"In New York, where rentals and provisions are, perhaps, more expensive than in any other large city, for an average family of five persons the minimum income on which it is practicable to remain self-supporting and to maintain any approach to a decent standard of living is $600 a year."

Not longer ago than last fall he said that this estimate was without doubt now far too low. Professor Albion W. Small, of the University of Chicago, is quoted in a lecture: "No man can live, bring up a family, and enjoy the ordinary human happiness on a wage of less than $1,000 a year." John Mitchell, during the coal troubles of last spring, estimated the minimum wages that will maintain a workingman and his family in the coal region, according to the so called "American standard," at $600 a year. But these were only estimates. Since they were made several more or

less detailed investigations have been made that put the question of an adequate standard of living on an entirely different basis.

Last year five prominent social workers came together in New York, and, after fixing on a typical family of a man, his wife and three children under earning age, the result of their calculations was that $931 was the minimum wages that such a man must earn to support his family decently; $3.10 a day for 300 working days.

The question was then submitted to sixteen other social workers in close touch with actual cheap living conditions. One group of six combined in averaging their estimates, and the result was placing the figure at $942 a year. The other estimates were $768 (two estimates), $879, $900, $901, $986, $1,078, $1,394, $1,403 and $1,449. It will readily be seen that a reasonable average of these estimates is $950 a year as the cost of a normal standard of living of such a family in New York City.

New York City is by no means the only city which is investigating the cost of living at the present time. It has been calculated for Chicago by investigators at $900, by New Orleans investigators at $1,000, and by Philadelphia investigators as low as $600, the difference arising through the inclusion of items like insurance, savings, vacations, reading and other "cultural" expenses in the higher estimates and not in the lower. The standard of living fixed in Philadelphia was an exceptionally low standard and one probably more closely resembling a sub-normal standard than any of the others. These were all for families of six persons.

One of the latest of these investigations is that of Baltimore, which has resulted in the conclusion that $750 a year is the minimum amount required by a family of six persons. This investigation was made by the Maryland Bureau of Statistics, which has just issued a report. This report places the figures thus:

Rent	$180
Market and groceries	364
Clothing	85
Insurance	18
Amusements and incidentals	10
Doctor and medicines	20
Carfare	$30
Coal and light	35
Total	$742

Of course, these figures give no luxuries, nor do they provide for much holiday in summer or winter. The item of rent is as low as it could possibly be placed and carries the family out into the suburbs, necessitating carfare to and from work. Says the report:

"Baltimore is cheaper to live in than either New York or Chicago, but even so the living on $742 a year would be nothing to boast of when we consider the thousands who are living on much less."

It is interesting to note that the average of these estimates by twenty-eight different people in various parts of the country is about $938. This figure can in no sense be offered as anything more than a shrewd guess at a decent cost of living, but as such it tends to show that to maintain a minimum "American standard," of which our oratorical political economists profess themselves so proud, it is necessary for the wage-earner of a family group of five or six to earn about $940 a year, $3.13 a day during 300 days.

Among the causes for the increase in the cost of living some weight must of course be given to the great increase in the production of gold in recent years. Thirty years ago the world's stock of this precious metal was only $1,600,000,000; today it is more than $6,000,000,000. Since 1875 the increase has been more than three times as great as the entire stock in hand in that year. Last year the production was more than $400,000,000, and it is likely that that average will be equaled for the next twenty years at least.

But the only effect that can properly be ascribed to this factor is that of a general leveling up of prices and a steadying of the markets of the world. The laboring man suffers, if anything, since the benefit reaches him after a gradual process of filtering down thru the other mediums of production and exchange, and is likely to be delayed a decade before landing finally in his hands. As a matter of fact, the problem remains about where it was as regards the relation of the different human factors.

We find ourselves forced to conclude

that there has been such an increase in the cost of living that the average of $938 in 1906 in equivalent to $670 in 1896. To buy now what $1 bought in 1896 $1.40 is required. Assuming, for the sake of argument, that the wage scale of 1896 was such as to furnish the workman with an adequate standard of living, the question now arises: Is the American workingman, whether of hand or brain, receiving $1.40 today for the same work he received $1 for in 1896?

It is true that among large numbers of workingmen there has been an increase in wages ranging from 5 to 12½ per cent. during the past year, with the greater number probably at 10 per cent. But do these increases, taken together with the increases received at various times during the past decade, counterbalance the 40 per cent. increase in the cost of living? The increase in income has been first of all in the incomes of the organized bodies of capital and labor. An increase, smaller without doubt, has taken place in the wages of unskilled and skilled labor that is not organized, for these are the people that feel the effect of good or hard times first of all, being on the firing line, so to speak. But the smallest increase of all has been among the workers of the middle class, unorganized, whose affiliations and tastes are with the capitalist and whose interests are in reality more closely allied with organized labor—the great mass of people between the upper and nether millstones of organized labor and organized capital.

Mr. J. G. Schonfarber, who made the Maryland investigation, points out:

"It will be easily found that if there has been any increase of wages approximating anything like the cost of living it has been mainly in those trades which were thoroly organized and could by numerical force and combination enforce their demands, and this is true, because all the newspapers reports of the increases of wages have been in the railroads and building industries, etc. We know that all these wage increases were among organized railroad hands, textile workers, or building trades mechanics. But as far as salesmen, for instance, are concerned, as indicative of men with fixed salaries, there was neither an increase in the yearly earnings nor a proportionate decrease in the hours of work.".

Probably the only test of the general rise, if any, in the money wages level in the country is furnished by the statistics of the railroads. Unfortunately even the few statistics on this subject are usually over a year old by the time they reach the public. But according to *Moody's Magazine* the general rise since 1896 has been about 20 per cent. for railroad men.

"As about half of the employees of railroads consist of skilled and about half of unskilled labor, and also about half of organized and half of unorganized labor, it is safe to assume that the average rise of money wages of railroad employees is a fair average for the whole country. This being true, it would appear that money wages will not now average more than 20 per cent. higher than they averaged ten years ago."

The problem that faces America in the year of grace 1907 is of this difference between 20 per cent. wages and 40 per cent. cost of living above those of a decade ago. Agitation, investigation, commissions, and income and inheritance tax suggestions all have to do in reality with the question who is getting the "rake-off." The lesson of production we have learned and learned well; we have yet to learn the lesson of distribution. That is the cause of a growing discontent when trade returns seem to show on the face of the figures an era of unheard-of prosperity. Prosperity matters little to the great middle-class consumer, however, when he gets the idea that he is paying the cost of it and not receiving his proportionate share. That is the dark side of good times—the problem: Who is paying for prosperity?

A DRESS FOR THE GODS TO DANCE IN.

A Practical Protest Against Fashion

BY ANNA G. NOYES

[Mrs. Noyes differs from other reformers in that when she conceives a new idea she carries it out herself directly instead of organizing a society and waiting until the whole world is converted. How she made a city flat commodious and artistic by the elimination and selection of furniture was told in THE INDEPENDENT May 16, 1907, and this article gives her experience in bringing feminine costume under the rule of the simple life.—EDITOR.]

THE great criticism to be made of modern dress is, that its incessant changes do not give an ever-increasing amount of convenience, comfort and beauty. The changes more frequently move in a circle than ahead. Once in every so often, we can anticipate the same conveniences, such as short skirts, loose sleeves and low collars, etc., and alternating with these, the same inconveniences as long skirts, tight sleeves and high collars. At the end of a century the only results we seem to have definitely gained are the final abolition of the hoop skirt, a reduction in the weight and number of petticoats, and the one-piece undergarment next the skin.

What seems so inexplicable is, that at a time unprecedented in history in the number and range of inventions for the production of better articles needed by man for food, shelter and clothing, there appears the fact that convenience and beauty in dress have not, to say the least, made a parallel gain. In the textile industry alone, in the cultivation of the fibers, weaving, spinning, dyeing, finishing, and in every one of the thousand details of these and other processes, inventors are finding out ways of economizing time and material, of giving a better finish, a more durable color, a greater variety of pattern, and so on. Power sewing machines, under the guidance of trained operators, turn out a hundred dresses where our grandmothers could make but one. There is no limit to the improvements which may be made on machines, unless it be our patent laws and the greed of the owner of the factory, and one never finds the inventor, at any rate, going back to a style of machinery used by his great-grandfather.

But dress does not radically improve, it only changes.

Philosophers and economists have tried to fathom this morbid desire for something new in dress, no matter how old it is. Some claim that the people demand the change. That is quite possible, for most fashions one does not like long. In countries like India, where there are sharp class distinctions, there is no change of style in dress. From this the conclusion has been drawn that the changing styles in Western countries serve to distinguish classes. In the West, however, the line is drawn not by birth, as in India, but by money, and the distinction is between those who can pay and those who cannot pay. Conformity to the style in every detail is a way of giving evidence of one's ability to pay. By some the custom of constantly changing styles is upheld because it gives employment to the poor. Then, to be consistent, the making of impure food should also be encouraged, and the publishing of yellow literature, and the constructing of unsanitary houses. Others say that it is deliberately stimulated by large dealers, to create a market for their goods, that they may secure great profits for themselves, an accusation that appears to have much truth in it.

But whatever the cause the result is evident, that there is to society and to the individual, a loss of valuable time and good material, with no compensation in continuously better models for dresses. In all factories, when expensive machinery is thrown on the scrap heap, it is estimated that the loss will soon be made up by the new machine installed to take its place. But with clothing, the coat or dress is set aside, not that the owner may adopt a style that is primarily *better*, but only one that is *different*. The change is not made with the idea of putting on the market dresses improving each year in convenience, in line, in harmonious and appropriate color schemes, but only

dresses of a new pattern, which the simple-minded public has been educated at its own expense to desire. Salesmen

THE FIRST EXPERIMENT.
Photographed by Jessie Tarbox Beales.

actually try to persuade me to buy a certain garment or weave or color, whose redeeming virtue to them, is that it is "just out," "something new this season," or "the very latest thing" and so on thru the whole gamut of their tiresome jargon. I never fail to tell them I am not looking for something *new,* thank you, only for something *good.* And "there's the rub!" For one of the by-products of this insane desire to get something new, is that the quality of goods is rapidly deteriorating. Adulterations which are harmful to the natural fibers, as well as others which cheapen the goods, are not designated on the labels and are increasing every year. Silk can be and is adulterated with tin to such an extent that when one buys a piece of silk one is liable to get only 1 per cent. of silk by weight and 9 per cent. of salts of tin! Both pure (?) linen and silk have threads of cotton in them—but to go into that story would take whole books!

The only excuses for changing should be, it seems to me, that a more convenient or beautiful or economical cut, tone or textile had been produced.

For me to wait until this idea was common to all, would mean a still longer period of personal discomfort, to say nothing of the fear I daily felt of losing my temper; so limiting myself to the parts of the big problem which I, unaided by lobbyists or special legislation, could solve, consciously stated my problems as they occurred to me, and began and am still trying to solve them.

These then were my problems:

To design a convenient method of putting my dress on and off, so that I should not have to depend upon my husband even for that.

To decide upon a "respectable" length for a skirt, and to adhere to it until skirts were no longer.

To choose a pattern for a skirt that was full enough for comfort in walking or running, and one so cut as to hold its shape, and one that I considered was becoming to me.

To devise a method of so equally distributing the weight of my clothes on my body, that I should always be as free from discomforts from my clothes as I am from discomforts from my skin and bones.

To provide pockets, enough of them so that I should not have to hook on a bag or carry one in my hand. Men don't.

To let, as far as possible, the natural curves of my body give character to the line design of my dress, and not drag in any extraneous deformities, either for my body or my head.

To select the coloring in textiles that tone with my own color.

To choose textiles for garments, under and outer, because of certain physical properties of the textiles; wool for warmth, linen for coolness, silk for cleanliness, and so on.

To have touch the skin only those materials which can be readily washed.

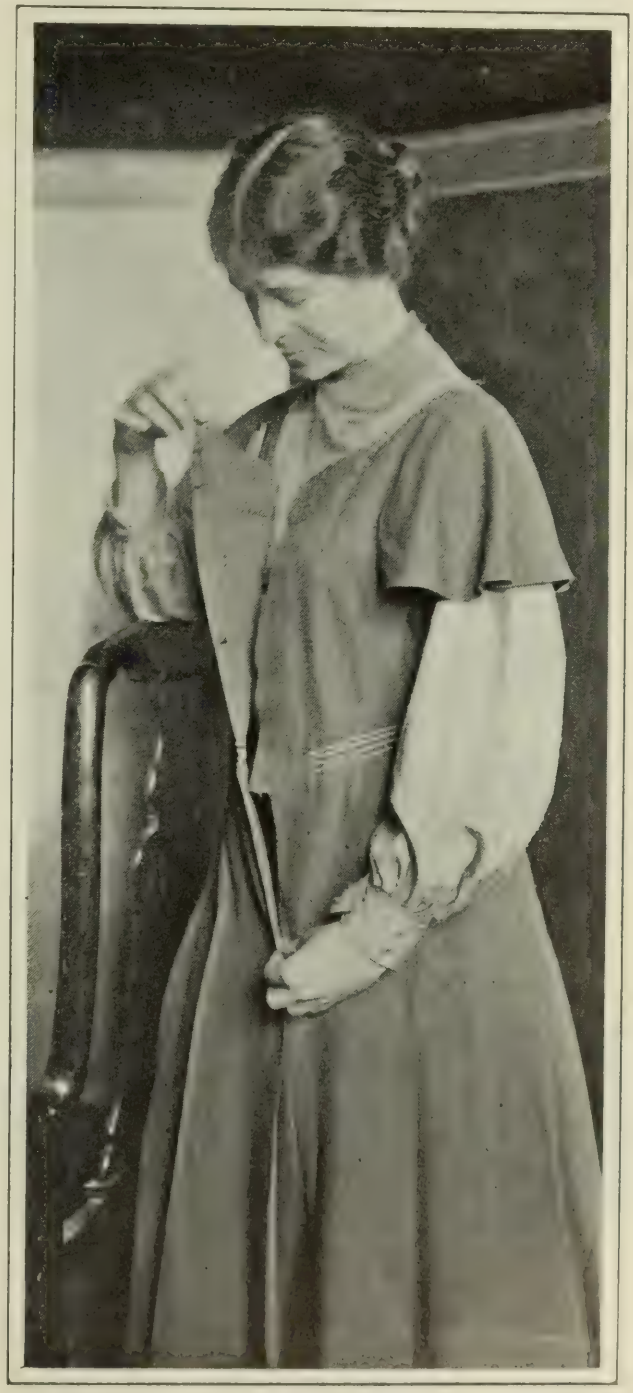
To buy what was in the long run, the least expensive material.

To find gloves warm enough for my hands in winter, so that I should not have to be bothered with carrying a muff.

To find a hat that was becoming to me, and that fitted my head, and then to wear it as long as there was any wear in the hat.

To find shoes or sandals that fitted my feet.

To eliminate starch, because technically it is dirt, and from an artistic standpoint it is unthinkable on the human body, and is without doubt only an invention for making money.



To eliminate all jewelry, nose rings, earrings, finger rings, arm rings, waist rings, neck rings, cuff buttons, hat pins, breast pins, everything in the jewelry line but a watch, and a brooch to secure it, and hair pins. I should be unjust to myself if I took too much credit for this last virtuous decision. It would not have been reached so precipitately, had not a fire consumed all my jewels. I did, however, rejoice and not weep over their burning, and did not dig for them in the ruins.

To eliminate fur in this climate, because just as it prevents the body's heat from escaping, it also prevents fresh air from penetrating.

One very important reason for elimination of non-essentials, is that it will reduce the amount of work those engaged in industry will have to do. For I believe that when the new era comes, the whole world will be planning to make less work and more play and song and life for itself, instead of more drudgery and stagnation, crime and death, and we cannot begin too soon to take that attitude.

In the early days of these unsettled problems, I put my body thru the last sufferings I ever hope to have to inflict upon it, in compelling it to wear out the old clothes, while my mind and I cut out patterns of cheese-cloth, drew picture dresses on paper, and delved in all the literature and illustrations to be found on the subject. In the meantime, I was sloughing off my integuments, until I had left upon my body, but two of an original six undergarments, the same thruout the year, namely a union suit and one petticoat.

For added warmth, I wear black cotton-and-wool tights, and a sweater, both of which are easily taken off in our warmly heated apartments. Of course I still wear shoes or sandals and stockings

"I CAN GET INTO MY DRESS ALONE, SO THAT I DO NOT HAVE TO DEPEND UPON MY HUSBAND EVEN FOR THAT."

Photographed by Jessie Tarbox Beales.

and supporters fastened to a belt which fits about my waist. For my union suit I choose cotton in preference to linen,

because my own skin does not demand the only property that would, in this case, make linen preferable; namely, that of rapidly absorbing moisture, and creating indirectly a circulation of air which gives to linen its characteristic cool feeling. Besides cotton is cheaper. The petticoat is a very good quality of sateen, soft, noiseless and washable, the same color as the dress with which it is worn. It is

"THIS IS MY POCKET AND I'VE GOT REAL THINGS IN IT!"
Photographed by Jessie Tarbox Beales.

made with but one ruffle, and that is stitched down on the top, under a tuck made in the body of the petticoat. This leaves the fewest possible places for dust to collect, and still makes a very satisfactory petticoat. The petticoat is fitted over the hips, and needs no further support and does not bind my waist. The material for the petticoat worn with light dresses is pongee silk, and made like the sateen one.

The following general plan for the dresses is the one which I have adopted, and is illustrated in the photographs here shown. They fasten with hooks and eyes under the pleat at the left, opening from the yoke to about eight inches below the waist. In this I keep my watch, fountain pen and pencil, all securely fastened so that I shall not lose them. The dresses are all in one piece, excepting those in which the yoke counts as a second piece. None of the dresses are lined, but under the dresses without yokes, I wear a China silk underwaist with as high a neck and as long sleeves as those of the dress. The guimpes are of washable silk. Both underwaists and guimpes serve the same purpose of preventing the dresses from touching the skin, and in these the shields are pinned.

I have chosen silk for these guimpes and underwaists because of all the textiles this one is least easily soiled. Cotton, which contains 1 per cent. wax, presents a sticky surface, to which foreign particles readily adhere. In summer I wear linen guimpes, because linen, as explained before, is the coolest textile to wear. All things considered, I feel silk is the best material for serviceable dresses. It is not so easily soiled, and when soiled is easily cleaned, and if a good quality is bought it wears a long time and always looks well. It is also very light in weight.

To get ready to step into the kitchen to prepare a meal, is a matter requiring but few minutes, for with apron and cuffs my dress is well protected. This apron was adopted after considering many patterns and so far has given entire satisfaction, for it is without the customary and needless fulness, ruffles and tucks. And as for cuffs I have found nothing to equal the woven straw ones, at 5 cents a pair.

A very satisfactory kimono may be made with little labor. It utilizes the full width of the goods, and reaches about a foot below the waist line. The piece is cut up the middle of the front, and the yoke cut out, the raw edges hemmed and the ribbon sewed on. The sleeves are made by sewing together the selvedges of the goods under the arm, for a dis-

tance of about three inches. For the fastening two plain buttons are covered with the ribbon and two loops are made of the same material, all of which took me about two hours to make by hand one evening after a full day's teaching.

Any explanation of the color schemes employed in the dresses in terms that would be intelligible to the average reader, would be difficult to write, tedious to read, and the information gained would not be exact. Not until all the world can get a definite color sensation from the formula, O.R., L.L., ½N, which is, according to Dr. Denman Ross, of Harvard University, the formula for the color of the Rajah silk, is it worth while to try to give descriptions of color schemes. All I can say is that I have had the colors of my flesh and hair and eyes in mind and have tried to tone to those, in complementary or analogous color schemes.

Three minutes is an abundance of time to allow in which to change my dress, that is, to take off one dress and to put on another, and I need no assistance, not even a mirror, to see if everything is all together and straight, for nothing can go crooked and nothing can come apart.

The weights of my dresses and other garments are as follows: Brown silk dress with guimpe, 6 ounces; gray-blue cloth with guimpe, 10 ounces; Rajah silk, 4.5 ounces; camping dress, 8.5 ounces; sateen petticoat, 4 ounces; pongee petticoat, 2 ounces; union suit, 2.5 ounces; stockings, 1.5 ounces; garters, .5 ounces; Sandals, 8 ounces; high shoes, 11.5 ounces; low shoes, 8.5 ounces; summer hat, 2 ounces; winter hat, 2 ounces; tramping hat, 1 ounce.

In these dresses I feel like a spirit! Nothing holds me to the earth. I feel as if I had left the cocoon of the chrysalis and were learning to fly. And O! it's such fun to dance in them with one's arms and body. Every muscle and bone is free! When I go to walk thru the city, I have to remind myself that it is improper thus to be merry on the street. What will folks think? I want to bend and twist and turn and jump and skip and vigorously pull in the air, just because I can! I know no buttons will burst off when I expand my lungs. No steel (think of it! steel worn upon a human body) will snap when I stoop from the waist to touch my toes. No waist will separate from a skirt when I stand on tiptoe and stretch and stretch to my very utmost. Surely those who have stayed so long in the chrysalis stage, that they never can develop beyond it, ought not to begrudge the freedom of those who still can be liberated.

It is merely a coincidence that my dresses happen to resemble somewhat the jumper suits being worn this season. They will disappear soon, however, and another fad will take its place. And the resemblance any way is only a surface one. The jumper suits are just as tight as other dresses about the waist, they button up the back, they have no pockets, the guimpes are of white, starched, and needlessly tucked and inserted, the collars are high and the skirt unnecessarily full and over-trimmed.

In the fire fortunately all my clothes were burned up, which gave me an excellent opportunity to do what I otherwise never could have done satisfactorily, find out the cost of my wardrobe. I have installed all I shall need for the four seasons except a winter overcoat, another pair of shoes and possibly another summer dress, and I can think of nothing else I shall need until these clothes are worn out. The cost for material, including two silk dresses, $1.25 a yard, two cloth dresses, $2.25 a yard, seven guimpes, two China silk underwaists, a bathing suit, three petticoats, three union suits, nine pairs of stockings, three nightgowns, two pairs of shoes, one pair of sandals, a raincoat, rubbers and umbrella, two aprons and cuffs, toilet articles, hair pins, an Ingersoll watch and brooch, pins and needles, darning cotton and a thimble, absorbent cotton and cheesecloth, in fact for everything I need in my wardrobe, the cost has been $122.26. I have paid for labor $24.50 and given about ten days of my own labor which, in the capacity of a seamstress, would be valued at $1.50 a day. One hundred and sixty dollars would easily cover the entire cost, and the cost of laundering is about 30 cents a week, at a steam laundry very unsatisfactory and expensive, but the only means available at present.

The effect of Fletcher's and Chittenden's experiments on the amount of food

needed to sustain the human body, and the method of eating so as to get the full value of the food eaten, are just beginning to give us a new standard for reckoning the cost of food in the cost of living. But in all the literature I have been able to find on dress, I have read of no one concerned to find out how much clothing a person needs, altho clothing has a physiological function and experimental tests could be made in a laboratory. Clothing is closely associated with food and digestion, the amount of clothing needed and the properties of it, are in part determined by the amount of heat generated and retained in the body. All I know is that I wear fewer clothes than I used to wear, and at the same time am eating less food, and as nearly as I can tell, I generate and retain sufficient heat to keep me equally warm, and my general health has never been better, nor my capacity for work greater. But this fact will have little weight in the world of science where but one experiment counts for so little.

THE RAJAH SILK OF INDESCRIBABLE COLOR, AND A WARDROBE COMPLETE, WHICH WEIGHS EXACTLY NINETEEN OUNCES.
Photographed by Jessie Tarbox Beales.

Then, too, the physiological function of clothing has so little to do with dress

that even if this were determined, it would be but a small fraction of the whole problem. For man not only dresses to be protected from the elements, and to retain his self-generated heat, but to be designated as a policeman, or sailor or coachman or minister; or distinguished as a person of wealth and leisure, a non-participant in the world's work, only partaking in its social functions and sports; or respectable and conventional, never questioning or refusing to obey a mandate of the day, whether it be to paint one's body, to tattoo one's face, to deform one's feet, to displace one's internal organs, or to wear stiffly starched linen.

When the spirit of equality shall be a living thing among us, these false and forced standards will cease to exist because they will perform no function. The place to spend one's energy is after all on the more fundamental causes of present day non-moralities. However, I have to wear my clothes on my own back, and they gave me no peace until I attended to them. Now at least I can go about my business in a comfortable dress, made by a dressmaker, who tho she makes elegant honorific gowns for "leisure class" ladies, never took greater pleasure in making a dress than she took in making in one day the Rajah silk for me. And if any one else is conscious of the same problem, what is herein written may give to that one an idea.

These few experiments which I have made have really very little to do with the whole problem. This is merely my protest against the point of view of the makers and wearers of dresses thruout the land. We all seem to be buncoed into pursuing a phantom, which because of its very nature we can never catch. We are exhausted running as fast as we can to remain stationary! And the bunco men all along the line, stand by enjoying the joke, because they pocket the cash.

The dresses themselves are not conclusive. Who knows? I may have another idea before I have another dress. If I do I shall try it on, and see what it is good for. Why here is this new textile Xylolin, made of paper, a dream of Bellamy's being realized. I shall certainly look into that!

NEW YORK CITY.

Song of Truth

BY COLETTA RYAN

I AM the soul of Truth. I rise and sing
O'er hill and mountain. There is naught but spring
And loveliness within me. I am bound
By broad good nature and I twine around
All hope and promise. O'er the fields I lean
And lo! the wailing world again is green.
Love kneels to me, and formal gates unclose
To greet the fragrant season of the rose.

In vain the ghostly churchyard waits to see
My silhouet against the cypress tree!
In vain the skeptic waits for me to die,
I cannot perish—trustfully I lie
Within the heart of heaven and I throw
A white enchantment over grief and woe.
God is my light, and lasting life is mine.
Arise, embrace me, brother, I am thine!

DORCHESTER, MASS.

Literature

Problems of Life and Heredity

In the University of Paris there is, besides the regular university department of zoölogy headed by Delage, and the normal department under Houssay, a laboratory of organic evolution under the direction of Giard. In the small lecture room of this laboratory Felix Le Dantec delivers to a little group of half comprehending students his suggestive lectures on *Les Grands Problèmes de la Vie.* But however few the men and women who find their way to this hidden lecture room in the insignificant building huddled under the shadows of the somber Pantheon —for the laboratory is not housed in the great Sorbonne—Le Dantec finds an interested hearing by a larger audience thru the medium of his books. He is a prolific writer and keeps Alcan's presses busy turning out his brilliant and extraordinarily bold and iconoclastic philosophico-biological disquisitions.

The present volume,[1] translated by Stoddard Dewey, and the second in "The New Knowledge Series," edited by Professor Duncan, of the University of Kansas, is interesting reading from cover to cover. So are all of Le Dantec's books and some more than this one; for example, *Les Influences Ancestrales.* But this will make a good introduction of Le Dantec to American readers.

Altho this "new knowledge" that we are reading and writing about so much now dates from the day of Descartes, it is nevertheless new today in its body of facts if not in its point of view. When Descartes conceived the universe as a mechanism and living bodies as machines, he did so out of the greatness of his scientific imagination. Today since the work of Roux, Hertwig Delage, Driesch, Rhumbler, Loeb and the others, to refer to some of the biologists only, we have in our possession a great mass of facts derived from observation, and especially from experiment, on which to base our physico-chemico-biological conception of life and its surroundings.

But the conception is too fascinating for some of us. Monism and mechanism are not proved, and it is well that Haeckel has his Oliver Lodge and Lloyd Morgan to face, and Loeb his Jennings. Otherwise we and all we do would be quickly resolved into enzymes, catalyzors, taxes and tropisms. The new knowledge aims to unite life and non-life; or, rather, not to separate it. Physics and chemistry are our gods and we are machines and chemical compounds. Particularly to Le Dantec are we chemical compounds. Life is chemism, says he. And he says it in the book before us lucidly, sparklingly, positively—but not convincingly.

Dr. Bastian's two recent volumes[2] are written to establish the thesis for which the author has conspicuously fought for thirty years, the thesis, namely, that life originates spontaneously and that it is doing so constantly and visibly all about us. His thesis and his book, in which are included the details of a great deal of personal observation, experimentation and speculation, recall the days before Pasteur and Tyndall. The great French biologist and the English physicist decisively put an end to further discussion, in their time at least, of this question of the spontaneous generation of micro-organisms in infusions or other organic liquids. But now that the opposing champions are gone, Bastian returns to the lists. Well, he does not prove his thesis. But he does make an interesting book out of trying to. But it is a book for the lay reader to approach warily. It is plausible: it seems convincing. But if it were worth while another Pasteur or Tyndall could refute it.

And yet, after all, what are we to do with that pax-plaguing question of the

[2] The Nature and Origin of Living Matter. *By H. C. Bastian.* 344 pp., 245 ills. from photomicrographs. Philadelphia: J. B. Lippincott & Co. $3.50.
The Evolution of Life. *By H. C. Bastian.* 319 pp., 12 plates of micrographs. New York: E. P. Dutton & Co. $2.50.

first life. Evolution and descent explain the kinds and variety of life, its adaptation, its progress, but not its origin. thorogoing evolutionists demand a physico-chemical origin of life; that is a spontaneous generation of the organic from the inorganic. Still Bastian cannot be their prophet.

Less subversive of current beliefs, scientific or popular, is Lock's account of *Recent Progress in the Study of Variation, Heredity and Evolution.*[3]

Of the ten chapters in the book, two discuss Mendelism (the theory of alternative inheritance based on the epoch-making work of Gregor Johann Mendel, an Augustinian monk of Austria), one is given to biometry (the modern statistical and quantitative study of variation founded by Galton and Pearson), one treats of the theory of mutations (heterogenesis or the theory, now identified with de Vries, of the origin of species by little fixed changes or leaps as opposed to slow modification by selection), and one discusses modern results in cytology, especially as these touch the problems of heredity. The author, a fellow of Gonville and Caius at Cambridge, has done considerable personal work along the lines of variation and heredity and his writing is well-informed and trustworthy. Portraits of Darwin, Galton, de Vries, Kolreuter and Mendel embellish the volume.

Another recent book treating various evolution topics in popular style is Headley's *Life and Evolution.*[4]

Headley is known to naturalists as a student of bird structure and habits and a pleasing lecturer and writer. His earlier "Problems of Evolution" is a book of decided interest. The present volume is composed of nine lectures written out as chapters and treating of such varied subjects as "The Sea and Its Inhabitants," "The Minds of Men and Animals," "The Flight of Birds," etc.

The author draws on his own considerable experience as a field naturalist in Australia and New Zealand for many of the examples chosen to illustrate and point the moral of his discussions and presents his material in attractive and understandable manner. It is a book for browsing in and should interest scientific students as well as lay readers.

Finally may be mentioned the recent translation by Joseph McCabe of Konrad Günther's *Darwinism and the Problems of Life,*[5] first issued in Germany in 1904. The author, a *privatdocent* in zoölogy in Freiburg, has undertaken an examination of the more familiar forms of animal life to be found by short excursions from home or school into forest and field from the point of view of a faithful student of evolution. Such sentences as "Who has not been in the woods on a spring morning?" and "These embryonic or primitive particles called determinants by Weismann because they later determine the soma-parts, consist naturally of living substances and hence must nourish themselves" come, therefore, into occasional unfortunate juxtaposition—tho these two actually do not. But on the whole Günther's attempt is fairly successful and his book gives nature study, or, better, popular natural history, a new aspect. It should certainly be interesting and suggestive and fresh reading to the persistent peruser of nature books, too many of which—the books—are given over to telling one how to distinguish a red bird from a yellow bird, and letting it go at that.

The French Church Question

THE writers of these two brochures* are not Catholics, altho friendly to the Catholic Church. Bodley's *France* is a standard work, of which two volumes have been out for some years. The third, dealing in full with Church questions, has been delayed owing to the author's poor health. During a tedious convalescence he whiled away the time in "such light reading" as the debates in the French Parliament on the Separation Bill.

"I am"—he writes—"probably the only person in the world who has read

* THE CHURCH IN FRANCE. *By John Edward Courtenay Bodley.* London: Constable.

LETTRE OUVERTE A S. E. LE CARDINAL GIBBONS. *Par Paul Sabatier.* Paris: Fischbacher.

every word uttered in those debates." The brochure consists of two lectures delivered before the Royal Institution. As any discussion of controversial questions is there forbidden, the historian gave a plain statement of facts. The first lecture is on the Concordat, the second on the Law of Associations. He terms the Concordat the work of a stupendous genius. Its seventeen articles were supplemented by the Organic Articles, seventy-six in number. In its White Book on "The Separation of Church and State in France," the Vatican holds that the Organic Articles had never been ratified by the Holy See. Sixty years before, Thiers, in the Chamber of Deputies, described this view as "an historical falsehood," and declared that all the Holy See objected to was to be found in the writings of Bossuet. Again, Bodley declares that the views of such Catholics as hold that they were imposed upon Rome surreptitiously and by fraud cannot be maintained.

Under the Restoration, when the clerical party was in power, the Organic Articles were left practically untouched. With the Third Republic came the anti-clerical reaction. Gambetta gave the war cry: *Le clericalisme, voila, l'ennemi!* Then the Boulangist movement, the Leo Taxil and Diana Vaughan scandal, the Affair Dreyfus, the condemnation of so many scholars — Loisy, Denis, etc. — roused the nation. The story is told of the results in the second lecture. The decrees of 1880 touching unauthorized monastic Orders set the ball a-rolling against them, and when, in December, 1900, the bare catalog of the religious houses in France, with the value and extent of their properties, was presented in Parliament, it consisted of two huge White Books of 2,000 pages. The Orders had to go and logical France wiped out the Concordat.

A lover of St. Francis, to whom he has devoted the best years of his life, M. Sabatier dates his *Open Letter* to Cardinal Gibbons: "Assisi, Holy Thursday, 1907." Under the shadow of the Poverillo, his humble client addresses a Roman Cardinal whose predecessors in the Sacred College ridiculed the first rule of St. Francis as impossible, altho taken almost verbatim from the Gospels. The *Open Letter* is an answer to a sort of platform of His Eminence, who got large and many notices in the European press. To be sure that he was right, the French scholar wrote to Cardinal Gibbons for the exact text. The Cardinal sent him the Baltimore *Sun*, December 14, 1906. Sabatier is highly respectful and couches his thoughts in language which cannot in any wise be misconstrued, either in sense or in respect.

Discussion is always legitimate, but falsehood never. He charges the Cardinal with putting into M. Briand's mouth words that statesman never uttered and which he is incapable of uttering. Again, it is true that the old seminaries owned by the Government had to be given up; but it is a falsehood to say that the seminaries were abandoned, for they were at once set up in new places at the choice of the respective bishops.

Moreover, the Catholics of France, with the majority of the French episcopate, were ready to give a trial to the Law of 1905, with its cultual associations. Catholic jurists, even, had studied in advance how to apply the law. Again, in spite of the declaration of Pius X, re-echoed in Baltimore, Sabatier proves that the law itself recognized the Roman hierarchy. Speaking on this point, Bodley agrees with Sabatier. Bodley writes:

> "The score of words added (in the French text) have an immense importance, which is not patent to the cursory reader of the cause, for they guarantee the impossibility of an association falling into the hands of a schismatic party, which might attempt to organize a religion independent of the bishops and the hierarchy of Rome." (Law of December 9th, 1905, Section 4)

The French critic reminds the American Cardinal that the real harm was done when Pius X rode roughshod over the bishops. Cardinal Lecot, of Bordeaux, and Archbishop Germain, of Toulouse, had taken the preliminary steps to secure the benefit of the cultual associations. This was on December 7th, 1906, and the very next day—December 8th—under the threat of being regarded as schismatics, they were obliged to countermand their orders.

Moreover, Pius X not only summoned the bishops to meet, but he sent the prearranged matter for discussion, and even assigned beforehand bishops to various committees.

Sabatier regards this as a disgrace to the Episcopate. But it is exactly as every political leader does.

Gen. Alexander's Memoirs

It can hardly be gainsaid that the most important book on the Civil War written by a Southerner is General E. P. Alexander's *Memoirs*.[1] It is important by reason of its being the account of a brave and capable officer who was always in the thickest of the fighting from Bull Run to Appomattox; by reason of the military knowledge and the shrewdness of judgment which it reveals; by reason also of its studied exactness of statement and its noble impartiality of spirit. A model of what such an account should be, it affords the strongest contrast to the character of most Confederate reminiscences, with their obliviousness or indifference to fact, their incorrigible and bitter sectionalism and their exaggerated rhetoric. Doubtless many judgments are expressed by General Alexander with which other soldiers and historians will disagree. It may be thought that he is too severe on Joseph Johnston, that he takes too little account of the enormous natural difficulties with which Grant contended from the Wilderness to Richmond. The partisans of Stonewall Jackson and the critics of Fitz-John Porter may object to his criticism of the one and his praise of the other. But these are matters of legitimate controversy, and the judgment of so fair a mind must win respect, even if it fails to win acquiescence.

General Alexander was a Georgian. He graduated from West Point in 1857, and when the war broke out he was station at Fort Steilacoom, Washington Territory, as a second lieutenant of engineers. Resigning from the army at San Francisco, he hurried East, arriving at Richmond on June 1st. He immediately entered the Confederate service as a signal officer. After Bull Run he was appointed chief of ordnance in Beauregard's corps, and a few days later Joseph Johnston "extended his office over the whole army." He participated in all the campaigns of the Army of Northern Virginia, accompanied Longstreet to Chickamauga and Knoxville, and returned with him to be in at the collapse of the Confederacy at Appomattox.

Evidently he entertained no illusions as to the success of the Confederate arms. He appreciated General McPherson's warning given to him in San Francisco that the Confederate cause was hopeless, but he felt that he must "go with his (my) people." After forty-six years, however, he is enabled to see that what the South fought for was something not for its best interests. He writes:

> "We now enjoy the rare privilege of seeing what we fought for in the retrospect. It no longer seems so desirable. It would now prove only a curse. We have good cause to thank God for our escape from it, not alone for our sake, but for that of the whole country and even of the world."

The book is written "not at all to set forth the valor of Confederate arms nor the skill of Confederate generals," but to give an unpartisan criticism of each campaign, pointing out "the good and bad plays on each side, and the moves which have influenced the result." This purpose has been executed with notable success. The treatment on the whole is hardly what might be called picturesque, the abundance of details often blinding the reader to a sight of the great determining movements in the various battles. There is, moreover, an unfortunate lack of maps and charts, the rough sketches of the author giving but little aid in picturing the contests. But in plain and direct statement, in keen and impartial weighing and considering of factors, little is left to be desired. It is an account of the great battles and campaigns and an estimate of the leaders which no interested person can afford to miss.

Doubtless there was great blundering on both sides, as the author so frequently insists. McClellan, "unfit to command in battle," but who nevertheless "had no superior in organizing an army," would seem to have led all others in the number and character of his blunders. Banks and Fremont in the Valley, Pope at Second Manasses, Burnside at Fredericksburg, Hooker at Chancellorsville, and Meade after Get-

[1] Military Memoirs of a Confederate. A Critical Narrative. *By E. P. Alexander.* New York: Charles Scribner's Sons. $4.00.

tysburg, are all treated to liberal criticism. The Confederate captains are not spared either. The failure of Beauregard and Johnston to pursue the Federals after Bull Run is regarded as one of the most stupendous blunders of the war. The Federals were utterly routed, but they got away with small punishment and loss of arms and stores. "Never," he writes, "did an enemy make a cleaner escape out of such an exposed position after such an utter rout." The criticism of Johnston is severe and constant until he is superseded by Lee. Commenting on the Seven Pines battle, he writes: "Our prospects, had Johnston not been wounded, would have been dismal." Doubtless he would have had something better to say for this object of his criticism had the scope of his account included the Atlanta and North Carolina campaigns. Of Stonewall Jackson he speaks with a more discriminating judgment than do most Southern historians. He has only the highest praise for his later work, but he cannot overlook his lethargy at Mechanicsville and Gaines's Mill and his merely perfunctory action at Malvern Hill. Lee, of course, escapes with the least censure of all, tho his tactics at Gettysburg are held up to considerable questioning.

He has high praise for Meade, despite his censure of that officer's delay in pursuing Lee after Gettysburg. "There was not during the war," he writes, "a finer example of efficient command than that displayed by Meade on this occasion" (second day of Gettysburg). Of Sherman at Chattanooga he speaks slightingly, declaring that his whole force (east of Missionary Ridge) was "fought to a standstill." Necessarily there is much about Grant, tho no attempt at a general characterization. He considers Grant had been so badly punished after Cold Harbor, and the North had grown so weary of the struggle, that the real crisis of the war is to be found at that time — a crisis successfully past by Grant's bold strategy in carrying his army south of the James. There is little to be said for this opinion, and the author partially concedes its vainness when he comments:

"Possibly the South never had any real chance of success from the first, and the actual crisis was past when she fired the first gun."

The author sets an excellent example to his brother Confederate historians in his use of figures. Often one may take exception, it is true, but on the whole he has sought to give the most reasonable statement of numbers and losses. The Official Records have been freely used, and where these are defective he has, as a rule, taken Livermore's excellent computations. But despite his fairness and exactness, he has permitted himself, in his pride in the record of the Army of Northern Virginia, to conclude his narrative with a statement regarding the losses inflicted upon the Union armies before Washington that is absurdly misleading. That the aggregate Union losses (killed, wounded and captured) from June 1st, 1862, to April 9th, 1865, were 262,141 men may be conceded. It is also possibly true that Lee's army at its greatest did not exceed 85,000 men. But the implication that this army put *hors de combat* three men for every one of its own is a mathematical absurdity. This army of 85,000 was annihilated twice over during the three years. Its losses were one-fourth greater than (more than double in killed and wounded) the Union losses in the Seven Days' battles, nearly a fourth greater in the Gettysburg campaign, but little less in the Chancellorsville battles, and in killed and wounded only (not counting the 12,347 Federals surrendered at Harper's Ferry) about equal in the Antietam campaign. Including captured and missing (which are included in the above-mentioned Federal total) the losses of the Army of Northern Virginia during the same period could not have been less (and were probably greater) than 200,000 men. It is unfortunate that so excellent a book should be marred by so inept a conclusion.

The Life of Goethe

BIELSCHOWSKY'S great work,* the translation of which is to be complete in three volumes, is sometimes called the authoritative life of Goethe in German, and as such it displays both the strength and the weakness to be expected. It is, to begin with, erudite; one feels confident

*THE LIFE OF GOETHE. *By Albert Bielschowsky.* Authorized translation from the German. *By William A. Cooper.* Vols. I and II. New York: G. P. Putnam's Sons. $3.50.

that the author has sifted the enormous mass of material accumulated about every step of Goethe's career. In the metaphysical parts it is excellent, almost impeccable. Thus the chapter of the second volume entitled "Goethe and Philosophy" is a masterly survey of the relations of the poet to Spinoza, Kant and Hegel. There is, for instance, a touch of sly penetration, altho slyness is the last quality Dr. Bielschowsky was aiming at, in the connection of Spinoza's "He who loves God cannot endeavor to have God love him in return," with the words of Philine in "Wilhelm Meister," "If I love thee, what is that to thee?" There is a sound estimate of Goethe's mind in showing that what really kept him from sympathizing, indeed understanding, Kant's "critique" was not a metaphysical difficulty, but the fact that Kant attributed a radically evil element to human nature, whereas Goethe was at bottom a thorogoing Rousselian.

But for the rest, one who approaches Dr. Bielschowsky's biography with the work of the English, and especially the great French, critics in mind will be chary of praise. When Dr. Bielschowsky passes from metaphysics to the philosophy of life, he seems to us to speak as a child, or as a German, speaks. Goethe is one of the few supremely interesting *men* in literature. But to deny that he was an egoist, to build up a huge biography to prove he was not an egoist, is merely to fill the air with dust. The value of Goethe's poetry and prose is due largely to his broad experience of life, uttered for the most part in fragmentary fashion. Very well, we grant the poet considerable license in gathering that experience. But to speak with reverence, as Dr. Bielschowsky does, of his philandering with young girls when sixty years old and more, shows some ignorance of the humor or the proprieties of the world.

Nor is Dr. Bielschowsky's literary criticism much more satisfactory than his practical philosophy. He does not know when to sow from the full sack and when to refrain. The long, plodding analyses of Goethe's works are mere waste verbiage; they mean little to one who has not read the works, and they are an impertinence to one who has. The criticism proper seldom shows that finesse of judgment and that sureness of taste that come to critics thoroly trained in the greater literatures of Europe. There is here, as everywhere, the peculiar twist and limitation of German Chauvinism.

We commend heartily the translation of this work and recognize its undoubted value; but we must add frankly that it is in no sense of the word in the tradition of great literature.

The Gates of Kamt. By Baroness Orczy. New York: Dodd, Mead & Co. $1.50.

The Baroness Orczy has undertaken to tell in this marvelous tale what became of the ancient people of Egypt who built the Pyramids and carved the Sphinx and then disappeared at the end of the Sixth Dynasty. A young Englishman interested in archeology discovers a parchment in a jar which was in the tomb of a Greek priest who had been buried upon the edge of the Lybian desert. It contains strange references to the Gates of Kamt and of those who dwell beyond. The young archeologist, accompanied by a friend, undertakes to find these gates by following the vague directions given by the priest. They travel for forty days across the Libyan desert, and the author has done well with her arid scenery and its psychological effects upon the minds of the explorers. They come at last to a horrible land covered with whitening bones of men, and lying beneath frowning cliffs. While they are wondering what the meaning of so many skeletons is they are approached by a madman, who has been cast out of the Land of Kamt, to die of hunger and thirst in the desert. They are told that it is sacrilege there to shed human blood and malefactors are disposed of in this way. When the next criminal is let down into the desert, they leap upon the drawbridge that deposits him and thus find themselves within the Gates of Kamt. And here we leave the reader to find out the rest for himself. The splendors and mysteries and sensuous horrors of that strange land are not for us to reveal. But, granted her situation, the author has made the human heart terribly and convincingly true to it.

Literary Notes

....A new edition, the twenty-second, of the indispensable Baedeker's *Guidebook to Switzerland* and the adjacent portions of Italy, Savoy and Tyrol, has just appeared. (Scribners, $2.40.)

....The latest section of the biggest dictionary in the world, the *Oxford Dictionary* edited by Dr. James A. H. Murray, is that dealing with words between Misbode and Monopoly, by Henry Bradley. In this section 3,790 words are defined and illustrated by 14,394 quotations. (Oxford University Press, Amer. Branch. New York. $1.25.)

....Mr. J. W. Stoughton has made a translation from the second German edition of Rudolf Schmid's *Scientific Creed of a Theologian* (New York: A. C. Armstrong & Son). Dr. Schmid defends the religious view of the world, and faith in prayer, Providence and miracles, together with an orthodox conception of the person of Christ, with full recognition of the principles and teachings of modern biology.

....In his critical essay on *Unbelief in the Nineteenth Century*, Prof. Henry C. Sheldon, of Boston University, surveys the principal phases of recent doubts and denials of orthodox religious opinions, both philosophical and critical. His aim is apologetic and constructive. The treatment of questions in Biblical criticism is hardly thoro enough to be effective, and the author's positions are not likely to involve him in the misfortunes of Professor Mitchell. The book is published by Eaton & Mains. $2.00.

....The publication of short stories in individual volumes has become very popular, and it is well that it has, for many of them are too good to be lost in the files. Crowell & Co. are the latest to take up the practice, with their "Entre-Nous Series" of 50-cent volumes, illustrated and prettily bound. The first six are a good selection: That admirable little genre sketch of *Schmidt*, by Lloyd Osbourne; three side-splitting automobile incidents, by Charles Battell Loomis; the amusing story (with an implied moral) of the exchanged Chinese and American babes, *Allee Same*, by Frances Aymar Mathews; *In the Deep of the Snow*, by C. G. D. Roberts; *Good Night*, by Eleanor Gates, and *Dawn*, by Katharine Holland Brown.

....One method by which it is proposed to solve the problem of religious education is to allow children of parents who desire it to send their children to their respective churches on Wednesday afternoons, for such instruction as each church deems advisable, credit being given for these religious exercises equivalent to that for corresponding regular school work, the Wednesday afternoon session in the public schools being retained for such as do not avail themselves of the Wednesday afternoon Sunday-school. Enthusiastic advocacy of this plan by one of its chief promoters may be found in *Religious Education and the Public School*, by the Rev. George U. Wenner, D.D., a Lutheran pastor of this city. (Bonnell, Silver & Co. 75 cents.)

Pebbles

THE SELF-GROWING BARN INDUSTRY.

AN esteemed correspondent, writing from Danville, Ky., tells of a novel industry, which will probably soon spread as far as Billville. Dan Cawley, a farmer in the Carol Hill neighborhood, has a barn which is growing rapidly. The structure, which is a capacious affair, was built several years ago. Willow posts were used on the end and along the sides. Being a moist and virgin soil, the posts took root, and the entire structure has flourished like a green bay tree. It ascended nine feet in the first three years, and Mr. Cawley was compelled to lay a second floor, using the first as a loft. The second floor is now too elevated for use, and next year a third floor will be added. The innovation has proven very advantageous, and a large crop of barns will be planted next spring by farmers of this vicinity.—*Atlanta Constitution.*

ATTORNEY-GENERAL MOODY was once riding on the platform of a Boston street car, standing next to the gate that protected passengers from cars coming on the other track. A Boston lady came to the door of the car, and, as it stopped, started toward the gate, which was hidden from her by the men standing before it.

"Other side, please, lady," said the conductor.

He was ignored as only a born and bred Bostonian can ignore a man. The lady took another step toward the gate.

"You must get off the other side," said the conductor.

"I wish to get off on this side," came the answer in tone that congealed that official into momentary silence. Before he could explain or expostulate, Mr. Moody came to his assistance.

"Stand to one side, gentlemen," he remarked quietly. "The lady wishes to climb over the gate."—*Boston Post.*

A MERE HALLUCINATION.

"I MUST be going," declared the young man for the fourteenth time.

"Not at all," responded the young lady, "you are sitting perfectly still, I assure you."—*Louisville Courier-Journal.*

IRATE Old Colonel (who has led a small trump, to partner, a novice, who took the trick, but didn't return his lead)—I called for trumps, madam!

Partner—Oh, did you? So sorry I didn't hear you.—*Sydney, Australia, Sunday Sun.*

A FLATTERING ILLUSION.

"I THANK you for the flowers you sent," she said,
And then she pouted, blushed, and drooped her head.
"Forgive me for the words I spoke last night;
The flowers have sweetly proved that you are right."
Then I forgave her, took her hand in mine,
Sealed her forgiveness with the old, old sign;
And as we wandered thru the dim-lit bowers,
I wondered who had really sent the flowers.

The President's Decision

We have no brief to glorify President Roosevelt, and we do not regard his multiplex wisdom as unlimited, but we could not easily find one word to criticise in his long and comprehensive Provincetown address. He talked no airy nothings, but every word was instinct with purpose and truth.

The chief and central point in his address, which we give at considerable length, is his decision and determination that for the next eighteen months of his term he will proceed, with all the forces at his command, to bring to the bar for punishment those rich malefactors who have flouted the laws which limit the unfair and dishonest prosecution of their business. He will not be frightened or dissuaded from the course already marked out by any disturbance of the money market, or any charge that he is ruining business prosperity. Here he is wholly right; and his position is one of characteristic courage. A weaker man would have yielded and withheld further prosecution of unlawful trusts. And yet he does not believe, nor do we, that the late disturbance and fall of prices is wholly or largely due to his interference. Ten years of prosperity and wild inflation are necessarily followed by contraction and the fall of prices of stock; and this is true the world over, and is not confined to the limits of Mr. Roosevelt's activities. He has not meddled with British consols, but they are down also. Doubtless his prosecutions and threats of yet other action have done something, but if the guilty are being punished and market values have fallen, it is right they should, and the people make no complaint. We shall come upon a better and more honest basis, and that will be a general advantage to all.

The chief criticisms of his address have been made on his argument for the enlargement of the central authority instead of leaving the control, especially of railroads, to State action. It is almost utterly impossible for States to control the iron highways of interstate commerce. States cannot agree what to do, when a system of railway runs under one control from the Atlantic to the Pacific. We believe with Mr. Roosevelt, and the Supreme Court also, in finding powers under the Constitution which its makers never imagined. They knew nothing of railroads; they only knew post roads. But railroads take the place of post roads to carry the mails, and for all practical purposes are post roads; and if the Constitution gave Congress the power to establish post roads, that involves, by a necessary as well as fair interpretation, the authority to control railroads and all their interstate traffic. The authors of the Constitution knew nothing of a vast system of national banks to take the place of private banks; but somehow, by enlarging our interpretation of a clause in the Constitution we have created a great and beneficent system which has replaced the State banks of our fathers and given us a consistent paper currency. What must be done we will find some way to do under the unspecified powers for the general welfare included in the Constitution. The only other alternative is nullification, for amendments are almost impossible under the cumbrous system provided. It were better to have no Constitution at all.

We are glad that the President, while declaring his intention to push to the uttermost the prosecution of malefactors, does recognize the fact that the Sherman law prohibiting combinations goes too far. Combination may be very injurious in preventing competition, but it has its place and may be beneficial. The supervisory and regulative power of the Gov-

ernment over trusts should be increased; but, as the President says, useful combinations made with absolute openness may be such as the Government would properly approve, and for such the laws should provide. It is only combinations used oppressively, not those used for the benefit of the people, that should be forbidden; and some further discretion and supervision should be allowed, increasing the powers of the Interstate Commerce Commission.

The people will like the air of honesty and fairness which appears in the President's address. There is in it no vindictiveness, no hostility to corporations. Indeed the President sees that corporations and even combinations of corporations are necessary in the present conditions of industry. They are for the public good when they do not oppress the people. If they favor one customer and exclude another, then they should be punished, and that punishment should be not a mere fine which the corporation can easily afford to pay, but imprisonment of guilty officials. But for that we still need to educate the people, so that they will see that such discrimination is heinous and criminal, and will be ready to revise their ideas of morals and punish guilty people as well as guilty corporations. It is always men that are guilty, not paper charters.

The Roosevelt Personality

No judicial mind, accustomed to weighing historical probabilities and estimating the forces that control social evolution, is likely to doubt that the President's speech at Provincetown was one of the history-making utterances of great men. Aristotle, in "The Politics," tells us that States normally go round and round the cycle of changes, from monarchy to aristocracy, from aristocracy to republicanism, from republicanism to democracy, from democracy to ring and boss rule, from such oligarchy or plutocracy to tyranny or imperialism. There is a vast amount of history that conforms to this Aristotelian formula and some that does not. There have been occasions when the one-man power to which a people turns for guidance and help in the struggle of democracy against oligarchies, plutocracies and other rings, has been great and just and patriotic enough to serve the people instead of tricking them. It is certain that the American people as a whole believe that President Roosevelt is this nobler kind of a one-man power. Their confidence in him is almost unbounded. The Provincetown occasion was not the first evidence of this fact; but it was first at Provincetown that Mr. Roosevelt gave to the people as solemn and explicit a pledge as was ever given by an Executive, that the people's trust should not be betrayed. The President declared, first, that he perfectly understood, as the people understand, that the conflict between the Government and corporations of the lawless sort is a struggle without quarter between the people, on the one hand, and a determined and desperate class of very rich and very powerful men on the other hand to decide *which is henceforth to rule this country;* and he declared, secondly, that during the remaining eighteen months of his Presidency the Government will give no quarter in the fight.

Probably no one who was not within hearing of the President's voice and within sight of his dynamic face as he said these things on that hilltop overlooking the bay where the "Mayflower" first cast her anchor, can frame an adequate idea of the tremendous impression that his utterances made. There was applause, but it was not the wild, bereft-of-reason shouting and thundering that sweeps ordinary political meetings into bedlam. The men who heard and applauded were of the same old stuff that got out the guns at Lexington and Concord, without talking much about it. But they were thinking and setting their teeth a good deal harder than they stamped their feet. And there was no mistaking what it was that they thought. They were absolutely with the President on both points. They said *"That's it"* when he said what the real conflict, as he understands it, is, and they showed, as only the hard-faced Puritan can show when he is really and deeply moved, their perfect trust in the speaker's sincerity.

The speech was history-making, then, because it defined with perfect clearness

one of the greatest political-economic conflicts that have yet arisen in modern times, stated unequivocally the President's own position in the conflict, and drew an almost electric response from the people. But this was not all. The speech was history-making also because, for the first time, it revealed in combination, at one time and place, as a living whole, the elements of the Roosevelt personality that make it one of the controlling forces of our national life for the time being, and, as we are confident, one of the most potent shaping forces acting now upon the future.

Mr. Roosevelt's personal courage has only to be seen once to silence the scoffer. It is not, as his detractors allege, a studied effect. He loves the spectacular and so does the multitude; and so, unhappily, does the vainglorious assassin. Mr. Roosevelt quite unnecessarily increases the danger of personal exposure on great public occasions by making them as spectacular as possible and then by placing himself so conspicuously in the center of them that all the secret service men, policemen of the line and regiments of marines on earth could not protect him against a clever assailant. But it makes the heart of the multitude go out to him, as it went out to "The Little Corporal." As he stood erect in his carriage in the narrow streets of Provincetown he could have been struck down at any point on the long tortuous route, but in his wide-open face there was not a suggestion of any emotion except one of intense enjoyment of the occasion and complete absorption in it.

Conviction of a man's courage is the foundation of popular faith in his sincerity, for, when all is said, the liar and trickster is usually such because he is a poltroon. But there are two other important elements also in any such popular faith. One is a record of straightforward, faithful service, with evidence continually manifested of a belief in pretty stern ideals of duty. This, next to courage, was the chief element in Mr. Cleveland's character on which the public faith in him was built. Faithfulness to duty, however, may be, too often is, in the Puritan temperament usually is, combined with a certain aloofness or coldness that repels. The combination of a strong sense of duty with courage is not uncommon, and with good intellect it often makes a great man—but never the greatest man. The greatest man always has in him a vast fund of spontaneity, a something left over from boyhood and youth, that breaks out in unexpected ways and places. It may take the rather common form of dissipation; it may become a titanic and devilish lawlessness as in Napoleon, or it may assume an endless variety of expression, in good fellowship, unconventional conduct, sport and exercise, with an occasional tempest of rage that clears the moral atmosphere like a thunderstorm. This outbreaking of the elemental forces is one of the surest evidences of a nature that the multitude instinctively trusts, thru evil and thru good report; trusts partly because it loves the elemental man, partly because it feels that such a nature could not, if it would, consistently follow out a course of cold-blooded hypocrisy. It would be sure to "break out," and betray itself.

And at Provincetown all of these elements of Mr. Roosevelt's complex and dynamic human nature were splendidly revealed. He was enjoying the show too much to feel any fear. He was there to talk about the importance of carrying the Puritan ideals of duty into our present-day public life and private conduct. He had not expected to make the clean cut definition of the present conflict between the people and the predatory rich as a struggle to rule the land, but once on his feet, with the people massed in thousands around him, he could no more help it than he could help making gestures. And in the very middle of it all, he had to break loose to speak a piece about the Navy! At the banquet where he was expected to speak a second time, he learned that the fishermen of the town could be found in large number in a nearby hall. Without waiting for the company to be seated, he seized a napkin and a fork, excitedly picked out three or four of the best pieces of cold meat in sight, and bolting them in superb defiance of Horace Fletcher, *et id omne genus,* he hurried over to the fishermen!

Such is the man, Theodore Roosevelt; courageous, spontaneous, elemental, unconventional; and, therefore, as men go

in this imperfect world, sincere. Such at least he revealed himself to be as by the bay where the Pilgrim commonwealth was founded he discussed the question whether the Republic is to endure. Such the American people believe him to be, and therefore they trust him.

Elements in the Next Presidential Election

We may presume that Mr. Bryan will be the next Democratic candidate for the Presidency. Mr. Taft says there is no doubt of it. Let us assume for the purposes of this editorial that Mr. Taft will be the Republican candidate. It is to be expected that the Republican candidate, whether he be Hughes or Taft, will be elected, but there are certain elements in the case that are quite different from what they were when Mr. Roosevelt gained such an overwhelming victory. To one or two we would call attention.

The most important of these is the negro vote. That went solidly for Mr. Roosevelt wherever it was allowed to be cast. As things now stand it will not go for any one who represents Mr. Roosevelt, and least of all for Mr. Taft. When Roosevelt invited Mr. Washington to lunch, the Southern whites were passionately angry and the negroes were delighted. Now the tables are changed, for the whites have taken Mr. Roosevelt to their bosom, and the negroes are as passionately inflamed against him. Wherever they meet they pass hot resolutions, and if their papers come to defend him or Mr. Taft, it will be taken for proof that they have been subsidized. Now, there are 115,000 negroes in Pennsylvania, 100,000 in Illinois, 110,000 in Ohio, 60,000 in Indiana, 120,000 in New York, 80,000 in New Jersey, and they can vote in Delaware and Maryland. In a close vote their mere abstention might turn the scale. It makes a very serious—even dangerous—condition for the Republican party in the event of the nomination of Mr. Taft.

Mr. Roosevelt might do something to turn the tide back in his favor, and so might Mr. Taft. Should the President frankly say that he depended too much on the one-sided report of General Garlington, and that the doubts raised by the Senate investigation show that his action in discharging the negro troopers without honor was hasty, and then recalling them to the army—supposing he could do this as honestly as the facts seem to admit—he would do a brave act, and he would recover the favor he has lost. We believe he is an honest enough man to acknowledge publicly a mistake if he finds he has made one.

And if Mr. Taft should sympathetically address himself to the colored voters, as he has to the white voters of the South, he might recover what he too has lost by accepting and defending the President's action in discharging the colored soldiers. But it will never be achieved by such a speech as he made at Lexington, Ky. There he had white votes in mind, not black wrongs and injuries. He did mildly express the desire that the time would come when the negro would deserve and receive the right to have his vote counted. But that is not the point; he ought to have it now. He did say that the Fourteenth and Fifteenth Amendments were wise and right, and that was much; but it does not please negroes to be told that the Southern whites who have shut them out from the ballot, who have excluded them from their cars and railroad stations, are their "best friends." They know better. What they have a right to ask of a Republican candidate is that he declare the laws past to exclude the negro vote—the last and worst the other day in Georgia—are infamous, because their expressed intention is to admit all white voters and shut out every negro they can. Absolute equality of treatment should be demanded, even at the risk of losing every Southern State to the party.

But one other very important element that gave Mr. Roosevelt his unusual majority may be mostly retained by Mr. Taft; we mean the Catholic vote. With a shrewd statesmanship to which American politics can scarce afford a parallel Mr. Roosevelt managed to transfer a very large part of the Catholic vote from the Democratic to the Republican party. This he did by his management of the great Philippine question. In those Islands the Catholic people were utterly

hostile to the Catholic Church, and were ready, if left to themselves, to dispossess the Church of all its accumulated wealth. This Mr. Roosevelt would not allow. In order to secure the fair purchase of the estates of the orders he sent Mr. Taft at the head of a commission to Rome to visit the Pope, such an act as no previous President had done or dared to do. This was perfectly legitimate, as only the Pope could compel the orders to sell their lands to the United States Government. The lands were purchased at a good, fair figure, and the hated friars were persuaded, not forced, to leave the country. Then American bishops were sent to take charge of the Church, not without conference between our Government and ecclesiastical authorities here and at Rome. Then followed the active sympathy of our officers in the Philippines with Archbishop Harty and his associates, and their plain opposition to the Aglipay schism, which would otherwise have swept the Islands. Equally in Cuba President Roosevelt has settled the question of the purchase of ecclesiastical property at a good price, taking advantage of present American occupation; and in Cuba, in the Philippines and at Rome Mr. Taft has been his agent and helper. There will be a natural tendency for the Irish and Catholic vote to revert to the Democratic party, where it naturally belongs, but much of it will be attracted to Mr. Taft, as it would be to no other man.

One other element of uncertain importance will be detached from the Republican candidate, whoever he may be, but will not be given to the Democratic party, and that comes from the so-called labor vote. For various reasons—one of them the Haywood trial—there has been an increase of a radical or socialistic movement within the ranks of organized labor, and probably thousands of votes will be detached from the old parties, particularly from the Republican, and will be given to a radical Socialist candidate. But how many they can number no one can now say. At any rate, Mr. Taft's decisions against organized labor while on the bench in Ohio will not be forgotten by the workingmen.

Mr. Taft is *now* the most probable Republican candidate, and can probably be elected; but by no means by such a majority as was Mr. Roosevelt, notwithstanding what Mr. Taft told his Lexington audience as to this being an era of "good feeling" and harmony like that which elected President Monroe.

President Roosevelt on Editorial Ethics

It is a question of morals, of editorial morals, which Mr. Roosevelt raises at the conclusion of his article attacking Mr. Long as a "nature faker." We say Mr. Long, as he is the only asserted nature faker who is mentioned by name. The ethical point he raises is in his declaration that editors and publishers are guilty of "a grave wrong" who "condone and encourage such untruth" by giving these stories to the press.

That opens a grave question, and the statement has in it a degree of truth. It is certainly wrong to invent stories of animal intelligence with the purpose of deceiving a fairly intelligent public. It is wrong to be a receiver and distributor of falsified goods. That is, it is wrong to publish what will be a wrong to the intelligence of the reader. That ethical rule ought to be fairly clear and accepted, however difficult for an enterprising editor to follow. But is there not yet another point of view, namely, the duty of the editor to the writer? Should he tempt or assist a writer to publish that which, true or false, would be an injury to the writer's reputation or to his personal interests? For example, would it be right for him to urge the Mexican Ambassador at Washington to write an article, if he were foolish enough to do it, on the defects of the American Constitution? A British Minister at Washington some years ago wrote a letter meddling with our political matters, and an editor printed it, and that letter cost the Minister his position. The publication of that letter was a fine stroke of editorial enterprise, but was it right? If we had the suspicion that a certain Catholic ecclesiastic in this country was very much put out at the Pope's new Syllabus and had so expressed himself privately, would it be right for us to tempt him to write an article that should

destroy his influence and power in his Church? If we have discovered that a distinguished jurist has a private silly fad or notion that he delights in, could we ethically persuade him to flare it in public view to public laughter and contempt?

We are led to these questions by reading President Roosevelt's article in *Everybody's Magazine*. It was a fine piece of journalistic enterprise to secure from him this article. Everybody will talk about it and *Everybody* will be read. But John Burroughs is quoted as saying that he is sorry the President wrote it; and John Burroughs is not alone in regretting that he should have continued and repeated his attacks on one or two individual writers, calling them liars. For this is what he says:

"Their most striking stories are not merely distortions of facts, but pure inventions; and not only are they inventions, but they are inventions of men who know so little of the subject concerning which they write, and who to ignorance add such utter recklessness that they are not even able to distinguish between what is possible, however wildly improbable, and mechanical impossibilities."

One of these writers, called by name, and with his statements mentioned, is thus called a liar and an ignoramus. Without deciding the question of veracity involved and without discussing questions of courtesy, we may, without disrespect to dignities, venture gently to suggest that not a few readers regret that a delicate sense of editorial ethics did not withhold the request for that article, simply because of its effect on the public estimation of a President whom we so much esteem for his many manly virtues and his strenuous, effective and polymorphic activities. For he himself has said it: "Our quarrel is not with these men, but with those who give them the chance."

Has Kipling Declined?

ONCE in a while we get a letter, apparently from some one preparing for a debate or paper before a literary club, asking us "Has Kipling declined in popularity?" or, "What is the cause of the deterioration of Kipling?" We have replied to the latter inquiry by suggesting that it could be answered in the same way as the question which perplexed the wise men of the court so long ago: "Why does a basin of water weigh less when a fish is put into it?"

As it may be that more of our readers are interested in the question than have written to us about it, and since it is bound to be discussed now owing to the rumor from Stockholm that Rudyard Kipling will receive the Nobel prize of $40,000 for the best work in idealistic literature done anywhere in the world, it is worth some consideration here. The report of the award is not authoritative, but such premature transpirations in the past have usually proved true. Certainly it would be difficult to put forward a candidate from the English-speaking world who has a better right to it. It might be supposed that this award, if confirmed, would settle the question, for the will of Alfred Nobel provides that the prize shall be given for work done during the preceding year, but unfortunately the committees have disregarded this provision, and the literary prize has always been given to men whose chief work was done years before the establishment of the Fund, so, if Kipling had done nothing worth consideration for the last seven years, as some people think, he would still be eligible.

The two questions, "Is Kipling as popular as ever?" and "Is his work as good?" are not the same, and have, we are sorry to say, no logical connection. New books crowd out the old simply because they are new, not because they are better. The "Kipling craze" undoubtedly past away at the beginning of the century, but in our opinion he has as many sincere admirers now as he ever had, and, if he has fewer readers, it is because he has been so extensively read. Prof. H. Morse Stephens, in a talk at the University of California not long ago, expressed his gratification on the change that had come over the literary ideals of college students. When he was at Oxford, he said, their desks were littered with Swinburne and Wilde, but now the students had taken Kipling as their guide and inspiration, and were being influenced by his insistence on the importance of work and discipline.

When Kipling made his sensational advent into London at the age of twenty-five with his tales of India he had the

charm of triple novelty—a new style, a new field and a new ideal. Now, seventeen years later, these have become common property. Most of the younger set of writers have taken lessons of his craftsmanship, as their forms and even their phrases show. India is no longer a fresh field, and imperialism is an old story. If Kipling could write another tale of Simla or Lahore, or should unearth one from the files of the *Civil and Military Gazette* as good as any of those he turned out after hours to fill a space in the next day's paper, it would not create a literary furore. But this is not, unfortunately, because the popular taste has improved in the meantime and outgrown him. We have a pat example of the impossibility of repeating a success in H. Rider Haggard. In 1886 "She" was the sensation of the day; twenty years later "Ayesha" appeared, as near like it as two peas, and it fell flat. From figures furnished by a public library in an important city we find that the relative popularity of some of Kipling's books is as follows, beginning with those most called for: "Puck of Pook's Hill," "Jungle Books," "Captains Courageous," "Kim," "Traffics and Discoveries," "Wee Willie Winkie," "The Light That Failed," "Soldiers Three," "Plain Tales from the Hills, "Barrack Room Ballads." Juveniles always outrun books for adults; apart from this it is evident that the public calls most for the recent books and decidedly prefers novels to volumes of short stories.

To see if Kipling holds his own we must compare him with his contemporaries. There were a thousand books of fiction published in England in 1890 when "Plain Tales from the Hills" appeared. How many of them are now more read? Here are the best sellers of that day, and a good list it is, too. William Black's "Stand-Fast Craig-Royston," Walter Besant's "Armorel of Lyonesse," Hall Caine's "The Bondman," Maarten Maarten's "The Sin of Joost Aveling," William Morris's "News from Nowhere," Haggard and Lang's "The World's Desire," and Edwin Arnold's "Phra the Phœnician."

In the United States, when Kipling made his debut, we were reading Margaret Deland's "Sidney," Howell's "Shadow of a Dream," Crawford's "Cigarette Maker's Romance," Mrs. Burton Harrison's "Anglomaniacs," Tourgee's "Pactolus Prime," Ignatius Donelly's "Cæsar's Column" and Janvier's "Aztec Treasure-House." How long ago it seems!

Does Kipling's poetry hold its own? It was in 1896 that "The Seven Seas" appeared, and that same year we had, let us see, Swinburne's "The Tale of Baden," William Watson's "The Purple East," Alfred Austin's "England's Darling," Stephen Phillips's "Christ in Hades" and Fiona Macleod's (*née* William Sharp) "From the Hills of Dawn." How many lines can you quote from these very respectable volumes to match what you remember of "McAndrews' Hymn," "The Last Chantey," "The Song of the English," "The Rhyme of the Three Sealers," "An American," "The Miracles," "The Native-Born," "The Cholera Camp," "That Day," "The 'Eathen" and "L'Envoi"?

But how does Kipling's recent work compare with his earlier? Mr. Kipling is writing more slowly now, or at any rate publishing less, but we are unable to detect any falling off in literary skill. His latest poem, "The Sons of Martha," which appeared in the Sunday supplement of many daily papers this spring, is certainly one of his best, most striking and original in thought and versification. Its title as applied to workingmen seems likely to become part of the language as "The White Man's Burden" and "Lest We Forget." When it was written we have no means of knowing, but it could not have been very long ago for he makes an effective use of one of the recently discovered *logia* of Christ.

"As in the thronged and lightened ways,
So in the dark and the desert they stand,
Wary and watchful all their days,
That their brethren's days may be long in the land.
Lift ye the stone or cleave the wood
To make a path more fair or flat.—
Lo! it is black already with blood
Some Sons of Martha spilled for that."

Considered merely as a *tour de force* Kipling's latest short story, "With the Night Mail," published in *McClure's Magazine*, is unequalled in its line, either by himself or any one else. It is a theme that has been often attempted; a trip on

an airship in the year 2025, but Verne, Bellamy and the host of others who have dealt with the mechanics of the future have been unable to manage their many inventions. Wells alone has been tolerably successful in keeping the human interest from being swamped, and he does it by a discreet reticence about mechanical details. But Kipling makes his story out of this refractory material; invents a new technological vocabulary, and teaches it by his old trick of assuming that the reader already has the knowledge that he is casually imparting to him. At the end of a dozen pages, with no tiresome explanation, the reader knows more about the airship of the future than about his own bicycle; he can, or thinks he can, draw a working plan of one, and tell how it is superior to other makes, how each part came to be invented, and what are the signals and international rules of aerial navigation; all without losing the run of the story, which tells how Postal Packet 162 was caught in a flurry over the Bank Mark Boat "when the heavens were balancing their volt accounts."

"We were dragged hither and yon by warm or frozen suctions, belched up on the tops of wulli-was, spun down by vortices, and clubbed aside by laterals under a dizzying rush of stars, in company with a drunken moon. I heard the rushing click of the midship engine lever sliding in and out, the low growl of the lift-shunts and louder than the yelling winds without, the scream of the bow-rudder gouging into any lull that promised to hold for an instant."

With a poem and a story like these in mind, together with "They" and "Puck of Pook's Hill," it is impossible to say that Kipling's hand has lost its cunning.

The Stuttgart Socialist Congress

THE International Congress of Socialists, in session last week at Stuttgart, Germany, was in many respects the most important gathering in the history of the Socialistic movement. It was the largest international gathering, it represented Socialism at the highest point of numerical strength which that movement has so far attained, and the subjects which it discussed were of the greatest significance to that movement's future. Moreover, the decision of these congresses become more and more of the nature of a standard of doctrine and a rule of conduct to Socialists all over the world. Originally these decisions were but advisory; and so they are even today in so far as goes either the pretense or the power of enforcement. But the force of circumstances ever tends to draw more closely together the Socialist parties of the various nations, to harmonize their sometimes varying doctrines, and allowing for certain racial and industrial differences, to impel them along like lines of advance. The decisions of the International Congresses thus carry along with them, of their own vigor, an increasing obligation of acceptance.

The Socialist vote of the world is now reckoned at approximately 8,000,000. All the elections held within the last two years, except those in Spain and in the United States, show remarkable increases. England, France, Austria, Finland, Denmark, Holland and Sweden have all added largely to the Socialist vote, and even Germany, in spite of a united and bitter anti-Socialist campaign which reduced the Socialist representation in the Reichstag from 79 to 43, piled up a quarter of a million increase in the popular vote. The Congress thus met under the most favorable auspices.

The more important questions that were debated were those regarding Socialism and trade-unionism, Socialism and colonialism (involving the cognate questions of patriotism and militarism), and Socialism and immigration.

The attitude of the Socialist party toward trade unions is a subject which is debated in all congresses, local, national and international. Long ago the German Socialists adopted a *modus vivendi* with the trade unions which has prevented serious friction, and has caused even most of the non-Socialist unions to look to the Socialist representatives in the Reichstag as their own representatives. This policy has been followed generally in the North European countries and in Austria. In France there is less harmony between the trade unions and the United Socialist party. In England, the Independent Labor party, tho most of its leaders are Socialists, is more of a trade union than a Socialist party, while the

straight-out Socialist party, the Social Democratic Federation, has only a minor influence with the unions. In the United States the situation is greatly complicated, and the Socialist influence in the unions is making its way but slowly.

The point at issue is the acceptance or rejection of the theory of the class war. To the Socialist this is a fundamental doctrine. All the manifestations of protest against modern evils in society are to the Socialist but differing manifestations of the world-wide movement of the working class against the owning or capitalist class. Most of the protesters, he admits, are but vaguely conscious, or even unconscious, of their motives and their aims. The "pure and simple" trade-unionist, acquiescing in the present order of society, and vainly striking for better wages, hours and conditions, is a creature of the Zeitgeist, just as is the studied Socialist. But he is unconscious of the influences which are affecting him and equally unconscious of the goal to which, as the Socialist maintains, all these protests and movements tend—the co-operative commonwealth. The Socialist is thus impatient with the "pure and simple" trade-unionist, and this impatience is frequently the cause of open warfare between them. The result of these antagonisms is invariably to throw the trade-unionist back in the direction of conservatism.

The traditional and orthodox policy of the Socialist party is not to fuse politically with the non-Socialist unions, nor to make any concession to them in method or doctrine, but at the same time to support their struggles, to respect their labels and to keep on the best of terms with them in order to influence them with its propaganda. This policy is, of course, not everywhere followed. The Socialists in the English Independent Labor party, on the one hand, actually fuse with the unionists, while a body like the Socialist Labor party, a minor faction in the United States, goes to the other extreme, and maintains an attitude of the utmost hostility to the regular unions, even throwing what strength it has to the organization of a rival labor body, the Industrial Workers of the World, which is founded upon the doctrine of the class war. From the meager despatches so far received, the exact wording of the resolution adopted cannot be stated. But it is unlikely that the congress has departed from the traditional policy, tho it may have sanctioned a large measure of national autonomy in dealing with the question.

The debates seem to have shown a considerable diversity of view regarding colonies. On the fundamental question, however, that the causes of the reaching out for colonies on the part of the industrial nations are almost exclusively economic—in a word, the need of greater markets for an overplus of goods—there was no dispute. But that all colonies are everywhere and always maintained with the sole view of exploiting to the utmost their inhabitants, was emphatically denied by more than one delegate. There seemed to be a more or less general recognition that, tho the cause of the seizure of lands for colonies is virtually always the same, yet colonies may be, and sometimes are, administered with a fair sense of the rights of the inhabitants, and that they should not be sweepingly condemned. Militarism and warfare were condemned, as in previous congresses, tho a strong national feeling was evidenced in the debates. The anti-nationalism of M. Hervé found few or no supporters.

The immigration question was warmly debated at the Amsterdam Congress in 1904, and was then referred back to the nations for new recommendations for the present Congress. The American delegation of the Socialist party presented a set of resolutions recognizing the inevitability of the migration of industrial workers, but censuring the deliberate fostering of immigration of peoples of the lower standards of living for the purpose of breaking strikes and lowering wages in the more advanced countries. From nothing in the despatches can it be learned what action the congress took. The question is a critical one and is thronged with difficulties. Socialism proclaims the universal brotherhood of man. But the unrestricted importation of blacks into Australia and of Chinese into America raises up a vista of the degradation of labor and the lowering of living conditions at which even the most sentimental Socialist stands aghast. A resolution which can square the sentiment of universal broth-

erhood of man with a demand for the exclusion of Chinese and Polynesians would have to be shrewdly drawn. But then the congress may have done what its predecessor did—may have found the subject too difficult for present settlement and put it by for another day.

Zionists and True Americans

Jacob H. Schiff, the wealthy Jewish banker, says that a true American cannot be a good Zionist. He says:

"If they are honest Zionists—I mean, if they believe and hope and labor for an ultimate restoration of Jewish political life and the re-establishment of a Jewish nation—they place a prior lien upon their citizenship, which, if there would be a possibility for their desire and plans to become effective, would prevent them from maintaining allegiance to the country of which they now claim to be good citizens. The Jew should not for a moment feel that he has found only an asylum in this country; he must not feel that he is in exile, and that his abode here is only a temporary or passing one. If those who come after us are to be freed from the prejudice from which this generation is not unnaturally suffering, we need feel that politically no one has any claim upon us but the country of which, of our free will, we have become citizens; that even if we are Jews in faith there is no string to our citizenship."

Let us consider parallel cases. If John Boyle O'Reilly comes to this country to escape British oppression of Ireland, but would return if Ireland achieved home rule, would he be a true American? If William Waldorf Astor lives and votes here, but is all the time hoping for the time when he shall be ready to buy a place with the English aristocracy, can he be meanwhile a true American? Mr. Schiff is pretty nearly right. A true American can believe in Zionism—for other people, Russians and Rumanians, who will go to Palestine rather than come here to burden our charity, but he will make this his permanent home, and make the development of its institutions his task, and teach his children to love the United States better than Palestine, just as the descendants of the Puritans and the Dutch prefer America to Britain or Holland. The company of American Germans whom you will see returning on the steamer from a summer's visit, and who, when they see the coast call to each other: "No more Fatherland for us!" are true Americans already.

The Chicago *Tribune* has been taking the votes of 1,700 leading men in the Middle West as to their choice for the Republican nomination. Taft is first choice (always supposing that Roosevelt will not accept) in Michigan, Minnesota the Dakotas, Iowa, Nebraska, Missouri and Kansas, his vote being 944, and he is second choice in Illinois, which favors Cannon; Indiana, which presents Fairbanks, and Wisconsin, whose votes are for La Follette. That is, Taft has also 322 votes as second choice. The first choices run: Taft, 944; Cannon, 191; Fairbanks, 159; Hughes, 184; La Follette, 239; while 158 insisted on voting for Roosevelt.

Exactly why ex-Senator Chandler has withdrawn the suit of Mrs. Eddy's "next friends" for an accounting of her property on the ground that she is not mentally competent to manage it is not clear. It looks as if the evidence shows her to be legally sane enough to attend to her own affairs. But it is a pity that the question of sanity could not have been settled now, instead of leaving it to be raised after her death. Why should not on old or feeble person announce his will, and then ask any who might plan to assail it to do so while it is possible to decide as to his competency.

It is easy to make distinctions between things that do not differ, and these distinctions may have a saving value. Such is the assurance from high Catholic authority that the Pope's new Syllabus of Errors is not an infallible utterance. But, on the other hand, we are told that it is binding on the consciences of Catholics and must have their obedience. What is the difference? Simply this, that it holds for the present stress, but may be allowed to lapse later in silence.

The Church of England, and its daughter Church in America, hold but do not hold to the Thirty-Nine Articles. The Methodist Church has reduced the number to twenty-five, and now the union of three of the smaller Methodist Churches in Great Britain, with nearly 200,000 members, cuts them down to twelve. By and by they will come down to one, which was our Lord's number.

Insurance

The Moving Picture Hazard

BECAUSE of the growing popularity of moving picture shows at seaside and other resorts, and of the extra hazardous character of such risks, the circular letter recently issued by the Southeastern Tariff Association becomes especially interesting to fire underwriters, as well as to those interested in amusement enterprises in which these moving pictures are incidental. The circular letter in question contains the following:

"In view of the large number of these equipments installed thruout the country and the fire hazard incident to carelessness or defective installation or apparatus, it has been deemed advisable to send out the following for the information of companies and agents:

"The main hazard is due to the films; these films vary in length from some 800 to 2,000 feet, are made of thin celluloid, the base of which is the unstable and dangerous compound, guncotton; they readily burst into flame at a comparatively low temperature and under favorable conditions, such as are met with in these operating booths, will burn almost explosively. The arc lamps throwing this picture are so constructed as to minimize the probability of a broken film coming in contact with the arc, but, when broken, the loose lengths of these films coil themselves about the place very much like the loose spring of a Waterbury watch and are likely to find their way to any part of the room. In operation, light from the lamp is thrown on a small section of the moving film, thru lenses, and the focusing effect is to produce heat similar to that from a sun glass. It will be readily seen, in view of this, that should some defect in the mechanism or feed cause the film to stop for a few seconds, unless a shutter is promptly dropped to cut off the heat, it would quickly burst into flame. It is for this reason an automatic shutter is required. It should be borne in mind that the film burns quickly, and, if so enclosed that the sudden flash cannot communicate fire outside the operating booth, this hazard can be eliminated and, owing to the short duration of the fire, this is not difficult of accomplishment. The other hazardous features are mere matters of construction, consisting of defective wiring and improperly located rheostats or resistances; both of these can be obviated by inspection.

"The operating mechanism is contained in an elevated booth at the front of the building, ordinarily of dimensions of about 5x8 or 6x10, and the picture is thrown on a white curtain at the opposite end of the building. As it is essential that the auditorium be kept dark the operating booths are generally entirely closed, with a small opening toward the curtain thru which the picture is thrown. The fact of these booths being located near the entrance to the building will facilitate the department's work in event of fire. With an experienced operator and the apparatus enclosed in a fireproof booth, conforming to the requirements of the National Electric Code, the probability of fire loss would be reduced to a minimum. The greatest hazard will be in small towns, due to inexperienced operators, defective and uninspected equipments and installation, and inferior fire protection. A chemical extinguisher might well be required in these places."

THE Pennsylvania Railroad Company is considering the advisability of equiping all of its yard locomotives with fire-fighting apparatus as a protection against the ever-present hazard of fire in its shop buildings, roundhouses, signal towers, station and other buildings. Several locomotives thus equipped at Altoona, Pa., rendered such good service at a recent fire in a train of box cars that the company has taken up the question of extending the fire equipment to all of its yard engines.

THE big fire which swept away seventeen summer hotels, sixty cottages and other buildings occupied as stores at Old Orchard, Me., on August 15th was the third large conflagration of the kind which happened this summer. The others took place at Coney Island and Revere Beach. The property loss at Old Orchard Beach will approximate half a million dollars, but comparatively little insurance loss took place, as conservative companies do not take kindly to underwriting on risks of this class. Most of the destroyed buildings were of wood, of the flimsiest possible construction. Help in fire fighting sent from nearby cities was heavily handicapped because of variation in the coupling threads of the hose in use in the different cities. The Old Orchard fire is a strong plea for what might perhaps be called a society hose coupling.

Financial

The Responsibilities of Wealth

THERE is, generally speaking, a universal tendency to envy the rich and prosperous man. He lives in a fine house. He fares sumptuously every day, and so far as externals go his condition is legitimately provocative of envy. There is, however, another side, which most persons overlook entirely, and that is the responsibilities of wealth. With every added dollar that comes into his hands there comes also an added burden. The cares of this world and the deceitfulness of riches were long ago held up to view as a warning to those who seek after wealth to the exclusion of other and better things. A bank president, whose wealth ran well into millions, once stated in the writer's hearing that he was far happier when as a young man he worked at a mechanic's bench with $300 per year income than when he counted his wealth in seven figures. Wealth creates heavy responsibilities from which the owner cannot escape. The brain is taxed daily and hourly to find profitable investments from which the returns shall be adequate and at the same time safe, and the investment of moneys calls for intelligence of the highest order. Thought, untiring energy, unrelaxing vigilance and constant and never-ending unrest are the prices that must be paid for the possession of wealth, otherwise riches will now, as in the old days, take unto themselves wings and fly away. The fear of loss that forever hangs over the man of large affairs is a veritable sword of Damocles that is suspended by a single hair. The man in the street, with his small family, his few possessions and simple life is only too much inclined to count himself unfortunate, because he looks upon a captain of industry and sees him with a steam yacht, a country place and perhaps a string of horses, but he knows nothing of the mental strain that is ever present with the man who has excited his envy, and he probably never once thinks of the many who look to this one man for their means of living and who place on his shoulders the very responsibilities of their existence. Added care and added responsibility go hand in hand with every new luxury that a man has, and these refinements of life carry with them an extra expense that is altogether out of proportion to the importance that belongs to them. The man of wealth can, of course, have many temporal things that are denied to those of smaller means, but pure enjoyment and great wealth do not always walk in each other's tracks. There is a certain joy lurking in self-denial as a means of obtaining many desired things that comes to most of us that is unknown to great capitalists. The masses have some forms of happiness denied to men of wealth and power, and before we begin to distress ourselves because we are poor we may well realize, at least academically, something of the responsibilities of wealth, and learn to know that wealth is not always happiness nor is it by any means all ease.

....In the last fiscal year we exported $5,500,000 worth of automobiles, and the value of automobiles imported was $4,500,000.

....On July 31st there were in existence 6,550 national banks, having an authorized capital stock of $902,405,775 and outstanding circulation amounting to $603,395,886.

....George E. Roberts, the retiring Director of the Mint, has published a revised estimate of the stock of gold in the country. His conclusion is that on June 1st the stock of coin and bullion was $1,464,845,240, of which $1,109,458,330 was held by the Treasury and the national banks.

....Dividends announced:

American Graphophone Co., quarterly, common, 1¼ per cent., payable Sept. 15, 1907.

Amer. Telephone & Tel. Co., coupons from Convertible 4 per cent. Gold Bonds, payable Sept. 1, 1907.

Entered at the New York Post Office as second-class mail matter.

Survey of the World

Fall of the St. Lawrence River Bridge

A calamitous accident was the collapse of the enormous cantilever bridge in course of construction across the St. Lawrence five miles below Quebec, with the loss of 84 workmen engaged upon it, of whom 25 were skilled American workmen and 30 were Indians. The bridge was to be about a mile and a half long, and half of it, from the south shore to the middle of the stream, as far as built, suddenly buckled and collapsed and fell into the water. It is said that the cause was the overweighting of the insufficiently supported structure on the middle span by materials for construction. The workmen rushed for the shore end as soon as they saw the end falling, but the whole was pulled down with a terrible crash and only a few escaped, some of them managing to hold to the iron as it rested on the shallow bottom near the shore. The workmen were employed by the Phenix Bridge Company, of Philadelphia, and the cost of the bridge was computed at $10,000,000. The central span was 1,800 feet, over a third of a mile, being the longest for a cantilever bridge in the world, and requiring the highest order of engineering skill. This is 90 feet longer than the span over the river Firth, and 205 feet longer than the longest span of the Brooklyn Bridge. The principle of a cantilever bridge differs from that of a suspension bridge, as a long span rests balanced in the middle on each pier, and strengthened by brackets, and the ends of two spans meet over the middle of the river, or are connected there by a central span. In this bridge the arms reaching out from the main piers were each to be 562½ feet long, and were to be connected by a central suspended span measuring 675 feet. The loss, over a million dollars, will fall on the Phenix Bridge Company.

The Fleet to the Pacific

The Navy Department has ordered nearly all the effective war vessels in our Navy to start December 15 on a practice cruise to the Pacific by way of Cape Horn, the route taken by the "Oregon" on her return home during the Spanish War. Rear Admiral Evans will be in command, and he would have much preferred to go by way of the Suez Canal, but that would have involved a visit to the Philippines and would have appeared to be in the nature of a more pronounced threat to Japan than the route by Cape Horn. Sixteen battleships will go on this cruise, and six torpedo-boat destroyers The fleet will go at moderate speed and will be accompanied by coaling vessels. Coal is now being hurried to the various coaling depots, as it will take 125,000 tons to supply the fleet. The vessels left behind will be those of the older type, so that the main effective fleet will be in the Pacific waters. This is called a practice cruise, and it is distinctly declared that it has no belligerent purpose. Meanwhile great doubt has been expressed as to whether there are on the Pacific Coast any suitable docks for the larger vessels in case it is necessary to make repairs. The Japanese are now taken up with Korean affairs, and have ceased to take any special public interest in the announced movement of the fleet to a place where it will

be able to protect Hawaii and the Philippines. It is supposed that the fleet will reach San Francisco about the last of April, proceeding at the rate of not more than 12 miles an hour, and making some long stops on the way.

Ex-Governor Taylor

Mr. Winfield T. Durbin, who was Governor of Indiana from 1901 to 1905, has made the statement that while he was Governor the attempt was made to bribe him to turn over ex-Governor Taylor to the Kentucky authorities for trial on a charge of conspiracy to assassinate Governor Goebel. He says that after he had declined to meet certain gentlemen from Kentucky to consult as to the extradition, State Senator Barkley, since dead, was invited to Cincinnati by these Kentuckians and was told that there remained $93,000 of the $100,000 appropriated by the Kentucky Legislature, and that this would all be cheerfully paid over if the Indiana Executive would surrender Taylor. Ex-Governor Taylor has written a long communication to the Kentucky authorities in which he declares that he will return to Kentucky and submit to trial for complicity in the murder of Governor Goebel, on condition that he may have a fair trial. He makes a long list of the conditions, such as that half the jury be Republicans and half Democrats. On the other hand, the Kentucky Governor has promised fair conditions, but no agreement as to terms are agreed upon, and it does not seem likely that Taylor will be able to return to his own State.

Archbishop Williams—Richard Mansfield

During the past week two men of very different fame died in this country. Archbishop John J. Williams, of Boston, was the oldest of the Catholic hierarchy, having been born in Boston, in 1822, and consecrated bishop in 1866. In 1875 Boston was made an archdiocese, and he became Archbishop. During his administration there has been a wonderful growth of his Church in New England, where there are now seven other Episcopal Sees belonging to the Province of Boston, those of Burlington, Fall River, Hartford, Manchester, Portland, Providence and Springfield. The Boston Archdiocese contains a Catholic population of about 700,000, with some 575 priests. Archbishop Williams has erected a cathedral at the cost of nearly a million dollars. He was known as a wise and gentle administrator, and was greatly loved and admired by his clergy. He is succeeded by his coadjutor, the Most Rev. William H. O'Connell, who was consecrated as Archbishop only about a year ago, having been transferred by the authority at Rome from Portland, Me., and not having been one of those nominated by the bishops and clergy. He is a man of much energy and experience at Rome. ——Passing from the Church to the stage we have to record also the death of Richard Mansfield, the well known American player. He was, however, born in Berlin, his father being English and his mother German, and a famous singer of her day. He was brought to this country as a boy, but, after serving as a clerk in Boston, he went to London and slowly rose in the ranks as a player. His marked success began in 1883, and he gained dramatic fame in leading parts in "Dr. Jekyl and Mr. Hyde," "Richard III," etc. In 1895 he took charge of the Garrick Theater, in this city. He was a very ambitious and positive man, and made enemies as well as warm friends. He was intensely ambitious. That he was a great player, the greatest on our stage, imaginative, humorous and dramatic, with an unusual power of expressing character, there can be no question, even if he did not reach the hights of genius. His death will prevent the carrying out of his intention to offer a magnificent presentation of "Hamlet," and his promise to act in Paris this year.

Various Items

The President has let it be understood that he will not press any further his desire for joint Statehood for Arizona and New Mexico, understanding that it has been settled adversely by the verdict of the people. ——Secretary Taft's speech in Oklahoma criticised the new Constitution. It is understood that the anti-injunction clause is particularly objectionable to the President and his advisers. The people will vote on ratification on September 17th, and a

sharp conflict is anticipated.——The Boston Chamber of Commerce has adopted resolutions deprecating agitation against the Japanese and opposing any legislation intended to discriminate against Japanese. This action was taken in response to appeals from chambers of commerce in Japan. But in British Columbia there is growing an agitation to exclude the Japanese, of whom there are 8,000 in British Columbia and 2,500 are expected to arrive in a few months to work on the Grand Trunk Pacific Railway. There are even more Chinese and a number of Hindus. There is an understanding with Japan that not more than 500 shall be admitted in a year, but most of these come from Hawaii and many cross the line into the United States. —— The American Bar Association has been holding sessions at Portland, Me. Ambassador Bryce was a guest and spoke on the Cannon Law. It has taken strong action against making State insurance commissionerships political prizes. A severe resolution condemning President Roosevelt's utterances in his messages in criticism of judges' decisions was tabled after much feeling was excited.——The negroes connected with what is called the Niagara movement, held in Boston, have issued an address, calling on "the 250,000 black voters of the North" to use their ballots "to defeat Theodore Roosevelt, William Taft or any man named by the present political dictatorship," and adding that it is "better to vote for avowed enemies than false friends." —— Mr. Bryan in *The Commoner* criticises Mr. Taft's Kentucky speech, and calls him a straddler on nearly all important questions, a compromise instead of a fight for any genuine reform. Mr. Bryan avoids discussing Mr. Taft's treatment of the negro question. But the Southern Democratic papers say that it will bring over no white votes, while the negro papers generally express disappointment. —— Governor Hoke Smith has overturned the State Railroad Commission by appointing two additional members, which gives a majority to his policy against the railroads, and also a new chairman. A principal matter is the securing lower rates of freight between the seaboard and the interior cities, and equal return rates. In an address carefully prepared the chairman made a long catalog of the grievances the people have against the railroads.——Prince William, grandson of the King of Sweden, has been entertained during the week in the neighborhood of New York. He was entertained by President Roosevelt at Oyster Bay and visited the sights in this city, and left on his Swedish vessel last Monday.

Central American Peace

It was announced early last week from Washington that Assistant Secretary of State Bacon was working to bring about a lasting peace in Central America by endeavoring to persuade the five turbulent little Republics to submit all their present and future disputes to the joint umpireship of the United States and Mexico who would be empowered to see that the awards were carried out in both the spirit and the letter. On Saturday it was announced that each of the Republics had assented to this proposition, and now the United States and Mexico are expected to call a Peace Conference of these States in Washington shortly after the first of the year. It will meet at Washington because the relations between Mexico and Guatemala are somewhat strained. None of the Central American diplomats at Washington will have any voice in the preliminary arrangements as the idea is to avoid all jealousies and vexations. It is assumed on all sides that this Conference will bear fruit, and if so it will probably do away with all those petty wars that have disgraced Central America for so many years. Of course the main reason that suggested this scheme to our State Department has been the trouble resulting from the recent attack by Nicaraguan troops on Acajutla, concerning which no principle whatsoever was involved. It will be noted that if the United States and Mexico guarantee the carrying out of their awards as is proposed it will be the first time that compulsory arbitration has been applied to nations by nations for the settlement of disputes.——The Asphalt mess in Venezuela still remains in *statu quo*. Castro has refused the third request for arbitration from Secretary Root and it is hinted at Washington that the matter will go over till the winter so that Congress can pass upon the case. In the meantime

there is a call in certain influential editorial pages for the publication of the report on the Venezuela situation, which Judge Calhoun went to Venezuela to get for the President about two years ago, but which has never yet been given to the country.

The Hague Conference

The American proposition for the International High Court of Justice, which we published in some detail last week, has given some of the smaller states much uneasiness because they cannot hope to have an equal representation on the court, composed of 17 members from the 47 nations attending the Conference. Señor Esteva, of Mexico, admirably sums up the objections as follows:

> The Mexican delegation thinks that a new and really permanent arbitration court, in order to command universal sympathy and confidence, must be entirely outside of political or national influences, either direct or indirect. This court must be an organism essentially juridical, representing all the countries, large and small, strong and weak, that assembled for the Second Peace Conference, on the basis of the most absolute equality. The Mexican delegation does not consider that these capital conditions are embodied in the present project; therefore, according to the instructions from its own government, and in accord with its own personal feelings, it cannot agree with a convention in which all the States convoked to the conference are not considered on a basis of the most absolute equality. For these reasons the delegation declares it does not accept the project for a convention regarding the establishment of a high court of justice presented by the delegations sent from the United States, Germany and Great Britain, and it will vote against it.

Indeed, the opposition to the American plan led by the prolix Barbosa, of Brazil, was becoming so formidable that Mr. Choate (it is said at Secretary Root's instigation) has suggested that the American hemisphere take four judges, Asia two and Europe nine, thus reducing the number of judges from 17 to 15. As this proposition seems to be acceptable to the little states it is expected that the American proposition will probably have little difficulty in passing.——The next question which has engaged the most attention during the past week has been that of compulsory arbitration. Germany, followed by half a dozen other states, will accept no universal or general scheme of compulsory arbitration, especially in anything that affects "national honor." As "national honor" is a term susceptible of any meaning, General Porter has proposed that the following subjects do *not* affect national honor: The interpretation of stipulations in customs tariffs, the measurement of ships, the extent to which foreigners may be considered as citizens with respect to taxation, the concession to foreigners of a right to buy and possess real estate, the interpretation of conventions for the international protection of laborers, concerning international railways, means to prevent collisions at sea, copyright, rules of commercial and industrial companies for employment of workmen, weights and measures; the reciprocal bestowal of gratuitous assistance upon poor patients, convention regarding boards of health, international and private law, civil and penal procedure, and disputes regarding the amount of pecuniary claims for damages when the principle of indemnity is admitted. General Porter would like to see all disputes arising under the above propositions sent to the International High Court of Justice for compulsory arbitration, but if this cannot pass he suggests that each nation bring forward the above or similar subjects, upon which it considers obligatory arbitration possible, so that, whenever two nations have agreed on the same thing, that thing shall always be referred to obligatory arbitration. M. Nelidoff, the president of the Conference, has communicated to the delegates the American proposal regarding the periodicity of the future conferences which suggest that the next one take place not later than 1914. A small committee will at once set to work on the program of the next conference, studying questions of rules, methods of discussion, etc. This committee is to convoke the conference in accordance with the desires of the powers. A plan is on foot to commemorate the birth of the peace ideal by erecting a monument designed by Frederick MacMonnies, the American sculptor, to be placed in front of the Carnegie Palace of Peace. The design shows a group of three figures of heroic size, not less than 25 feet high, expressing the idea of peace intervening among the warring elements of the world. It will cost about $100,000. The exact date of closing the Conference has not yet been set, but it ought to be very soon.

Absolutism in Portugal

The dictatorial *régime* of Senhor João Franco does not seem to be a bad thing for the country. The Government is carrying out by legislative decrees a program of financial and administrative reforms which have been sorely needed, but which, under the old corrupt system of party rule, were likely never to have come. The annual deficit, which has, for the last fifteen years, averaged $6,385,000, altho partially concealed by adroit bookkeeping, has this year been reduced to less than $2,500,000. The internal funded debt, which was $381,249,000 in 1894, had risen to $561,000,000 by 1906. In the last year this has been reduced to $549,133,200. On account of the extravagance and inefficiency of the administration, taxes in Portugal had become very heavy for so poor a country. The rate per head of the population, which in 1882 was $4.50, had risen to $9.60. This does not include local taxation, which, in its many forms, direct and indirect, is extremely burdensome on the people. For example, the octroi or duty on food products brought into the city of Lisbon amounts to more than $6 per head, of which, however, only 30 per cent. reaches the Government; the rest is absorbed in the cost of collection. Among other reforms, it is proposed to take the university out of politics by having the professors nominated and paid by the Council of Education, a partly elective body. Premier Franco is relying upon some future Parliament to legalize his acts, which he believes will meet with the approval of the people when sufficient time has elapsed for them to be understood and appreciated. It is supposed that a new Cortes will be called late in the fall. In the meantime the country seems to be tranquil as a whole. There were some riotous demonstrations at first, but they soon stopped when the police showed a readiness to fire upon the mob. Newspapers attacking the Government were fined or suppressed. The Opposition party has lost its leader by the sudden death, by heart failure, of Senhor Hintze Ribeiro, head of the Regeneradores, or Conservatives, from which Franco broke away when he organized his new party. The decrees issued by the dictator have been pronounced legal by the Supreme Court, in an appeal made to it by the Government from the decision of a judge of the commercial court, which had refused to recognize their validity. But several members of the Cabinet have declared their dissatisfaction with the dictatorship, and the resignation of Cardinal Netto, Patriarch of Lisbon, who has retired to a Franciscan monastery, is regarded as an expression of disapproval of the *régime*. The elections, whenever they are held, are likely to show an increase of strength in the House of Representatives, where their advent a year ago upset the traditional balance of power between the Regeneradores and Progressistas.

The Boycott Movement in India

An organized movement in India for the boycott of British goods and the encouragement of native manufactures for political purposes has now lasted two years. It is apparently strong and popular in Bengal, and has been successful in arousing considerable uneasiness among the English, altho there seem to be no practical advantages gained so far. It has been found impossible to establish native cotton mills, as the swadeshi leaders proposed, and the import trade of India during the last financial year shows a normal growth even in cotton goods and sugar. A celebration of the anniversary of the origin of the swadeshi movement in a Calcutta temple, August 7th, 1905, when a crowd of natives took solemn oath to establish the economic independence of India, was held in College Square, and among the crowds in attendance were some 5,000 students of the Government schools, altho these were prohibited by a recent Government circular from attending such political meetings. Surendranath Banerjee delivered an address congratulating the people upon the national movement and prophesying that self-government would be their reward. He denounced Mr. Morley for stating that the Government of India must continue to be personal and autocratic. Mr. Morley was inaccurate and his philosophy was bad. This being the attitude of British statesmen, it was for the educated men of India to carry the nation with them in the grand march of their political emancipation. Boycott was the negative and swadeshi the positive aspect of the

same question; they were indivisible parts of the same common whole. Home articles were steadily making their way and foreign articles being displaced. *Bande Mataran,* a native newspaper, warned the Government that the attempt at bureaucratic control had alienated the young men of the country, who would have nothing to do in the future with the Government institutions of Bengal. It called attention to the "striking similarity" between present conditions in India and those prevailing in "all subject nations at the initial stages of their struggle," an indication that "Providence is with us." It called attention to the fact that in America "the desire for independence first found expression in the boycott of English goods"; and "the boycotting zeal was first inflamed in the younger section of the community; the shooting down of a boy by the military in a certain boycott fracas irreconcilably arrayed the colonists against the mother country." Such addresses and articles seem to have inspired a willingness among the young natives to make martyrs of themselves in the cause of their country's independence, for two students celebrated this anniversary by assaulting the police of Calcutta. They were arrested and tried, and when the case came up for trial in the police court the students left the university and crowded the court, singing nationalist songs and cheering the prisoners. After they were driven into the street they resisted a charge of the mounted police by biting and kicking. The editor of *Bande Mataran,* Arabinda Ghose, was arrested on a charge of sedition. He is a man of good family and education. He was graduated at Cambridge University and past fourth in the Indian Civil Service examinations, being rejected on the ground of physical unfitness. His trial was also marked by rioting in the court and the streets.——In order to conciliate the Nationalists, the British Government has decided to give the Indians a share in the Government by establishing an imperial and local advisory councils. These will be partly nominative and partly elective and will include all graduates of Indian universities of more than five years standing. Two elected members will be chosen from a special Mohammedan electorate of the class paying an income tax, having on income of $330 a year or paying a land revenue above a fixt amount.

The Two Sultans

Many of the cities and tribes of Morocco have declared allegiance to Mulai Hafid, who was proclaimed Sultan at Marakesh, or Morocco City, the southern capital of the country. The letters he has sent out are said to be pacific in tone and not as violently anti-foreign as was expected. He urges the people to remain peaceful and promises to grant satisfaction to the French for the murder of Dr. Mauchamp. He is unwilling to comply with the wishes of his fanatical adherents to undertake a holy war, at least until all the tribes have joined him. The nearest seaports to his capital, Safi and Mazagan, have proclaimed him Sultan, and it is thought likely that on his approach even Fez will desert the Sultan Abdel Aziz. A fund of a million dollars has been raised in his support, the Jews of Morocco contributing $200,000. The Sultan Abdel Aziz has sent to his Minister of War, Mohammed El Gabbas, at Tangier, for reinforcements, and General El Merani, who has returned from his unsuccessful expedition into the mountains to rescue Maclean, is ordered to bring his troops to Fez. If this is done Tangier will be practically at the mercy of Raisuli and the Kmass tribesmen who recently defeated the Moroccan troops under El Marani. On account of their failure the British Government will undertake direct negotiations to secure the release of Kaid Maclean, who was kidnapped on July 3d by Raisuli. All of the foreign residents in Fez, except the American missionaries, went to the port of El Araish, and embarked for Tangier on the French cruiser "Du Chayla." The Arabs have continued their daily attack upon the French troops under General Drude. The most formidable was that of August 28th, when a reconnoitering party, consisting of two companies of the Foreign Legion and half a battery of the new quick-firing guns under Commandant Provot, followed the Arabs to some distance from the camp. When he was ordered to retire by General Drude he found himself ambushed on three sides by 1,500 Arabs, who had been concealed in the ravines.

The 300 legionaires promptly formed a hollow square, with the guns fifty yards in the rear, and lying down poured a well-directed fire into the charging cavalry, supplemented by shells from the French and Spanish warships in the harbor. They were relieved from this situation by a detachment of Algerian Spahis, who charged the Arabs with their sabers, and by French sharpshooters advancing along the ridge. The fighting lasted from three to six in the afternoon.

THE RUINS OF CASABLANCA AFTER THE BOMBARDMENT BY THE FRENCH.

The French casualties were three killed and nine wounded. The loss of the Arabs was much greater. Their troops are said to number 12,000. Two more battalions have been sent from Oran to Casablanca, which will bring General Drude's force up to 7,000. M. Jules Cambon, the French Ambassador to Germany, has had a long interview with Prince von Bülow, in which, it is reported, the Moroccan question was fully discussed and an understanding reached on the diplomatic questions involved. It is believed that Germany is not disposed to interfere with the efforts of France in restoring order.

The Transvaal Diamond

Whatever may have been the motive of General Botha in proposing that the Transvaal purchase the Cullinan diamond and present it to King Edward as a token of their loyalty and gratitude for the grant of self-government, it does not seem to have had a good effect in any way. Altho he pled for a unanimous vote in the Legislative Assembly in order to make the gift a national one, the measure was carried thru only by a party vote of 42 to 19. Sir George Farrar, the leader of the Progressives, in opposing it said:

"We are faced with the fact that owing to the financial position of the colony and the acute depression which consequently exists large numbers of his Majesty's subjects, very many of whom proved their loyalty most unmistakably during the late war, are, thru no fault of their own, daily losing their employment owing to retrenchment and in many cases are without certain means of livelihood, while large numbers of others are in em-

ployed and do not know to-day where to-morrow's meal is to come from. We cannot help thinking that it would be a source of far greater satisfaction to his Majesty to know that such people were duly provided for."

The Cullinan diamond is the largest ever discovered, weighing 3,025¾ carats and measuring 4½ by 2¾ by 2½ inches, and the Premier Company, in whose mine it was found in 1905, have been unable to sell it at anything like its estimated value of $750,000. According to the law the Government already owns three-fifths of the stone, and the Premier Company has promised easy terms, extending the payment over many years. The fact that the Premier people are political supporters of Botha has been regarded by his enemies as a reason for suspecting that his motive was not purely patriotic. Of course it is the Liberal Cabinet, not the King, to whom the Transvaal is indebted for the unprecedented restoration of its autonomy, but the gift of the diamond has proved an embarrassment to the Government in its efforts to secure for the Transvaal a guaranteed loan of $25,000,000. Mr. Churchill, in moving the second reading of the Loan bill, endeavored to make the best of it by alluding to the gift in these words:

"What could more raise the prestige of British statecraft than the announcement of the gift of the great diamond which was to be made by the Transvaal to the King? (Some laughter.) That was a wonderful event. It had nothing to do with the loan, but it had a great deal to do with the relations between the British and Boer peoples. It would probably be remembered for hundreds of years after a great deal of the legislation on which they were engaged had been forgotten. (Opposition cheers.)"

But as indicated by the parentheses the impression produced was hardly what he could have wished. In the debate that ensued he was accused of having arranged the gift as a stage trick and also of having made a bargain with General Botha to guarantee the loan in consideration of their getting rid of the Chinese, both of which charges he indignantly denied, explaining that:

"The Transvaal Government were forced to raise a loan, and if they had not had the British Government to fall back upon they would have had to go cap in hand to Sir P. FitzPatrick, Sir Julius Wernher, Messrs. Albu, and other defenders of the gilt-edged Union Jack, who were so powerful and prominent in South Africa. These gentlemen would then have been able to say they would support the loan provided they were enabled to have the labor which in their opinion was most profitable for the mines. If that situation had arisen it would have compromised the whole independence of the new Government."

The Opposition speakers held that in saying this he had practically admitted a "bargain" by which the British people were to be taxed to bribe the Transvaal Government to carry out the election promises of the Liberal party to dismiss the Chinese. They criticised the administration of General Botha, the increasing deficit, the bills allowing liquor to be sold to the Kaffirs and drafting them for labor in the mines, and particularly the laws restricting the rights of Hindus resident in the Transvaal. Mr. Cox put this objection in the following words:

"The vicious treatment of British Indians by the Boer Republic was part of our case against that republic. But to-day the position of the British Indians in the Transvaal was worse than when we made it a *casus belli* against the Transvaal. None of the serious evils under which the British Indians labored had been removed; indeed, to the old grievance had been added a new one by the passing of the Asiatic Ordinance. Now men who had lived in the Transvaal twenty years or more were risking the loss of everything they possessed rather than submit to the humiliation to which that ordinance subjected them. Moreover, alien Indians were better treated in the Transvaal than British Indians. Therefore, in a British colony it was a disability to have been born under the British flag. This situation was condoned and sanctioned by his Majesty's Government. If Mr. Gladstone were alive the country would ring with his denunciation of this dishonor to our flag. The Government said they could not interfere with a self-governing colony. But the Transvaal was not a self-governing colony. We had endowed a small minority with power to govern the rest of the population. No colony had a right to commit acts which were injurious to the Empire as a whole. It was said that the white inhabitants of the Transvaal were afraid of being overrun by a colored race. But South Africa was not a white man's country. If they got rid of the 13,000 Indians in the Transvaal, they could not get rid of the millions of natives who made it a black man's country. They could not fight against the competition of the cradle, and the Transvaal would become more and more a black man's country. The real basis of white supremacy was the superiority of the individual white worker, whether he worked with his hands or his head. He was opposed to artificial barriers against other races. The competition of other nations stimulated our energy, and thus gave us the means of maintaining our supremacy. He appealed to the House to reject this bill for bolstering up the credit of a colony which, under the shadow of the British flag, insulted and oppressed British subjects."

Ilyas

BY COUNT LEO TOLSTOY

IN the Government of Ufa there lived a Bashkir named Ilyas. Ilyas was rather poor when his father died. His father lived only one year after his son's wedding. At that time Ilyas possessed seven mares, two cows and some twenty sheep. But Ilyas knew how to take care of his stock, and his possessions kept increasing; he and his wife worked hard from morning till night; he was the first to rise in the morning and the last to go to bed at night, and he grew richer from year to year. Thus Ilyas worked hard for thirty-five years and amassed a great fortune.

Ilyas now had two hundred horses, a hundred and fifty heads of horned cattle and twelve hundred sheep. Workmen tended Ilyas's droves of horses and his cattle, and working women milked the mares and the cows, and prepared koumiss, butter and cheese. Ilyas had plenty of everything, and everybody in the vicinity envied his life. The people would say: "Ilyas is a lucky man; he has a great deal of everything; it isn't even worth his while to die." Good people began to make his acquaintance. And guests came to him from distant places. And he received everybody, and gave them all to eat and to drink. All those that came to him got koumiss and tea and mutton. As soon as the guests came he would order to kill a ram or two, and if the number of the guests was great he ordered to kill also a mare.

Ilyas had three children—two sons and one daughter. When the time came he married them off. When Ilyas was poor his sons worked with him and they tended the horses and the sheep themselves; but as soon as they became rich the sons began to lead a dissolute life, and one of them took to drink. The older of his sons was killed one day in a fight, and the younger one married a proud woman, and this son stopped obeying his father, and Ilyas had to give him his share and part with him.

Ilyas gave him his share; he gave him a house and cattle, and thus the old man's wealth decreased. And shortly after that Ilyas's sheep were attacked with disease and many of them fell. Then a poor year set in for Ilyas; there was no hay, and a great many heads of cattle died during that winter. And Ilyas's possessions grew even smaller and smaller. Ilyas kept falling lower and lower, and his strength also kept declining. And when Ilyas was seventy years old he was reduced to such poverty that he had to sell his fur coats, his rugs, his saddles, his carts, then the last few heads of cattle; and Ilyas remained with nothing. And he himself did not notice how everything had past out of his hands, and now, in his declining years, he had to go to work for others. All he had was the clothes he wore on himself—his fur coat, his cap and his boots, and his wife, Sham-shemagi, who was also very old. The son had gone away to a distant land, and the daughter had died, and there was nobody to help the old people.

A neighbor of theirs, Mukhamed-shakh, took pity on them. Mukhamed-shakh was neither poor nor rich; he led a straight mode of life and was a good man. He recalled the hospitality of

Ilyas, took pity on him, and said: "Come to me, Ilyas, you and your old woman. During the summer you will work in the garden according to your strength, and in the winter you will feed the cattle, and Sham-shemagi will milk the mares and make koumiss. I will feed and clothe both of you and will give you whatever you need."

Ilyas thanked his neighbor and together with his wife began to work for Mukhamedshakh. At first it seemed hard to them, but they soon got used to their new life, and the old people began to live and to work according to their strength.

It was profitable for Mukhamedshakh to keep such people, because the old couple knew how to take proper care of things, and they were not lazy; they worked according to their strength; but Mukhamedshakh felt sorry as he looked at the old couple, and thought of how these high people had fallen to such a low state.

And it happened one day that kinsmen and distant guests came to Mukhamedshakh; the Mullah also came with them. Mukhamedshakh ordered Ilyas to catch a ram and kill him. Ilyas killed a ram, cooked it and sent it to the guests. The guests ate of the mutton, drank tea and started to drink koumiss. The guests and their host were seated on soft cushions and rugs, drinking koumiss out of cups, and chatting, while Ilyas got thru with his work and went past the door. Mukhamedshakh noticed him and said to one of his guests: "Do you see the man who has just past by this door?"

"Yes, I see him," answered the guest. "Is there anything remarkable about him?"

"The remarkable thing about him is that he was the richest man around here; Ilyas is his name; you may have heard of him."

"Of course I have heard of him," said the guest. "I never saw him, but his fame had traveled far and wide."

"Now he has nothing, and he is working for me, he and his old woman—she milks the mares."

The guest was surprised; he smacked his tongue, nodded his head, and said: "Yes, it seems that happiness is turning like a wheel: One is lifted high and another is lowered. Well, I suppose the old man is feeling sad?"

"I don't know; he lives quietly, peacefully, and works well."

Then the guest said: "May I speak to him? May I ask him about his life?"

"Why not?" answered the host, and shouted: "Babai (grandpa in the language of the Bashkirs), come in; have some koumiss and call in the old woman."

And Ilyas came in with his wife. He greeted the guests and the host, made a prayer and knelt near the door; and his wife past behind the curtain and seated herself with the mistress of the house.

They gave Ilyas a cup of koumiss. He wished the guests and his master good health, bowed, took a sip of koumiss and put it back.

"I suppose, old man," said the guest to him, "I suppose that, looking at us, you must feel sad when you recall how you used to live before? when you think of how you live now in misery?"

And Ilyas smiled and said:

"If I were to tell you of happiness and unhappiness, you would not believe me. You had better ask my old woman; she is a woman, she will speak her mind; she will tell you the whole truth about this matter."

And the guest said to the old woman behind the curtain:

"Well, grandma, tell me how you look upon your happiness in the past and upon your present misery."

And Shem-shemagi said from behind the curtain:

"I will tell you how I look upon it: The old man and I lived together for fifty years; we were looking for happiness, but did not find it, and here we have lived one year, since we lost everything, and we are working here, and we have found real happiness, and we need no other happiness."

The guests were surprised; even the master was surprised; he rose from his seat, drew aside the curtain to see the old woman.

Then the old woman went on:

"I am telling you the truth; I am not jesting. For a half-century we have been looking for happiness, and while we were rich we could not find it; now we have nothing left—we went to work for

others—and we have found such happiness that we need none better."

"Wherein lies your happiness at present?"

"When we were rich the old man and I never had an hour's rest; we had no time to have a good talk, to think of our souls, or to pray to God. We had so much anxiety. When guests came to us, we were worried, thinking how to treat this one or that one, what to give to this one or that one, so that no one should speak ill of us. When the guests came together we also had to look after the workmen; they are simply waiting for an opportunity to rest and to get something nice to eat, and we had to watch so as not to lose anything; we were sinning that way. Then we were afraid that a wolf might kill a colt or a calf, or that a thief might steal some of our horses. When we lay down to sleep we could not sleep, we were afraid that the sheep might choke the lambkins. We would go out at night, and no sooner would we feel relieved than a new anxiety would come over us—we would worry whether we would have enough feed for the cattle for winter. And besides this, there was no peace between me and the old man. He would say that a certain thing must be done that way, and I would say that it must be done the other way, and we would start to scold each other; we would sin that way. Thus we lived—always filled with anxiety, always sinning, and we never saw the happy life."

"And now"

"Now the old man and I rise in the morning and we talk lovingly and peacefully; we have nothing to argue about, we have nothing to worry about; all we care for is to serve our master. We work according to our strength; we work willingly, so that our master shall have profit, not loss, thru our work. When we come back from work there is dinner, there is supper for us, there is koumiss for us. If it is cold, there is a stove where we can warm ourselves, and we also have fur coats, and we have time to talk; we have time to think of our soul and to pray to God. For fifty years we have been looking for happiness and we have just found it."

The guests began to laugh.

Then Ilyas said: "Do not laugh, brethren; this is not a joke, but a human life. We were foolish—the old woman and I; at first we were crying because we had lost our wealth, but now God has revealed to us the truth, and it is not for our amusement, but for your good, that we are revealing it to you."

And the Mullah said:

"These are words of wisdom, and he has told you the real truth; it is also written in the Scriptures."

And the guests stopped laughing and they became thoughtful.

YASNAYA POLYANA, RUSSIA, July, 1907.

Fair Lady Flora

BY GARNET NOEL WILEY

FAIR Lady Flora went down to the brook;
Sing, sing little birds in the willow!
Too blue were her eyes and too lily her look;
White cloud on the breast of the rill O.

Fair Lady Flora past over the sand;
Can faint-kissing feet leave a hollow?
The creamy flags purpled to brush her soft hand,
Up-springing and sighing to follow.

Fair Lady Flora stept into the tide;
Oh, rose on the fountain a-quiver!
It was too mickle deep, it was too mickle wide,
And the lady stept back all a-shiver.

Fair Lady Flora came up from the brook;
The birds flew away from the willow;
Too blue were her eyes and too lily her look—
White cloudage will fade from the rill O.

WASHINGTON, D. C.

September in the Fields

BY E. P. POWELL

AUTHOR OF "THE COUNTRY HOME," "OUR HEREDITY FROM GOD," ETC.

JUNE stands for youth; September for mature age. It is calmer and cooler and less likely to break out into passionate storms. The color of June is blue and green; September is predominately yellow and red. The yellowish-red ray denotes ripeness and peace. Now we look around and see what we have been working for all the year. Indian corn rustles with heavy ears, ready to be cut; or it already stands in rows of brown stooks. The potato fields are ready for the plow to turn out the tubers. Wheat and oats have gone to the barns, but the fields where they were reaped stand in yellow stubble. These are very conspicuous, as I look down from the hillside. The hop fields are just gathering their pickers. It is a curious sight, these wagonloads, coming out from the tenement houses, and gathered from every grade of city life, to engage for once in a wholesome employment. I do not know of any other one attraction that will draw these fragments of the herded masses out into the valleys. But for picking hops they will come—there is with it a license and a laxity of restraint that make even hard work tolerable. From my hilltop I look down over the slopes, and take in the poetry of that which some time ago was very prosaic with the plow and the hoe. But what would harvest be worth if it did not cost a struggle with seasons and conditions?

August was called "Barn Month" by our early English ancestors, when they were only the Angles, new-comers in Britain, and full of the poetry of their new home. The word barn meant saved, while burn meant wasted. They burned the poor stuff, but they barned the good. August in those sweet, yellow valleys filled the storage houses with the year's produce—mostly wheat and rye. They were quick to fight and hard to strike, the men of the ante-Norman type; but they knew how to work, and they loved nothing like the harvest fields. With us September, with its Indian corn and wagonloads of pumpkins, its filling silos and its orchard fruits, accords more with the idea of barn month—and so I christen it. I wish we knew more of the story of the evolution of Indian corn. It is a mistake to suppose that the Indians found this magnificent cereal growing wild. It is the product of centuries of what we may fairly call scientific culture. I do not suppose the Indians worked along the lines of our agricultural colleges, but I am sure that they did some wonderful things in the way of creating better foods and fruit. The Indian apple was a good long way ahead of the wild apple, and Indian corn was originally only a grass. The pumpkin was another product of Indian skill and aboriginal evolution. We have hardly improved it since we inherited it.

September is the first month of the cider mill. We clean up the press about the first of the month, and begin to grind the richer and sweeter apples into that most delicious of beverages—"American wine." And this reminds me that those same old Englanders used to call September the wine month. An orchard gets to be a wonderful sight about these days. The limbs bend over with their marvelous globes of food, and nature is busy painting the apples with every hue that shall attract the eye. What in the world is more beautiful than a great Spitzenberg apple tree? It really should be one of the old-fashioned sort, two stories high, and lifting the crimson fruit thirty feet from the ground. The ground is covered with the least perfect fruit; all of which should be promptly gathered and run thru the cider mill. The cider will not have quite the twang of that later product which comes in October, with the ripening Pearmains and Jonathans and a judicious mingling of Pound Sweets; but a pitcher of the product of the press will find judicious welcome if placed on the dinner table. Every farmer should have his cider press and so turn his waste apples into a mar-

ketable product. Just now the trees are everywhere propped with great poles, to keep them from breaking down; and yet the limbs will occasionally snap off with the weight, in spite of the utmost care.

In the vineyard the first grapes are sweetening about the 20th of August. Yet we prefer that they shall not be in any hurry. The oriole leaves us on the first day of September—he is quite precise about it—and we are quite willing that he shall be gone before the bunches purple and sweeten. He is a mischievous bird and destructive in his habits. It is one thing to be willing to share one with another, but it is another thing to have the good things of nature wasted. This flitting, but brilliant, bird pecks a hundred grapes, but takes from each only a drop of juice. Then come the hornets and the bees, and the work of ruin is done. September 5th to 25th gives us most of our market grapes ready for the basket, except the Catawbas, Jeffersons, Pocklingtons and Aquwams, which wait for October. Lady is a delicious white grape, of purest quality, that ripens a little in the lead; and is followed by El Dorado, a grape of equal richness; then by Duchess and Niagara and Worden; and these by Herbert and Goertner and Lindley, winding up with Pocklington and Jefferson. But for most people Moore's Early is quite early enough, and this, with Worden and Niagara, make a triplet that for hardiness, cleanness and for prolific bearing and delicious quality is hard to beat. But when one comes to comparing grapes he will change his mind constantly. The only right thing to do is, every day just before dinner, to wander about a vineyard and sample ten to twenty varieties —with your mind open to conviction. Then go and sit down to a modest dinner of green corn and beans, with possibly a bit of lamb; then a few more bunches of grapes. If one does not overload the stomach with other food he can scarcely injure himself with grapes. The grape is a perfect food; as they say nowadays, "predigested," and easily assimilated. I recommend for breakfast only a couple of bunches of grapes—possibly two more.

To originate new fruits and flowers is the glory of horticulture. I should not like to die without having created a few exceedingly good new grapes, fit to live after me, and make the world happier. If you will select a few seeds of the best bunches that you eat in autumn, you can start new vines, each one of which will be a novelty, and stand a good chance of being a grape better than anything now in your vineyard. Remember that of all our choicest fruits very few are one hundred years old. Here again I could tell you a pleasant story of what we have accomplished on our own home farm; but that, too, must wait for a future article. It is enough to say that we have been able to enrich our list of grapes with some very choice new sorts. The work is not difficult, and most of it may be left in the charge of our boys and girls, in whom it is sure to quicken a keen taste for horticulture and life in the country.

As a rule, a vegetable garden is not supposed to be either a very interesting or a very intellectual place; but I assure you that beets and turnips, and corn and beans need no longer be associated with the most stupid and mechanical work. People in the cities know very little about high grade vegetables. The green peas that they eat are unpalatable to those of us who grow a dozen different sorts, and can tell the varieties by the nicest distinctions, after they are cooked. You should know the May Queen and the Prosperity and the Improved Telephone. Ah, but then you will still have Gradus and William Hurst and Alaska and others, every one a specialty. With an expert the skin must be thin, the pulp must be sugary, and the flavor unique. It is well enough for you to eat the rattling affairs that lie on your plate, with forks; but with us we must delicately sip our peas with spoons. I know nothing like it except a company of old ladies, sipping and criticising their tea. So it is with our cabbages and our beans. What is that? It is a Savoy, and it is as much above a common cabbage as is a cauliflower. Properly cooked, it is a delicacy that hardly has its equal among vegetables. Now I see that you throw up your hands, and your exclamations of delight are not surprising. These beans are the result of more hybridizing. Here the old cranberry beans have changed to white pods. Just down there you see the

same bean turned to a white pod and white bean; while farther down the swale we shall find the white bean in a brilliant red pod. How were the changes wrought? There, again, you come upon the problem of hybridization, and the explanation must be put off for the present. It is enough for you to see that a vegetable garden is every way as beautiful as a flower garden. Those beans, hanging in trusses of pure white pods, eight inches long, are fully as attractive as the pinks in your flower bed. The one that you most admire is a cross of Lima and Horticultural, and it is fit for the king. We should never undertake anything without enthusiasm, and I assure you that one will find free play for enthusiasm in a well-ordered vegetable garden. It rivals the orchard in October.

On the shrubbery lawn one must now have an abundance of altheas and hydrangeas. These loitering bushes blossom out of season, but they are peculiarly useful. Along the flower borders we have gorgeous dahlias, and perennial phlox These two are eminently flowers for farmers' wives. The newer sorts indicate to us what may yet be done in the way of multiplying varieties. It is a long stride from that single-petaled flower, which Mr. Dahl brought from Mexico, above one hundred years ago, to the hundreds of gorgeous blooms of every hue that now adorn our gardens. The Japan lilies sometimes linger into September, with a stray blossom in October, and the ever-blooming roses are in their prime. We have at least a half dozen thoroly hardy, magnificent and ever-blooming roses that can stand by any kitchen door in the country. Like your dahlias they need no farther care that some of the warm water that is thrown away upon washing day. Three or four of the best of these are General McArthur, Virginia Cox, Hermosa, Clotilde Soupert.

But so abundant are the goldenrods and the wild asters that your eye is inevitably drawn away from the most beautiful garden, to trace the yellow and purple windings of the creeks thru the valley, and of the brooks that creep down everywhere from the hillsides to feed the larger streams. Invariably these are banked in with great masses of the starflowers, and the drooping heads of goldenrods. Some of these are of exquisite beauty, but their glory is in their massing. Yet, after all, the real characteristic of October is that everything becomes individualized—not all green as in June, but red, purple, yellow, golden and blue. Not only flowers, but every bush says, "Now I wear my own colors." Thoreau tells us that the pokeberry is an October poem—"It appears a rare triumph of nature to have produced and perfected such a plant. Here are berries enough to paint afresh the Western sky. It is truly a royal plant. I could spend the evening of the year musing among the poke stems. And perchance amid the groves might arise a new school of philosophy or poetry." All this is true, but it is equally true of thorn apples, of wild ivy, and above all of the sumach. Under foot the mints and the trefoils have also caught their own hues and shades. Overhead there is nothing so marvelous as the swamp maple. Fortunately these maples can be transferred to our lawns, and I have one which, every autumn, turns into a globe of intensest crimson, thirty feet in diameter. Things grow companionable as they become individualized. There is a tender sympathy expressing itself thru all nature. The first leaves that turn red make a direct appeal to our emotions. This is not altogether because we love color, but because all nature moves on together. The year's work is done, and we all feel it alike. We are tired of crowding and pushing, of harrowing and hoeing. Everything feels as St. Paul said of himself, "I have finished the fight." But there is no complaining mood in nature. The sumach makes whole hillsides triumphant with scarlet songs; and the Virginia creeper flames scarlet up and down the charred trees, or flashes long lines of harmony over old rail fences. Done! Done! Well done! Everywhere young birds are gathering with the older ones, to start for Southern homes. Goldfinches flash like shuttles thru a loom. Clear across the valley you hear the farmers laugh and shout, as they husk their corn, stack their hop-poles or hurry loads of potatoes homeward. The last picnic marches thru the valley—belated and out of season.

September is the month for strolling—the time to make acquaintance with the

hillsides, the glens and the forest edges. Your pleasures are largely your own. You need but little companionship. There is no pleasure quite equal to an old-fashioned all-day ramble after wild blackberries in the thickets and gorges, too rough for cultivation. Besides yourself you need only your faithful dog. Our cultivated blackberries are ripe in August, but the wild ones keep up old customs and are not quite gone by October. I like still to spend a day in the winding glens, now bordering a swamp of ferns, now watching a brook flowing over red shale, with small trout hiding under the logs; now following it as it squeezes thru a rockery, and leaps and whirls and gurgles, as it leaps away, to run thru the orchards down to the mill. The bushes make a solid thicket up the sides of the gorge, and their black burden of luscious berries can only be secured with many a scratch and tear. "Ye blackberry," says Old Humphrey, "is ye teacher of patience and perseverance." So have I gone home at night, thru the woods, with my lessons well scratched in, but with prevenient visions of huge bowls of new milk, half full of berries and half with home-made bread—not to forget the blackberry pie on the morrow. It is a wonder to me that our farm folk do not make more of the elderberry. It is a cosmopolitan affair, growing almost all over the continent, and offering its loads of useful berries to every comer. Like all cheap things, it is overlooked and despised. Yet I assure you nature meant it to be everywhere, because every one needs it. "Elderberry puddings are only surpassed by elderberry tarts." I can gather them by the bushel up any country street by the roadside and wherever a zigzag fence winds thru the fields. The only rival of the elderberry, for universality and liberality, is the barberry. Altho this makes delightful jelly, I think it was meant for the birds. It is the most beautiful shrub that we can have on our lawns, and around our houses, to make winter look cosy and comfortable.

A September morning is unique. The birds are not all here, and those that are do very little singing. I hear a song sparrow occasionally, and the goldfinches flit out sweet notes, as they flash from thistle to thistle, cracking the seeds, like animated sunshine. Instead of bird music the young cockerels about the farmyards try their boastful pipes about five in the morning—a curious bit of impudence, for every one of them is a coward. But is that not true of all of us? Are we not all at heart afraid—and crowing to keep up appearances? The sun does not rise until after six o'clock, and it wakes up sleepy. It no longer hurries us out of bed with suggestions of hay in the field and possible showers. We roll over, contented to have the chill taken off the day, before we bathe and dress and get at our work. It is just the time now for a good supply of beech and maple chunks—ash and oak will do. The reign of coal has been one of the dark ages. Giving us animal heat, it has decreased social warmth. Perhaps electricity will give us back the open fireplace and the cleaner, cosier, social hour.

Of course you have a few hives of bees, and in October you are taking up the last of your honey. Remember that this is an alliance, and that you must only take your own share, leaving enough to last them thru the winter. This is the most curious feature of country life. It does not seem so very odd that we should have harnessed oxen and horses, or domesticated dogs, or even made friends of toads; but that we have invaded the camp of our worst foes, the insects; have divided their forces, and formed some very useful alliances is eminently strange. Entomology is now our one indispensable study. We must know the beetles and the bugs, the moths and the butterflies, or we shall be whipped back into city life. My honey-bees have not only gathered a large storage of delicious food, but they have pollenized my apples and plums and grapes, so that the harvest became doubly assured. Already I have taken, from my twenty hives, from four to five hundred pounds of honey. Besides honey-bees, the bumblebees have been at work for me, and even the white faced hornet. These curious paper manufacturers are not pleasant neighbors, but they destroy untold numbers of destructive slugs and aphidæ.

As the month goes out we are picking

the first of our apples. Shiawassie Beauty and Princess Louise do not care to hold on late; and the Pound Sweets are fit for market by the middle of September. Snow apples and Hubbardstons should be in their bins about October 1st; and after that you will be busy with your Spys and Kings and Baldwins and Pippins and York Imperials and Russets. All these must be carefully sorted, after careful picking, and neatly placed in shallow bins, in a tight frost-proof cellar, before you can feel quite at ease at the approach of winter. What a lonesome person is that one who can only eat nameless apples, who does not know a Northern Spy from a Baldwin, nor even a pear or a plum by its Christian name—or, if at all, by a false one; as those who buy "cherry currants," whereas not a cherry currant now goes to market—or cannot tell an El Dorado blackberry from a Kittatinny. This is far worse ignorance than that which cannot turn a Greek sentence into English, or has failed to read the going novel. A real countryman knows everybody (every*thing* you call it) as a personal acquaintance. Here is a picture of two old men, each over eighty years of age, and they are just making the acquaintance of a new plum. One of them has an orchard of over two hundred varieties of native plums, and the other has one nearly as large. Do you think such people can be lonesome in the country? Emerson tells us:

"Many haps fall in the field,
Seldom seen by wishful eyes;
But all her shows did Nature yield,
To please and win this pilgrim wise.
He saw the partridge drum in the woods;
He heard the woodcock's evening hymn;
He found the tawny thrushes' broods;
And the shy hawk did wait for him;
What others did at distance hear,
And guessed within the thicket's gloom,
Was shown to this philosopher,
And at his bidding seemed to come."

CLINTON, N. Y.

Granby Road

BY JENNIE COLTON

ON Granby Road, the other day,
June overtook belated May;
The pines had festive tapers hung,
And somber hemlocks, overflung
With knots of pale, delicious green,
Wove panoply of shade and sheen.

Strange, timid children of the wood
Along the glade all blushing stood;
The ferns their tender fronds unrolled,
The violets bore hearts of gold,
And mats of waxen foliage showed
Blooms exquisite, by Granby Road.

Brave Lupine waved her blue racemes,
And Wintergreen hid coral gleams
Of lingering berries, gems of price,
Nigh crowding spears of flame and spice,
And followed still, by pasture fence,
The herd, with looks of confidence.

As pondering the mystery,
"How strange these human creatures be!"
That one should condescend to taste
The flaunting herbage of the waste,
While kindly nature has bestowed
Sweet vernal grass by Granby Road!

'Mid shrouding pines an orchard gray
Heeds nevermore the call of May;
Beneath, perhaps—none live to tell—
Are tumbled stones, a hearth, a well.
Fair heads once by that hearth-fire glowed
That rest afar from Granby Road.

Aloft are wires Eolian strung,
To every breeze their chords are sung;
Yet passing still, inviolate,
Are messages of love and fate,
World-echoes heard in some abode,
Serene, remote, on Granby Road.

SIMSBURY, CONN.

Finding the Tyrannosaurus

BY BARNUM BROWN

Of the American Museum of Natural History

MAN-WRITTEN records are the chronicles of events that are confined to the later chapters of the earth's history. In comparison they are no more than a page of the unwritten history found in the rocks. This earth book is accurate in its descriptions. In many places, however, leaves are torn out and sometimes translators disagree, but it is always due to faulty interpretation. One of the most interesting of the geologic stories is that of animal life.

Conditions have been favorable for the preservation of animal remains, during the different geological periods, in only a few restricted areas where they were covered by wind-drifted matter, river and lake mud, ocean ooze or volcanic ashes. Such places are found most abundant in the Western United States east of the Rocky Mountains, where the accumulated sediments are weathered into sculptured "bad lands." Some of these bad lands have been thoroly explored and all surface fossils collected, for the present at least, until more are uncovered by the action of rain and wind.

Many of the most interesting of the prehistoric animals are known only from fragments, consequently news of an unexplored region is received by scientists with delight; new fields invariably turn out a few or many forms new to science,

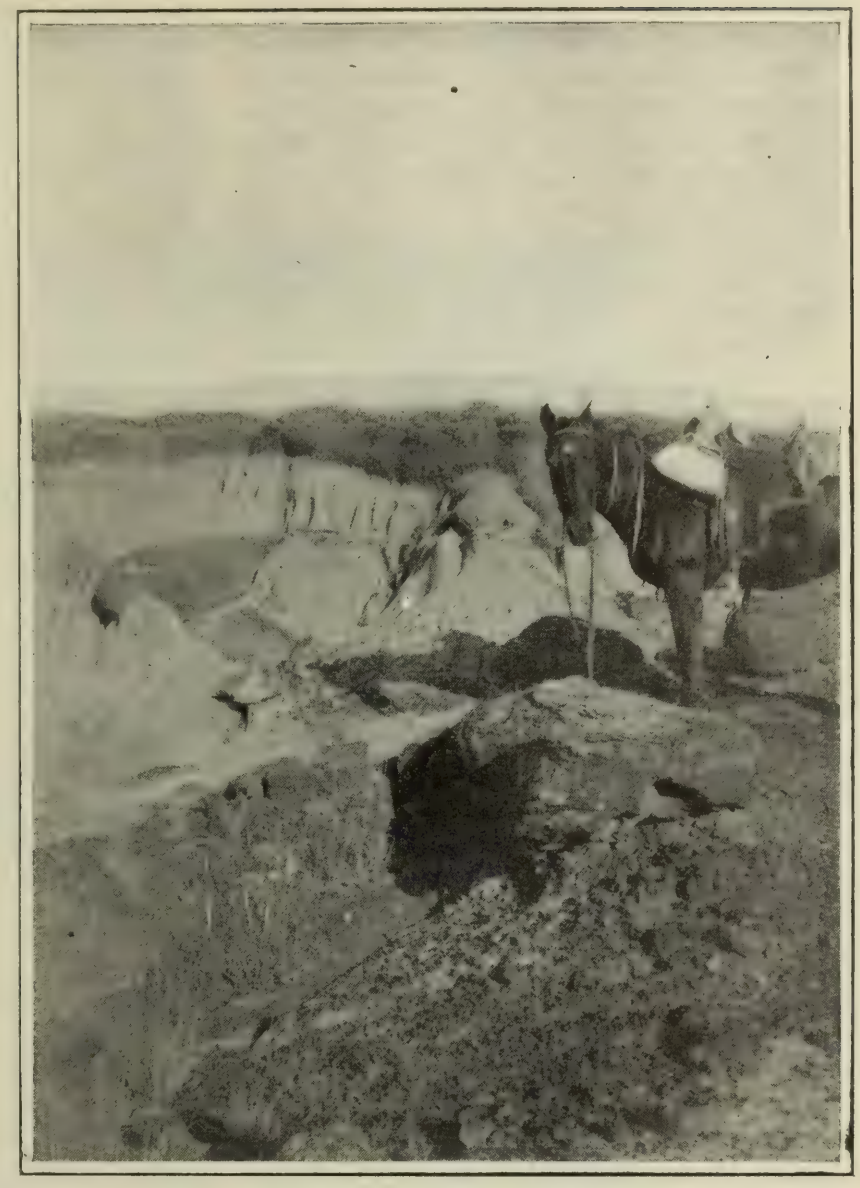
TYRANNOSAUR QUARRY ON HELL CREEK.

Man chipping the large sandstone block that contained the pelvis of the Tyrannosaur.

and the pleasure of discovering an unknown fossil animal is greater than vouchsafed to a successful gold prospector, for each new discovery means one more brick added to the structural knowledge of life.

Information of a new locality often comes in the most unexpected and accidental way—for example, the Hell Creek region. A few years ago Dr. W. T. Hornaday, director of the Bronx Zoölogical Garden, was hunting deer in a wild section of Montana, near the Missouri River, north of Miles City. In the bad lands he saw a pile of large bones, one of which was brought home for a paper weight. His companion on that expedition, Mr. L. A. Huffman, of Miles City, took a series of fine photographs. When shown to the writer the bone was recognized as part of a horn core of an extinct reptile known as *Triceratops*, while the photographs showed the similarity of these bad lands to a deposit in Wyoming from which all fossil bones had been collected.

It was, therefore, with sanguine expectations that an expedition was planned for the following season. Our outfitting point and base of supplies was to be Miles City, Mont., a point on the railroad nearest to the bad lands, about 130 miles away. Some time was spent in obtaining team, wagon and camp equipage, for everything must be freighted to the bad lands by wagon. A teamster, familiar with the surrounding country, is easily secured in almost any Western town, and nearly every ex-cowboy says he can cook—but really does well if he succeeds in boiling water without burning it. The hardships of camping in regions remote from settlements in the West are not so great as in early pioneer days, for now practically all vegetables, fruits, butter and milk are canned. One certainly gets tired of living on bacon and ham during the hot summer, and looks longingly at a fat beef, but the real hardship is the water, or lack of it. During the early spring it is plentiful, but toward the last of June rains are less frequent, the creeks dry up, and water that remains in pools becomes so strongly alkaline that the surrounding banks are covered by frost-like crystals. Yet even this looks good to a thirsty bone hunter who has ridden thirty miles without a drink, and he does not hesitate to use the Western water test; that is, to throw a stick in the pool. If the stick falls



OUR CAMP ON HELL CREEK.

over it is water, but if the stick stands up it is mud and not fit to drink.

Our destination was Jordan, not far from Hell Creek. This association of names I learned later was not due to any especial irreverence on the part of those who christened the places. Jordan was named for its founder, while the creek was undoubtedly named by some cowboy who had failed to get thru the surrounding bad lands.

Uncle Sam has few more desirable unsurveyed sections of country left than that part of Montana lying between the Yellowstone and the Missouri rivers, which is destined some day to support a dense population. The prairies, undulating like a vast tossing sea, are covered with short grasses. Shallow depressions where buffalo wallowed and a few of their bleaching bones are the mute reminders of the vast herds that vanished before the white pioneer. Then the cattle came, and in numbers nearly equaled the buffalo. They, too, are passing rapidly; deep-channeled roadside trails wind over the plains as far as the eye can see, marking the course of great round-up drives, but few of the large cattle outfits like the hat *X*, *X I*, and *L U* brands are left. These run about 20,000 each.

PATIENTLY WAITING.

The white object in the sandstone concretion at the left of the picture is a bone. Each of the other stones contain bones hidden from this view.

Now canvas-covered sheep wagons dot the landscape marking the course of the living streams and the temporary homes of the shepherds, for this is the sheepman's country. Like the nomads of old, they roam from place to place as the grass is eaten off. The bands of 3,000 head of closely herded sheep leave the ground nearly bare as they pass over it, consequently the camp must be changed often. The tinkle, tinkle, tinkle of many bells and the incessant bleating in various keys, with the lonesome hours spent following the bands, are said to "loco" the herder; certainly it loosens his tongue when given an opportunity to talk to fellow men. His one solace is his faithful dog, whose noisy welcome sounds our approach, for he, too, is glad of a sight of new faces.

Five days of travel over the boundless prairies, thru such scenes, brought us to the much-talked-of Jordan, where cowboys sometimes still "shoot up the town." I was quite surprised when the three log houses nestling among the cot-

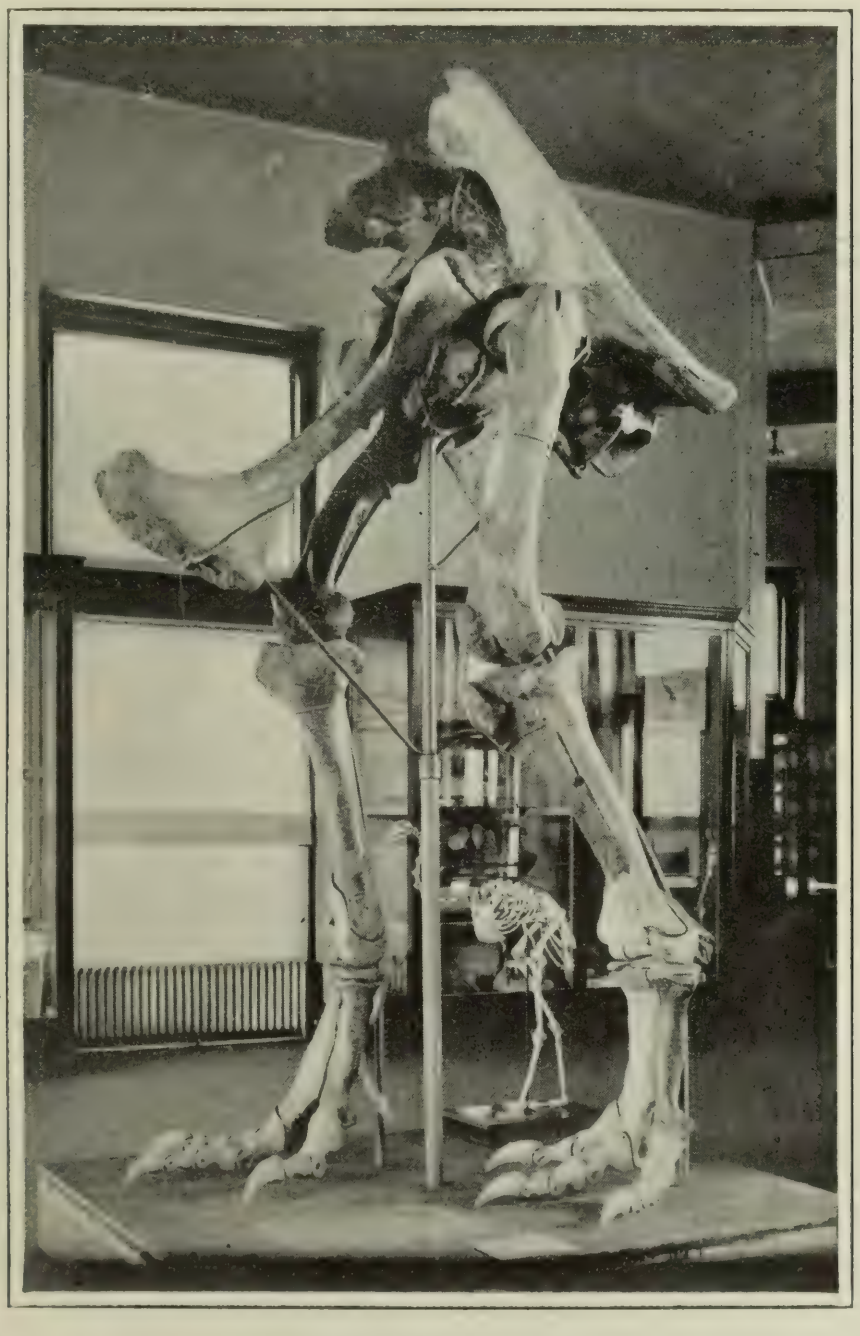
tonwood trees on the Big Dry were first pointed out me as Jordan, for they did not at all seem as important as the name. But time works rapid changes, even so far from the railroad, for in three years a dozen houses have been built in the village. There is no church, but the saloon keeper's sister teaches a Sunday school class, thus creating a social status for the community.

From Jordan the country is rolling part of the way, but suddenly, as we cross the divide near Hell Creek, a panorama of striking beauty spreads out before us. The whole country for a hundred miles up and down the river is cut into fantastic bad lands. Cañons two and three hundred feet deep, with nearly vertical sides and short lateral culs-de-sac, make travel by horse difficult, sometimes almost impossible.

The somberness of these denuded areas is relieved by the bright-colored banded clays, the different layers of which can often be traced for miles on the same level. Scattered pine trees cover most of the hills, while the sheltered hillside pockets are filled with junipers, and on Seven Blackfoot Creek there are groves of fir trees marking the most eastern boundary of this Pacific variety. In the valleys the courses of the streams are marked by fringing cottonwoods.

Mr. Hornaday had found the bones mentioned near the Max Seiber ranch, so it was thither that we directed our course. This is near the head of Hell Creek cañon, where the stream has cut thru yellowish sepia-colored sandstone. Harder spherical or irregular shaped sandstones of various sizes are scattered thru this layer, and it is in these harder sandstones that the bones are best preserved. Often a hillside will be strewn with clusters of immense rounded stones resembling a nest of eggs.

The various layers of earth show that they were deposited more or less uniformly, by wind-drift and water, on the flood plains of a river which in times of high water overflowed its banks, depositing successive layers over the inundated area. Many shallow lakes, bayous and marshes were thus formed. In the clays representing such localities we frequently find beds of shells, many species of which are extinct, but some nearly identical with those living today; all representing a Mississippi fauna, showing that this section of country was drained by the same great river system as at present. Layers of woody material, in the form of coal, impressions of leaves, grasses, beds of seeds and sections of trees are found scattered thru the different layers in more or less abundance, especially toward the top of the bad lands, which represent a later geological period. All of these are extinct species of plants, while the genera here congregated are now widely scattered. Here are leaves of the ginkgo, native of Japan, and cones of the sequoia, or big trees, of the Pacific Coast. In the lower beds are leaves of the sabal palm that proclaim the climate subtropical at that time.



Animals lived during that period; some aquatic types fed on the rushes and liliaceous plants, remaining in the water most of the time; others fed on the tree foliage and grasses of the higher ground; still others fed on their fellows. These creatures are called dinosaurs. They form a group of extinct reptiles, mostly of large size and of strange appearance. Some evidently mired down in the marshes, and in these cases the skeletons are often nearly complete, especially in those forms whose muscles were attached to the backbone by rod-like bony cartilage. These harder tissues held the skeleton together while it was gradually being covered over. Usually, however, the bones were scattered before turning to stone, either by the action of the water, which could easily dismember the loosely articulated bones as soon as the flesh began to decay, or by the flesh-eating dinosaurs. The carnivorous creatures tore their fellows to pieces while alive, or dismembered and scattered the decaying carcasses.

These great lizards must have swarmed thru the prehistoric everglades, for their bones are scattered thruout the clays in great numbers. Most numerous of all was the great *Triceratops*, a strange-looking beast with an immense skull ornamented by three horns, a long one over each eye and a shorter one over the nose. Its body was protected by flat bony plates set in the skin.

Nearly as numerous as these were the

Hadrosaurs, a form with duck-like mouth, long hind legs and short fore legs, the latter so small that they could not be used in walking. This was a creature suited to the marshes, where it fed on tender juicy plants. So well preserved have been discovered. They probably did not frequent the marshy grounds except to capture their food, hence comparatively few of their skeletons have been entombed.

In the bayous and lakes were croco-

are its remains that in a recently discovered specimen the impression of the skin is perfect, even giving the exact contour of the tail.

Rarest of all these strange animals are the carnivorous or flesh-eating dinosaurs, only a few specimens of which diles, gavial-like champsosaurs, turtles and numerous scaly fishes. This was the close of the zenith of reptile life, in size, if not in variety.

Sometimes the collector finds a few separate teeth, a fractured limb bone, or a vertebra of a mammal, rarest of all the

THE BAD LANDS.

animal remains. These early representatives of the dominant animals of the present day had begun long before the cretaceous period, but were still small and probably few in number. The teeth and limb bones of the largest indicate an animal no larger than a house cat, while the smallest forms were of the size of bats and mice. These remains are usually associated with fish teeth and washed fragments of larger animals where they have been drifted by some water current. The association is fortunate, for the teeth are so small that they would otherwise be overlooked if it were not for some such indication. Curiously enough, the insignificant ant is the collector's best friend in such places; their cone-shaped houses are frequently located in drift material, where teeth have been brought up with the small pebbles. Thus separated from the finer sand they are more easily seen.

We camped on Hell Creek, near the locality found by Mr. Hornaday, and before the cook's call for dinner, had located one of the most interesting fossils ever discovered. This was *Tyrannosaurus,* tyrant king of the dinosaurs. High up on a hillside were a number of large, rounded sandstones. Some had tumbled down the hillside and several contained bones. Tracing these scattered fragments up the side of the hill we at last found some running into the sand. Here, then, were the bones in position where they had originally been covered before turning to stone millions of years before. Each bone in this specimen was encased in a concretion of hard, flinty, blue sandstone nearly as hard as granite.

At first the sand was soft, but as the excavation proceeded beyond frost line it was firmly cemented and so hard that a pick made but slight impression on it. As the bones were scattered and the hillside steep the undertaking became a herculean task with the means at hand; but the rare bones were those of an unknown creature, so additional help was secured, and with plows and scrapers we

attacked the hill. Soon, however, the sand became too hard to be plowed, and then it was necessary to send for dynamite and blasting powder. Each cut was blasted down nearly to the bone layer and the bones taken out separately. The work of removing the upper sand or clay can be done by any one, but as soon as a bone appears only one acquainted with the details of the work, an expert, is allowed to handle them.

Altho turned to stone, these bones are usually delicate and brittle, and are nearly always cracked in all directions. If any attempt were made to lift them up as found they would fall to pieces. As soon as the surface of a bone is first seen, work with heavy tools ceases, a crooked awl is used to loosen up the sand or clay, and this is brushed away with a whisk broom and soft paint brushes. After the bone is partly freed shellac is poured over it, and filtering in thru the cracks holds all the pieces together as soon as dry. Then strips of burlap dipped in plaster of paris are wound around the broken bone in all directions. When the plaster has set and dried the bone can be taken up and packed in a box for shipment.

In this specimen there were several large blocks, one that weighed forty-one hundred pounds when crated. It took four horses to transport this block to the railroad.

Part of a second season was also spent in recovering the bones of this animal, and when the excavation was finally completed a hole in the hillside had been made thirty feet long, twenty feet wide and twenty-five feet deep. Unfortunately all of its bones were not present, but enough were recovered to determine nearly all of the anatomical features. The hind limbs, now mounted in the American Museum of Natural History of New York City, measure fifteen feet from the top of the hip bone to the floor, and they were hollow, like bird bones. Each enormous foot spreads over 7½ square feet of surface, and had four toes, the first rudimentary and directed to the side and backward as in birds. The contour of these footbones bears a striking resemblance to those of birds. The fore legs were very small, vestigial in size,

Scraping out the sand after it has been blasted down.

but powerful, and were probably used in seizing and holding. The head was massive, 49 inches in length and proportionately deep. Each powerful jaw was armed with thirteen dagger-shaped teeth having saw-blade edges, the largest five inches long. As soon as one of these teeth was broken or lost another grew up from below to take its place. Thus, under each one that is functional, six teeth are found, one above another, forming a never-ending supply. The size and length of the tail are conjectural, as only two vertebrae from that part of the body were found, but it was probably long and heavy and used to balance the weight of the body when standing. From the hips forward all the vertebrae were recovered, together with vertebral and abdominal ribs, the latter, slender rods which completed the bony circle enclosing the body cavity.

Associated with the vertebrae of another individual of this same type were a number of irregular flattened bony plates that had been embedded in the skin and formed a dermal armor similar to that of the crocodile. In life this gigantic animal stood about twenty-two feet in hight and was the largest carnivorous animal that has ever lived. Contemporaneous with and possibly the chief food of *Tyrannosaurus* were the *Triceratops,* or horned lizards, the largest herbivorous animals of that time. Altho protected by three horns and a skin in which were set bony plates, these sluggish creatures might easily fall a prey to the more active *Tyrannosaurus,* king of the period and monarch of his race.

New York City.

The Passing of Brother Milam

MRS. L. H. HARRIS

PAPPY CORN and the Stranger were taking a short cut thru the graveyard of old Zion Church one Sabbath evening when Pappy paused beside a slim white pillar, with the design of an open book upon the top of it.

"This is the monument we raised to the memory of John Milam. He was pastor of this church fifty-two years. And sometimes of a moonlit night when I come by here I can almost see him standin' behind it, lookin' like an old he-angel, and bendin' over the book on that pillar the way he used to do to git his text. And I kin almost hear him read out:

" 'And be not conformed to this world, but be ye transformed by the renewin' of your minds.'

"He was mighty fond of that scripture, and I reckon he preached from it first and last oftener than ary other verse in the Bible."

Pappy swept his arm around the circle of gray, lichen-covered stones that kneeled and staggered upon the ground far and wide about the white pillar.

"Them's the graves of the folks he preached to when he first come into the valley. They air all up here with him now but me. And sometimes after prayer meetin', when I have been listenin' to our smart young preacher tell about the two Isaiahs, I stop out here on my way home, look around, and wisht I was there too. I ain't complainin' of the new preacher.. I reckon he suits this generation same as Milam pleased mine, but the bread of life is a mighty skace article, and there ain't much of it to be had from a pastor that acts as if he was the speritual stepfather of the community. At my age a man don't give a dern to know whether it was a lemon or an apple Eve gave Adam, nor he don't keer much whether David wrote his own psalms or hired another fellow to do it. What he wants is some message to lighten the clay he's in and to help him think he sees a little beyond the darkness.

"I don't know as I ever told you about Milam," continued Pappy as they quitted the churchyard and made their way homeward. "He was like the other preachers of them days at first, full of just doctrines and damnation gospel for sinners. Preached on torment so much that he about got the lid off and had

us all har-hung and breeze-shaken above the lake of fire and brimstone. But you can't tame folks for Heaven by skeerin' 'em about t'other place, and we didn't do much good speritually till after he'd changed his tactics. He had a heap of trouble, or maybe it was prayer and fastin'; anyhow, after a while he got scent of heaven, so to speak, faced about, and made a bee-line for glory. And we all legged it after him accordin' to election or free grace or whatever doctrine suited us. For Milam took on an angel-of-the-covenant smile and got to be a regular speritual sharper when it come to castin' his net for sinners. He could preach free-will and foreordination in the same sermon so slick that the weak-kneed, natural-born backsliders drapped in without a misgivin'; and at the same time the hickory-nut headed saints, that think they air predestined to salvation from the foundation of the world, never once suspicioned him of heresy. I was as far from grace in them days as a polecat air from havin' tail feathers, but I could no more git away from Milam than an egg can from the hen that's trying to hatch it, and so it wan't long till I had jined the Church and begun to maneuver toward heaven myself.

"Time past. The war come on; Milam went to the front with the rest of us, and when he want spittin' bullets at the Yankees he was wrestlin' with the Lord in prayer. The only difference in his preachin' was that he got his texts further and further back in the Old Testament, accordin' to the original vindictiveness of man. Lord, sir, the Bible is a wonderful book, and Milam knowed how to use it. If you had to fight he could find terrible authority for vengeance. But if you had to forgive your enemy, he could give you the word for that too. Or, if you had to die, he could quote you the very passages set down to free the soul from that last fear of the darkness. So it was that after the war he come back here such an apostle of peace that none but the old soldiers ever knowed what a fighter he had been. I don't know as you have thought about it, Mister, but the only men in this world that know what peace is air the ones that have been in battle and seen the green, quiet bosom of the earth outraged with human blood. Well, Milam got his knowledge of it that way, and he preached it every Sunday in them first hard years, till at last it began to bloom again here in the valley, and we forgot the pain of war. But it looked like Milam couldn't forgit, and so he kept on tellin' of peace. And sometimes as I set yonder in the church listenin' to him cluck to us out of the gospels as a hen gathereth her chickens, I'd recollect them other sermons there on the edge of the wilderness when he took up the war cries of David, and we went into battle blood-mad, with him yellin' them blazin' scriptures after us. T'want hard to understand. He was born with a bugle to his lips, and it was his nature to call to war or peace, accordin' to what was needed.

"But all this time he was gittin' old, and at last one spring his health failed and he took to his bed. I recollect it was one Sunday evenin' he sent for the deacons of old Zion Church to come to his house. And we went, me and Prim Mayberry and Budd Sockwell and old man Snow. We found him in bed with his long, white beard spread over the kiverlid, his hands crossed and his face sorter bleached, as if the very bones beneath had begun to whiten. He talked around some about common things, same as you'd sugar-coat your own pill, then he 'lowed he'd sent for us to give in his resignation to the congregation. 'Lowed he didn't reckon he'd ever preach agin and for us to look out for a new pastor.

"Mister, did you ever think how often we air silenced in the midst of life as if we were in the presence of death? A man's words may open the grave at your feet or just a look in his face. So for a minute we set around Milam's bed, silenced by that long shadow from eternity. I felt the coffin-lid agin my breast. The years appeared to open in the sunlight behind me, and I looked back and I seen just Milam walkin' up and down our valley sowin' seed. Then I looked ahead and there wan't nothin' plain to the sight. Our mountains were dissolved in a funeral mist and the valley was just a grave. But would you believe it—I didn't have time to blow my nose and come out of that trance before old Deacon Snow hitched his cheer forwards, gethered up his whiskers like they was the petticoat of his face, spit into the fireplace, and 'lowed he was glad

Brother Milam had saw his duty at last; that he'd been thinkin' for some time we needed a younger preacher for the good of the church, and so forth. Snow was one of them dad-blame business-minded disciples that looks after the interest of the church as if it was a cotton mill or shoe factory. And Budd Sockwell was just a little pukin' hallelujah saint that didn't know nothin' but how to holler amen. So he agreed with Snow. Mister, some men air natural-born pallbearers. It makes 'em feel cheerful to git a fellow creature out of the way. And as them two set there praisin' the preacher for gittin' out of the way, I recollected how he'd stayed up night after night with old man Snow's boy when he had the typhoid, and how he'd nursed Sockwell thru his spells of speritual downsettin's, and my dander riz. I jumped up, ketched hold of the foot of the bed, and I sez:

" 'We all know what Snow is, Milam. If he'd been in the Old Testament he'd a hired out to Jacob's daddy-in-law and traded him out of all his gals and all of his sheep before Jacob could a turned round. But the rest of us ain't tryin' to buy up the kingdom of heaven the way Snow is. You been like the vine to the branches with us. We have set under the drippin's of your ministry from the time you was just a young tight-fisted theologian that couldn't do nothin' but spit damnation at sinners, till you growed into the very shepherd of our hearts. There have been times these last years when just to hear you made some of us feel as if we were already roostin' in the branches of the seven golden candlesticks. It never has been too far or cold or dark for you to come if we were sick or dyin' or in trouble and needed you. And now that you air flat on your back, you air for quittin' without givin' us the chance to do the same by you. All I got to say is you must have a goll dern pore opinion of us to think we'd agree to sech a thing!'

"Well, sir, would you believe it, when I accidentally brung out them words, a natural human smile crossed Milam's face like a waverin' candle-beam, altho he'd abused me for more'n fifty years about my strong language. And the sight of that last concession to me, that whimsical little flicker of forgiveness, moved me so I had to set down. There's nothin' more Christian than that, Mister, for a good man to forgive you the fault he couldn't break you of.

"We laid his resignation before the congregation that same night. Prim Mayberry led in prayer. I wisht you could a heard him. 'Twant no better'n quarrelin' agin Sockwell and Snow to the Lord. Prim had a gift at vindictive prayer, and for once Sockwell didn't shout amen. After that I made a speech in which I had more liberty than if I'd been ordained to preach. I don't know if you ever thought about it, but there's a right smart onery truth about old hard-featured human nature that can't be told as forcibly in the language of an ordained minister, and this was the kind I give 'em that night. I reminded 'em of what Milam had been us to, and I 'lowed if the members of Zion Church were for turnin' him out because he couldn't trot around after us no longer as if we were just bottle babies of salvation, I was in favor of tearin' it down and burnin' it up. At that old Misses Lovin'good shouted as usual—women air as illogical speritually as they air in other ways, Mister—and the upshot of it all was that Milam was called to the pastorate of Zion Church till his death.

"He lived a year after that, and it was the best year we ever had. Even the winter wan't so cold, spring came earlier, and there was no drought that summer. More flowers bloomed upon the mountains, and this valley was like a cup that runneth over, sech crops we had of corn and wheat. And old Milam just lay up there on his bed, with his long, white beard spread over the kiverlid, and his hands folded, keepin' books for us with Heaven. We humored his speritual fancies same as he'd bore with our backslidin's. Sometimes he'd take a notion that he wanted all the children to come up there and have a party on his bed. And he'd look more like an old he-angel than ever when they got thru plaitin' daisies in his har. You'd have thought the little fellows would be afeerd of him, but they wan't. The very least ones would set up on his pillow and tell the biggest lies you ever heard about grasshoppers and sech, and Milam would laugh fit to kill hisself. Then he'd hold on to the little devil till he could explain to him the difference between just a tale

and the truth. Lord, sir, he taught the very children cunnin' agin Satan. And if he heard tell of some young buck's layin' around the stills on the Ridge, he'd send for him and have it out with him, and that boy would come home as sober as if he'd been baptized. Or maybe it was some gal that was gaddin' about too much for her good. I used to wonder what he said to the gals, but they'd come home lookin' as prim and pacified as if he'd dipped the wings of their young sperits in the whitenin' dew of heaven.

"The worst job he had was settlin' the row between Bob Lovin'good and old John Snow about their line fence. Did you ever take note of this, Mister, a line fence will lay down straight and quiet between two peaceable neighbors; but if they air close-fisted and contentious, the blamed thing will squirm till it brings on a lawsuit. That is the way it done between Snow's farm and Lovin'good's. Every year that line would crawl too far one way or t'other; then they would call one another carnal names and go to law about it. The fall I'm tellin' you about, the line fence squirmed so far one day while Bob was away from home it throwed half of his sweet potato patch on Snow's side, and that evenin' when Bob come on from town he might' nigh flung a fit to see old John Snow and his boys in there grabblin' his potatoes. But before he could git out a warrant, Milam sent for both of 'em. They didn't want to go, and me and Prim had to get behind 'em and persuaded 'em to humor Milam. We never knowed what he said to 'em, but when we all seen them two old rams down there in the field next mornin' runnin' their line fence as straight as a die across every curve they'd been quarrelin' about for the last thirty years, some thought it was the greatest victory over the world, the flesh and the devil that our preacher had ever won.

"But to my mind the finest thing he done was the last just before he died. The men in this valley ain't no better than men air on yan side of the mountain. And the male instinct for virtue ain't so very strong anywhere as I know of. But the women as a rule have been good plain Marys and Marthas, with nothin' worse to repeat of than a little spiteful gossip about one another's housekeepin'. Yet there was an exception, Mag Barfield that lived by herself on the Baker's Ferry road between Brasstown and Anderson's still on the Ridge. She had went astray when she was a young gal, and I reckon you know how a respectable community would treat sech a woman. At the time I'm tellin' you of, it had been eight years since a decent woman had spoke to Mag. You'd see her goin' along the road sometimes, a tall, handsome young hag, with that wild hatin' look on her face that sech women have, as if they'd thought in secret to the scarlet letter on every other woman's breast. And Milam never could do her no good tho he tried, nor she wouldn't come nigh him after he took sick, tho he sent for her time and agin. But 'long toward the last, as he lay up there in his little house agin the sky line of the valley castin' up his accounts with the Lord, she was on his mind constant. He couldn't make 'em balance without her. It seemed like the rest of us were just his ninety and nine, and that pore lost gal was more to him than all the others because she had wandered away. He talked about her so much that we got embarrassed and nary one of us knowed what to do. At last one day this happened. I had come up to fetch some fresh eggs to Milam's widowed daughter that took keer of him. And while I was settin' in there tellin' him the news, a shadow drapped across the doorsill, and in stepped Mag Barfield. She didn't say a word, just put her hands behind her back and leaned agin the door jamb and looked over Milam's head. When he seen her that angel-of-the-covenant smile came out and glistened on his face like a blessin'. Then he sez, soft as if it was just his sperit speakin':

"'Maggie, child, I knowed you'd come, and I been waitin' for you.' She didn't move, nor give a sign that she heard him more'n two little spots of red that flamed out on her cheeks.

"Then Milam he began to quote scriptures, easy, like a mother singin' a cradle song—not the damnin' kind, but tender words, put in to heal the soul. I can't recollect all of it, but at last he sez in a whisper, holdin' out his hand to her, 'Tho your sins be as scarlet, they shall be as white as snow; tho they be red like crimson, they shall be as wool!'

"Mister, I ain't never been in the holy

of holies but that one time, and I was afeerd to look up, but when he said that it seemed to me I heard the sweet flood of livin' waters they tell about. And the pore gal must have heard it, too, for she run forward with a sob and flung herself down by Milam's bed. She cried terrible, but he wan't no ways disturbed, jest laid his hand on her head and began to quote one of the old foundation hymns. I forgit the words, but he bound it like wings in her sperit. And I have saw many a saint in my time, but I ain't never seen no woman's face look as fair and clean as what Mag's did when she lifted it after awhile and looked at Milam. But she didn't git the chance to speak, for just then we heard female voices and the sound of feet comin' up the path outside, and I recollected that it was the evenin' for the Women's Band of Hope to meet at Milam's house. Mag started up like she wanted to git out of sight, but that old he-angel helt on to her as if she'd been the only jewel in his crown. Did you ever see an old tabby cat come in the door and face a strange dog and sorter roach up her back and spit as she went by? That's the way Partheny Sockwell looked when she seen Mag. After her came Misses Snow and Misses Lovin'-good and half a dozen more, and every one of them looked that cat-hiss at the pore gal settin' there on the floor by Milam's bed as they filed by. I have thought about it a right smart, Mister, and I'm bound to say that in my opinion tain't jest virtue which makes good women despise bad ones so piercin' keen; it's the all-fired advantage of them the bad ones have taken. Besides, women are more subject to spells of reptilian godliness than any other kind of good people. But Milam knowed how to deal with that disease. So he sez first to Partheny:

"'Misses Sockwell, maybe you didn't see Mag Barfield settin' here by me, her that waited on you the time you had chills and fever. *You* recollect her, Misses Snow, her mother was sech a friend of yourn. And I *know* you remember her, Misses Lovin'good. It's Mag that toted your Annie home the time she fell off the bridge and broke her leg. She have come home to us in old Zion and I want you all to make her welcome.' With that he looked around mighty fierce and bright at them old church hornets settin' there in stingin' silence. I got oneasy, for you can't tell what turn piety will take in some kind of Christians, and Mag was lookin' ready to backslide herself when Prim Mayberry's wife stepped in the door and come straight to the gal when she seen her, as if she understood everything that had happened. Air you acquainted with Misses Mayberry, Mister? She ain't got no sense, not a grain, but if you give her the choice, she always knows what is right. And she is sech a fool she ain't got no policy agin' doin' it, I don't keer what it costs. So now she took hold of Mag and begun to wet her with her tears. Did you ever have a good, old, fat woman cry on you, Mister? There ain't nothin' more cleansin' to the sperit this side of Heaven.

"But when the others wanted to follow her example and come forward to rejoice like harpies over the sinner that had returned, Milam riz up on his old arm bones with sech a fightin' look in his face as I hadn't saw there since the Battle of the Wilderness, and he sez, wavin' 'em back:

"'No! you ain't comin' right. You think you have all to forgive, but I tell you Mag has much to forgive too. You let her go, you women of the valley, this gal that played with yourn. You let her go with your dammin' whispers behind her, instead of holdin' out your arms to keep her back.'

"Well, sir, he give it to 'em good and hard till they were ashamed of themselves and were ready to promise anything for Mag. Then Misses Lovin'-good shouted, not because there was anything to shout about but because she was hung on a har-trigger speritually and couldn't help it. And Milam was so happy it was terrible to look at him. We all knowed he wouldn't last long after that. It seemed, too, like he got in a hurry to be gone. At last, one night, about a week later, me and Prim were settin' by his bed when he roused up, folded back the kiver as if it had been the leaves of a book, looked out of the window, and sez, as if he were bringin' us word from the very end of time:

"'And be not conformed to this world, but be ye transformed by the renewin' of your minds'—he never finished. Them were his last words and the best last words I ever heard from any man."

NASHVILLE, TENN.

The Life Story of a Hungarian Peon

[The following true story was told by Mike Trudics to Alexander Irvine. Mr. Irvine spent several months last winter as a manual laborer in the lumber and turpentine camps of the South. In a café in Pensacola Mr. Irvine entertained Mike and Mr. Sandor as they exchanged experiences. Mr. Sandor was then on his way to prison for his share in Mike's involuntary servitude.—EDITOR.]

"I AM going to America!"

The words of my father startled us that night, for we were so quiet—out there two hours' walk from B——. It was to us like saying he was going to be hung.

My father and mother were farmers. There were four of us children—two boys and two girls. John was ten, Annie twelve, I was seven and Mara sixteen.

We were at supper, but my father was not eating. "It is the best I could provide," my mother said, thinking it was the food.

"It is not that," he said. Then he spoke of America, and we all looked at him with our mouths wide open.

Mother stopped eating and we children had more black bread that night than we could eat. After supper we gathered closely around the open fire. All of us got very close to father. Annie sat on his knee, I sat on the hearth with my arms around his leg, while John and Mara leaned their heads against him. Mother rocked and rocked, looking with big eyes into the fire all the time.

"Even if I owned a farm," father said, "what difference would it make? I need a mule, I need a plow—I need many tools. It breaks my back to do a mule's work, and the best I can do brings but black bread, and not even enough of that."

I did not understand what all this meant; I only knew in a dim kind of way that something had gone wrong. My father was a different man to me. My mother, too, looked strange. Her eyes were large, and she would look a long time at one place.

Our hearts were heavy. They were heaviest at night, but during the day I saw my mother weep and kneel for long periods at the ikon. We had all been baptized in the Russian Church, and one day the priest came and said a blessing for my father.

MIKE.

"Yes, yes," my father said when the priest was gone, "prayers are all right, but they are not black bread. They do not pay the rent. The priest says prayers and I sweat and give my blood; that is different."

My mother made the sign of the cross and said, "God is good! God is good!"

When my father picked us up one by one to say goodbye, he kissed us many times. Then, to please my mother, he went over to the ikon in the corner, and dropping on his knees crossed himself. We all sobbed aloud.

Nikof Jaros, our neighbor who lived alone, came with his mule to take father and his box; but we all cried so loud that he had to take us all. The journey was a fine holiday for us and we forgot our trouble on the way. It was different coming back.

"In two months," my father said, "I will send for you." We hugged him tight and hollered, tho there were crowds of people around. My mother still wept quietly and said, "God is good! God is good!"

"America is great," Nikof told us on the way home. "It is not a land of fat priests and skinny people. Everybody has plenty and every man is a lawyer. The people make whatever laws they like."

We thought Nikof was very wise—except when he was drunk.

We were very lonely. When the wood fire burned brightly on the hearth at night we all sat around it just thinking, thinking about father. Mother used to gather us around the ikon every night and make us say our prayers. John cut a nick in the door-post for every day the ship was at sea. One day, when the posts on each side of the door were covered with nicks, a letter with George Washington's picture on it came to B——. John got it. None of us could read it, but the feel of it was very nice and we all handled it in turn. We handled it over and over. Mother wept over it before she knew what was in it. Nikof was sent for—he can read. He came at night. It was a great night for us. We believed more than ever that Nikof was really a great man. He read the letter over to us. Indeed he read it so often that we could all repeat it by heart. For so much paper there seemed to be very little communication. It just said father was well and making a fortune very fast.

A week afterward the priest came to our house, and after telling him the good news, mother gave him the letter. We all watched his round, red face. There were so many expressions on it in a minute.

"Nikof is a liar!" he said. "Jan Trudics is dead! This letter is from a friend of his who says Jan walked the streets of New York looking for work until his feet were blistered. It says that at the end of a week he was taken ill and died. It says he died of a broken heart!"

My mother began to cry, and that started all of us.

"Be quiet!" the old priest said sternly. "God will be a father to the orphans. He will succor the widow in her distress!" But we cried all the louder. That night we gathered closely about mother.

John brought in extra wood and we sat silently by the fire watching the red flames as they leaped up the old chimney. Mother's face made us all cry. It was so pinched. Her lips were white and her eyes were sunken deep into her head, and for long hours she just looked steadily into the fire. We cried until one after another we went to sleep, and mother carried us to our bed in a corner.

Mother pined and prayed and spent much time before the ikon. As the days passed there was less and less black bread. Nikof came often, and always brought something to eat. He seemed to know our affairs, tho nobody ever told him. We liked him very much even tho he did read the letter backward. "For stupid peasants," Nikof said, "knowledge is a great curse. The less we know, the less we need." When he cursed the old priest only one of us agreed with him—that was Mara.

A year from the time my father went away my mother was in her grave, and the old priest and the doctor said that she, too, died from a broken heart. When we gathered around the fire again, we were a quiet, sorrowful lot. Nikof came and sat up late with us. He chopped plenty of wood and made some cakes with his own hands. He told us plenty of stories—good stories, stories about God and another world than this, where father and mother were. "There," he said, "we will all be spirits and we will have no stomachs at all."

"The priest does not say we shall have no stomachs," said Mara.

"I know," Nikof said. "He is always making me out a liar—he is all stomach, the old——"

Mara put her hand on Nikof's mouth and stopped him.

Some kind-hearted folks in B—— took John and somebody took Annie. Mara and I were unprovided for. One day Nikof hitched up his old mule and took us for a ride. It was a long ride to the city, and Nikof and Mara seemed to have all the conversation to themselves. But I was glad of the ride anyway. And when we drove up to the old priest's door Nikof let me mind the mule while he and

Mara went inside. When they came out again Mara's face had a different look She looked as she did before father went away, and I was very glad. I thought she had gone tor a blessing to the old priest, but Nikof said:

"That is not it at all. We have just got married."

I was very glad. Nikof took us to his own little farm a few miles from our old home and we lived there happily with him for a year. In a year Nikof got drunk just once. It was when he was with a soldier in the city. They got too much brandy and on the way home lay down in the snow. They found the soldier dead and Nikof had both his legs sawed off later.

I was taken to the city and given away. I was nine at the time. I did not see Mara for years after that, tho we were only two hours' walk apart. One day they told me that Mara had gone crazy and that she had left Nikof.

At fifteen I became apprenticed to a molder. It was a place where were made cornices—cornices of tin and zinc for churches and other fine buildings. I staid there until I was twenty years of age. Then I worked at a number of things—at times a common laborer and again as a teamster.

After I was twenty I attended meetings of different kinds. I heard a lecture once on America by a man who had gone there as a poor emigrant and returned a rich man. He said America was a country of magic. He told of wonderful things men had done, but all the time I was thinking, thinking of my father.

THE MILL AT LOCKHART.

of his blistered feet and broken heart. It was not his talk, however, but a book by Louis Kossuth that stirred me up to go to America. It took me nearly a year to get enough money to come. I about half starved myself to do it.

It was in May, 1906, that I came to New York. I was then twenty-four years of age. It certainly did look wonderful from the ship! A well dressed man who spoke our language told us that the big iron woman in the harbor was a goddess that gave out liberty freely and without cost to everybody. He said the

thing in her hand that looked like a broom was light—that it was to give us light and liberty too. I thought he talked like Nikof Jaros. Especially when he told us a man could stand inside the broom.

THE NOON HOUR.
Awaiting Archie's order, "Pull 'em out, boys!"

I thought the rich people lived in the big, tall houses, but he said that was a mistake; they just did business there. He said they lived in palaces that would make our eyes bulge out if we could see them.

At Ellis Island they put my life in a book and asked me a lot of funny questions. Did I believe in law? Was I in favor of government? etc.

When I got away from them I found my way to my mother's brother on East Third street, near the river. My uncle was a brass polisher, but altho he had been many years in New York, he had not performed any miracle; he had not seen any magic. He had an ordinary kind of a job that he held in an ordinary kind of a way for a number of years. I expected, of course, to find him rich, but he laughed loudly at that, for he had that idea himself when he first landed.

The man my uncle lived with was an old friend of my father's. He gave me a corner in one of the two rooms. It was a good corner and I was happy in it.

Of course I looked around for the dwellings that were to make my eyes bulge out of my head. I saw only tenements, however. Maybe they were barracks. I was much bewildered by these big houses. They looked like big stone caves and the people were so crowded that they knocked each other about the streets. Indeed they rushed along as if they were crazy.

I got a job with my uncle at $10 a week. That seemed a very big price to get for my labor, but the price of board was so many times larger than it was in the old country. However, I was getting along very well until the factory was destroyed by fire. Then I had the experience of looking for work. It was easy as long as I had money to pay my board, but when my money had gone and I was dependent on my uncle and my father's old friend, I felt it very keenly indeed. I kept going, going, going, until my legs were very tired. Then a feeling of home-sickness came over me, and I came to the place where my father had been—I mean the condition he had experienced eighteen years ago. But I was young and had no one dependent upon me. I dreaded debt, and I would rather be beaten than called a loafer. Yet work I could not get. I ran up a board bill of $2. That worried me and I determined to go away and fight it out alone. I wrote a note and left it on the table. I promised to pay the bill as soon

as I got work and asked them not to think unkindly of me because I left in a hurry.

I met on the street a Hungarian who had arrived on the same ship. He told me of an agency where they wanted men. So together we went there. The names of the employment people were Franks & Miller. My friend and I did not have much clothing, but what I had was good and strong.

"You will work in a sawmill," they said, "and you will get $1.50 a day and your food."

That seemed all right and I counted up on paper how much I could save in six months. It seemed big—very big. All my fellow laborers seemed pleased. I thought of my father: how fortunate for him if he had found an agency like this!

The railroad fare was $18. That, of course, was paid for us by the agency, so they said, and we were to pay it back at the rate of $3 a month, and if we liked the work and staid for so many months we would not have to pay it at all.

"You will stay three months!" said Lanniger, a Hungarian friend I had met on the voyage. I determined to do so too.

Eighteen dollars seemed a lot to save by just holding on to a fine job, and the very thought of $45 a month made me laugh with joy. I imagined myself going back to Hungary rich!

We looked a queer lot as we went to the boat. There were so many nations represented and we were so differently dressed.

I had good, stout boots and woolen socks; a fine cap; a cotton shirt with cotton collar and a bright new tie. My clothes were strong and whole.

I was one of a gang. There were all sorts of men in it. We shipped from New York to Savannah by boat and from there to Lockhart by rail. A young man whom they called "doctor" met us at Savannah. I liked the look of him. He had large eyes and a fine, kindly face. It was July 18th, 1906, when we arrived at Lockhart. The first thing we saw was an immense saw-mill.

"This is our place," said Lanniger.

THE TRAIN-LOAD OF LOGS.

We looked at each other with wide open eyes.

"You bet I'm going to stay three

"Good!" I said. "I am glad to be so near a good, long job. I am tired out."

But we staid there only an hour. Cer-

tain men were picked out to stay and others were ordered on board a little engine. I was of the latter, and soon we were crashing noisily thru the forest to the camp. The journey was about seven miles. A sort of dread seized me as we tore along. I was filled with suspicion, but I did not tell anybody. The camp was a train of box cars and around the camps were a lot of wooden sheds, stables and shops. My contract called for work in a saw-mill. I got enough courage to speak up.

"My contract says saw-mill," I said.

SANDOR.

Gallagher, the boss, was chewing a toothpick while he looked us over. He paid no attention, but just looked at me as if I were crazy.

"My contract"——I would have said more, but he waved me aside.

Gallagher is a stout little man with a revolver sticking out of his hip pocket, and before we were an hour in the camp we heard some examples of his fearful profanity.

"Put him on the railroad, Charlie," he said to the underboss. The men standing around laughed.

The food in the camp was very good and there was plenty of it. We sat down to meals in a box car around a long table. The table was covered with good things —pork, meat, potatoes, bread and cake. We had tin cups and tin dishes.

The bunks in the car were too close together and too many men slept in them. I could not rest easily. My mind was disturbed.

The hours of labor were from six to six.

The work in the woods sawing logs was hot—too hot and too heavy for me. I learned that the pay was a dollar a day. I told them how the agency had told me that the pay was one dollar and fifty cents a day and food. They smiled at that.

So here we were, out in a wild place, helpless and at the mercy of men who laughed at contracts and out of whose hip pockets bulged revolvers. I did a lot of thinking. I talked to Lanniger.

"I'll run the first chance I get!" Lanniger said.

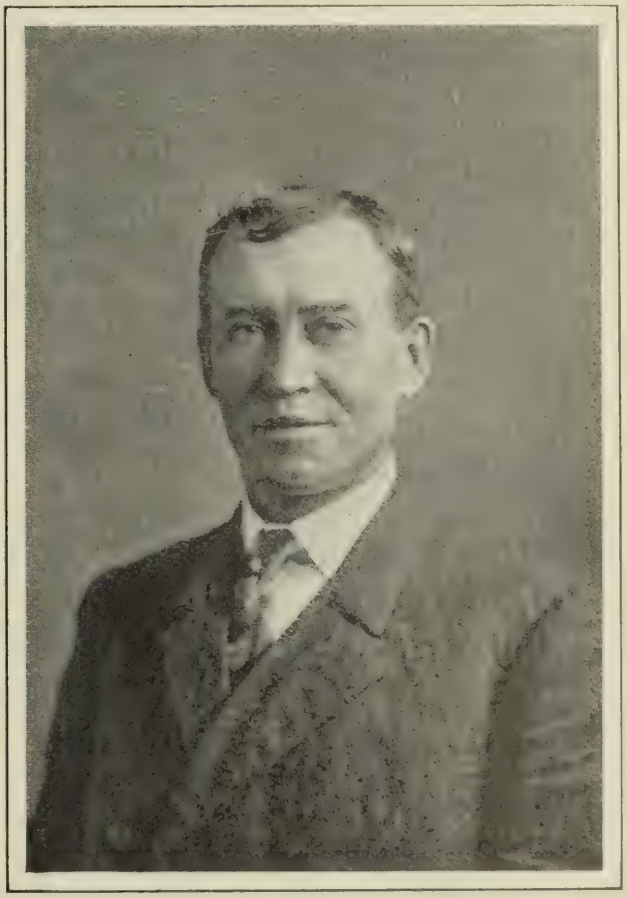
"I won't wait for a chance," I replied. "I'll make one and go!"

Next day before it was daylight I left the camp—not knowing where I was going. I knew the lumber company was big and powerful and that I was less to them than a log of wood. I was afraid most of the time. I walked all the forenoon, not knowing where I was going. Every time I saw any one coming I hid in the woods. About noon time I saw some men coming along the road in a buggy. When they approached I knew Gallagher. Sandor, the Hungarian interpreter, was there, as was also Dr. Grace, the camp veterinary. They had three bloodhounds with them.

"There's the son of a——," I heard him say as he leaped from the buggy and rushed at me.

The doctor was at his heels in a moment and seized me with his right hand, while he pointed a revolver at me with his left. Gallagher had a horse-whip and at once struck me on the hips. He coiled the lash around my back at every stroke. Sandor sat in the buggy. I screamed in Hungarian to him, but he dared not move or interfere. After a dozen strokes my back was raw and the lashes sank into the bloody ruts of their predecessors. It made me howl with pain. Gallagher whipped me until he was exhausted.

Then they drove me like a steer at the point of a revolver along the road toward Lockhart. I appealed in my native tongue again, but Sandor told me that just as surely as I ever attempted to run away again, they would kill me. I believed him. In the woods they can do anything they please, and no one can see them but God.



When we arrived at Lockhart, where the sawmill is, I again protested and showed my contract, for I thought I was in a town where perhaps there might be some law or civilization. But I soon discovered the kind of law lumbermen are accustomed to. Gallagher whipped me a second time—whipped me until my shirt was glued to my back with my blood. Then they tied me in the buggy by the arms and legs, and with a drawn revolver and yelping bloodhounds, we drove away thru the woods to the camp. That night armed guards kept watch over the laborers in the box cars. Hardly a day passed after that without some one being run down by the bosses or the bloodhounds and returned and whipped. There were some ghastly beatings in the broad daylight, but most of it was done in the barn.

In the daytime I had no time to think, but at night as I lay awake in my bunk, I made up my mind that not only most men, but most books also, were liars. I thought of that first picture of Washington on our letter at home; how Nikof thrilled us all with interest in it. I remembered the burning words of Kossuth on his impressions of America. But here I am with my own feet on American soil. I hear with my own ears; I see with my own eyes; I feel with my own feelings the brutality.

The bosses of the lumber company were put on trial and we told our stories; at least those of us who were still remaining. Of all the things that mixed my thinking in America, nothing was so strange as to find that the bosses who were indicted for holding us in peonage could go out free on bail, while we, the laborers, who had been flogged and beaten and robbed, should be kept in jail because we had neither money nor friends. We were well treated, of course, but at first I felt like a criminal. I am not sorry now for that jail experience, for I learned more about America than I would have learned in a year in a night school.

Foster was an American. He had fought in the Spanish-American War. He told us about graft and politics. "To get on," he said, "you must be a grafter here. Honesty never pays. A tip to the lumber bosses that we would lie on the stand and we would be out of here by noontime."

Lanniger was with me. We laughed

GALLAGHER.

at the queer ideas of free men. We talked all day, every day.

"Is Gallagher a grafter?" I asked.

"No," Foster said. "He is just a common slave-driver."

"Do they flog men everywhere in this country?"

"No, just down here in the South where they used to flog niggers. Thirty thousand laborers are sent South every year. They come down to mines, they fill the camps of all kinds, but they never stay."

"Why not?" I asked.

"Well, for the same reason that none

of us will stay—small pay and nothing to see."

I learned much English from Foster, especially slang. When conversation was dry I got very tired of iron bars and jingling keys. They hurt my mind.

"Say, Mike," Foster said, "you're dead in luck to be here. In the stockades you'd dig five tons of coal a day, and for a lump of black rock found in your coal they'd flog you raw. Over there across the way in the city prison you'd be squeezed in an iron cage seven by three feet"—he measured it off for me—"and you'd be forced to sleep in the excrements of the hobos that were there ahead of you. I've been there; I know."

Then I was more content with the county jail. The trial came off in November, 1906, and we went every day for weeks to the big Government building. In the trial I learned that there was law in America, but its benefits to the poor were accidental. I was glad to see Gallagher get fifteen months in prison. I think he deserved much more. But Foster said he'd never serve a day. I asked him why, but he merely said, "Graft."

Old Jordoneff and I got work on Fort Pickens in the Gulf of Mexico as laborers in the repair of forts, where I am working now. We have very good pay—dollar and a quarter a day and our board.

The boss is a gentleman.

We work eight hours a day and get a day off every two weeks. But the men we work for, even the under-bosses, are humane and kind. Therefore we do far more work and far better work, and work is a pleasure.

Shall I become a citizen?

Why should I?

The Growth of Prohibition and Local Option

BY J. FANNING O'REILLY

[The author of the following article is the Editor of *Beverages*, a journal devoted to the interests of distillers, brewers, rectifiers, bottlers, importers and wholesale and retail dealers, and the official organ of the Liquor Dealers' Association. It will be interesting to our readers to see how the liquor dealers are placed on the defensive and are compelled to confess not a little wrongdoing on the part of their agents, resulting in the proposed suppression of many saloons. Our readers are familiar with the argument for State prohibition and local option, and we refer them to our editorial columns for further comment on this article.—EDITOR.]

THE concession is seemingly general that within the past few years a very perceptible sentiment in favor of prohibition and local option has developed all over the United States, and particularly in the South. The average reader, upon looking into the matter, will doubtless couple this new problem with the circumstance that a comparatively few years ago no one took the question of prohibition very seriously, and a great many well-meaning people, willing enough to give any temperance movement a fair trial, believed that the idea as a whole was a failure. Prohibition has been a failure for the reason, as has been clearly shown time and again in the States where it has been tried, that it does not prohibit, and whatever of logic or common sense there may be in local option (a failure also in many places, by the way), there is certainly none in absolute prohibition. An enforced prohibtion law would be a true test of the principle, but if, as has often been stated, "the best way to repeal an objectionable law is to enforce it," it is safe to say that not a State in the Union would now be under the prohibition banner, because, as is a well known

fact, in every State where prohibition is legalized the law is not enforced and gets only a partial recognition.

This is notoriously true of Maine, and so true was it of Kansas that only up to a few weeks ago the large brewers of the country operated in that State in open defiance of the law and even went to an enormous expense in erecting distributing plants in its various cities. The situation there, however, has recently been changed by a Governor who seems to have made up his mind to enforce the law, but it remains to be seen to what extent he can do so. It is amusing to notice, however, that since the determination of Governor Hoch to carry out the law, any number of suits have come forward in the courts of Kansas and elsewhere to determine the legality of the C. O. D. business, a circumstance which rather indicates that those engaged in this particular branch of the liquor trade are hopeful to continue it under the stricter order of affairs. It also shows that prior to the Governor's decision to enforce the law there must have been a thriving business done in packages of liquor sent into Kansas under cover of the interstate laws.

In Maine it is generally understood that the United States Revenue license of $25 is easily collected by the Federal officers, and that people who sell liquor there are willing enough, for that privilege, to be fined by the State authorities every week. It is, therefore, little to be wondered at that this hypocritical condition of affairs is every year lessening the sentiment in favor of prohibition in Maine. The vote record of the State for several years past sustains this statement.

People in Europe and other countries interested in temperance and the problem of dealing with the liquor traffic, sometimes come to America in the belief that they can find model license laws as a basis for changes in their home regulations. A few years ago Maine was visited by a commission from Finland, who made a most thoro investigation of the so-called strict operation of prohibition there, but with results the most discreditable to the State. Their investigations revealed an almost incredible state of demoralization. They found women and children engaged in the surreptitious sale of liquors under the most degrading circumstances and conditions. They obtained liquor everywhere with the greatest ease, and found it to be of the most execrable quality. They ascertained that the authorities of Maine were fully aware of the existence of the traffic, and they finally proclaimed that they saw more drunkenness in Portland, Me., than in any other American city they had visited.

Other States in the East have also been waning in their interest in prohibition, because of its failure as an economic principle, altho the movement has at times taken on new life. Many years ago when it was revived it found some response in the adoption of prohibitory laws by three Western States, but as stated before, the older States repudiated prohibition, and thereafter for a time, or up to a few years ago, the sentiment in favor of it declined rapidly—an occasional success, as in North Dakota for instance, being offset by many failures, such as the repeal of the law in Iowa, South Dakota, Vermont and New Hampshire. In many other States where the idea was extensively mooted, the voters compromised on local option.

In the face of all this, the great State of Georgia recently joined the prohibition phalanx, and some seem to think that Tennessee, the Carolinas, Texas, and even Maryland, will follow suit. It should also be taken into consideration that the local option principle has made extraordinary inroads in the Middle and far Western States. This method of dealing with the liquor question may in the end be more far-reaching in its effect and purpose than what is known as out-and-out-prohibition. Of the sections of the country affected by local option laws, the largest proportion, probably 80 per cent. according to a recognized authority, is inhabited by a rural population; the territory is thinly settled, contains no cities of any considerable size, and scarcely any that come under the head of incorporated communities. The Anti-Saloon League, however, is working very hard to introduce its pet idea into the larger cities, and has even tried to do so in New York City, altho without succes.

All this goes to show, whatever may be said either for or against the principles of prohibition and local option, that a

very marked antagonism has sprung up against the liquor traffic. It has grown with amazing rapidity, and its increase presents much occasion for reflection. Some people will find it hard to account for such a sudden development of sentiment on this specific proposition, and they will try to reason out some excuse for this new order of things. These people may believe that if the laws were strictly enforced, prohibition would not be a failure, but I contend against this argument by the statement that if such laws were strictly enforced and carried out to the letter, they would be repealed at the first available opportunity, by reason of the fact (and statistics show this) that a large percentage of the population desire to drink and will drink more than they ordinarily would if they have to resort to subterfuge to get it.

Those who have followed closely the adoption of prohibition in Georgia cannot believe that it was taken up there with the seriousness to which the subject was entitled. The people were confronted with some local conditions, and concluded that these would be best settled by the adoption of prohibition as a panacea. The writer read all the debates in the Legislature on the subject, and has never before heard of an enactment becoming operative thru such disgraceful scenes of riot and disorder. Here was a law getting its support because of the belief that liquor had something to do with a succession of negro riots, yet so boisterous and disorderly had the conduct of its supporters become that the Speaker of the House had to clear the galleries several times, and to even resort to calling in the aid of the police to assist the House officials in restoring a semblance of peace and order. It was anything but a sober and sedate affair, even if in the cause of sobriety. Prohibition was passed in Georgia thru the wild and unbridled excitement of fanatical enthusiasm, inflamed to a great degree by the local conditions already referred to.

Reviewing the question as a whole, it is to be doubted whether the existing movement is due as much to a genuine desire for prohibition or local option, as it is to a sense of resentment against the offensiveness of the saloon and its character generally. It has sprung up with altogether too much suddenness to be capable of any other construction. The United States is very far from being an intemperate country, and there are too many temperate temperance people in it to warrant the assumption that apparently so general a sentiment has these two theories pure and simple for its basis.

The saloon has had a self-inflicted discoloration of the optic for some time past. It has offended public sentiment in many ways. It has, to all intents and purposes, so far as its morale is concerned, been without check or regulation. This statement is not meant as a general one against saloon-keepers, for the writer has met and knows hundreds of them, and knows, as a matter of fact, that the majority are respectable, law-abiding citizens, but the business as a whole is in bad repute thru the sins of the minority. The regeneration of the saloon itself is the only thing that will stay the growth of the prohibition and local-option movement.

It is worthy of notice that Bishop Grafton, of Fond du Lac, Wis., recently said:

"The saloon will remain where public opinion sanctions it."

But in this connection it must be remembered that neither the Prohibitionists nor the Anti-Saloon Leaguers have any sympathy with a movement for the betterment of the saloon. Their sole aim and object is the extermination of the traffic, and in order to save itself from absolute annihilation the saloon must endeavor to conciliate public opinion. Perhaps at this late stage such an achievement is impossible, but the effort will be governed mainly by the degree of activity displayed by the brewers, who are logically most interested in the continuance of the saloon. That this is true is perhaps best evidenced by the unanimous determination arrived at the other day by the brewers of Indiana to close up two thousand saloons in that State at the expiration of their present license terms.

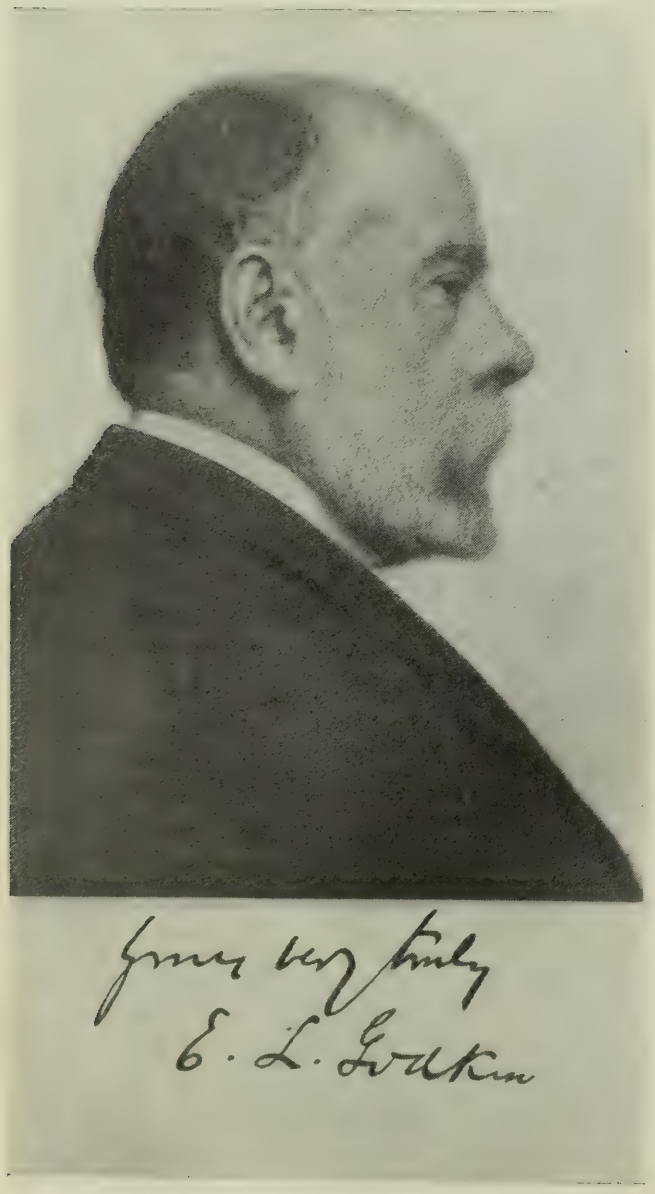
Coming back again to Georgia, which is now the storm center of the prohibition movement, it seems that the negro has very much entered as a factor in the growth of this sentiment in the South, and it remains to be seen how far his social improvement will be advanced

under these new circumstances. Colonel Henry Watterson, of the Louisville *Courier-Journal,* may certainly be taken as a fair judge of conditions in the Southern States. Some little time ago, the Rev. Dr. Houghton, of New York, took him to task in a kindly way for some remarks he had made on this very subject of prohibition and local option, for, be it understood, the State of Kentucky is now fully two-third "dry" under the principle of local option, and this is the Colonel's reply:

"There is a strong tendency to import the old 'blue laws' of New England into Kentucky. The real, underlying, compelling cause is the negro—to keep drink from the negro. The pretense is temperance. The method is fanatical. The lower order of politicians, seeking lines of least resistance, are mounting and riding this wave of bogus religion and reform."

The Prohibition party is not to be credited with the growth of the existing general sentiment, whatever it may amount to. The credit really belongs to the Anti-Saloon League, which has evolved a new theory of circumlocutionary prohibition. The League is really as anxious for the extermination of the liquor traffic, but it goes at the matter by indirection, or local option. This makes its platform more plausible, for the drinking man is as likely to vote for local option at first glance as the most rabid prohibitionist would be to vote for prohibition. This is one reason why the movement has grown to such an extent, because the ordinary voter seems to think that local option merely drives the saloon out of the residence districts. The League is composed of a well-organized body of clever men, many of whom have been identified with different churches, and who know how to appeal to public sentiment. The work of fighting liquor is said to be much more profitable than that of ordinary religious endeavor, and possibly this may account for so many of the clergy flocking to the League's standard. Be this as it may, they have no difficulty, with their *pro bono publico,* semi-religious platform, in gaining easy entrée to church pulpits and obtaining a fair share of the collections for a continuance of their work. These missionaries point the finger of scorn at the local saloon, claim that it is a menace to public morals, and go great lengths to establish the correctness of their statements. Along these lines the organization has become a very powerful one. Its workers are in every field, and they are busy in season and out of season. During the legislative sessions in the various States their representatives are on the ground pushing forward local-option measures, and they have acknowledged to spending as high as five hundred thousand dollars in one year's work. When we consider that this activity is general, that it is amply financed, as shown, and intelligently carried forward without cessation, what wonder should there be that a general feeling has arisen against the liquor traffic and that it has so few friends?

In the facts presented we may also find some food for thought as to the character of so-called "public sentiment," and how far in any direction it may be swung, either for good or bad, with such an impelling force.



Against this extraordinary development under notice, the interests of the liquor trade have made little, if any, intelligent effort to stay the progress of adverse public opinion, deserved or undeserved. The representatives of its various sections have convened in successive years at different places and past perfunctory resolutions pointing out the legality of their business, its moral status, etc., but all this has counted for naught in the face of the ocular evidence presented by the existence of dives, back rooms, assignation parlors, gambling-rooms, handbooks and such like evil adjuncts of a legalized business. The lay press of the country has fallen in with this general denunciation, and in this way we may account in some degree for the cause of the present "prohibition movement."

New York City.

Literature

E. L. Godkin*

THE editor has done his work admirably. He has effaced himself and left his author's letters to tell their own story almost of themselves. The selection, too, is excellent—as far as any one can judge

who has not himself worked over the original papers. The letters are not only illustrative of the subject, but the greater number of them are interesting in themselves. Most intimate of all perhaps and nearest to the man are those written to Charles Eliot Norton, one of his oldest and most constant friends—while the few addressed to women, which the editor has done well to include, serve to relieve the severer and sterner side of his character.

Taken collectively the correspondence forms an unusually instructive study of a man whose being was almost exclusively political. Literature in the remoter sense, art, music, the vaguer disinterested subjects of the study and the cloister had no great attraction for him. Not that he was without intelligent concern for everything about him; but these matters were of distinctly minor importance. Even scenery and landscape, the face of nature, touched him but little. "I find I am a *'homme très policé,'*" he writes toward the latter part of his life, "and only thoroly enjoy scenery created and improved by man. Nature, except Switzerland, tires me." Man, the social animal and the institutions by means of which he tries to get on a little better with his neighbor—such were Godkin's main affair. And of all man's polities, his makeshifts and experiments, it was the democratic which had the journalist's sympathies. At Windsor Castle he sees the Queen and the Prince of Wales driving thru the gardens and bowing affably to the people. "Fat, useless royalty," he calls them.

Indeed, it is nothing else than this supreme faith in popular government apparently which furnished the mainspring to his activity. It brought him to America as a young man and inspired him to forty years of conflict against abuse and error, as he saw them. Prejudicial as his foreign birth was to him at first in many respects, it undoubtedly gave him a freshness of impression when brought face to face with our institutions, which the American, immersed from birth in his own element, seldom attains. It was a distinct gain for the political critic, as Godkin always was, to come hither with his sensibility unimpaired by use and

*LIFE AND LETTERS OF EDWIN LAURENCE GODKIN. *Edited by Rollo Ogden.* 2 vols. New York: The Macmillan Company. $4.00.

wont. He writes to the *Daily News* in '59:

"It would be hard to imagine a position more thoroly pitiable and forlorn than that of an American President at the close of his term of office. He has generally disappointed the expectations of his own partisans—in fact, in the nature of things he must always do so; he has not accomplished one-half of what he promised and expected to accomplish. His enemies are delighted, and his friends disgusted by his shortcomings. In the second year of his Administration his successor begins to appear on the horizon, and all eyes are turned toward him; the outgoing incumbent falls into contempt and obscurity, and is finally turned out of the White House, generally toward the close of his life, with nothing to hope for in the future and nothing to look back on in the past."

It is seldom that the born American sees things quite in this way. And while perhaps it is well that the great constructive statesman should be blind to certain matters of the sort, yet it was very largely this newness of view, together with his temperamental belligerency, which gave Godkin the power he had. For, in spite of his humor, he took serious things—and some things that were not altogether serious—very seriously. "I am tired," he exclaims after some adverse election or other, "of being continually hopeful; what I long for now is a little comfortable private gloom in despair. It seems in America as if man were made for government, not government for man."

Small wonder that under these circumstances, with his Irish intensity of nature and his long hope in this slow and patient people, he should have felt occasionally something of the despondency which is bound to visit him who tries to realize a high ideal in practical life—and that the feeling should have deepened upon him gradually with years. As late as 1897 he writes from England:

"There are many things here which reconcile me to America, but there is no country in the world today in which you can be very happy if you care about politics and the progress of mankind, while there are many in which you can be very comfortable if you occupy yourself simply with gardening, lawn tennis and true religion."

And the feeling, spreads sadly enough, till it appears to overshadow life itself and he is moved to cry in dispirited strains: "But what a cheat life is."

This is the melancholy of reading biography. The sense of failure in which it all seems to decline—unreasonably, no doubt; for the failure dissolves a little in a clearer, calmer view of the possibility at least of a relative and limited success. To have fought, to have kept the battle alive is the main thing after all.

Some Recent Plays in Verse

THE influence of Stephen Phillips on American and English drama has been greater than might reasonably have been anticipated. Writers of distinction who, ten years ago, would probably have devoted their talent to prose fiction, have been fired with the ambition to produce literary plays. Among them have been some—still to be counted on the fingers of two hands—who, with a boldness bordering on temerity, have presented their plays in verse.

PERCY MACKAYE.

Few out of their more or less dramatic works have had the honor of reaching the footlights. But quite a number of them have found their way into the library in book form, and have thus challenged criticism. Several such contri-

butions to stage literature have appeared quite recently. The most noteworthy, and perhaps most nearly satisfying of them, the "Jeanne d'Arc of Mr. Percy MacKaye, has already been reviewed in these columns. With the English version of Gerhart Hauptmann's "Die Versunkene Glocke" last spring, "Jeanne d'Arc" was interpreted by Mr. E. H. Sothern and Miss Julia Marlowe in London and New York. Another work by Mr. MacKaye, entitled *Sappho and Phaon*,[1] was published lately and will be performed in the near future by Madame Kalich and her company. That it is the outcome of an exceptionally gifted mind none could deny. It has poetic qualities and it appeals more surely than "Jeanne d'Arc" to the dramatic cravings of the playgoer. The plan which it unfolds is curious and ingenious, but so involved that it may puzzle the spectator even more than did some portions of the earlier drama. For the pith of the work is not only a play within a play, but a play within another play, and, as few who attend the stage performances will be graduates of Yale, Vassar or Columbia, much in the scenes, characters and dialog will be wasted on the audiences. To disparage Mr. MacKaye for aiming high would be both thankless and inane. But it must be admitted that there are passages in *Sappho and Phaon* which seem calculated rather to display the precocious erudition of the author than to help on the play. With these small reservations, let it be proclaimed frankly and ungrudgingly that the drama is creditable alike to the imagination and to the culture of its inventor. It was an audacious task he attempted when he set out to put thoughts and words into the mouth of the immortal Lesbian; yet he has sometimes succeeded in conveying the illusion he desired. For example, in this apostrophe of Sappho to the sea:

'Tis the sea,
The teeming, terrible, maternal sea,
That spawned us all. She calls me back to her,
But I will not go. Her womb hath brought me forth
A child defiant. I will be free of her!
Her ways are birth, fecundity and death,
But mine are beauty and immortal love.

Another remarkably fine passage occurs at the end of the second act of the play proper, when Sappho frees the dove which has been caught in Phaon's net:

O darling bird, which art my beating soul,
That Phaon captured on these wild sea-cliffs,
Mount up, mount up! and nestle with thy wings
Against the burning chlamys of heaven's queen
There where her breast heaves highest. Say to her:
"Lady of love, almighty! This is Sappho—
Her spirit—whom thou madest of that fire
Which sleeps in Phaon's eyes. Lo, I am his,
And I will make him mine! . . ."

The plot of the inmost drama, which is described as "a tragedy, set forth with a prolog, induction, prelude, interludes and epilog," is the substance of the dream supposed to have been dreamt by an American archeologist during the excavation of Herculanæum. In sleep he sees the mimes and actors from the neighboring theater of Pompeii preparing to perform the tragedy of "Sappho and Phaon" before its dream-author, Varius, and his friends, Horace, Virgil and Mæcenas. It may be mentioned that the least convincing episodes in Mr. MacKaye's very unusual and interesting work are those in which, to suit his own fancy rather than fact, he has endeavored to restore to us the life, customs and habits of the ancient Roman stage.

A great deal of nonsense has been printed in praise of another play in verse, *The Goddess of Reason*,[2] of Miss Mary Johnston, author of "To Have and to Hold." Miss Johnston's effort, which concerns itself with the French Revolution and, more particularly, with the *noyades* and *dragonades* at Nantes, lacks, save in a few episodes, both the rhythmic and dramatic qualities which are demanded of such efforts. Much of the verse halts and more offends one by its pretentious and unpleasant distortions. There are far too many words in the play, and of those words an absurdly large number are foreign. The characters of the heroine, Yvette, and of De Vardes, her Royalist lover, are drawn vividly enough. But the scenes in the plot and the conduct of the characters are painfully unnatural, while the occasional "lyrics" introduced are, as a rule,

[1] SAPPHO AND PHAON. A Tragedy. *By Percy MacKaye*. New York: The Macmillan Company. $1.25.

[2] THE GODDESS OF REASON. A Drama. *By Mary Johnston*. Boston and New York: Houghton, Mifflin & Co. $2.00.

commonplace. Take, for instance, this Song of the Tricoteuses:

We are the tricoteuses!
Dyed wool we knit while rumbles by the cart.
Knit! Knit! All knitting in the sun.

There is much more of the same sort of twaddle in the play. And, on the other hand, there are descriptive passages of some charm. *The Goddess of Reason* deserves no permanent place in the library, and on the stage would, in its present shape, be soporific.

So, despite its skilful and often melodious verse, would be *The Coming of Philibert,*[3] an attempt at drama, from the pen of Sara King Wiley (Mrs. Drummond). It will bear reading. But, in the acting, it would appear lamentably monotonous and wanting in almost every essential of a play, notably characterization, contrast and "suspense." The two brothers, Conrad the King and Philibert, who, after being brought up as a scholar, ignorant of his birth, comes to the Court and in the end is crowned Lord of Artacia, were evidently meant to be contrasted characters. But, tho we hear, from other persons in the play, that Conrad is as vain, weak and frivolous as Philibert is modest, brave and true, until the last act is reached nothing that the King says or does proves him to be appreciably worse or better than his brother. The element of suspense is almost eliminated, and, from the moment in the first act when we learn that Conrad, in defiance of his wise father's wish, has recalled his banished brother, we know, not only what will come of it, but even how it will come. The men in the play, and above all the hero, are drawn with a most feminine touch, and at times comport themselves like young ladies in a modern seminary rather than nobles, statesmen and soldiers of a far-off age.

Most of the writers who have lately tried their hands at plays in verse seem wedded to the delusion that, to achieve success, it suffices to select a historic theme, devise grandiloquent speeches, and attribute them to posturing personages who are no more real than lay figures in a studio. Never was the need of a departure from the old, hackneyed form which we slanderously call Shakespearean brought home more forcibly than it has been this year in some of the published plays which we forebear to mention. If the poetical drama is to have a fair chance here, it must be clothed in fresher and more varied coverings than the conventional blank verse of England; its imagery must be kept subordinate to action; while its plots must be the fitting, if not inevitable, consequence of the clashes due to the unfolding of contrasted characters.

[3] THE COMING OF PHILIBERT. *By Sara King Wiley.* New York: The Macmillan Company. $1.25.

Christ and the Social Crisis

HAS Christ anything vital and practical to say to the twentieth century on the social question? In the books before us* we have accordingly the affirmation by two spokesmen for the Church that Christ *has* the word of leadership for us now, as regards the problems confronting us. But it is only so far as this affirmation goes that the two writers agree; when the natural next question is asked, What is that word? they agree not at all. Professor Leighton, on his part, would like it to be understood that he is not behind the times: he knows of

"the ever more insistent questions of the right relations of labor and capital, of the rights and wrongs of labor organizations, . . . of the unemployed, . . . of the minimum hours of labor and the living wage, etc.; in short, the problems of the right distribution of opportunity and means of maintenance."

But when we inquire of him whether Christ advises us to take the side of labor or that of capital; whether to advocate legislative interference in wages and hours of labor, or not; whether to stand for the competitive system or the co-operative system; whether to be individualists or socialists: when we ask, in short, what word Christ has for us as to the choices we must make if we would be living men of the twentieth century, he tells us that Christ has no specific word on such questions.

"Jesus lays down no political or economic program." "These, I take it, are the principles

*JESUS CHRIST AND THE CIVILIZATION OF TODAY: The Ethical Teaching of Jesus Considered in Its Bearings on the Moral Foundations of Modern Culture. *By Joseph Alexander Leighton, Ph.D.*, Professor of Philosophy and Psychology in Hobart College. Pp. 248. New York: The Macmillan Company. $1.50.

CHRISTIANITY AND THE SOCIAL CRISIS. *By Walter Rauschenbusch, D.D.*, Professor of Church History in Rochester Theological Seminary. Pp. 429. New York: The Macmillan Company. $1.50.

of Jesus' social teaching: 1. Every man has an essential dignity and worth which may indeed be hidden and potential, but is none the less real. 2. The higher or ethical and spiritual life of man is social. The social institutions—family, community, church and nation—are instruments and means of personal development and activity, and thence, so far, have an ethical character. The meaning and value of society is expressed in its individual members. The spiritual individual is at once, as potential spirit, the point of departure for social activity and reform, and, as actual spirit, the point of return, the living center or core of social life. The final touchstone of a civilization's value is the men it produces." "Jesus regards society as a communism of free and responsible persons."

But these are abstractions on which we are all agreed. And even tho the acceptance by the modern world of these principles, once so little known, be due to the impulse originally given them by Christ, still they are now the basis from which we all start. The question is whether we can gather anything more specific from the teachings of Christ.

Professor Rauschenbusch sees the matter otherwise; Christ, the captain of our salvation, is still for him the world's leader precisely by virtue of the definiteness of His commands in the present emergency. This thesis forms thruout the background of Professor Rauschenbusch's book. That he has a keen realization of the importance of the question is shown by his opening sentences:

"Western civilization is passing thru a social revolution unparalleled in history for scope and power. Its coming was inevitable. The religious, political and intellectual revolutions of the past five centuries, which together created the modern world, necessarily had to culminate in an economic and social revolution such as is now upon us." "The social revolution has been slow in reaching our country. We have been exempt, not because we had solved the problems, but because we had not yet confronted them. We have now arrived, and all the characteristic conditons of American life will henceforth combine to make the social struggle here more intense than anywhere else. The vastness and the free sweep of our concentrated wealth on the one side; the independence, intelligence, moral vigor and political power of the common people on the other side, promise a long-drawn grapple of contesting forces which may well make the heart of every American patriot sink within him."

The temper in which Professor Rauschenbusch approaches these burning questions is revealed in such words as these:

"In a few years all our restless and angry hearts will be quiet in death, but those who come after us will live in the world which our sins have blighted or which our love of right has redeemed. Let us do our thinking on these great questions, not with our eyes fixed on our bank account, but with a wise outlook on the fields of the future and with the consciousness that the spirit of the Eternal is seeking to distill from our lives some essence of righteousness before they pass away."

There is not room here to show the successive stages by which Professor Rauschenbusch builds up his structure of thought to its culmination; we can only say that nothing in it is set down in carelessness or in ignorance, and that it cannot be ignored by any one who would understand the social thought of today. The consummation of his argument is startling enough: being no less than the conclusion that the only way to be truly and fully a follower of Christ in the twentieth century is to merge one's self in the working class political movement, now world-wide—that movement which has socialism as its guiding star and as the goal of its will.

Running Horse Inn. By Alfred Tresidder Sheppard. Philadelphia: J. B. Lippincott Co. $1.50.

A strong, splendidly written story with a disastrous ending. The scene is laid first in the Running Horse Inn, at Herne Bay, just after the war with Napoleon. There is the vagabond soldier returned from the war to find a wedding party and his brother married to his promised wife. The reader is not prepared for the development of this malcontent's character. His personality is not sufficiently convincing to account for the ferocity of his evil love, nor for the part he plays later in the Spa field riots. But the tender character studies of rural English folk, the captain's yarns, the homely life within the Inn, and the eternal scenery along the downs, and, above all, the solemn tread with which all events seem to march toward the final, inevitable tragedy gives the book power that is not broken till the last sentence is

By Right Divine. By William Sage. Boston: Little, Brown & Co. $1.50.

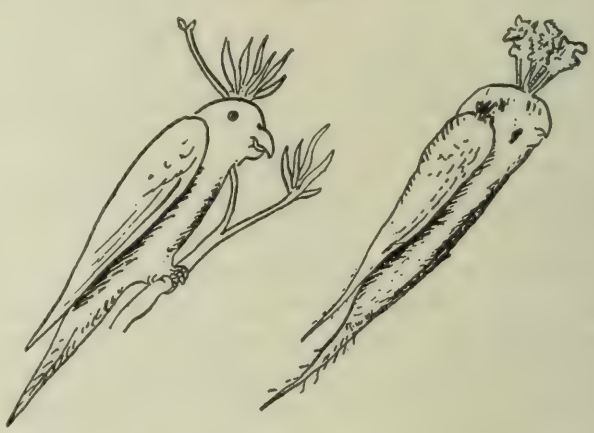
Mr. Sage has written another vigorous romance of love and politics of the present day." He is becoming the literary prosecuting attorney for all our so-

cial selfishness and political crimes. The indictment upon which this last book rests is the usual one of high-class insolence on the part of the rich at the expense of the poor, and of bribery in politics. Naturally the rich and beautiful heroine reads books on sociology and loves the honest man, the white crow in politics, while her own father is the Senatorial grafter from his State. The first chapters contain the roots of bitterness out of which the whole tale is spun. Two tramps out of a job, a saloon, a parvenue automobile party who ran over a poor man's child, a governor who handles a mob single-handed as if it was the lamb that had wandered out of his political fold, and the usual plotting and counter-plotting, with the young lady holding fast to her books on sociology—and to the young governor's hand when she gets the chance. No wonder the Senator failed with his wicked schemes. There is nowhere on record a novel in which the heroine has "calm, blue eyes" and a taste for sociology, where the national life is not reformed.

Catherine of Calais. By Mrs. Henry De La Pasture. New York: E. P. Dutton & Co. $1.50.

The heroine of Mrs. De La Pasture's story is another added to the innumerable victims of the literary imagination. Some women ought to keep out of fiction. Their presence only stimulates the author to think of persecutions and to harrow the reader's feelings. Here is Catherine, for example, a preposterously innocent little maiden, abused by her aunt, regarded with coldness by the man she loves and marries. Yet with that singular obtuseness of the very good, she cherishes her enemies, endures the gibes of a vicious grasping mother-in-law, and the envy of her other female relatives, until one wishes that she would turn and smite and slay even if it outraged every canon of literary art and poisoned the public against the author forever. As it is we may be thankful that she comes thru her tribulations happy in a small cottage with an insignificant girl baby, utterly indifferent to the contempt of her relations who have managed to get possession of her fortune. Readers who like little star-trimmed heroines who give the impression of having moonbeam toes and of being incapable but good will enjoy this story. The interest of the story depends upon what the characters say, not what they do.

As Ye Have Sown. By Dolf Wyllarde. New York: John Lane Co. $1.50.



The author of "The Rat-Trap" writes of the smart set in London with vitriolic vehemence. The thesis of her latest novel, *As Ye Have Sown,* seems to be that the British aristocracy has been bred in idleness and nursed in vice for generations until its men are gamblers and roués by instinct, its women unspeakable things clad in scale-like sequins and triply armed with brazen conceit, lewdness and loudness. In contrast, she draws a flattering portrait of the "Great Middle Class" of England, which, according to this partial estimate, monopolizes all the useful service and most of the brains and morals of the empire. We had thought it, at times, heavy and gray of hue, as Miss May Sinclair and Mr. George Gissing have portrayed it; we are disabused of the impression, provided we credit the truth of the present picture. We must confess to a doubt concerning the open indecency of the talk at the dinner tables in *As Ye Have Sown.* Perhaps the "lords and ladies" who gather about their mahogany boards in London do drink too much wine, altho not nearly so much as their forbears did, and they may "scream until they are hoarse" over their time-killing games of "Wall Street" and bridge, and they may let Satan fill their idle hands and brains and hearts with all sorts of mischief, but we do not believe that they talk openly of their secret shames when they sit together to dine. That is a little too much even for "middle class" credulity concerning the habits of the great! A beautiful young woman, Patricia Mornington, wanders into the story and into the fast society, where she finds herself about as much at home as an angel in Tophet or an ascension lily in a foundry furnace. Disgust and weariness seize her utterly, and the awakening of a pure girl, bred in the finer traditions of gentle womanhood by her godmother, to the fact that her own

mother is thoroly evil and depraved is a tragical thing. The same situation as in "Cosmopolis," but the French author differs from the English in his treatment of the effect of such a discovery upon a young girl's mind. *As Ye Have Sown* does not give the conventional ending to the painful experience.

The Invader. By Margaret L. Woods. New York: Harper & Bros. $1.50.

The Castle of Doubt. By John H. Whitson. Boston: Little, Brown & Co. $1.50.

Miss Sally Beauchamp has much to answer for. She was responsible for a great deal of trouble among the various personalities inhabiting the body of Miss Beauchamp proper; and she has been working mischievous pranks in the minds of our novelists ever since. None of the multiplex personalities in recent fiction, however, has equaled her in diablerie or in interest. Mr. Burgess came first with his "White Cat," an old familiar. Now Miss Woods, in *The Invader,* attempts almost the same situation, but with a different and distinctly repulsive ending. *The Castle of Doubt,* by Mr. Whitson, has a hero of a "double life," in a different sense from the usual well-worn meaning of the words. The last is an interesting story, not without many instances in real life to prove its plausibility. The Invader is a more fascinating person than the normal young woman she supplants. It is a queer situation altogether, in these cases of dissociated personality; which of the souls who share the same bodily house *is* the normal and which is the "interloper," to be evicted, if possible? It is an intolerable form of co-operative housekeeping, and leads to many perplexities and embarrassments — sometimes to tragedy. We wonder what Max Stirner would say to such a question. If the "Ego" is not even sure his very body is "his own," what becomes of his elaborate and passionate philosophy of selfishness? Dr. Prince had to kill poor Sally Beauchamp in order to let a saner spirit live peacefully in her own head. Yet it is with a shiver we confess the possibility of a more intimate "solidarity of mankind" than is usually predicted. We are fast being driven from the fastnesses of individualism into communism, but it is a little too much to bear that we may not even claim to be the owners of the cunning machines we have used so long and fancied ours. Is hypnotism our only refuge from this new menace?

The Parrot. The Carrot.

The Parrot and the Carrot we may easily confound,
They're very much alike in looks and similar in sound,
We recognize the Parrot by his clear articulation,
For Carrots are unable to engage in conversation.

THE above is a reduced facsimile of a page of the new "nature study" book published by Paul Elder & Co., New York, at fifty cents. Its scientific value cannot be called in question, for it is written and drawn by Prof. Robert W. Wood, of Johns Hopkins University. It is entitled *How to Tell the Birds From the Flowers. A Manual of Flornithology for Beginners.*

New Chronicles of Rebecca. By Kate Douglas Wiggin. New York: Houghton, Mifflin & Co. $1.25.

When Rebecca of Sunnybrook Farm had made friends for that real child in literature who were numbered by tens of thousands, her creator, Mrs. Kate Douglas Wiggin, declared, in a published interview:

"No, I shall decidedly not write a sequel to 'Rebecca,' because I feel that it might disappoint my readers. Rebecca is theirs now, no longer mine. . . . She will have to go thru life without me—bless her heart! Thank

heaven, she has plenty of sincere friends to help her over the rough places!"

However, here are the *New Chronicles of Rebecca,* irrefragable proof of a woman's greatest privilege. Have they disappointed their readers, as Mrs. Wiggin foresaw? The answer depends upon the amount and the quality of the goodwill and the imagination of the individual reader; but it must be confessed that the author's part in the creation of the new illusion is decidedly less potent and convincing than it was in the old. Rebecca, with "the genius of temperament," was a happy thought, a true inspiration; the *New Chronicles* are the result of a deliberate attempt to rekindle the flash of insight and keep it alive a little longer. The consequence is that conscious invention has taken the place of intuition. The book is good enough in its way; it will prove a total disappointment to none, but the best that can be said for it is that, like most sequels to successful books, it is inferior to its predecessor.

Silanus the Christian. By Edwin A. Abbott. New York: The Macmillan Co. $2.60.

Silanus is an imaginary character, a young Roman of the time of Hadrian, a pupil of Epictetus, and later a Christian convert. In the form of an autobiography of this truth-seeking Roman, Mr. Abbott discusses a large number of the important questions of New Testament criticism, such as the miraculous birth of Jesus, the resurrection on the third day, the comparative worth of the several gospels, and especially the proper appreciation of the fourth Gospel. These subjects are handled in an interesting and suggestive manner. While the book aims to be popular, the author's wide knowledge and competent scholarship lift his effort entirely above the level of the usual endeavor to teach Biblical and Christian history by means of fiction. The aim of the author is constructive, to exhibit the real message of the Christian faith, and his purpose is to show that the religious attitude of a Christian is not inconsistent with disbelief in the strictly miraculous and supernatural element in the New Testament. A useful part of the book is a careful comparison of the teachings of Epictetus and the "constraining love" of the gospel of Christ. The high value of Christian teaching, and the distinction between religious faith and belief in miracle, are presented by Mr. Abbott in unique form and with considerable force.

The Sons of the Seigneur. By Helen Wallace. New York: The Outing Publishing Company. $1.50.

The scene of this story is laid in the Isle of Guernsey during that brief period when the young Prince Charles was being hunted by the followers of Cromwell. The chief characters in it are the old seigneur, his English wife, his stepdaughter, and his two sons. It is needless to say that both of the latter are in love with the pretty stepdaughter, and that the English wife is really in league with the Royalists against the Roundheads. These would naturally be the troubles out of which all such tales are spun. And this one is well spun to the thrills and delight of the reader. But we are minded to call attention to the introduction of the fugitive Prince Charles into the tale, who tarries on the island only long enough to do the usual damage to an innocent maiden and then makes his escape in the usual manner, at the sacrifice of some nobler man's life. This young man sustains the same relation to English fiction that Aaron Burr does to the American historical romance. Some years ago Burr figured in ten stories, during one brief season, each covering exactly the same period of time, and in each he was represented as the seducer of a fair and innocent lady. Even so the Prince Charles always appears in an English novel in headlong flight from his enemies and with a wronged lady clinging to the skirt of his cloak. By this time there cannot be less than a thousand of them weeping and dying and flinging themselves headlong over cliffs in the pages of British fiction for his sake. Really, however bad he was, he could not have been as omnipotently bad as he is represented. And what is even more confusing, the varying descriptions are so different. The reader can never know when he has met Prince Charlie, no matter what color or manner of man is before him on the page. It is not three months since we had a thrilling account of him in a story where he was

represented as so delicate featured and fair that he escaped his pursuers disguised as a woman. Now in this story of him in the Isle of Guernsey he is presented as a handsome, coarse, dark young man with a shock of black hair. Really if Aaron Burr and Prince Charles could be expurgated from romances, we should hear less scandal of our forbears. And that is an advantage to be considered, even if we have less interesting stories.

Literary Notes

....Mr. John de Morgan has been shaking the chestnut tree and has gathered his harvest of anecdotes and witty sayings in a brown volume published by Paul Elder & Co., at $1.50, under the title *In Lighter Vein.* It contains some good jokes and some dull ones, some that we never heard and some that we are glad to have recalled to memory.

....If there are any more people reading Esperanto than there are publishing books and periodicals about it the movement has attained greater proportions than some thought it would. The latest guide is *The American Esperanto Book,* compiled by the editor of *Amerika Esperantisto* (Kerr & Co., Chicago). It contains the standard exercises of Dr. Zamenhof, with vocabulary and grammar.

....Students of the New Testament and Christian doctrine will remember instructive volumes by Professor William P. DuBose on "The Soteriology of the New Testament," and "The Gospel in the Gospels." The same author now issues a careful study of the teaching and theological conceptions of Paul under the title *The Gospel According to Saint Paul* (New York: Longmans, Green & Co. $1.50).

....British defenders of the faith have a fondness for Latin titles, and accordingly the Rev. Charles Harris, of St. David's College, Lampeter, entitles his defense of natural and revealed religion *Pro Fide* (New York: E. P. Dutton & Co. $2.00). The work contains much good material and some valuable apologetic suggestions, but its treatment of important subjects is often inadequate and incomplete.

....The librarian who is often called upon to tell what historical novels have been written about a particular period will find the two-volume guide, *History in Fiction,* by E. A. Baker (Dutton, $1.50), of great service. It is arranged chronologically, one volume for England and the other for the rest of the world, and gives full bibliographical data, as well as hints as to the character of the books and a synopsis of the contents in many cases. We miss some expected titles, but it is a very good selection, more comprehensive than Nield's.

....An edifying and interesting volume, entitled *In the Footprints of the Good Shepherd,* is written by Miss Conway, editor of the Boston *Pilot,* who lately received the Lætare Medal for services to the Catholic Church, and is published by the Convent of the Good Shepherd in this city, which celebrates this year its semi-centennial. The convent was started only with the tolerance of Archbishop Hughes, who thought its purpose to recover fallen women was very nearly hopeless. During this half century the House of the Good Shepherd has received 13,018 girls, of whom 8,581 were committed by the courts, and 4,457 came of their own accord. Of these 7,274 have returned to family life. This volume tells the story of this house, out of which have been established eleven other similar convents.

Pebbles

EXTRACT from a history book: "Robespierre had small reason to rejoice over such an easy victory, for seven months after he saw his own head fall on the scaffold."—*N. Y. Evening Post.*

POETESS DORA R. GOODALE has a poem in the current INDEPENDENT titled "The Merchant Weighs His Merchandise." If the customer weighed it, there would probably be a fight.—*New York Mail.*

SENTIMENTAL BRIDEGROOM—Why is my darling so pensive? Is she planning some love-inspired project for our mutual happiness?

Practical Bride—Yes, dearest, I was wondering whether we'd better send the washing out or have a woman come in once a week?—*Brooklyn Life.*

MEANT JUST WHAT HE SAID.

HER HUSBAND—If a man steals—no matter what it is—he will live to regret it.

His Wife—During our courtship you used to steal kisses from me.

Her Husband—Well, you heard what I said.—*Chicago Journal.*

TODAY friend, listen to music. Strike on the piano the following keys, and hold them down steadily until the vibrations die away. With the right hand strike altogether the following: d flat, f, a flat, d flat; with the left hand: d flat, a flat, d flat. Do this a number of times during the day. Close your eyes and let these vibrations have sway over you. Read no more for twenty-four hours.—*Charlie Ross Revelations.*

JOHN DREW AND THE FRENCH ACTRESS.

IT was the social duty of John Drew, the actor, not long ago to escort a young French actress of great personal charm, on her first visit to New York, to a roof garden. The orchestra was playing a very melodious air as they entered, and after being seated the actress asked Mr. Drew the name of the selection.

"'I Love You, I Love You,'" replied Mr. Drew. "Yes, yes, I know," returned the French girl with an appreciative glance of coquetry, "but ze tune zat zey play, Mistaire Drew, vat ees de name of eet?"—*Ladies' Home Journal.*

Civilization Perforce

It is impossible not to feel a sympathy for Korea, however one may also believe that in the end the iron hand of Japan will be for the benefit of that unhappy country. Gradually, thru turmoil and assassination and corruption, by internal reform and revolution, Korea was trying to work out for herself the problem of civilization and self-government, that which Japan has achieved for herself, and which China is being allowed to try for herself, because she is too great a nation or too great a prize to be taken in hand and ruled by any single outside Power.

We have had two such examples in the last generation of a nation thus suppressed in the midst of a most interesting experiment of self-regeneration. The other case is that of Madagascar. There, as later in Korea, and also in Japan and China, it was the missionaries who brought the ferment of change. They had given Christianity to the Malagasy, and with it the hopeful beginnings of sound government and civilized institutions. It was a most interesting experiment that was going on, to see whether a negro people, receiving from English missionaries the institutions and free government of England, under a Christian Malagasy queen, could attain a worthy and equal rank among the nations of the world. Laws, schools, roads, commerce, were all fairly in initial operation, and all was hopeful, when France cast covetous eyes on the great island, and, with her superior power, but after long effort, subdued it, exiled the queen, and appointed a French colonial governor over a people who thereafter had no rights except what the French governor might allow. At present that governor is bitterly hostile to the Christian faith and Christian schools, and has suppressed them ruthlessly. When France thus seized Madagascar, the queen sent her prime minister, at the head of a deputation, to appeal to Great Britain and the United States for protection, inasmuch as those from whom Madagascar had received Christian civilization were British citizens. But what did these nations care for distant Madagascar? France might do what she pleased for all they recked of it, and the most interesting and instructive political experiment of modern times was allowed to be suppressed and an inchoate civilized nation overthrown. Oh, the pity of it!

Much like the case of Madagascar is that of Korea, except that Korea had already the barbaric civilization of the East. There, too, English and American missionaries had opened the land to modern ideas and had access as advisers to the throne. Education was being introduced. Princes of the royal family were sent to this country to attend our schools. Reform was in the air, for there are in Korea a hundred thousand Protestant Christians. Of course, there had been and still were corruption and violence—those throes thru which a nation is born. But the end was sure, the creation of a civilized state and probably a Christian one, the first Christian Mongolian nation. Then came the opportunity in the war between Japan and Russia, and Japan took possession of the peninsula, against the will of the people, in the interests of "order." We have not complained, altho the Emperor of Korea sent his envoy to Washington and his delegation to The Hague to protest, but it did no good. It was too late; that was settled in the Treaty of Portsmouth. Korea was thus given over to Japan, and we might have been sure that the appeal to the United States would be unavailing. We give consent because we believe that Japan

will hasten the process of civilization, will make roads and laws, and will execute them. And yet, again, oh, the pity of it! We doubt not that the American and English missionaries in Japan deeply regret that the process of regeneration—if regeneration it is—is forced upon the people from without instead of coming naturally from within. But France could not wait; Japan could not wait; and in both cases it was doubtless natural selfish ambition rather than any desire to hasten beneficent processes that was the real reason for crushing a weaker nation.

On the Run

WERE the Sioux Indians to give a name to Mr. O'Reilly, who, as official representative of the brewers, argues in our columns against prohibition, it would be "The-man-afraid-of-his-saloons." In Bailey's "Festus" the Devil rises in the market place and preaches a sermon to the people, telling them how horribly they have sinned, and how their occasional repentances only make their sins show more heinous,

"As a black block of marble jagged with white
Looks blacker than without such."

And then the Devil, when he has frightened some of them, turns to his companions:

"Then I must stop.
Now I will rub them backward like a cat,
And you shall see how they will spit and sparkle up."

We hope Mr. O'Reilly will not be offended if we admit that we were reminded of this passage when we read in his article his accusation against the vicious saloons. They have "offended public sentiment"; they have been "without check or regulation"; "the business as a whole is in bad repute"; the brewers of Indiana have voted "to close up two thousand saloons in that State." Indeed

"The representatives of its various sections have convened in successive years at different places and past perfunctory resolutions pointing out the legality of their business, its moral status, etc., but all this has counted for naught in the face of the ocular evidence presented by the existence of dives, back rooms, assignation parlors, gambling-rooms, handbooks and such like evil adjuncts of a legalized business."

We don't wonder that two thousand saloons, thus told their sins by their patron and organizer, should have repented and shut up shop in Indiana—or said they would. They have done better than the sinners in the market place, or say they will. We fear they will backslide or "spit and sparkle up" again, for we recall the rhyme about the one who when sick would be a monk.

Mr. O'Reilly tells us that the brewers and distillers are frightened by the wave of prohibition. Local option has so far covered the counties that its friends can capture the State. They have just done it in Georgia and will soon do it elsewhere. In this extremity the brewers, who have been putting saloons on every available street corner, now declare that the evil saloon must go, that thousands must be shut up, that only virtuous and model saloons must be allowed to exist. Why did they not say this before? While they had the politicians, and the polling booths were in their back rooms, they did not care what dives and assignation parlors were provided for blacklegs and strumpets. But now "the Devil a monk would be." The people do not trust him. They don't care to have him get well.

As to the impossibility of enforcing State prohibition in cities, the editor of the official organ of the Liquor Dealers' Association is probably right. For that reason we put more confidence in local option than in State prohibition. Wherever there has been State prohibition it has been impossible, except for brief periods, to secure convictions that will everywhere suppress the traffic. Where the majority of the people of a city want liquor they will get it. In Maine and in Kansas the larger cities have regularly been open. We believe in exterminating the saloon wherever the public sentiment will allow it, but where the people want and will protect the saloon, the law against it is a farce. We admit that laws can be framed to put their execution in the hands of State officers, but even so, juries must be local. The saloon will be harried, but not suppressed.

We also recognize a certain advantage in putting the ban of legal condemnation on the saloon, and that it is possible to some extent to make it odious even in cities no larger than Portland or Wichita. That is something, and yet that depends

on whether an actual Governor or Sheriff really tries to execute the law. Usually they will not, and in that case it is the law that becomes odiously ineffective. We can hardly imagine prohibition made a State law again in Massachusetts; but we can conceive it possible in an agricultural State like South Carolina, where there is an overwhelming public sentiment, for State officers to enforce the law in a single recalcitrant city. Then let us have State prohibition, so that the city may not contaminate the country.

On one point we heartily agree with Mr. O'Reilly. It is moral forces, vastly stronger than the political Prohibition party, which is suppressing the saloon. The Prohibition party thinks it does it all, but its effectiveness is as slight as was that of the Garrisonian following in the overthrow of slavery.

Discussion in the British Association

WHY is it that we cannot have in the American Association for the Advancement of Science as good discussions as they have in the British Association? We complain because the people in this country will not join the Association or even show their interest by turning out to the lectures when it meets in their own city. Is it not because when they do come they are not apt to hear anything except the hurried and perfunctory reading of papers so full of technical detail that they can only be followed understandingly when they are seen in print? If there happens to be time, as there usually is not, the chairman's inquiry "Does anyone wish to discuss this paper?" is likely to be followed by a prayer-meeting silence. If the views presented are new the members hesitate to express themselves impromptu without having had a chance to study the evidence. If it is old they have no interest in them.

Once in a while there spring up lively debates in which flint and steel strike out illuminating sparks, but they are accidental and apt to concern only minor points. We have heard papers full of nonsensical ideas read in section meetings and received by the assembled savants in dignified and apparently respectful silence after the customary hand-clapping. The laymen present went away thinking that they had listened to the authoritative exposition of scientific truth. The speaker congratulated himself on making a hit, whereas he really had ruined his professional reputation for life. The "inner circle," meeting after adjournment, said to each other: "Let's get out of this and form a new society for ourselves next year."

Now, there are still debatable questions in science, where the frank and free exchange of views, bringing to light personal differences in opinion and modes of thinking, would do much to clear the air and stimulate thought. These debatable lands lie for the most part on the borderland of two fields of science, the inhabitants of which are strangers to each other and speak different languages. The American Association for the Advancement of Science is especially adapted for the discussion of such problems because in it all the sciences meet on common ground. Why should not a feature be made of joint or sectional meetings for the discussion of suitable papers previously printed and circulated in advance among those best qualified to criticise them?

At the New York meeting of the Association last year something of this kind was attempted, especially in a session devoted to the origin of sex, which the leading workers in heredity had been invited to discuss according to a carefully prepared program. The lecture room was packed to hear it like a subway car in rush hours. The audience was disappointed, not merely because the papers were less sensational and more abstruse than they had anticipated, as is inevitably the case, but more because there was really no discussion at all, properly speaking. There was apparently nothing whatever gained by bringing these men together upon the same platform and assembling the audience. The papers, tho individually excellent, might just as well have been written in each man's private study, as indeed they were, and published in a pamphlet for each person to read at his ease in his own home.

The only reason for getting together physically is to get together mentally, and this can only be done by conversa-

tion or by public discussions, which are merely conversations permissibly overheard. There should be a real exchange of views. As it is now, a speaker makes no reference to what his predecessor has said. He talks as he would in the isolation of his own lecture-room or seminar, where he has no competitors. One would think that these men of science were already in Kipling's heaven for all good workmen, where each in his own particular star is painting the thing as he sees it for the God of Things As They Are.

We are not proposing that scientists give gladiatorial combats for the amusement of the masses, but the *viva voce* presentation of a subject has still its advantages if used in the proper way. Notwithstanding that science progresses now with such a firm and even step there are yet points on which there are important differences of opinion among those qualified to have opinions. Even tho they all may be willing to accept at par the experimental results reported, the value and significance of these results may often be profitably debated.

In almost every section of the British Association last month there was such a discussion, certainly interesting to listeners and readers, and, we venture to say, beneficial to those who participated. In the section of Economic Science the question of the success or failure of cooperation and its relations to trusts and to socialism was considered from many different standpoints. In the Physiology section there was a discussion on whether alcohol was beneficial to the normal man, participated in by eight doctors and physiologists, varying widely in opinion, but all worth listening to. In Section A, Rutherford, Kelvin, Strutt, Ramsay, Soddy and Larmor had a long argument about the disintegration of the atom.

If we had at the next meeting of the American Asociation a discussion of such a subject by six men of like standing and ability would not the members feel better repaid for their long journeys, would not the townspeople take more interest in the session, and would not the newspapers give it more respectful consideration? Why should we not? Is it because we haven't such men? Is it because we are afraid of hurting each other's feelings by face to face criticism? Or is it because it is regarded as impolitic to allow a somewhat hostile and contemptuous public to perceive that there is diversity of views on any point among scientific men?

The Salaries of Our Diplomats

THE salaries of our diplomatic officers are not only inadequate, but grossly insufficient to cover their legitimate expenses. Our Ambassadors receive barely enough to pay the rent of their embassies, while our Ministers and Secretaries, if they were dependent on their salaries alone, would be obliged to ignore the greater part of their social obligations, and to live, if not miserly, at least meanly.

While there may have been some excuse during the first few decades of our existence as a nation for establishing and maintaining stern standards of simplicity in our diplomatic service, we discovered, almost as soon as we attained to a position of prominence in world affairs, that we could no longer furnish excuses or even offer apologies for our ostentatious parsimony, but had to select representatives for our foreign missions possessing the social graciousness of their equals and as ready to extend as to receive hospitality.

The change came as a rude shock to many conservative Congressmen. Benjamin Franklin, in homespun, honored and fêted by king and court, had always been their ideal American diplomat, and they had never stopped to think that at times he must have felt mortified that his purse was not sufficiently full to permit him to return the courtesies that he received and enjoyed, and that helped to bring the nation which he represented and the nation to which he was accredited into closer relations of friendship and good will. Precedent moreover, demanded that no sudden increase should be made in the annual appropriation for our foreign service. No Congressional action, consequently, was taken to meet the requirements of the new conditions. The President, therefore, was forced to select as our representatives abroad men who were able to regard their salaries as negligible quanti-

ties and to defray the expenses of their respective missions with almost royal unconcern. While the selections have, as a rule, been fairly creditable to the country, the criticism is now frequently heard that since we became a nation we have never had so few diplomats of great and distinguished ability as we have now, and the regret is often expressed that Congress has not increased the salary appropriation sufficiently to permit the appointment to diplomatic posts of men of extraordinary capacity and competency, who are, as were Webster, Lincoln and McKinley, without large personal incomes.

As we have only about forty embassies and legations, and as the highest salary paid to any of our diplomats is only about a third of what the British Ambassador at Washington receives, we must acknowledge that the reform suggested would not add any perceptible burden on the people, and would rectify an injustice which now keeps out of the service men that represent all that is best in us as a people intellectually, morally and socially.

Sooner or later every nation learns that the best diplomats are cheap at any cost, and that poor diplomats are high priced at any cost. Great Britain has been especially quick to grasp that fact, and no one who has studied carefully her history of the last twenty-five years can fail to comprehend that her diplomats, wisely selected and salaried, have achieved successes for her that they never could have attained had the other nations exercised equal foresight and sagacity in forming and equipping their respective foreign services.

Andrew D. White, in his delightful "Autobiography," describing a reception at the home of the British Ambassador at The Hague during the first Peace Conference, brings this out very clearly. He says:

"In the evening I went to a great reception at the house of Sir Henry Howard. It was very brilliant, and the whole affair afforded an example of John Bull's good sense in providing for his representatives abroad, and enabling them to exercise a social influence on the communities where they are stationed, which rapidly becomes a political influence with the governments to which they are accredited. Sir Henry is provided with a large, attractive house, means to entertain amply, and has been kept in the service long enough to know everybody and to become experienced in the right way of getting at the man he wishes to influence and of doing the things his Government needs to have done. Thruout the whole world this is John Bull's way of doing things. At every capital I have visited, including Washington, Constantinople, St. Petersburg, Rome, Paris, Berlin and Vienna, the British representative is a man who has been selected with reference to his fitness, kept in the service long enough to give him useful experience, and provided with a good, commodious house and the means to exercise social—and, therefore, political—influence. The result is that, altho in every country in the world orators and editors are always howling at John Bull, he everywhere has his way; to use our vernacular, he "gets there," and can laugh in his sleeve at the speeches against him in public bodies and at the diatribes against him in newspapers. The men who are loudest in their attacks are generally the most delighted to put their legs under the British Ambassador's mahogany, or to take their daughters to his receptions and balls, and then quietly to follow the general line of conduct which he favors."

Good diplomacy works for peace, and is quite as valuable to any nation as warships are. We, therefore, need have no fear of adding a few thousands to the cost of maintaining our diplomats. The salary of our President has been increased to what was considered fifty years ago a fortune, and no dire results ensued. We simply added to his comfort and dignity and to his power to work for the welfare of our country. We have even seen that his home and official quarters have been improved, so that he may perform his duties with greater ease.

In the same way we should look to the comfort, dignity and ease of our diplomats. We should have permanent embassies and legations for them, and provide them with ample funds to fulfil all their official and social duties creditably to themselves and to our country. Then we would have a right to find fault if any representative of the United States made a pretentious display of personal wealth, so as to make the way more difficult for a successor who had only the official income. They should then, and they would, remember, if they are men like Webster, Lincoln and McKinley, that pomp and ostentation are not consonant with republican institutions and character, and that while they are relieved of the kind of mortification Benjamin Franklin may have suffered, they

are expected to bear in mind that he would never have become an ideal diplomat if he had put social success before official efficiency and position above patriotism.

The Occasion for the Syllabus

FORTY odd years ago Pius IX astonished the world with the first Syllabus of eighty propositions, all aimed at the enemies of the Church. Now Pius X's second Syllabus of sixty-five propositions strikes down the devoted sons of the Church. The first made a great stir in the world; but this second will affect only Catholics themselves. It has long been discussed; in fact, the first beginnings of it were the outcome of the Abbé Loisy's *"Autour d'un petit livre."* Now, even, its appearance seems to have been forced, for the usual encyclical which is looked upon as indispensable has not appeared. The row in Germany over the Pope's letter to a professor of theology at Vienna, condemning the subscription to erect a monument to the late Professor Schell of Würzburg, and naming the subscribers as ignorant and heretics, probably led to the promulgation of the new Syllabus. Among the subscribers to the proposed monument were the Archbishop of Bamberg, the Bishop of Passau, and the leading intellectual lights of Germany. The charge is bruited about that a league of German Catholics was formed, with headquarters at Münster, which petitioned the Holy See to abolish the Index. The news of the existence of this league came first from the Vatican, and Pontifical journals alleged — falsely too — that it had branches in France, England and America. How much truth is in the charge cannot be clearly made out. Therefore the Syllabus appeared without any encyclical. Upon top of all the *Augsbürger Abend-zeitung* has just published a series of letters from Schell, who denied in them that he ever signed the retraction of January, 1904. He declared that it was his bishop, Schloer of Würzburg, who signed it. The newspaper denies also that Schell signed the retraction of December 6th, 1905. This contradicts the Index, which declared that the author submitted.

While, however, the Syllabus appeared, headless, as it were, Pius X seems in it to reaffirm in a practical way the first Syllabus. For he signed it on July 4th, the centenary of Garibaldi and the anniversary of American independence. At Rome, dates like this are not haphazard. We have mentioned the report that it was only after a vision of Our Lady of Mount Carmel that the Pontiff took up his halting pen and found wisdom and peace in his signature of the document. It was on July 2d, we are told, that the vision strengthened the hesitating heart, which, however, found the pen and ink only on July 4th. But why Our Lady of the Visitation, whose feast falls on July 2d, did not steady the faltering hand of Pius X, in place of Our Lady of Mount Carmel, who gets the credit, but whose feast comes on July 16th, is only explicable because the latter feast is an Italian holiday, as Americans living near any "Little Italy" know very well.

No doubt the date sounds and is meant to sound a warning to the liberal Catholics of America, of whom hardly any have written anything from which could have been drawn damnable propositions. Leo XIII wound up their heretical tendencies in his encyclical on Americanism.

To the English-speaking Catholics—aye, to the world at large—proposition xxv is the most serious. It condemns Cardinal Newman's theory that the assent to Revelation is the outcome of a congeries of probabilities—a theory which Newman took from Bishop Butler. At Edgbaston, near Birmingham, lies the great Englishman, heedless of the blow. Rome has only one monument to put over his grave; it is "The Grammar of Assent" resting upon the Roman Index.

But to sum up in a word. Advanced Catholic scholars witness all their theories condemned and that without any note of any kind whatsoever. Pius X, after listening to the accurate report of the labors of the Inquisition and the Holy Office, expressed in the sixty-five propositions, reprobates and condemns them. Here is the marked difference between the first and the second Syllabus. Nearly all the propositions condemned in

the former had one or more notes or terms condemnatory attached thereto, such as "heretical," "savoring of heresy," "approaching to heresy," "erroneous," "offensive to pious ears" and two or three others less strong. By this vague condemnation Rome escapes many difficulties which the first Syllabus raised, and, moreover, leaves a convenient loophole of escape. Here, then, to the world is given an irresponsible dragnet of extracts taken from Catholic writers; irresponsible, that is, as to authorship. No one knows, at least officially, who drew up these sixty-five formulas. Not one of the cardinals, members of the Holy Office, knows enough about modern scholarship to dig out of it those many leading points. They are a study. Rampolla and Serafino Vanutelli are two aspirants for the Papacy. Respighi is the Pope's Vicar, the one who condemned one of Houtin's works before it was even published; Ferrata, who refuses to the ex-Jesuit Tyrrell authority to say mass unless he first promises to submit beforehand all writings to some official; Gotti, a Carmelite and Prefect of Propaganda, hence the immediate superior of the American Church as well as of all other missionary Churches; Steinhuber, a reactionary Jesuit; the two Spaniards, Del Val and Vives y Tuto.

The Syllabus of 1864 stopped not the progress of democracy, the expansion of philosophy, the decay of dogmatism. The Syllabus of 1907 will not hinder the advance of Catholic students. It is one of Rome's worst illusions that by killing off men it can stamp out ideas. This is the root idea of the Index: Silence the author by death or cloister and his ideas will die out. Huss and Wiklif, Luther and Giordano Bruno should teach Rome how foolish is that notion. Ideas belong to the university of knowledge, and are independent of the brains which give them forth.

The Post Office vs. the People

Now is the time for the press of the country to speak out and assure Postmaster-General Meyer of the popularity of the reforms he hopes to introduce. THE INDEPENDENT has for many years advocated the establishment of a Parcels Post service and Postal Savings Banks All but one of our Postmaster-Generals since Mr. Wanamaker have strenuously argued in their favor, yet we remain behind Austria, Germany, Holland, England and our neighbor across the St. Lawrence. It remains, of course, to find out whether Mr. Meyer can overcome the indifference and dilatoriness of Congress and the opposition of the lobby. He will have Mr. Roosevelt with him, and that the people are heartily in favor of such reforms goes with the saying. The National Grange, the Farmers' Congress, and nearly every subordinate grange and farmers' club in the United States, has more than once advocated postal savings banks as the next great reform required for the public welfare. The country districts care more for the bank; the larger towns more for the parcels post. The opposition to the latter comes mainly from the express companies, to the former there really is no serious organized antagonism. Savings banks are supposed not to favor these Government banks, but it is difficult to tell exactly what they are doing or saying in opposition. The president of one of our larger savings banks says, "I do not think it would hurt us at all. It would tend to encourage the habit of saving, and that would make investments more safe—which, of course, would accrue largely to our benefit, as it would to everybody else." Banks are prosperous with a cautious, economical people. Spendthrift habits, if indulged by a large share of the people, unsettle finance. The same banker adds "I see great possible good to the people, and a great deal of added security to the banks from the projected move." In fact the opposition to postal savings banks, so far as it exists, does not materialize in any pronounced manner.

Mr. Meyer says that he has not worked out the details of a parcels post system, but he is in favor of increasing the weight limit to at least five pounds, and possibly to eight or ten. He does not see why such a system need be construed as opposition to express companies, as the increased demand for service will be more likely to benefit those companies than injure them. He believed the German limit is eleven pounds, on which there is

a charge of twelve cents, over against which we have, in this country, only the four-pound package allowed in the mails, for which we pay sixty-four cents. Divide your eleven pounds into three packages, and it can go thru our mails for one dollar and seventy-six cents—or more than fourteen times what would be required in Germany. Now we can assure Mr. Meyer that if he will carry thru the establishment of an improved parcels post, giving us a service approximating that in the German Empire, he will become a very popular man. The service at present offered us is practically prohibitive. The very same four-pound package can be sent across the Atlantic, to an English post office, for fifteen cents less than it can be carried ten miles, or from one town to a neighboring town, in this country. What we want is a popular system, adapted to the rapidly increasing business of the common people.

The revenue of our post office has grown since 1880 from thirty-three millions to one hundred and sixty-seven millions, or nearly five-fold. The gain from 1900 to 1906 was over sixty-five millions. It does not stand to reason that such a service should be practically restricted to a system and method used before the present generation was born. Nor can the American people much longer be content to remain behind every other civilized people in its public utilities. The establishment of a Government savings bank is not an experiment, for it has been carried on in England for forty years. The postal depositors in Great Britain and Ireland number nearly ten millions. It is the unanimous report that the savings of the poorer classes have been greatly increased, and the good done to miners is especially notable. Money once deposited by those under age cannot be drawn with such ease and speed as to be spent on a debauch. Our Canadian neighbors are especially emphatic in their endorsement of such Government service. Mr. Meyer proposes a system very similar to that in operation in Canada and England. He tells us that he has been convinced that such banks are needed by the fact that many of our working people are now buying postal orders, payable to themselves, when they shall need to have them cashed. This is simply a sacrifice of interest to security. Mr. Meyer will recommend a resumption of postal orders payable to bearer only, but limited to two dollars and fifty or five dollars.

Mr. Meyer, we are confident, has no reason for apologizing for the cost of rural free delivery. The deficit in this corner of the Department is in no way worrying the people. If any innovation of the last quarter of a century has proved to be satisfactory to the people, it is this service to the farmers. It came about almost coincident with the reaction from herding in our cities. The tide outward has been certainly encouraged by the fact that the isolation of remote homes has been canceled by daily mails and by rural telephones. The effect intellectually would compensate for the cost, were there no financial reasons for continuing the service. Mr. Meyer estimates the cost for the current year, 1907, at thirty-five millions. There was no deficit at all for the first quarter of the year, and the deficit for the whole year certainly cannot be increased beyond 1906. The Department is to be operated on a more businesslike basis than heretofore, and we shall know more accurately where the deficit lies, and shall know how it can be remedied.

Mr. Meyer adds that he intends to recommend a deduction in foreign postage, making the present five cents a two-cent charge, to all countries where we have direct steam communication, including England, Germany, France, Holland and Italy. This change would not require any action on the part of Congress, but could be accomplished by an agreement with the countries now included in the Postal Union. It will be acceptable to the people. It is expected that such a change would increase the revenues rather than decrease them. The Department also proposes to establish stamp-vending machines, like those used in Germany; first in Washington, and then in other large cities. Mr. Meyer believes that to facilitate the purchase of stamps would also increase the postal revenues. In our new Postmaster-General we believe we have a man who comprehends the people as well as a thoro business man. The history of a people has always been coincident with the cheap, rapid spread of intelligence, and with easy in-

tercommunication. The cheapening of our postal service, and the improvement of it at every stage, has proved a national blessing. Nothing has contributed more to our political strength and our financial prosperity, as well as the higher social life of the people.

Richard Mansfield

By the death of Richard Mansfield there is removed from the stage an original force that did much to dignify and enrich the drama. There are some players who create a school, who stamp their work with a certain style that courts imitation even tho it may lie beyond such superficial reproduction. Edwin Booth, created a tradition; and the same may be said of his contemporaries. It is different with Mr. Mansfield, but the difference is a spiritual, intellectual one. What marked him far and above all others on our stage today was the intensity of his art, which brooked no dallying and courted no appeal to superficial favor. It was his high seriousness and his careful attention to detail that won for him his true position. He had mannerisms as clearly defined as those of Henry Irving; he also possessed the English actor's student sense, so evident in his choice of plays and in his selection of scenery. His rôles were varied, and either exquisitely fine or colored with a martial dash—such extremes as one finds in "Beau Brummel" and "Cyrano de Bergerac." In his romanticism there was none of the feminine softness that tempts an actor away from strong sentiment into sentimentalism. He could not have played "Romeo," but his "Prince Karl," his "Don Carlos" were types full of feeling and of poetry. The scope of Mr. Mansfield's acting was remarkably wide. He could run the gamut of youth and old age in an evening, and the old age of "Baron Chevrial" was wholly different from that of "Ivan the Terrible." He was pre-eminently a character actor and he leaves on record a gallery of portraits that do him credit as an artist and as a man of intellectual aspirations. Mr. Mansfield was an actor who dared. He played in pieces which he knew would be far from financial successes, but which he realized would, because of their historical significance and their literary value, add to the knowledge of the American student and redound to the credit of the American stage. "The Misanthrope" was in every sense a caviare production; its interest was merely intellectual. We have no actor left who will dare this much for art; who will persist in upholding a high standard and in carrying an average audience with him. Mr. Mansfield was a writer, a painter, a musician and a lecturer. In all these capacities his reach was high. It is peculiarly fitting that his final rôle should have been "Peer Gynt"—a blend of music and poetry, of picture and literature, and, above all of an aggregate of the great variety of characterizations which he had previously embodied. The American stage—and no stage, for all that—can afford to relinquish any of the soundness and dignity which such an actor as he has created for it. In the final estimate, that player is great whose love of true drama is great. And with the passing of Richard Mansfield the theater has much to remember that will add to its tradition and to his honor.

To the Pacific

It is a great pity that it should seem necessary to the Government to send the main part of the fleet to the Pacific. There is only one possible reason for it, namely, the Japanese flurry. It has come to the eyes of the Navy Department that California is making trouble with Japan, and that reckless talk of war may lead to war, and that there is quite as much danger of war with our old friend Japan as with any other Power in the world. *Ergo,* let the fleet go where it may possibly be wanted. That is the sole explanation, whatever authorities may say. It is not for a practice cruise; not to make a patriotic display to our citizens in the Pacific States. It is only for the purposes for which navies are created, to be ready for war. There is a great deal of nonsense talked about it, and the last absurd story is that President Roosevelt has some occult personal and political purpose in view, and has made an agreement with Emperor William to protect our coast with his German fleet while ours is watching the Japanese! But we do not approve this transfer of the fleet. We believe it provocative of distrust. We

would have the navy as little in the public eye as possible, just as the army keeps quiet, because war and its agencies are discreditable when not odious. Nor is there the least danger, to human vision, of war with Japan. We don't want it; Japan doesn't want it. We can't afford it; Japan certainly cannot. We would have the fleet wait until the Panama Canal is dug, and then let vessels go to the Pacific inconspicuously and, one by one, on real practice cruises. Meanwhile let the officers adorn the summer resorts on the Atlantic Coast or visit the agreeable Mediterranean ports.

A Time Limit for Old Art

When, after the next Presidential election, Congress takes up seriously the matter of revising the tariff, it would be well to consider some other points besides the importance of protecting American manufactures. We suspect that few members of Congress will care anything for anything else. For example, there is no money interest that will seek the abolition of the duty on works of art, and no consideration may be given to it if some public demonstration is not made. Sir Purdon Clarke, Director of our Metropolitan Museum, suggests that any object made before 1800 might be brought in free. That would help art collectors not a little, and be ultimately a boon to our museums. Think of it, a man cannot import old Greek gems, or prismatic glass from a Syrian tomb, without paying duty to protect our manufacturers. Here is Mr. Morgan, President of the Museum, who has to leave his collections in England, altho they will probably go ultimately to the Metropolitan Museum, because the Government wants duty at something like half their cost. What goes directly to a public museum pays no duty, like the famous Hoentshel collection of carvings, for which he gave a million dollars, and which will be displayed in the new wing when built. Then the Museum will have a sufficiently full representation of this branch of industrial art, and can proceed in the same way to make collections of other industrial arts, such as pottery, illustrating its development in Italy, Germany and France; and a history of textile manufactures, carpets, tapestries, brocades and weavings of all sorts. Sir Purdon's idea is that the Museum should be chiefly devoted to industrial arts, yet not, we presume, to the neglect of the archeology which has given such fame to the British Museum.

The Creeks and Seminoles

We published in our issue of July 25th an article by L. J. Abbott on the race question in Oklahoma and the Indian Territory, in which the statement was made that there are very few families in the Creek and Seminole tribes which have not a tinge of negro blood. We have a letter from the Rev. William Meyer, Superintendent of Indian Work for the Presbyterian Synod of Oklahoma, who strongly controverts this statement, and he quotes different gentlemen, both from the North and South, who are well acquainted with those tribes from long residence and declare that there are many families, indeed hundreds of them, in the tribes which are of pure Indian blood. He says that in the hotels and public places no discrimination is made against them on account of race. Mr. Meyer also denies that the Republican candidates for the constitutional convention generally made separate coaches and waiting-room an issue, altho certain Republicans from the Chickasaw Nation did favor separate coaches. It was not, he says, the race question, but the liquor and other questions, which caused the defeat of Republican candidates. Many of the Republicans were disgusted with the leaders of the party, and this had not a little to do with the tremendous defeat of that party.

Another Church Union

While certain Congregationalists, belonging to a denomination which has been loudest in decrying sectarianism, are shivering on the brink of union and long to launch some other way, the two largest independent Lutheran Synods of the West, the Ohio and the Iowa, representing a constituency of more than three hundred thousand members, have inaugurated a movement that will establish at least a federation, if not eventually a union, of these two bodies. Conferences have been held between the

Lutherans of the West for the purpose of reaching a *modus vivendi,* which had been badly broken by the Predestination controversy of a quarter of a century ago. That larger project failed; but this movement promises success. Joint committees of the two bodies met some months ago in Toledo, O., to formulate theses on subjects which had been under discussion in past years. When this was satisfactorily settled, these theses went before the Iowa Synod, and were unanimously and even enthusiastically adopted. The Ohio Synod will not meet until next year, but the Toledo theses are being discussed at all of the district meetings held this year, and so far with good results, altho as yet they have been adopted in full only by one or two districts. The Congregationalists hold their National Council in Cleveland in October, and their proposed plan of union will come up for decision.

Plague and Vermin

It is startling to learn that there have been nine cases of bubonic plague in San Francisco and six deaths. The health officers seem to be wide-awake, and are active in fumigating vessels and destroying their rats. It seems to be settled that the plague is communicated chiefly by rats, which themselves have the disease. There has been much question how the disease is communicated from the rat to the man, some holding that it is by the bare feet treading on the excreta, others that, as in the case of typhoid fever, it is thru the alimentary canals, but the Indian Plague Commission finds that the bacillus is transferred from the rat to the human subject by fleas. Thus again insects are shown to be the carriers of disease, literally pestiferous. So we have one species of mosquito responsible for malaria and another for yellow fever; one sort of fly for the sleeping sickness and another for killing off domestic cattle. The lesson is, cleanliness and the destruction of vermin. Just what species of flea, or *pulex,* it is that carries the bubonic plague we are not yet informed, but there are seventy-five different kinds known. The common Old World flea is not much in evidence in America, where we are familiar with the cat and dog flea. There is a special rat flea, but that evidently attacks man as well. There ought to be special concerted governmental effort to destroy pestiferous vermin. We are just learning that mosquitoes can be exterminated. The common house fly will cease to be a plague when the stables in which it breeds are replaced by garages. The destruction of fleas is achieved chiefly by cleanliness, as they breed in dust and dirt, in cracks in the floor. In India the plague has taken off nearly a million people a year for the last five years. Now that Mayor Schmitz is in prison we may expect active measures to be taken to segregate all cases, but how about the rats and fleas? Our grandchildren will wonder that we endured all these vermin.

The suicide of an aged clergyman, formerly professor in the General Theological Seminary in this city, does not look quite like insanity. He had been despondent, it is true, and had talked much on the thought that the superannuated and useless should be removed, just as the Siberian Esquimaux expose their old people. But if Christianity does not teach a better lesson of patience until the end of natural life, the pagan piety of a Socrates, who would not disobey the will of the gods, might have taught a better lesson. Of all men one who is a teacher of religion should endure the disabilities of age and not hasten unbidden into the presence of God so long as he believes in the religion he has taught.

Spelling reform in Rhodesia and Mozambique may seem far off from us, but it illustrates the importance of beginning right in the spelling of a language. The Bible and missionary literature have been printed for the natives by representatives of various nationalities, each following his own sweet will or system in the matter of spelling. It got to be very confusing; so members of every mission came together determined to put scholarship first and national preferences second, and they were better able to agree as to the spelling of a whole language than we are as to twelve words. That they felt the importance of the task appears from the fact that one of the delegates walked over two hundred miles to attend.

"Keep a thing for twenty years and you will find a use for it" is the old rule. The French have had half a mind to tear down the 300-meter tower built by M. Eiffel for the Exposition, because it was good for nothing and they were not at all sure that it was an ornament to their city, but now before the twenty-year limit is up they have found it very handy. The troops who are fighting the Arabs in Morocco are in direct and immediate communication with the headquarters of the army at the capital. The antennæ on the Eiffel tower exchange wireless messages over or thru land and sea with the masts of the cruiser "Galilée" in the harbor of Casablanca.

We had one little rebellion when the country was new, and we need not be surprised that the new Commonwealth of Australia, weak as yet as a whole, and without an army, may suffer from nullification or even rebellion somewhere. We do not believe that New South Wales will secede, nor that there will be civil war over a question of tariff. The question is as to the remission of duty in wire netting which New South Wales is importing to sell to farmers and thus save them the duty. It is much like South Carolina's importing laborers for contractors who are not allowed to import them.

It appears that we Americans were hasty and conceited in assuming that the flurry on the Stock Exchange was due to the threat of the big stick. Now that the British newspapers have been received we learn from the Conservative organs that this decline in high-class securities, extending from Germany to Japan, was caused by the introduction into Parliament by the Liberal Government of the Scottish Landholding and the Transvaal Loan bills. Why cannot the financiers of different countries get together and have a gentlemen's agreement on what story to tell?

The utter passing away of the Thirty-nine Articles as a creed or statement of faith in the Episcopal Church is illustrated in *The Churchman,* which thus concludes an editorial on the subject:

"A set of theological propositions aimed specifically at sixteenth century Roman Catholics and Anabaptists and framed to represent Tudor England as a model Christian State is an anachronism at the present day."

And this shelving of them raises no remonstrance. Then why should such an anachronism be retained in the Prayer Book?

Last week Thursday in this city a mob attacked Bellevue Hospital to get at a chauffeur who had run over a girl, whom he had carried in his automobile to the hospital. Altho ten policemen dispersed the mob no one was arrested, yet this sort of thing goes on every day all over the land. The most dangerous symptom in American social pathology is the failure of the law to put down the mob spirit, and the police, sheriffs and judges are entirely to blame.

The new Singer Building in this city will, with the exception of the Eiffel Tower, be the highest human structure in the world, 612 feet from the sidewalk, 689 feet above the basement floor. The Great Pyramid was originally only 482 feet high. The Eiffel Tower, which is only a framework of iron, rises 984 feet above the ground.

It can hardly be that President Roosevelt's policy has caused all the slump in market prices of stocks, considering that in the British stock exchange there has been, this year, a shrinkage of $1,170,000,000 of values, excluding American railroad securities, and the heaviest loss has been in South African values.

We sympathize with Bishop Potter. He will not reply to newspaper reports about himself, but he found his rule quite too much for his patience when a newspaper quoted him as using the words, "that *strata* of life." Anything else, but not bad grammar.

In China and Korea when a new dynasty comes into power they change the style of wearing the hair; in France they change the names of the streets; in America they change postmasters.

Insurance

The American Bar Association and Insurance

THE committee on insurance of the American Bar Association, which met at Portland, Me., on August 26th, has made certain suggestions or recommendations. Those which have already attracted marked attention are as follows:

That this association disapproves and condemns the prevalent custom which makes State insurance commissionerships political prizes, to be distributed as such without regard to fitness or knowledge of the insurance business.

That all companies created under the laws of foreign countries be required to make a deposit in at least one of the States before transacting business anywhere in the United States.

The repeal of the valued policy laws.

The creation in each State of the office of Fire Marshal.

The enactment of a Federal statute forbidding the use of the mails to persons, associations, copartnerships or corporations conducting any kind of insurance business in the United States which are not licensed to transact such business by the State wherein such persons, associations, copartnerships or corporations are domiciled or under whose laws any such corporations are credited.

The apportionment and contingent distribution of the deferred dividend surplus on existing life policies of all companies as a condition precedent to the transaction of business outside of the home States of the several companies.

The association is, however, by no means a unit in regard to all of the suggested insurance reforms, and withholds its approval from plans to restrict mailing privileges and surplus apportionment.

Reinforced Concrete Buildings in San Francisco

ACCORDING to *The Adjuster* there are now about eighty-five reinforced concrete building either finished or under construction in San Francisco. Of these there are 4 one story, 11 two story, 21 three story, 8 four story, 7 five story, 9 six story, 8 seven story, 7 eight story and 1 ten story. Nearly all have basements in addition to the stories enumerated. Of the number, about 35 are finished, or nearly so; about half a dozen have been very recently commenced, and the balance are in various intermediate stages. They are intended for the following purposes: Stores, 14; offices, 13; warehouses, 10; factory, 5; mill, 1; loft, 3; wholesale store, 2; wholesale market, 1; store and residence, 1; store and office, 7; store and rooms, 4; store and bank, 1; office and bank, 1; apartment house, 1; rooming house, 2; residence, 1; hotel, 2; club, 1; theater, 1; laboratory, 1; sanatorium, 1; power stations, 2.

The causes of accidents on the Washington Traction Company lines, at Washington, D. C., are set forth in the table printed below. In view of the recent large increase in the number of street car accidents, the table, with all its limitations, is interesting and instructive:

Stepping off moving car	139
Attempting to board moving car	78
Collisions with pedestrians	39
Collisions with vehicles	8
Car started while alighting	18
Car started while getting on	6
Fell in car	6
Hand crushed in gate	2
Collision of cars	37
Struck by pole	2
Collision with bicyclist	9
Fell from moving car	46
Employees	13

ACCORDING to late press dispatches Otero, the famous Paris dancer, has recently taken out accident insurance on her ankles. The sum at hazard on each ankle is given as $80,000.

IN our table showing fluctuation of losses for the past decade in ten fire companies, published in the issue of July 25th, reference was made to the Liverpool & London & Globe Insurance Company of England. This was an error. It should have been the Liverpool & London & Globe Insurance Company of New York.

Financial

How to Get Rich

Most men desire wealth. The popular idea of happiness is associated with a pot of money. He is a benefactor of his race, therefore, who can show his fellows how to get rich. Generally speaking, a man does not go to bed very poor and wake up in the morning very rich, altho a few cases of this kind have happened. How, then, shall a man get rich? There are various ways. A sharper who advertised the vending of an infallible recipe for obtaining riches upon the payment of a paltry dollar used to send the following formula, viz.: "Work like the devil and never spend a cent!" This scheme is not consistent with modern ideals.

The race track continues crowded with those in whose hearts there lingers the fond hope that a lucky bet will tempt the goddess of fortune to outpour her cornucopia. Time after time, however, she sustains her old reputation as a fickle jade, and statistics show but few lucky strikes at the race track. Defalcations have begun at the betting ring, and personal losses that could be ill afforded have been suffered because of the vain hope of getting rich by devotion to the turf.

Lottery tickets, policy playing and other forms of gambling, well called games of chance, but where the chance is all against the player who would have wealth, are other oft tried methods to get rich quick.

If a man could go into Wall Street and buy stocks or bonds at 50 and presently sell at 150 he would not require to continue such a process long before he would be rich. Every man finds, sooner or later, that wealth has its price, and to buy even it the price must be fully paid. Self-denial is one of the prices of wealth. He that would be rich must save his money, not waste it. The rich man is conservative. A young man who says to himself at the beginning of his career "I will be rich" must start out by spending less than he receives. When his companions squander, he must refrain from "blowing his money in," according to the modern vernacular. He must learn to finance himself and to keep in touch with income and outgo. He must keep account of his money. A small cash book will easily answer at first, but a careful study of this book and an analysis of it will teach him, as nothing else will, where his money goes and how to regulate his tides of expenses.

The weak young man who refuses the amputation of an expense that is unnecessary turns voluntarily from the road to wealth into the side track of self-indulgence and bids farewell to the goal toward which he started with unwilling feet. Saving by a plan is, then, the first step toward wealth. To this first step there must be adherence, in season and out of season, summer and winter, day and night. The price of wealth is high, and some men decline to pay the price when they realize what it really is. To the rigid keeping of personal accounts much must also be added. An eye, with the keenness of a searchlight, must be trained to lookout for investments that shall first be safe and, second, profitable. Step by step wealth comes, on the average, when the man seeking it goes persistently about amassing it properly.

Russell Sage, who was fairly rich when he died, was a poor boy who set out with a determination to get rich, and he got rich. He took no vacations during his long quest, however. He never bought his raiment of fashionable English tailors, and he did a thousand other things to conserve his expense account that made him a marked man. The man who, like him, would be rich must not hope for popularity. He must eschew club life. He must count his pennies and squeeze his silver until the American eagles on them scream before he parts company with them, and then when he has done all and he has the pot of gold that was really hidden at the foot of the rainbow there are some of us who will not finally envy him.

Entered at the New York Post Office as second-class mail matter.

Survey of the World

Suits and Indictments

One of the leading suits against trusts was concluded in Texas by the conviction of the International Harvester Company for a violation of the anti-trust laws and action in restraint of trade. A judgment of $35,000 was secured in penalties, altho the State originally sued for $1,150,000. The judgment also forfeited the permit to trade in the State, ousting the company from Texas, and the most sweeping injunction ever entered in a similar case, in that the defendant is forever enjoined from doing any further business in Texas, except an interstate business. It is enjoined from ever entering into any exclusive contract with any person, firm or corporation in Texas for sale of its goods in the State where any one concern would have the right to handle the goods exclusively. It is also enjoined perpetually from organizing any other corporation to do business in Texas, or from acquiring or relaying stock or interest, either directly or indirectly, in any corporation, firm or association of persons, to do business in the State.——Indictments have been returned in this State against the Standard Oil, the Pennsylvania Railroad and the New York Central Railroad companies for giving or accepting illegal rebates on consignments of oil from Olean to cities in Vermont. The total number of counts make 438, and as there is a penalty of $20,000 on each count, the total fine, in case of conviction, might be $8,760,000.——Indictments brought by the Federal Grand Jury against United States Senator William E. Borah and three other prominent men for land frauds have been served on the defendants.——Four men prominent in Pittsburg politics, one of them a State Senator, have been indicted for frauds in giving thousands of false tax receipts for political purposes. Besides these indictments at least 200 more persons will be indicted for their share in these frauds before the cases are taken up in court.

The Reply of Standard Oil

Two replies in the way of defense of the Standard Oil Company have been made during the past week. One of these is by Frank D. Pavey in *The North American Review* and the other by John D. Archbold, one of the highest officers of the Company, in *The Christian Advocate*, which had given a pretty full account of the trial and enormous fine of $29,000,000 assessed on the Company. Mr. Archbold declines to discuss the law in the case or the justice of the decision, leaving that for the trial on appeal. But he does object to the following statement in his own religious paper:

"The trial has revealed that the company does not deny that it had a private rate and was getting oil transported at one-third of the price charged to others, nor that this was contrary to the text of the law."

He absolutely denies this. He declares that the defense showed that there was no secret rate or rebate, that it was never intended to apply the 18-cent rate to petroleum shipments:

"The six cent rate was issued by the Chicago & Alton Railway Company to the Standard Oil Company each year for fifteen years, and the traffic manager of the Standard testified under oath that the chief rate clerk of the Chicago & Alton told him that the six cent rate had been regularly filed by the railroad company. . . . .

"The evidence showed that the rate was not a secret one—that it was not discriminative—because there was no other shipper of oil be-

tween those points and that an open rate of six cents had prevailed since 1895 over the Chicago & Eastern Illinois Railroad running between Whiting and East St. Louis; that this rate was filed with the Interstate Commerce Commission; that the Standard Oil Company shipped fully one-third of its oil over the Eastern Illinois, and had there been any doubt of the validity of the Chicago & Alton rate all of the oil could have been shipped over the Eastern Illinois."

Mr. Archbold adds a letter from Paul Morton, Second Vice-President of the Atchison, Topeka & Santa Fé Railroad System, dated August 17th, 1899, who said:

"For nearly four years I have had charge of the freight business of this company, and never in all that time have the Standard Oil Company's representatives asked for, or received, better rates than other shippers of oil secure. From my own experience I know that the Standard Oil Company does not ask for rebates, and I know further that the chief aim of the freight representatives of your company has been to have the railroads of the West absolutely maintain the tariff. I wish that other large shippers would take the same position in regard to this matter that your company does. If the terrible pressure from gigantic shippers for inside rates could be relieved the transportation problem of the country would be a very easy one to solve."

"The position of your company in not asking for special rates, and in declining to receive rebates, and its effort to keep the rates on oil and its products up, has been a common topic of discussion among Western traffic men ever since the Interstate Commerce law became enacted."

Similar letters, he says, were received from representatives of every great railroad in the United States, and he concludes:

"The Standard Oil Company and all of its affiliated companies have obeyed the Interstate Commerce law since its passage in 1887. We believe in the law and have endeavored in every way possible to adhere not only to its letter, but its spirit."

Mr. Archbold is a well-known Methodist as well as financier, and has been the principal benefactor of the Syracuse University. The article in *The North American Review* covers much the same ground at somewhat greater length.

"Silent Treatment" at West Point

In the absence of any important domestic events this past week much attention has been given to the effort to stamp out hazing at West Point. The rules are now very strict, and the cadets are supposed to be pledged not to do any hazing. A cadet in an upper class, named Sherman, met a plebe named Bock, and not liking his manner of carriage, required him to go thru a practice which consists chiefly in throwing back his shoulders and straightening out his body. He smiled and refused. The clash and the excitement of it so worked on the young plebe that he failed in a recitation, and when required by his teacher to give the reason he replied that he had been hazed, altho the hazing was of the mildest. The instructor then required him to tell who had hazed him, and he gave the information. Thereupon Cadet Sherman was punished by being required to have extra tours of "duty" for two and a half hours every Wednesday and Saturday until March of next year. He was not one of the cadet officers who had the right to punish Plebe Bock. From the time that he reported Sherman the cadets, even of his own class, have given him the "silent treatment." They have done nothing to him, simply not spoken to him, treating him with contempt. They do not claim that he did wrong in telling the truth when asked, but that he did an ungentlemanly act in saying that he had been hazed, and so opening the way for further question. Colonel Howze, in command at West Point, is much displeased at this concerted agreement, and it was reported that he threatened to dismiss the entire plebe class, but this is denied, altho he has taken means to persuade the boys to cease their persecution.

Anti-Oriental Riots

The opposition to Asiatic immigration by the laboring classes of the Pacific Coast found violent expression during the week, both in Vancouver, British Columbia, and Bellingham, a city in the State of Washington, 48 miles southeast of Vancouver. In Bellingham, September 5th, a mob of some 500 white men raided the mills along the water front and drove out all the Hindus working in them. The lodging houses were also attacked and the Hindus dragged from their beds and driven out of the town half-naked and whipped. The police were powerless, and for five hours the city was in the hands of an unrestricted mob. Four hundred Hindus were brought

under the protection of the authorities by being placed in jail or confined in the corridors of the City Hall. Seven hundred and fifty others escaped across the Canadian line. Six of the Sikhs were so badly injured that they had to be taken to a hospital.——In Vancouver on September 7th there was a parade and anti-Oriental demonstration in which 10,000 men took part. At its conclusion the effigy of Lieutenant-General Dunsmuir, of British Columbia, was burned and the agitators put their principles into action by making a raid upon the Chinese quarter of the city. Two thousand Chinese were driven from their homes and $5,000 worth of property destroyed. Later in the night fifty Japanese stores and offices had their windows smashed. The laboring classes of Vancouver have been much excited by the report that Japanese were to be shipped into British Columbia at the rate of 1,000 a month. The particular ground for this belief was the arrival of the steamer "Kumeric," from Honolulu, carrying 1,300 Japanese, followed by the "Indiana," with a smaller number. These steamers had been chartered by Hawaiians interested in the exportation of Japanese from the islands, and each Japanese had been provided by them with the $25 requisite for all immigrants under the Canadian law. On the following day the mob attacked 500 Japanese landing from a steamer, and in the riot Baron Ishii, Chief of the Bureau of Foreign Commerce, and Saburo Hisamidzu, Consul at Seattle, were mistreated.

Safety of Arctic Expeditions

Serious alarm was raised as to the safety of the Anglo-American Polar expedition led by Mr. Leffingwell, Mr. Stefansson and Captain Mikkelsen, owing to the news that their vessel, the "Duchess of Bedford," had sunk. Captain Mikkelsen had left the ship in February with sixty days' provisions, for the supposed land to the north, and had not returned, altho one of their trains of dogs had returned. But a later dispatch from Gibbon, Alaska, reports the expedition safely returned. The purpose of the party, one of the leaders of which is the Harvard ethnologist, Mr. Stefansson, who has made previous journeys in Iceland and the North is thus explained:

"The party had intended to make an ice trip northward from Flaxman Island to find the mysterious land north of Alaska which Captain Keenan reported many years ago, and which such scientific men as R. A. Harris, mathematician of the United States Geological Survey, and Sir Clements Markham thought must exist because of scientific deductions from observed data. The movements of whales and birds, the stories of Esquimaux and the tidal conditions all seemed to indicate the existence of the land.

"Inasmuch as Mr. Stefansson's dispatch said nothing about the discovery of land, it is believed that no discoveries were made. The fact that a dog train returned in advance shows that the party had been out on the ice. The message announcing the expedition's safety, despite the loss of the "Duchess of Bedford," was sent overland to Eagle City, the nearest telegraph station. It is a distance of several hundred miles and the time when it was sent off by Mr. Stefansson can only be conjectured. It may have been several weeks ago. After the messenger reached Eagle City it is probable that the despatch came thru in less than twenty-four hours.

"The party had planned, after making the trip to the north in search of the mysterious land, to go east to Banks Land and explore that territory next season. Then they were to go westward and strike out once more for the mysterious land they had been seeking, and then south to reach their ship, waiting for them at some of the islands off the north coast of Alaska."

The Fishery Dispute

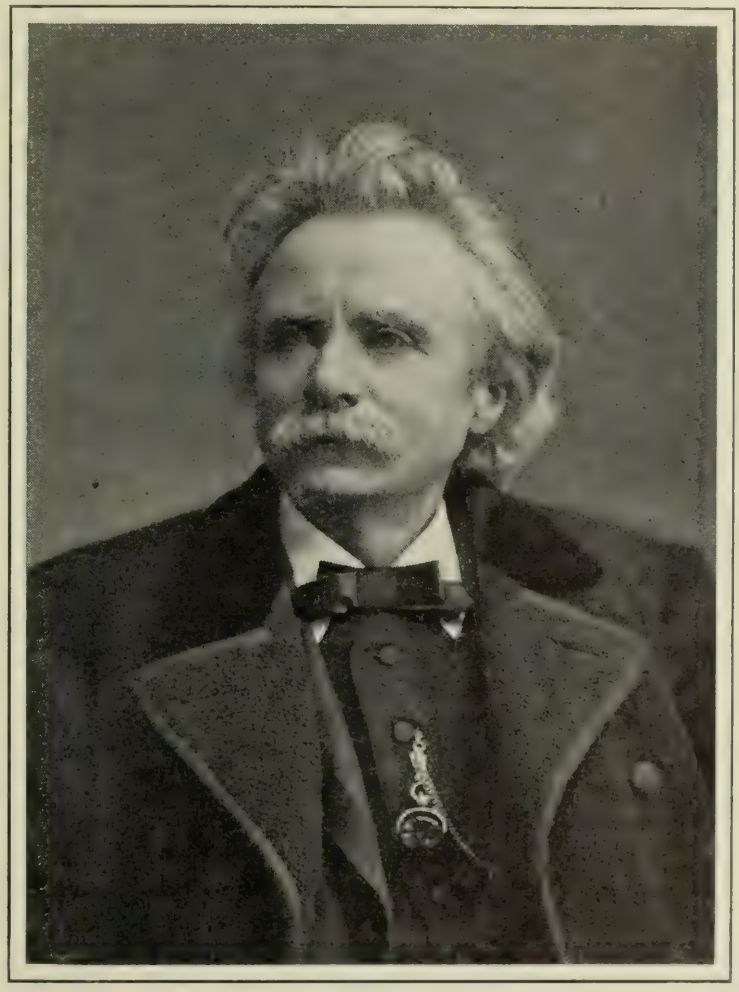
A modus vivendi to regulate fishing by Americans in the treaty waters of Newfoundland was concluded on Saturday by an exchange of notes between Ambassador Reid and the British Secretary of State for Foreign Affairs. The modus vivendi so arranged is in terms and fact a substantial renewal of last year's arrangement, and is to continue for this season and until the long standing controversy regarding the fishing question shall be settled by arbitration, unless in the meantime any of its provisions should be modified by some amicable agreement between the Newfoundland authorities and the American fishermen, not derogatory to the rights of the United States, and acceptable to the British and the American governments. The important point of agreement is that the American schooners can ship Newfoundland fishermen outside the three mile limit, and, in return, will desist from Sunday fishing and the use of purse nets.

Various Items

A Congressional Committee, of which Senator Dillingham of Vermont is chairman, has been in Europe and Turkey for the past three months investigating the conditions of immigration. They find great anxiety among the governments of southern Europe over the drain of young men, which reduces the number of those called to military service as well as of those who are sadly needed for agricultural work, which is much crippled. The loss to Italy and other countries is not made up by the very large amount of money mailed to relatives at home by immigrants here. Various countries have forbidden the efforts of emigration agents, but it is the letters from America, telling of good wages and easier conditions, that is the great attraction, while the steamship lines advertise their cheap rates of passage to the American El Dorado. Doubtless the commission will propose more restrictive legislation, at least as to criminals, and very likely also as to those whose intention is simply to remain here a limited time and then return to their old homes.——Secretary Cortelyou has relieved the stringency in the money market by his plan to distribute his available surplus in the banks. He has the legal power to do this, and he has announced his intention to do it as a regular policy, so as to prevent artificial stringency. In September of last year $30,000,000 was transferred to depository banks to aid in the moving of the crops, and the surplus revenue was added, so that the amount in the banks reached $60,000,000 in two months. This deposit is now $157,000,000, and yet the Treasury has $34,000,000 more cash balance than a year ago. All last year it carried a balance of $201,000,000 to $225,000,000.——It is anticipated that when Congress opens the initial steps will be taken for reducing the tariff by appointing a commission to gather the facts bearing on reduction. As it now stands there is likely to be free lumber and free coal from any other country, like Canada, that will reciprocate. It is expected that iron and steel products will have lower tariff, inasmuch as the statements of the manufacturers as to the margin between cost and price warrant the reduction. But it is not now expected, in view of Secretary Taft's advice, that any tariff bill will be considered until after the next Presidential election.——Governor Magoon issued last Friday a proclamation directing that the Cuban census enumerators begin their week September 30th and conclude it by November 14th. As this census is taken for electoral purposes the special object will be to find out what persons have the right to vote. Cuba cannot be past over to the control of its own people until after a Congress has entered on its duties, a new President elected, and quiet conditions are assured to the satisfaction of the American Government. Governor Magoon has declined the request of the Cuban Chamber of Commerce that he cannot assent to the reduction of the tariff from 20 to 30 per cent., as the public improvements planned for will not allow a reduction of income.

The Hague Conference

Interest has centered during the past week about the proposed Permanent International High Court of Justice which the American delegate, Joseph H. Choate, is pushing. In the examining committee the the plan was approved with the exception of the paragraph relating to the allotment of judges, about which there is great difference of opinion and some bad feeling among the delegates. In his speech to the committee Mr. Choate urged them not to allow their differences upon this point to defeat this important project. He said that several of the proposed plans were practicable and suggested that the judges be elected by the whole Peace Conference, voting by States, each State exercising absolute equality. He continued:



"Speaking for the United States, I would be perfectly willing to intrust the fortunes of the court and the success of the conference in creating it to the result of such an election. So sure am I that the establishment of this court would be a great triumph for civilization and justice and an effectual guarantee for the peace of the world that I urge with all the earnestness of which I am capable the adoption of one of the provisional schemes now suggested. If no permanent method for a choice of judges can now be agreed upon, I trust that, laying aside all national differences, all pride of opinion, and all desire to secure special advantages for our respective nations, we will devote ourselves with one mind and heart to the solution of the problem now before us."

To secure an agreement upon a plan for the selection of the judges a special committee, reporting September 10th, was appointed, consisting of Joseph H. Choate and James Brown Scott of the American delegation, Baron Marschall von Bieberstein, M. Nelidoff, representing Russia; Count Tornielli of Italy, M. Bourgeois of France, Dr. Ruy Barbosa of Brazil, and Merey von Kapos-Mere, Austria-Hungary. The committee has agreed that the judges are to be selected on account of their eminence in international law, and without regard to nationality, by an election in which all the States vote as equals. The judges are to receive a fixed salary of $2,400 a year and in addition $40 a day while sitting on the Court. Special delegations of three judges, appointed by the High Court, may be sent to try cases elsewhere than at The Hague. The plan for the Permanent High Court meets with opposition from the delegates of some of the most important Powers, who hold that the results will not be as satisfactory as under the former plan of special courts for each case brought before The Hague. The committee having in charge General Horace Porter's resolution in favor of arbitration before recourse to arms in the collection of contractural debts was approved by a vote of 11 to 1, Switzerland casting the only opposing vote. According to the resolution the signatory powers agree not to have recourse to armed force for the recovery of contractural debts, but that the stipulation is not applicable when the debtor State refuses or leaves unanswered an offer of arbitration, or in case of its acceptance makes a conclusion or compromise impossible, or, after arbitration, fails to conform to the award. At the Fifth Plenary session of the Conference the following rules regarding the opening of hostilities and the conduct of war on land were adopted:

"The contracting Powers agree that hostilities must not begin without previous unequivocal notice having been given, either in the from of a declaration of war, setting forth its motives, or in the form of an ultimatum with a conditional declaration of war.

"A state of war must be notified without delay to the neutral Powers, the effect for the latter beginning after they receive notice, which can be given even by wire. In any case the neutral Powers cannot protest against the lack of this notice if it is established that they undoubtedly knew that a state of war existed.

"The territory of neutral States is inviolable.

GRIEG.

Edvard Hagerup Grieg, the greatest of Norwegian composers, who was born at Bergen, June 15th, 1843, died at the same place, September 4th, 1907.

"Belligerents cannot establish wireless telegraph stations in neutral territory, or any other means of communication with belligerent forces on land or sea.

"Volunteers cannot be enlisted or a body of combatants formed in neutral territory.

"The exportation of provisions from neutral States and the transport of provisions for belligerents are forbidden.

"Belligerents are allowed to use means of communication belonging to neutrals or private companies.

"Prisoners who escape to neutral territory, if recaptured by troops, must, after having

asked for refuge in a neutral State, be set free.

"A neutral State can defend its neutrality by force without this constituting an act of hostility."

The head of the Venezuelan delegation, José Gil Fortoul, has received a cable message from his Government ordering him to withdraw from the Conference and return to Berlin.

The Antwerp Strike

It was supposed last week that the Antwerp shipping strike had been settled, for all the workingmen, with the exception of the grain and lumber loaders, had come to an agreement with the Shipping Masters' Federation and were ready to sign the contract on the terms proposed by the Committee of Arbitration, composed of two merchants, two shippers and two workmen, but failure to make the agreement complete and universal reopened the strike with increased violence, directed particularly against the foreign and native strikebreakers. The general strike began with the dockers on August 21st, and the shipowners met it by raising $200,000 as a campaign fund and importing 1,500 English laborers. Attacks upon the strikebreakers have been continuous ever since, and many of them have been stoned, beaten or killed. Attempts have been made to starve them out by shutting off the food supply, and the omnibuses used to carry them from their boarding places to their work have been burned or thrown into the water. Women have taken an active part in the strike, both in the street fighting and in exciting and encouraging the strikers at mass meetings. The saloons have contributed free liquor, and revolvers are in frequent use by all parties. The police have found it difficult to protect the strikers at work and on the way to their boarding places, and many of them and of the rioters have been wounded. The strike fund has been recently augmented by $52,000, and the strikers are receiving recruits from the clerical force of the shipping houses. Four hundred tallymen employed on the docks joined the strike on September 6th. A hundred of the Dutch strikebreakers demanded an increase of twenty cents a day in their pay, and when this was refused they went over in a body to a Socialist mass-meeting, where they were enthusiastically received. The work of loading and unloading the steamers goes on with difficulty, altho there are 4,000 strikebreakers employed. The strikers have added incendiarism to their other weapons, and several lumber yards and warehouses have been set on fire by the use of petroleum, causing a loss of $100,000 or more. A regiment of troops was called out to assist the firemen. In several cases the rioters have invaded the steamers, destroying their loading machinery and throwing trucks and tools overboard.

Russia

Anti-Semite rioting broke out in Odessa the first of the week and continued for three days without effective interference from the police. The inciting cause was the explosion of a bomb in the Central Police Station, which killed an artillery officer and four policemen. It was given out that the bomb was accidentally dropped by the officer. The League of Russian People, commonly known as the Black Hundreds, past a resolution calling for the extermination of the Jewish Self-Defense Association and took the execution of it into their own hands without regarding the weakness of sex or youth. Their favorite weapons were rubber canes, and with these they scourged every Jew or Jewess they found in the streets. Five were shot with revolvers, one a girl of fifteen, and nearly a hundred wounded, including two children of four and a man of seventy years. Thousands of Jews were in their cemetery mourning their dead when they were attacked by the mob and many injured. Forty Jewish shops were sacked. Finally, in response to the petition of a joint delegation of Jewish and Christian business men, who threatened to leave the city unless the rioting was stopped, the Governor-General brought in a sufficient number of troops to maintain order.——The Emperor Nicholas, on September 1st, past thru the streets of his capital for the first time since "Bloody Sunday," January 22d, 1905. The occasion was the consecration of the Memorial Church which stands upon the spot where his grandfather, Alexander II, was assassinated in March, 1881. The fact that

the imperial party past thru the city and returned to Peterhof without disaster is regarded as a triumph of the Russian police service. All traffic was suspended, the route was patrolled by troops, and owners of houses were forbidden to open their windows. The banks of the Neva were lined with marine guards and torpedo boats patrolled the river. The Emperor and Empress disembarked from a yacht at the Admiralty and went in an inconspicuous launch to the Grand Duke Constantine's palace, passing from there to the Memorial Church in carriages thru a new road.

The New Finnish Constitution

The Finnish Senate has completed the drafting of the proposed constitution of Finland, which has been submitted to the Emperor of Russia to be brought by him in his official capacity as Duke of Finland before the Diet now sitting at Helsingfors. The Senate has been at work upon this constitution ever since the Czar a year ago expressed his willingness to grant a liberal charter to Finland. The new constitution is of a radical and surprisingly liberal character. It practically severs Finland from the Russian Empire, making the union, like that between Austria and Hungary, a personal one; that is, a common sovereign. According to its provisions the Emperor-Duke is to govern Finland exclusively thru his Finnish subjects, and upon his accession to the throne he takes an oath to observe the rights of Finland before claiming the reciprocal oath of loyalty from the Finns. A Finnish army is to be created, officered exclusively by Finns, which will have charge of the defense of Finland and the maintenance of order, thus removing from Finland the Russian soldiers and police. A Supreme Court is to be established which will have power to determine the constitutionality of all laws. The Emperor-Duke will not have the right to levy taxes, establish a customs tariff, expend the revenues, raise state loans, or impose military service without the consent of the Diet. He retains the power to determine the tariff duties levied upon Russian goods entering Finland, to grant pensions, to insure the payment of interest on the existing state loans, to fix the salaries of state officials, and to appoint and dismiss administrative officials and judges. All his administrative acts must be carried on thru the Finnish Senate, which will serve as a Cabinet under the presidency of the Governor-General. All imperial ukases require countersigning by the State Secretary, and their legality is to be determined by a special administrative Council attached to the Finnish State Office at St. Petersburg. Women are to be eligible to all offices the same as men. The Finnish Diet now in session has so far refused to vote Finland's contribution to the military expenditures of the Russian Empire for 1906-7, possibly witholding such action until the constitution shall have been approved by the Czar. It is said that the Russian police force and garrisons in Finland have been strengthened in anticipation of a conflict.

The Grand Vizier Assassinated

Mirza Ali Asghar Khan, Grand Vizier and Minister of the Interior of Persia, was shot as he was leaving the hall of the National Assembly, on September 1st. He received five shots and died instantly. A soldier and a Cossack were also killed and a member of the Assembly shot in the leg. It appears that the assassination was the result of a plot on the part of a secret society said to number 700 members in Teheran and thousands in the Caucasus. Several men were concerned in the act; one of them committed suicide, others escaped, and one was captured. He is identified as Abbas Ali, a money lender from Baku, and letters were found on him indicating that he acted under orders from a revolutionary committee in that city. The assassinated Premier took office when the new Persian Constitution came into effect, and his removal will be a great injury to the Government, since Persia as a whole is in a very unsettled state. The question of the establishment of a bank by Germany or some other Power is not yet determined. The Persian Government has asked the French Legation at Teheran to give them a financial advisor. Part of the country is in revolution under the Shah's own brother, and the incursion of Turkish troops on the northwestern frontier has increased the disorder which is characteristic of that

district. The Persians have been unable to protect the Christian villages from the raids of the Kurds, either from inefficiency or the fear that severe measures will drive the Kurds into active alliance with the Turkish invaders. The commander of the Turkish troops has announced that all the villagers who accept the sovereignty of Turkey may return in safety to their homes and will be protected against the Kurds. The Persian Minister at Constantinople, backed by the English Ambassador, has obtained an irade ordering the Turkish troops to retire from Persian territory, and appointing a commission to delimit the frontier and investigate the conditions there; but since the Turkish contention is that the territory occupied does not belong to Persia it is difficult to see what advantage is gained by this order. The army under Prince Firman Firma, which was to drive the Turks from the country, has not yet made its appearance at Urumia. The new Anglo-Russian agreement is said to have divided Persia into two distinct spheres of influence between these Powers, Russia, of course, taking the north and England the south. This will permit the building of a railroad along the Persian Gulf, connecting Europe with Asia by rail.

The Moroccan Situation

On September 2d another engagement took place between the French troops at Casablanca and the Arab tribesmen, very similar to that of the week before, but more serious to both parties. Like the former affair it resulted from a reconnaissance in force, made about eight miles toward the south, by a detachment of the Foreign Legion supported by rapid-fire artillery and Spahis, the Algerian irregular cavalry, under the command of Major Prevost. As the column was returning to camp it was attacked by 6,000 Moors, sweeping down upon it from the hills with all the courage and fury of their ancestors. The front lines were mounted on white horses and carried banners, and as they charged they chanted the songs of the Koran. Major Prevost, as before, formed his troops in a hollow square, then placing himself in front of his Legionaries cried: *"En avant, mes enfants."* At that moment he fell, struck thru the heart by a bullet. His men rescued the body and retired to the camp under the protection of reinforcements and the shells of the French cruiser "La Gloire." The fighting began at 7.30 in the morning and continued until 2 p. m. In spite of the machine guns and the naval cannon, which almost literally decimated them, the Arab cavalry charge reached within a few hundred yards of the French entrenchments. The French lost, besides Major Prevost of the First Battalion of the Foreign Legion, Lieutenant Benizzas of the Second Battalion of Algerian Sharpshooters, and six privates killed and seventeen wounded. Kaid Mazi, chief of the tribes surrounding Casablanca, is negotiating with General Drude for peace, but this is not to be taken as proof that the natives are disheartened by their losses. They apparently regard the French as an army of invasion, which they have checked in all its attempts to advance into the interior. The immobility of the French and the invariable retirement of their sortie parties under fire are interpreted as evidences of cowardice and incapacity. The international complications which prevent the French from taking the offensive are, of course, not realized by the Moors. Word has been received from Kaid Sir Harry Maclean, who is held in captivity by the bandit Raisuli. He is guarded by four of his men in a broken-down hut in the mountains, within fifteen hours' march from Tangier, and complains of chills from sleeping on the floor with nothing but a carpet for a covering. Since the Moroccan troops have failed to rescue Maclean, the British Government is negotiating directly for his release. Raisuli's ultimatum demands British protection for himself, an appointment as Pasha over a large district and an indemnity. The rival Sultans are collecting their forces for a decisive combat, which is likely to take place near Rabat. The American missionaries, Clinton, Reed and Enyert, who elected to remain in Fez when all the other foreigners left, have found it impossible to remain there, as they are regarded as French spies.

The Philippine Assembly

BY HENRY C. IDE, LL.D.

[In view of the trip of Secretary Taft to be present at the opening of the Philippine Assembly in October, the following article by the recent Governor of the Philippine Islands is most timely.—EDITOR.]

ON July 1st, 1902, Congress passed an act providing temporarily for the government of the Philippine Islands, and enacting, among other things, that as soon as a condition of general and complete peace should be established thruout the Islands, a census of the inhabitants thereof should be taken, and that two years after the completion and publication of the census, if general peace should still continue, the President should direct the Philippine Commission to call a general election for the choice of delegates to a popular assembly, which assembly, when convened, should, together with the Philippine Commission, exercise the legislative power heretofore exercised by the Commission alone. The Assembly was to consist of not less than fifty nor more than one hundred members, to be apportioned by the Commission among the provinces as nearly as practicable according to population, but no province should have less than one member. The portions of the Islands inhabited only by Moros or other non-Christian tribes were not entitled to representation. The members of the Assembly were to hold office two years, their successors to be chosen every two years thereafter. The Legislature was to hold annual sessions not exceeding ninety days, the first session to be held upon the call of the Governor-General within ninety days after the first election.

The census was taken in the years 1902 and 1903, and duly published. Certification was made to the President by the Philippine Commission that a condition of general and complete peace had been established.

Since that certification was made, the Filipino people—at least that portion of them who took an interest in public matters—have looked forward with the highest degree of anxiety to the election of the members of the first Assembly, as a fruition in large part of their desires, ambitions and patriotic aspirations. They had before received a very large measure of self-government. All municipal officers are elected by popular suffrage. The same condition has existed as to the governors of the provinces. Local affairs, therefore, were mainly administered by local officials chosen by the people. In the central or insular government the system of legislation and executive action by officials appointed, instead of elected, prevailed, but even here the very best representatives of Philippine thought, education and ability were chosen to fill most responsible positions. The Commission with legislative power was made to consist of five Americans and three Filipinos. The Chief Justice and two other judges of the Supreme Court of the Islands, eight or nine judges of the courts of first instance, the Attorney-General, all the fiscals or prosecuting officers outside the city of Manila, all the justices of the peace, all the provincial secretaries, and several thousand minor officials and employees in every branch of the public service were Filipinos.

It was the opinion of many conservative people that the Filipinos had been given too strong political food; that their digestion was not fitted without longer training for the exercise of the numerous important and public functions that had been entrusted to them. Such timid people were confident that the time had not yet arrived for entrusting the Filipino people with the power to elect one of the bodies constituting the Parliament or Congress of the Islands, the concurrence of which would be indispensable to the enactment of any legislation.

On the other hand, the theory upon which our Government is operating in the Philippines required that the inhabitants should be trained in political duties, and that as rapidly as possible the Gov-

ernment should be converted from one of Americans assisted by Filipinos to one of Filipinos assisted by Americans, and that the time had arrived when a legislative assembly, elected by the Filipinos, not only could be called into existence without danger to existing institutions, but that it would be a most useful factor in determining wisely the legislation that was best for the people.

Theoretically, of course, representatives of the people chosen directly by them best know their wants and needs, and can be most helpful in framing suitable legislation. Practically the Philippine members of the Commission had been found to be most useful and to be able to furnish constantly and instantly necessary information as to local needs, customs, prejudices and resources, the knowledge of which is indispensable to wise legislation. There is every reason to believe that the popular assembly, altho to be composed entirely of persons who have been absolutely without legislative experience, and to be chosen by constituencies with no knowledge of public affairs and no experience in exercising political rights except such as has been gained during the few years since the establishment of civil government in the Islands under American sovereignty, will still be an admirable training school in civic duties, and a possible help in wise legislation.

The campaign was carried on with intense feeling and a great array of eloquence and rhetoric in newspapers and upon the public platform. As the law required candidates for the Assembly to have resided at least six months in their respective districts, the politicians from Manila hastened to take up residence in the various provinces six months before the time fixed for election, to announce themselves as candidates.

Dr. Dominador Gomez, who was one of the two representatives from Manila declared to be elected by a plurality of 31, during his campaign rivaled a distinguished American orator in the fervor of his oratory, declaring in his organ, *La Independencia:*

"On the road of bitterness, with the cross upon my shoulders, triturating slanderers and reptiles, I am pursuing under the insistent fire of most galling attacks the dangerous path of Philippine politics. I shall always consecrate all my energy and enthusiasm to the making of worthy citizens of the Filipinos, of independent individuals, as indispensable elements in the fomentation of a future cultured community, a people always vigorous, and a sovereign and glorious nation. The stripes of prison uniform which are such a terror to many may perhaps mark the delicate epidermis of my organism, but they will never succeed in furrowing, not even in the slightest degree, the integrity of my honor and my faith, which I consecrate with fervorous unction at the altar of my free and independent conscience."

The worthy doctor, in his allusion to the prison uniform, referred to a recent imprisonment which he had endured for a non-political offense, and to a prosecution for embezzlement still pending in the Supreme Court, after a conviction in the court of first instance. It will readily be seen that Dr. Gomez is a spellbinder on the platform, however unsatisfactory his record in other respects may have been. At a public meeting of the adversaries of Dr. Gomez he forced himself upon the platform and kept himself there by the aid of a large number of his followers whom he brought with him. Referring to this incident, *La Democracia,* the organ of the Progressistas, declares:

"This is the spectacle the people are witnessing in the Nationalist camp, and it would seem to be high time that all Filipinos rally to the defense of national decorum, devising the means of checking such proceedings, which clearly prove that we need foreign tutelage to prevent us from tearing each other into pieces. We are becoming more and more confirmed in our conviction that if independence were granted us today, tyranny and oppression would reign supreme in the Philippines, and, saddest of all, we would be oppressed and vexed by our own kind, and civil war would be inevitable. The mask of patriotism, which covered the vilest passions, has been torn off sufficiently to let us see clearly and act accordingly."

The registration was very small. In the city of Manila, out of about 230,000 inhabitants, less than 80,000 voters registered, of whom about 800 were Americans. At the election, which occurred on the 30th day of July, there was a total vote thruout the whole Islands of 97,803, out of a population of toward 8,000,000 people, not including Moros and non-Christian tribes. The vote, therefore, was only about 1 4-10 per cent. of the population. The Assembly, therefore, has been elected by an exceedingly small minority of the whole people, altho the

registration and election were as free and untrammeled as they are in any State of our Union.

The result does not represent the sentiments of the people, or satisfaction or dissatisfaction with the existing Government. It represents rather the wishes and preferences of a comparatively small number who have been interested in politics, and who have cared enough about public questions to take any active part in the decisions.

A small majority of the members elected were chosen on platforms favoring early independence of the Islands under the various names of Nationalistas, Independistas and Immediatistas. Out of 80 members, 16 were Progressistas, whose platform in substance favors a continuance of the present relations between the United States and the Philippine Islands until such time as the Philippines have become trained in the art of government, and have become economically and politically able to maintain a substantially independent government of their own. Nineteen unpledged or independent representatives were chosen, who will probably in the main be conservatives and act largely with the Progressistas.

If the work of the Assembly were to be controlled by demagogs and utterly dishonest politicians like Dr. Gomez, its work would be a complete demonstration of the present incapacity of the Filipinos to legislate for and govern themselves. The preponderance of members who are nominally in favor of early independence would, on the face of things, indicate that the Assembly would devote its attention to the discussion of theoretical propositions and demands that cannot be complied with, instead of to the solution of questions immediately affecting the good of the Islands. A personal acquaintance, however, with many of the members who have been elected leads the writer to the belief that rational counsels will prevail, and that useful legislation will result after the effervescence of political sentiment has been duly worked off.

It is entirely possible that there might be serious difficulty in enacting appropriation bills, arising from a difference in opinion between the Commission and Popular Assembly. The Act of Congress, however, provides that in case the Legislature shall fail to pass appropriation bills, the appropriation for the preceding year shall be deemed to continue in effect.

Appropriations for the current year have already been passed by the Commission, after great care and deliberation, and will therefore continue effective until the Assembly and the Commission shall hereafter agree on other appropriation bills, so that no danger of throttling the Government can exist.

Much will depend upon the manner in which the present Assembly is dealt with by the existing authorities. The better class of Filipinos are glad to accept advice and to co-operate heartily with officials who deal with them in an intelligent and sympathetic manner. The present Governor-General and the other members of the Commission undoubtedly will meet the Assembly in a spirit of loyal co-operation, and desire to make the great experiment a success. The presence of Secretary Taft also will contribute very largely in securing this result. The probability of that success is materially enhanced by the general attitude of the Filipino press in urging the election of the best men to office, particularly with a view to having the Assembly so conducted as to make a demonstration that the Filipino is capable of exercising the higher functions of government successfully. That such may be the result is the hearty wish of every friend of the Filipino people, irrespective of politics.

St. Johnsbury, Vt.

Ted

BY LOUISE DUNHAM GOLDSBERRY

[Our readers will be glad to read this second mother song about Ted. We printed the first one in our issue of November 1st, 1906.—EDITOR.]

"DEAR," said Ted.

I was very busy; sometimes 2+2 will equal anything; and my expense book would drive a mathematical body into idiocy.

"Dear," said Ted.

"Lovely Dear," said Ted.

"Sir?"

"*Fen* I'm a man I'm goin' to marry you. Will you *like* for me to be your stephusband?"

"It would be *beautiful,*" I make fervent answer.

Ted gives me a kiss; quite sticky with butterscotch and redolent of sweetness, and tells me the things I shall have to wear.

I do not like silks, but Ted says I shall not be compelled to wear them, only just *have* them; and two pairs of shoes—all at one time; and two pairs of gloves and sixteen white dresses *an'* most a dozen hats.

Ted is devoted to "my's dod Bon," a gay little doggie that he bought with money-bank pennies, who answers to the name of Bonnie.

And the dance the two of them dance o' bedtimes!

Never a dance so darlingly danced; never a dance so tilted and toed and teetered on the twanging, stretched strings of a woman's heart.

The two heads on a laddie level; crown of young gold and the gay doggie's brown fringe. And the gay doggie's little lolling red tongue is quite eloquent of his enjoyment.

And up and down Ted bobs and bobbles, Bonnie's front paws in tight grip, to a classic ditty that runs somewhat so:

"Darby, Darby,
Jig, jig, jig."

in drony, many iterations; and

"Darby, Darby,
Jid, jid, jid, Bon,
Jid, jid, jid."

the little jiggling voice croons after, and bubbles of laughter float all along the fun.

It is just up and down, up and down, two little panting jolly dears; almost as soundless as a leaf comes down, the feet do twinkle and twirl; but oh, my soul! *How* two of those feet do tread the wine-press of one woman's heart!

Ted has his first pockets; one at each side; two in apron; one in blouse. FIVE! Queer, isn't it, how men do take to pockets?

Ted collects keys. Keys make such a nice companionable noise when one runs and shakes one's pockets. Door keys, closet keys, drawer keys, desk keys. I've taken thirteen keys out of his pockets at one fell confiscation.

"Fy *of* course," says Ted; "course I'll borrow my keys *to* you, Dear."

Then he begins his collection anew, with unchastened ardor; and indoors I always know just where to find him, upstairs or down, by the jingle, jingle that accompanies his busy self.

Once, tho, I remonstrated.

My neighbor was neighboring. She said goodnight. But — the bedroom door was locked and Ted asleep and not a key to be found; not even a clock key. We hunted for fifteen minutes, after trying hairpins and scissors.

Then I wakened Ted.

"Ted, what did you *do* with the key?"

He sat up.

"I love you *so,* dear," he said, in slow, sweet dribbles of speech.

"Ted, where is the *key?*"

"Yight down zere," he lilted, pointing to the door hinge; "it's yight down zere."

Hung on the hinge!

"Oh, Ted, Ted," I said, "what did *make* you put it there?"

One eye blarneyed up out of his nest, and then the long lashes went down.

"Cos," said Ted.

Next morning, over his breakfast, he explained: It was Bluebeard's key, and he hided it where Misses Bluebeard would be sure to look first thing soon's he left the castle.

"I fot course you knew *that,*" said he.

Ted lost a tooth lately. It was a delectable scrap of his favorite butterscotch that did it. "I'm comin' to pieces," he wailed; "I'm comin' *all* to pieces," and made many efforts to fit the tooth back to its place. I offered to buy it, but Ted was scandalized. "It *belongs* to me, Precious," he gravely explained; "it was *borned* in my mouf. I *need* it in my mouf." But the raisins were fat and the tooth *would* not stay stuck when he fitted it in, so he reluctantly allowed me to put it away.

But his confidence in his physical accouterments was shaken, and quite often he would "try" fingers and toes to see if they, too, might not possibly be on the eve of deserting him; and visibly was happier when each trial found them still fast. And Bonnie and Nixie, poor beasties! He "tried" their tails and toes and claws till Bonnie yapped loudly in face of all assurances that it was for his good, and Nixie took refuge on the very top of the woodshed. And Ted's skies were stormy; for Nixie, purring, singing, wheedlesome, adoring Nixie left an oozy red scratch on his hand as she fled.

But he told God all about it that night. Suggesting that it might be best if God *could* just as well's not let Nixie's claws come off. "Right away, please, sir."

Ted's bed-going is always a serious business. I, a mother, hearken with God to the prayers. Mothers may, you know.

Dixie and Nell and Bonnie and Nixie. Canaries and gay doggie and tiger kitten. If they have been naughty their several sins are duly laid before God, with extenuating circumstances.

"Good Man," begins the awed, dulcet, sleepy voice; "bless Precious an' me an' me an' Precious an' my *dear* friends Bonnie an' Nixie an' Dixie an' Nell. Nixie *needs* a heap o' blessin', please, sir, Good Man; she eated a little sparrow baby bird this mornin'. But she's *just* a poor little kitty an' I *fink* she'll be good. Amen."

Maybe he has forgotten one of his "dear friends." Maybe we have been crooning full five minutes the song of the "Pussy and the Owl," Ted's hand palm-clung against my cheek, Ted's lover-eyes kissing my eyes with their gaze.

"Oh, I forgot Nell," he startles, and back to knees at my knee. And blesses Nell with fervid blessing.

Then—Ted is asleep.

And the songs of the night, the dark-shining songs of the night, go thru the starry atmospheres like fine, fine, crystal lances. The crickets cry; so piercingly thin and sweet and faint that crying out in the shining dusks. From the stilling earth is that vague illusory *feel* of sound, as if it breathed and all the little grasses trembled for ecstasy. And once a catbird sang. The very aerial poignancy of all song, trickling in silver runnels ineffably soft along the windy *mere* of the atmospheres.

It made my heart swell with its unbearable sweetness, that sun-song sung in the dark of night, till I found myself kneeling at Ted's bed, cheek against his palm, praying prayers. To God? I do not know. Just my heart breaking on God's feet.

The little house sometimes seems so awfully big and empty when Ted's asleep; and so lonely. And so astir with footsteps of The Dead.

Up and down the stairs; in and out the room where Ted dreams and laughs and babbles in his dreaming. To and fro, to and fro, out on the back, grape-vined porch. Sometimes I go out under the vines and walk with them; till He bends to kiss me—then I flee to Ted. I think I could never face another day-break with one least kiss kissed on my mouth. I could not bear it! Oh, I *could* not bear it!

The delicate cobwebs glister on the grass, moon-jeweled. The locustpods at the curb clapper and clink and the winds tread the dark very softly and blow the moon-flowers open to the powdered moth.

But no tears. Ah, no; no tears.

No tears, while Ted laughs out in his dreaming and loves me and lovers me.

WASHINGTON, D. C.

Bird Duets

BY HENRY OLDYS

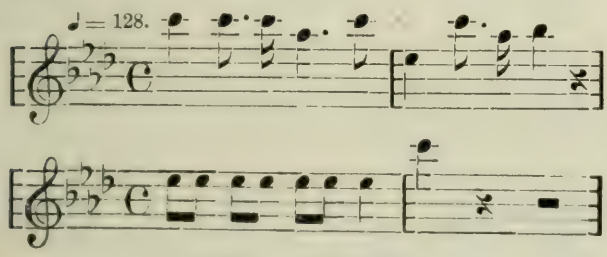
[Two weeks ago we printed an article, "The Music of Birds," by Mr. Oldys, who is connected with that branch of the Department of Agriculture which has charge of bird preservation. It will be remembered that Mr. Oldys has devoted years to the careful and intimate study of bird music and is an authority on the subject.—EDITOR.]

THE beauty of the songs of birds is mainly independent of their musical construction. In forming the estimate that goes into the memory as representing the value of the singing of any particular bird much is added by the listener, either consciously or unconsciously, to the bare musical theme that forms the basis of the concept. The quality of tone and style of delivery have much weight in the valuation of the song, and environment, like the setting of a gem or frame of a picture, is of great importance. Association with certain events or moods has also a potent influence in forming the composite impression received by the mind. As with many other things, we usually fail to divorce the intrinsic from the extrinsic, the substance from its embellishments. Many a thrush's song has borrowed serenity from the peaceful summer sunset, and many a bobolink's notes contain the charm of the vernal meadow, to both of which, be it said, however, they lend in return a full equivalent of the beauty they appropriate.

From a purely musical standpoint bird songs are not of high quality. The most melodious combination of notes offered by woodland or meadow minstrel is mediocre when measured by the standard of modern human music. Attractive as it may seem in its natural setting, were it transferred to the four bare walls of a concert hall and given to flute, violin or horn, it would be shorn of most of its charm and would make as poor a figure as a gingham gown at a court reception. The fragments of melody that are borne to our ears by the vernal breeze have little to commend them to one in quest of the highest melodic beauty.

Yet apart from all the externals that bestow on them their chief charm, the songs of some of our native birds have a wonderful interest for the musician who is a bit of a philosopher—one who, not content with the enjoyment of mere physical beauty, finds pleasure in problems concerning the nature, origin and growth of the art whose present development contributes so much to his happiness. Such a person will be filled with delight by the evidence offered by these humble musicians of the possession of a musical taste that in certain degree coincides with his own. He will hear in pleased wonderment many snatches of music that, tho simple, show unmistakable governance by rules that underlie his own art, and will note that the singer evinces a keen appreciation of the satisfaction derivable from the employment of these rules. Let me not be misunderstood. The birds do not understand the rules they follow, but merely find unanalyzed pleasure in their employment. In this, however, they are in the same category with many, if not most, human melodists, who construct without construing, following certain lines at the dictation of pleasure, not principle. Indeed, in the first instance, the rules themselves are deduced from pleasing music, not the music from the rules. They are merely the result of our attempts to account for the pleasure we derive from certain combinations of tones and phrases, and are necessarily second chronologically to the pleasure they explain. They may and do serve as a guide to students, but the master requires no rules for his guidance, just as the true logician needs no acquaintance with the rules of logic.

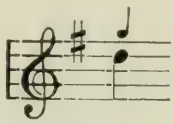
Symmetry plays an important part in all rules of art. In music, painting, sculpture, architecture, writing (whether poetry or prose) and many minor arts, a proper balance is always necessary. In music, especially music of the simpler sort, theme balances theme continually. As an example let us note the sym-



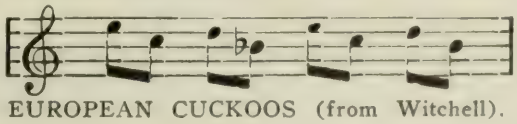
metrical effect of the first two lines of the "Evening Star" song in "Tannhäuser":

THE EVENING STAR SONG.

Note how the second theme, instead of announcing a new musical idea, simply carries out the suggestion contained in the first, to which it is a complete response. It follows the first as naturally as the words it accompanies follow the words of the preceding line. In time, style and general character the two themes are the same, but this alone is not sufficient for the purpose; the notes must be, as they are, specially chosen to satisfy the demand of the musical sense that the two shall form one continuous whole. The proper combination suggests itself to the composer as naturally as a pleasing combination of color tones in his picture suggests itself to the artist.



In many bird songs the same arrangement of consecutive themes is noticeable. Thus I have heard a song sparrow sing two phrases, the second always immediately following the first, the relationship of which to each other is plainly manifest:

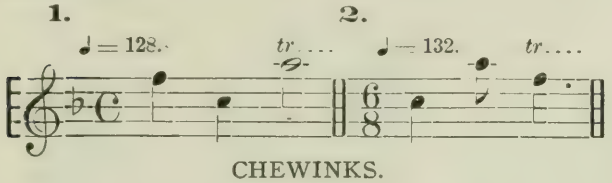


SONG SPARROW.

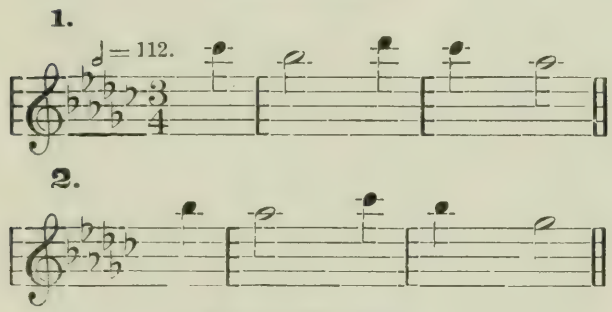
In the numerous examples of bird music of this kind that have come to my attention it is quite certain that the performers had no intelligent idea of following any set rule of construction. It is equally certain, however, that the utterance of related themes in a consecutive order satisfactory to our rule was not a mere coincidence—one might as well regard as a coincidence the arrangement of words in sentences by Eskimo or Bushman. The real explanation is that, as has been stated, the avian musicians are governed in their choice of notes by the possession of a musical taste that is similar to our own, since it leads to the same selection.

This conclusion, which is strengthened by the keen enjoyment evinced by birds in their songs, is further sustained by instances in which the second theme is sung by a second bird. The birds have not yet acquired an appreciation of the harmonious blending of notes, so far as my observation goes, tho I have heard a yellow-breasted chat sing a two-note chord

unaided, the D being full and strong, the G above fainter, but clearly determinable; but in the singing of duets that consist of the separate utterance of related themes they have made considerable progress. I have heard related phrases antiphonally sung by chewinks, chickadees, field sparrows, song sparrows, meadowlarks, and perhaps by two or three other species (the doubt is due to uncertainty of antiphonal intention). F. Schuyler Mathews and Simeon Pease Cheney have noted such singing on the part of chickadees; C. A. Witchell and Arthur H. Patterson have reported antiphonal singing by European cuckoos; and C. A. Witchell has also noted the unique instance of a response in unison by a small flock of starlings to a two-note theme uttered by one of their number. It must be remembered that in all these instances the response bore a direct musical relation to the original theme, just as the second line of the "Evening Star" song bears such a relation to its first. Thus the cuckoo duet noted by Mr. Witchell, which he heard in the same place in three successive years, was as follows:

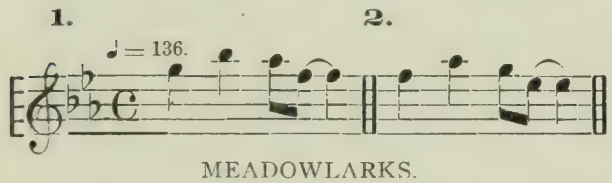


EUROPEAN CUCKOOS (from Witchell).

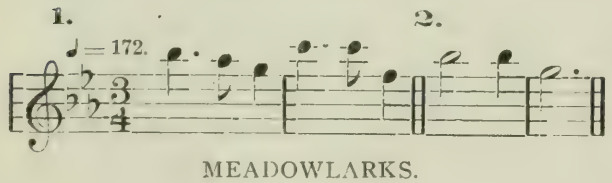


The thought will here naturally arise that the relationship in these two utterances was merely a coincidence, due to the presence of two cuckoos with songs

of the same intervals, but with voices exactly or approximately a tone apart. And I am free to confess that with no better evidence than this it would be very rash to infer intentional antiphony on the birds' part. Indeed, the first antiphonal songs I heard I unhesitatingly ascribed to accident. But I have since observed so many examples and have noted the combination of such elaborate themes, as compared with these simple two-note phrases, that no place is left for rational skepticism.



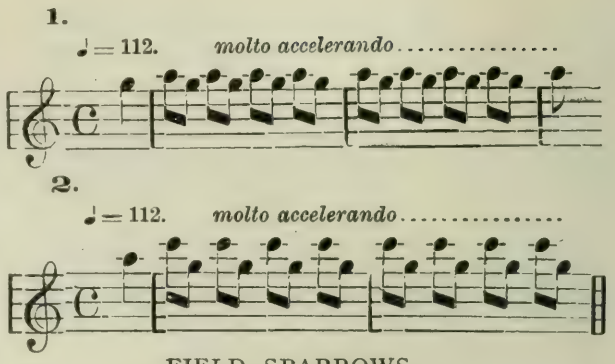
Here are a few of these duets of wood and field:



CHEWINKS.

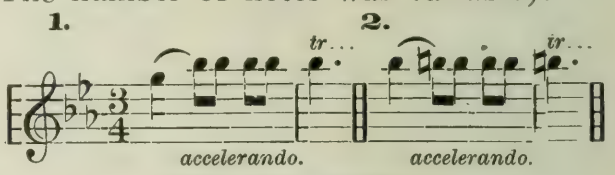
MEADOWLARKS.

MEADOWLARKS.

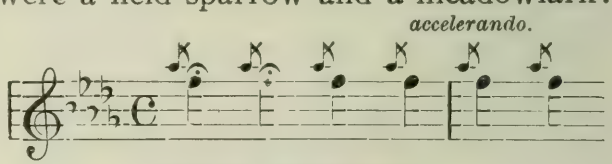


MEADOWLARKS.

(In this case the interest was hightened by the presence of a grassfinch, the only other vocal occupant of the field, singing in the same key).



MEADOWLARKS.

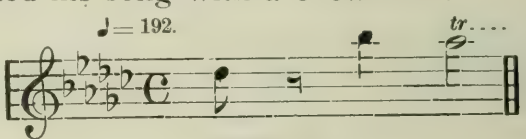


FIELD SPARROWS.

(The second bird always waited for the first to sing before uttering his own song. Both were very true to the pitch. The number of notes was variable).

FIELD SPARROWS.

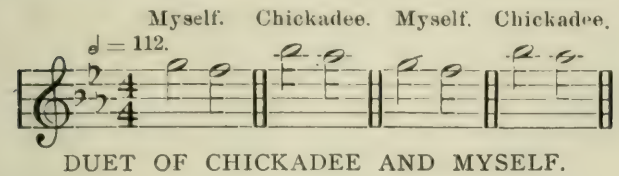
On rare occasions I have heard antiphonal singing, apparently with intention, by birds of different species, as in the following case, where the singers were a field sparrow and a meadowlark:



FIELD SPARROWS.

MEADOWLARK.

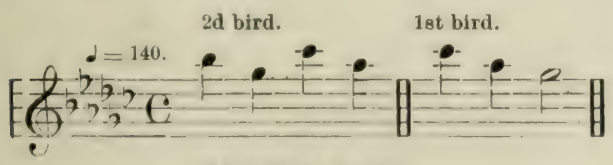
—and this, where a Bewick wren alternated his song with a chewink's:



CHEWINK.

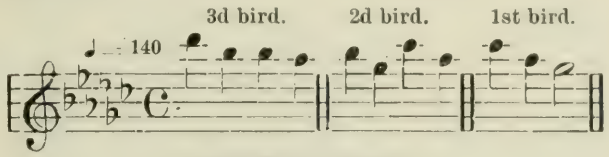
BEWICK WREN.

In one instance I secured a musical response to my own whistled notes. As I was passing a small patch of woods near West Bridgewater, Mass., I heard the high conversational note of a chickadee behind the foliage. I whistled the



song of the Northern chickadee—a very easy song to reproduce—when instantly the bird flew to the edge of the woods within a few feet of me and responded a third higher, thus (the pitch and the speed are from memory):

DUET OF CHICKADEE AND MYSELF.

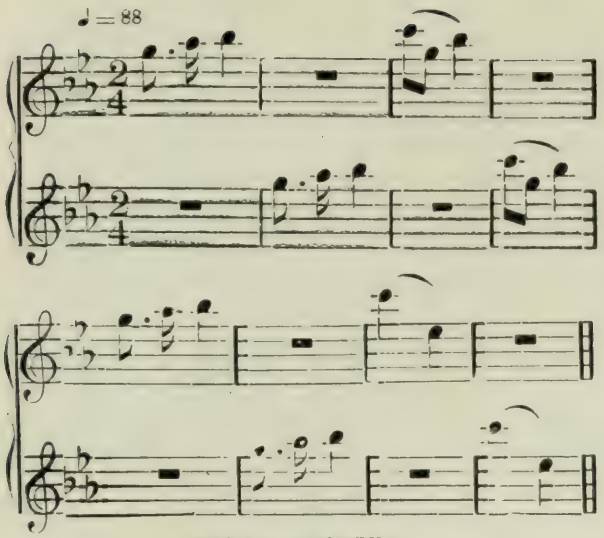


After a number of repetitions of this little duet, in which my fellow performer responded with unfailing promptness and energy, I changed to an entirely unrelated key. I wish I could report that the chickadee altered the pitch of his phrase correspondingly; but, alas! I am truthful and the chickadee was unmindful of the opportunity offered him to distinguish himself, which unfortunate combination compels me to state that he failed to notice my change and continued to utter his notes unfalteringly in the original key, utterly regardless of its lack of affinity with the one I was now using.

I greatly regretted the obstinacy or incompetency of my musical partner, as it was a rare chance to demonstrate that responses of this character are due to selection, not accident; but a few weeks later I happened upon an incident that not only gave the demonstration I wanted, but enriched my experience with something entirely unprecedented. I was walking along a road with a field on one side and a grove on the other. A meadowlark was singing in the field, but as his song was not unusual I did not note it, a neglect which in the sequel I regretted. After a few repetitions of the song another meadowlark replied from the grove with a phrase that was totally unrelated to that of the singer in the field. The two songs were alternated a few times and then the field bird replaced his original theme with one that was a suitable response to that the second bird was uttering:

MEADOWLARKS.

This duet was repeated often enough to enable me to make a careful record of it, when something occurred which, as far as my experience goes, is absolutely unique in bird music—a third meadowlark, in another part of the field, cut in, so to speak, with a phrase that anticipated the other two musically, and the three birds sang twice around this attractive trio:



MEADOWLARKS.

Then the newcomer dropped out, leaving the duet to go on as before.

This circumstance I commend to the careful consideration of any one who may feel disposed to ascribe antiphonal bird songs to chance. The change of phrase on the part of the first singer to one musically responsive to that of the second singer, the entrance of the third singer with a related phrase appropriately placed, and the twice repeated orderly rendition of the three phrases by the three birds seem to preclude any explanation that denies all musical intelligence and appreciation to birds.

A subsequent occurrence, reported to me by a neighbor whose interest in bird songs has been awakened, should set at rest any lingering doubt that the birds, or at least some of them, are aware of the musical significance of the combinations of notes they utter. This seems clear to me, and the instance I now adduce ought to tend toward confirming the theory, that they do know about and enjoy the music they make. I have several times in former publications called attention to the twilight song of the wood pewee—the arrangement of four phrases into a rhythmical song that follows the rule of construction governing many of our ballads. One evening last summer my neighbor was listening to this performance when, after one of the completions of the song, a wood pewee across the way began to echo each phrase as it was uttered, the original singer making a sufficient pause after each to permit this. The duet continued for some time in the following style:

WOOD PEWEES.

At the close of one of these double quatrains the second bird relapsed into silence. The first bird uttered his first phrase and waited as before for its repetition from the other side of the street. None came, and after an unusually long pause he repeated the first phrase. Still there was no response and again he repeated it. Twice more he uttered his first phrase—five times in all—then, apparently satisfied that his fellow singer had definitely withdrawn from the performance, he resumed his song, giving it in the customary way, without pauses between the phrases.

This episode presents overwhelming evidence of musical appreciation on the part of the two participants. An explanation based on any other theory is so forced—I may say so extravagant—that it cannot be rationally held.

Instances of theme and answer, fairly common in the songs of single birds, are not frequent as joint avian productions. The examples I have cited probably constitute a third of all that I have noted in observations covering fourteen years; and of the entire number only a few would be free from suspicion of accidental coincidence if unsupported by other evidence. But, taken in connection with the great mass of proof I have gathered that birds possess a musical intelligence differing from our own only in degree, they present a fairly valuable and certainly an extremely interesting link in the chain of evidence.

WASHINGTON, D. C.

The Dove

BY WILLIAM H. HAYNE

APART from greed and strife—
The clamorous rush of life—
Thought, like a tranquil dove—
Irised in peace and love—
Broods, with half-folded wings,
On God's eternal things.

AUGUSTA, GA.

Success in the Ministry

[We have printed challenges to laymen, confessions of ministerial heretics, who are dissatisfied with the Church, and the tales of clergymen who are forced to live on a dollar or so a day. This week we have prevailed upon one of the highest salaried ministers in America to tell how it feels to be satisfied with his lot and a ministerial success.—EDITOR.]

THREE times the editor has requested me to write this article. That were enough to inflate one with self-conceit were it not that three other times he has rejected other articles of mine—ones that I thought were better. His invitation, therefore, is my sole excuse for what would otherwise seem arrogance; my only claim of fitness for this task is his selection.

Two things may make this attempt in these columns apropos at just this juncture, two other articles of recent date. The first was the confession of an Undistinguished Heretic, the second one the lamentation of a Gadite who has difficulty in collecting his year's salary. Both were pathetic in the comments they called forth: they missed their marks so palpably. The first was written *ad clerum;* it should have concerned the clergy; but the people it vexed most were all laymen. The second was "A Challenge to Christian Laymen"; but the writers who took up the gage were mainly clergymen. Moreover, in their very *raison d'etre,* each article has seemed to me defective. My own experience has been the very reverse of that of both these gentlemen. I have never met restraint in preaching any truth I knew; my hardest task has been to keep pace with the growing eagerness of men for more. Nor have I met with stint of compensation; my chief embarrassment has been in being paid five times the salary I felt my labors worth.

But who am I? What denomination? Where located? etc. Never mind. You will never know. If I feared that you would guess, I would mislead you with sufficient misstatement. This would be possible. One could tell you details that, while inaccurate, would be illustrative. But this were only fiction. Here instead are some facts.

I was born thirty-five years ago on a farm in Ohio. I was doing chores at the age when my present charge's children are studying French. I whistled at the plow the same days that their mothers went to dancing school, and was learning to swim in a mill pond while their fathers were going bathing at summer resorts. I attended country school, where, of course, I learned nothing. I prepared (!) for college by reading, which, of course, was worthless, the prescribed amount of Greek and Latin, with a fossil failure of a country clergyman. It was a solemn childhood and a waning youth until, at seventeen, I got to college. Then it was that life began.

The college was one where expenses were low and ideals were high, one I would choose now from preference as I accepted then of necessity, one of the so-called small colleges in contrast to the model modern large ones. I would choose it, because that, in such, the student does not lose his identity; he preserves his individuality, he bears the consequences of his own errors and efforts, he is thrown in closer touch with classmates and with teachers, he does more hard work—and he has more fun.

Seven years—four at college and three at seminary—are the common cost in labor, time and money of all those who enter this profession, and this price at length I paid. The receipt I got signed in the form of a certificate of ordination at the age of twenty-four. By that time I had known the pain of toil, the stress of hard necessity and the desire to do something worth the doing. I had spent seven vacations doing seven different things. I had bossed a railroad construction gang; I had been a clerk in a steel mill; I had worked as a harvest hand; I had fired an engine for a well-drilling concern; I had been a canvasser, a schoolteacher and a newspaper reporter. That part of my life I look back upon now as one looks at a landscape thru the wrong end of a telescope. It is so far away and foreign. I think of myself in those days as of some other person. And when I think of him, that child and boy, I sometimes smile and sometimes drop a tear.

That was a dozen years ago. At present I am a preacher in a city pulpit. I am a pastor of a congregation with a thousand members. My surroundings are those of wealth and refinement; my friends are men and women of influence and culture; my home is comfortable; my income is ample and my opportunities for work are abundant. I have more calls to churches than I can accept; I have more invitations to preach than I can fill; I have more engagements to lecture than I can keep, and more requests for articles than I have time to write. To be sure, I realize that I am borrowing from old age in my youth; that my chiefest asset is my brains and my chiefest stock in trade my sympathy; that, in the language of the economists, I am capitalizing my income, am selling my crop and living on the harvest, and all that. Nevertheless, I am content. Barring accident or incapacity, the future will be the present recurring. In any case, I am too busy working to worry and too happy serving to complain.

My salary? Oh, yes. It is $5,000 a year, while, with gifts, wedding fees, fees for lecturing, preaching and writing, my income last year was $2,000 more. But if it were only seven hundred instead of seven thousand what would be the difference? A sort of law of static physics holds good here: income is equalled by outflow. The two are equally well balanced relatively no matter what the figures are in the absolute. The last time I had my bankbook posted there was a balance of just $27.08 of these deposits over checks against them. No clergyman can make money. Let him not delude himself by trying. He can make something better, however; he can make friends. He has been wasting his time sadly if in thirty-five years he has not made many, some of whom have incidentally made money. And they, in turn, are poor friends if they are not willing to put their ability in this line at his service. Let him stop thinking of their business and think solely of them, and they, in return, will forget their business long enough to think about him.

Which raises the question: Why am I not one of them? Why am I in the ministry. Why did I ever choose this profession? This is the question asked me more frequently than any other by the men of my acquaintance and of my own age. Since college days I have been one of them. They are my friends; but they cannot understand why I am not in one of their professions and why their desires are not mine. I cannot answer their question because there is no answer comprehensible. There is no answer because that, in my choice as in theirs, there was no alternative. It is as tho one said to another: Why do you stutter? When I try to frame an answer it is as senseless as theirs would be to me if I asked: Why do you want to make money? The gist of their inquiry is: You are clever; why don't you get rich? You are popular; why should you be a minister? You are clear-headed; why should you counsel the stupid? You are hale and healthy: why should you not be happy? My reply is: I am happy. And my counter-queries are: To be a good fellow is it necessary to be a bad one? To be sympathetic must one be a marsport? Must piety always be pale? Must sympathy always be sad? Must counsellors' all be callow? And most of all, what is success? You, Tom, were born a poet; why are you making steel

rails? You, Dick, are the most persuasive mortal that I know; why do you waste your eloquence selling electric motors? And you, Harry, are a fine, far-sighted, level-headed and kind-hearted friend; why will you waste your time buying and selling stocks and bonds? My dear fellow, there is more reason for your being me than for my being you.

But still the question definitely: Why do I preach? It was Bishop Brooks who once said: "No man ever ought to preach if he can help it." Well, I could not help it. I had something I wanted to say and I took the ordinary course to get a hearing. I believed that men needed help, that they wanted it, that to give this was the highest occupation one could choose, and that, if helped, men would be grateful. All these things I have found to be true. There is a certain kind of recompense in this profession not to be found in any other. To see men's faces light up on the hearing of a message, to have men strong in other fields come to one for advice as docile as mere children where their conduct is concerned, to feel the hand-grasp of appreciation when sympathy is extended, merely to hear expressions of deep gratitude for things done that were so easy to do as to seem to him who did them trivial—this last is at times fairly embarrassing. There is no other profession in the world in which such a flood of affection is poured out as in this. If young men only knew how great is the amount of this recompense and how real is its value, they would crowd the ministry with the best men there are, as it ought to be, instead of shunning it as they do, and leaving it to weaklings, as too often it is left.

True, a change has occurred within myself in these ten years, both in motive and in method. At the outset I wanted feebly to help men and thought I knew clearly just how. Neither the desire nor the method I had gaged quite rightly. As I approached my task definitely the method grew less plain, but the motive grew ever more strong. This former is but part of that change that has gone on in general in the generation past in all that has to do with theological conception. Those who complain of failure in this calling are most often they who refuse to face facts of life as they come to them and to follow the peregrinations of self as they change. He who will be the prophet of the coming generation will be he who can ally this deep desire with a method of his own. Stop it? Give it all up? I could do this any day —and make a living. I could do this in any one of a dozen ways. Any man who succeeds in the ministry could succeed out of it. But I am not going to stop—at least not for that reason. I am not concerned about money at present, but only about men and my message.

But why have I succeeded? I did not know that I had. I prefer to put it another way: Why have I not failed? There are, perhaps, six reasons. Two have to do with inheritance; two are due to my training, and two more are inborn traits that I have cherished and developed.

The first couplet deal with my parents. My father was, now that I realize it, a very remarkable man. He was a giant in stature, a Puritan in morals, a gruff man in manner, but one of unflinching purpose and unbending will, of abounding vitality and indefatigable energy. He was a master among men, the adviser of all his neighbors, their counsellor in all disputes, their mentor in perplexity and the stern censor of their sins. He spent his life at hard work, deluded in the belief that one could get rich honestly. In this he kept the path but did not reach the goal. He bequeathed to me no legacy save only his capacity for industry. But if there is one chief requisite for success in my profession it is this; and if there is one reason above all others for failure it is in the lack of it in many, which lack is a loathsome thing, for it is laziness. I work more hours in the day than any of my people; I work, as must all clergymen, seven days in the week; I work hardest on the day my people have most leisure; while even my vacations, altho long, considering, must all be spent in work, preparing for next season, reading, studying and writing. If any one in this calling complains search here for the reason before you look elsewhere.

My mother was a lady. She had all the qualities of one, but not the leisure in which to cultivate them. Her in-

stincts were for satin, but her income held her to homespun. She gave me nothing—save herself. But, next after strength, what could be of more value than just gentleness? In the ministry, far beyond any other profession, a man has *entré* to society so-called if he but be a gentleman. No other *sine qua non* is required. He holds an option if he choose to exercise it. He must learn some things, to be sure; but do they realize how short a time that takes who hold them of most value? When I came to New York it took me about six weeks to learn how to wear my clothes and six more to learn a language of which, after all, the vocabulary is but small. When those two things are learned what else distinguishes a gentleman in a drawing-room from a gently-born man on a farm? I was born with better manners than I have often found at Newport, Saratoga or The Spa. I have lived for some time each in Boston and in Baltimore, and in both places the one thing that helped me to despise their pride of family was pride in my own. Here is a second prime pre-requisite if one would succeed in the ministry. He must be a gentleman. But, to be one, he must know, the only need is gentleness. He must scorn to death all counterfeit and sham. Doing this he will be happy. He will also be of use.

Something next I gained from my training, my career, my experience—that's the conventional word, I believe: the number, the kind and the variety of things I had to be before reaching my profession. Because I was poor that course was hard; because I began early it was long; and because it was broken up into summer fragments by winters of study between it was pretty well varied by the time it was ended. What came of this all was not only training in business, the ability to "manage a church in a businesslike way." That is often spoken of by critics of clergy who have it not as a qualification that would be of priceless value and one worth long years of hard knocks for any young man to acquire who would be a minister.

Personally, I am not so sure of this. To have a church "run in a businesslike way" is a doubtful benefit. Preaching is not done best by the clock; church funds are not raised by bookkeeping; charity cannot be administered as sugar is sold—by the scales; nor sympathy doled out to sorrowing ones from labeled chests of drawers and pigeonholes. In the same way that a plow is not a bicycle, a sword a yardstick nor a tear-vial an oil can, so a parish register is not merely a card catalog, a subscription list is more than a page of a ledger, a sermon something else besides a carefully typewritten manuscript, and a pastoral visit something more than a drummer's monthly call. To know the ways of business and to have its instincts does no harm; but also it may do no good. Those who know figures best keep records and manage details to perfection, sometimes can do nothing else; and, vice versa, they who cannot do these things at all can often do far better ones.

It was something else than this ability to "manage," then, that I learned while training, else too than that much-lauded thing "executive ability." How shall I phrase it? Perhaps best thus: I learned that in every profession there are certain things that are easy and one, above all others in each, that is hard; that when one looks longingly on the profession of another and wishes he had chosen it instead of the one he is in, it is the easy things that attract him, while the hard one he never sees; that he never sees it because it is so personal it is kept out of sight, and that the successful man in any field is he who is able and willing to give his best energy to this and does not make a substitute for it of superficial small details.

Now, more than in any other profession, in the ministry, it is easy to fill all one's time with superficial things and to avoid the doing of the hardest one. A clergyman may be the busiest man in town and yet leave his greatest work undone. He may be "busy with concerns of little worth, an idler in the best." For a railroad man to ride on passes, issue orders and inspect work looks attractive; to use up gray matter framing orders, solving problems and making the wheels go round is a strain he only knows. For a salesman to tell stories, render his expense account and travel far and wide would seem to be a

pleasure; to pin a patron down to a point and get him to buy so much goods for so much money is hard work. So, for a clergyman to dine out, read a service well, be *persona grata* to a congregation, organize societies, keep records, visit widely and discourse on every topic other than religion may fill all his time. Unlike the former two he may stop here and still draw his salary; but if he does he shirks his proper task. And others will soon come to find this out. It is difficult to talk to men about their souls; it is embarrassing to pray with the sick and afflicted; it is trying to the patience to be gentle with the ignorant and scornful; it is perplexing sometimes to induce the rich to give alms to the poor; it is exhausting to give more sympathy than one can get in return, and it is hard to preach to others with the same candor that one uses in thinking to himself; but he who tries to succeed otherwise in this office fails—and he deserves to. He who does these things shall never fail—nor shall he want for recompense.

One other thing I learned from my mingling with men in other fields before I left them for this one: that is, that they are both more earnest and more intelligent than the average clergyman esteems them. Men spend much of their time thinking of problems that most of us do not know disturb them, and when they do think they think more deeply and profoundly than we thought they could. This makes meaningless, by cutting out the stays from under it, much of the horror of heresy had by good brethren. Worse than that, it makes ludicrous much of the discussion that goes on in clerical clubs and conventions, many papers read, articles written, disputes engaged in and discussions provoked—not to say many sermons that are preached.

Laymen do their own thinking quietly but often very swiftly. They move seriously and sometimes so rapidly that they leave many of the clergy a whole generation behind. Is it any wonder that, when the two groups face each other suddenly in some discussion, both stand aghast in surprise; that when certain clergymen learn to their amazement that certain laymen have "advanced ideas" and pick out points for argument, they are met with the keen tho unspoken retort: "That is on the surface. You are not down where we are at all. Ye tithe mint, anise and cummin, but omit the weightier matters of the law—judgment and mercy and faith." My own hardest task is not to find freedom in speaking the truth, but to learn truth fast enough to speak it. My trouble is not to keep from preaching over people's heads, but to keep from preaching under their feet. I am not afraid of being worldly; I am more afraid of being out of touch with the world. I am not afraid of shocking somebody by saying something new; I am more afraid of speaking platitudes that are old. If the preacher works hard enough in his study to be a real leader of thought, if he mingles enough with men to know where they are in their thinking, if he allies faith to practice by living the one in the other himself, he will always have hearers to listen. And he will be let alone. For this puts even bushwhacking heresy-hunters to shame.

Lastly, I said there were two traits, inborn to begin with, I have tried to cherish and develop. They are traits either one of which will seem valueless to those who have only the other and the two incompatible to those who have neither. I mean a drop of melancholy and a sense of humor. I truly thank the Lord for both. For the combination is a blessed one. By means of it I have always been able to take my joys seriously and equally able to laugh at my sorrows.

Now, chief among my joys has been my work. It must be so to every clergyman to whom it is not torture. He who in this profession is not serious is flippant; there is no middle ground between them. He who does not preach as a dying man to dying men only beats the air. But seriousness has certain attributes. It is sober, it is sensible, it is earnest and it is discreet. This leads to four details of method in preaching; he who does not have these attributes makes four mistakes.

First, I have tried to be as unlike as possible those who "court a smile when they should woo a soul." There are such. The seed that they sow has small depth of earth. No wonder the heat of life's sun scorches it. These are they who are often, alas, the most popular preachers.

Secondly, there are those who strain

after effect. They do this out of the pulpit as well as in it; but they show their attitude toward their calling chiefly by the texts they choose and flaunt their flippancy by printing these to draw a crowd. An article printed in these columns a few years ago by an incensed layman, on "Advertising the Gospel," ought to be hung round their necks for their shame. These make up the great group of sensational preachers.

Again, there are those who leave the word of God to serve tables. They are preachers who do everything but preach. Instead of depending on it they depend upon musical services, magic lantern entertainments, soup kitchens and settlement work. They may be anything you like to call them, in accordance with their worth or lack of it, mountebanks or entertainers, benefactors or philanthropists; they are not preachers.

Lastly, there are those who in their preaching are polemic. Sometimes they point their fire of controversy against those within the Church, sometimes against those without. In the one case they set up men of straw and knock them down; in the other they build bulwarks about the Faith and dare the infidel to do his worst; in both they waste their time. Better the method of him who "argued not, but preached; and conscience did the rest."

But these four types apart, there still remains another. He of this type realizes that to dare to stand between God and man one must be either impertinent or inspired. He believes that to preach is the most serious business on earth and he approaches his task every week with prayer and fasting, fear and trembling. For his comfort he remembers sometimes the old story of the stern Scotch elder and the bumptious young supply. The young man had strutted up into the pulpit, self-confident and cocksure, made a miserable failure and come down crestfallen. He had begun in exultation, he had ended in humiliation. Said the old man: "Sonny, gin ye'd gone up as ye kem doon, ye'd a kem doon as ye gone up."

I think it was Sidney Smith who said "No man without a sense of humor ever ought to study for orders." This sense is indeed a valuable one; but it is not a simple one; it is most complex. To have it is to know not only what to do, but what not to do; not only what to laugh at, but what not to swear at, what not to be angry over, what not to weep about, and when to bide one's time withal. The sense itself, therefore, is not one; it is several. It is at least four things: it is the sense of discrimination, the sense of finesse, the sense of caution and the sense of toleration.

First, among all the things that find their way into the privacy of his study to perplex the pastor and to puzzle him, whether brought by parishioners in person or by the postman, he must know by instinct which ones are large and which are small; which have great importance and which have none; which ones he needs to lie awake at night and pray over and which, figuratively, as well as actually, to throw in the waste basket. If his instinct does not prompt him he will never learn; and if he does not learn he will die young.

This is discrimination, to start with; but, beyond that, in dealing with problems that are of account, he must have finesse. He must not drive a tack with a sledgehammer nor use a crowbar to remove a hairpin. While, yet again, he must choose, without having to choose, the right time for many a meeting. He must sometimes procrastinate.

Strange counsel it seemed at the time, but sage it has proven long since, I received from an old homiletic professor: "Never do today what you can put off till tomorrow." In other words, avoid psychological moments in strife. Many a problem that presses for answer, many a quarrel that clamors for settlement, many a task that were difficult today will, if just quietly let alone, solve or resolve, settle or perform itself.

Lastly, in the realm of theological discussion, one must know when not to be terrified. He must know that there are certain verities eternal as the hills; that there are certain longings in the human soul vast as the ocean's depths, and certain aspirations of the heart as high as heaven's arch, and that the quibbles of poor, little men are but as motes in the sunlight of revelation. If only these quibbles were confined to those in low station one's peace would be undis-

turbed; but they are not. Sometimes they find their place in Presbyteries, Conferences and See Houses. That's where his sense of humor must come to his aid.

To cite these all would be to write a volume. Here is only one: A few weeks since a candidate for orders in the Episcopal Church, in what is supposed to be an enlightened age, and in what purports to be a civilized community, was "turned down" by his Bishop in his examination on a question on the Virgin Birth. He did not deny the fact. He said he believed it. But that was not enough. The Bishop pressed this further question: Do you believe the fact can be *historically proved?* Now what can meet the situation there but risibility? And, come to think of it, is not this sense, the sense of humor thus applied, almost a sense divine? It is an attribute of God himself. What comfort the Scripture containeth! If that young man thinks much about that Bishop at all, let him think in these terms: "The Lord shall laugh at him, for he seeth that his day is coming."

Women in the Finnish Parliament

BY THE BARONESS GRIPENBERG

[The first national legislature to admit women to its membership is the Finnish Parliament. This has already been the subject of comment and description in THE INDEPENDENT, but this article, by one of the most prominent leaders for the enfranchisement of women in Finland, the result of an interview with a staff correspondent of THE INDEPENDENT at her home in Helsingfors, gives an inside view of the situation of marked interest. The Baroness Gripenberg has an excellent command of English. She visited America some years ago where her addresses are still remembered by those who heard them.—EDITOR.]

VARIOUS causes have combined to bring about the granting of universal suffrage in Finland. During the last few years we have had all kinds of political misfortunes which have tended to unite men and women for national ends. So when the question of universal suffrage came up men believed that it would be necessary to give the suffrage to women to protect us against too much of the anarchistic movement in Social Democracy. The enfranchisement of women was one feature of the universal suffrage law, and this law had, of course, to go to the Czar. I think we never would have got the consent of the Czar if the Japanese war had not occurred in connection with the revolutionary movement in Russia. The Russian statesmen simply thought that they had no time to consider Finnish questions then, so they said, "We will give them now what they want." Very often, when there are difficult questions concerning Finland presented to the Czar, no answer comes to us, or sometimes we have to wait years for the answer; but this time the Czar's approval came quickly. Parliament passed the law last year on May 21st; the Czar sanctioned the law July 20th, only two months after its passage by Parliament.

According to the new law, the elections will regularly be held the first week in July, but a special provision as to the first election required it to be held the 15th and 16th of March. Parliament was opened May 24th and adjourned June 2d for the summer recess, and will convene again September 2d. Members are elected for three years. Hereafter the Parliament will assemble every year in the beginning of February and sit three months during the year. There are 200 members and the salary is 1,400 Finnish marks—or about $270—a year. A poor workingman can accept this small salary and not lose much or anything of his income; but for many it means a good deal of sacrifice to accept this small sum for three months' work.

In Norway woman suffrage has also just been conceded; it is granted to women of twenty-four years of age who pay municipal taxes; but here in Finland men and women have it on precisely the same conditions. These are that the voter shall be twenty-four years of age. It is not necessary to own property, but there are the usual discriminations

against persons who have suffered criminal convictions and who are not of normal mind.

Of our 200 members, 80 belong to the Social Democratic party. The next strongest is the Finnish party, with 59 members; the Swedish party has 24; the so-called Young Finnish party also 24; the Agrarian party, 11, and the so-called Christian Liberal party, 2. All kinds of political divisions exist now because of the somewhat chaotic conditions of recent years; but the Finnish and Swedish parties have existed for some thirty years.

The Swedish party thinks that the only way to prevent us from being Russified is to have the Swedish language preserved; it is also the more aristocratic party. The Finnish party believes that the only way to construct a bulwark against the Russian interest is to awaken and educate the people, and develop national feeling; this is the more democratic party. There has been a great movement to have the Finnish language prevail in the law courts and the civil service. At present we have two official languages, Finnish and Swedish, and Russian is used in the army.

There are 19 women in the Parliament, which I should have said is composed of but one chamber. Of these women, 9 were elected from the Social Democratic party; 6 from the Finnish; 2 from the Young Finnish, a kind of branch of the Swedish party; 1 from the Swedish party, and 1 from the Agrarian party. This large number of Social Democrats in Parliament does not mean so much that the Finnish people as a whole are Social Democrats as it means that our people are not so developed politically as to understand what suffrage means, and to appreciate the ethical responsibilities of suffrage and of the lawmaker. For instance, among these 80 Social Democrats there are 30 who have had very little schooling. They may be able to read, but there is no guarantee that they can write. The fact that 30 such members can be elected shows, of course, that the electors have not quite understood what they are doing.

It was unfortunate that women got their rights just at this time when the Social Democratic party has so much anarchism in it, and it was a disappointment that so many women were influenced by the appeals of this party. The leaders of that party did not understand the great responsibility they took when they sent out servant girls in the campaign and all kinds of ignorant people to help make the canvass, and many things were said that were not true. For instance, until now it has been a dangerous matter for us, owing to our relation to the Russian Church to enter upon the question of reform in the Lutheran Church, which is the national church. We are not ripe for the question of disestablishment, and our people would never have elected so many to the Social Democratic ranks if they had thought that it would be a part of the policy of that party to do away with the national church, and also with religious instruction in the schools. I do not mean to say that the people could not be Christian without a State Church and without religion taught in the schools; I only mean to say that our people as a whole have not reached that stage of development when they would knowingly consent to elect to parliament people who are enemies to the Lutheran Church. But the Social Democrats, during the campaign, never displayed this part of their program, but promised everything to get votes. I have some sympathy with Social Democratic principles as that term is understood in America, and my political program will show that there are many things we people who are very democratic are trying to secure in common with the Social Democrats; but in many respects that party is more anarchistic than socialistic. When we have developed more and more, and the bitter results of all these hard years are only a remembrance, I am quite sure that our socialism will develop in another direction and it will have leaders who are able to carry it that way.

Of course, I believe that men and women should have the same rights, but I think it would have been better if women could have got the right of suffrage step by step as men have got it. Women were obliged to work very hard in Norway to get universal suffrage, but here we got it too suddenly, and before we were fully prepared for it. No one would have objected if the Social Democrats had elected some of their best

women, for they have some splendid workers, who will rank with any women; but the result of their political methods and of their crude campaign was to elect nine Social Democratic women, six or seven of whom have not the best character. Of course, they were elected by the women alone. It is because the Social Democrats have become a meeting point for all kinds of bad elements. The choice of such women by that party has rendered it impossible for us to work with them, and it is a bitter disappointment. We have never wanted to have such women. The Social Democrats have simply wanted to show how much they despise present society, and present laws. Our political conditions are certainly very bad; we are having all kinds of violations of law. It is unfortunate that our Social Democratic leaders wish to unite as much as possible with the Russian anarchists, which means further difficulty for us.

As to the political program of our parliament, I should explain that we cannot deal with questions that do not come to us in the form of an imperial proposal. The Finnish Senate prepares these proposals and submits them to the Czar, and if they are formally approved by him they then come before parliament. We have eight parliamentary committees: on law, constitutional questions, finance, economic and social questions, agrarian questions, and a committee for common petitions embracing all those questions which cannot be referred to other committees. Then we have a committee to edit parliamentary proceedings.

All petitions must be read within two weeks after parliament has opened. The petitions introduced by the women of the Finnish party are eight in all. The first concerns married women's property. Married women here cannot possess anything but their wages. The second petition concerns a mother's right to her children. According to our law the father has the sole right to the child; he can take it away from the mother and send it off if he wishes to. We think this is no longer in accordance with modern ideas. Then there is a petition for an increase in the number of midwives. The number now is very small. In our hard climate the children ought to have the best nursing from the very first. The lack of this is seen in the terrible infant mortality.

Another petition we have presented is for the establishment of practical schools in housekeeping, needlework and domestic science. Two petitions relate to social purity. One of them asks for reforms in the laws concerning children born out of wedlock. Our laws on this subject are very old and these unhappy children have scarcely any rights. Another law is for the further protection of children. The age of consent is high; a girl is protected up to the age of eighteen; but if the girl is older than twelve years, the man who has committed the offense against her can get off by a money payment, which is sometimes not more than $60. The parents of the girl are usually poor, and they are tempted to compromise for a sum of money. Then according to our law a girl can be married at fifteen; this is much too young; for girls in our climate at that age are but children. We ask to have the age of marriage fixed at eighteen. Still another petition seeks to make the way easier for women to enter the civil service, in the post offices and railway service. We have women now at work in private business undertakings but there are cumbersome and amusing formalities to be fulfilled before women can enter public positions.

I have long been working for suffrage for women and trying to educate women for this responsiblity; but we have worked under great disadvantages. For instance, during six or seven years of political oppression we were not allowed to hold meetings. We could not do much then to prepare women for their public responsibilities. The privilege did not come to us in the natural way of evolution; it came as a great surprise as the result of conditions I have mentioned. So as I have said, we have worked so little for it that we are not fully prepared for it.

The temperance movement in Finland is not espoused by a single party; but all political parties with the exception of the Swedes have a prohibition law on their program. Without doubt I think we shall have prohibition soon in Finland; but it cannot become a law without the consent of the Czar, and there is fear that he will not approve of it.

HELSINGFORS, FINLAND.

A World-Wide Penny Post

BY J. HENNIKER HEATON, M. P.

[The author of the following article is the world's authority on the subject he discusses. He carried thru the Imperial Penny Postage Scheme in 1898, introduced telegraph money orders in England and parcels post in France, and has received in a gold casket the freedom of the city of London. The question which he treats below is much to the fore just now. When Mark Twain was in London this past summer, he and Mr. Heaton met several times to study this subject of reduced postage rates between the United States and England. Last May, the rates on printed matter between Canada and England were lowered. Our Postmaster General, in an interview the other day, put in his list of early reforms a two-cent rate with Europe and on October 1st an international "reply coupon" is to be inaugurated.—EDITOR.]

ON 30th March, 1886, now more than twenty-one years ago, I had the honor of moving, in the British House of Commons:

"That in the opinion of this House the time has arrived for the Government of this country to open negotiations with other governments, with a view to the establishment of a universal international penny postage system."

As the event proved, the time was not yet ripe for such a sweeping reform, tho my motion enjoyed the support of 142 Members of Parliament.

It has naturally been a source of very legitimate pride to me that what I then sought was partially achieved when, in the year 1898 imperial penny postage became an accomplished fact.

It, therefore, only now remains to get this principle applied to the entire globe, and to crown the work of postal reform by the establishment of a world-wide penny post.

The hour has struck for this grand yet simple assertion of the brotherhood of nations; of a change which threatens no interest and benefits all mankind. Since 1898, when imperial penny postage was introduced, our outward mails have nearly doubled. Every Friday some 250,000 British letters pass thru France and Italy for India, Hong Kong and Australasia—12,000 miles. The postage on each of these letters is 1d. By the same boat a few British letters are carried for residents in Calais—21 miles; and on these letters the postage is 2½d.! By what perverse ingenuity can such a distinction be justified? Or why should a letter to New York cost 2½d. and another in the same bag be carried thru that city and 1,000 miles into Canada for 1d.?

That is the humorous side of the question. But, in my judgment, the carrying out of this scheme would be pre-eminently conducive to peace and good will, apart from the less elevated but important consideration that every letter may be regarded as so much seed, which will in due season yield a harvest of trade. The investment would be a sound one, as directly promoting peace, and would cost less than a single great battleship.

At this critical moment in the world's history, when nations long divided are fraternizing, and a vague yearning for peace and good will is working and fermenting in the mind of humanity, any reasoned proposal for developing and facilitating international communication claims serious attention. Ignorance is the breeding ground, not only of discord and war, but of every plague that afflicts us. How impotent for evil are bellicose Ministers when the masses of the governed peoples thoroly understand, and, as a necessary consequence, esteem one another.

This reform seems to be all the more imperatively called for in view of the fact that we have already for some time enjoyed the blessings of universal halfpenny postage for printed matter. Anything in print—newspaper, pamphlet, prospectus, catalog or circular—not exceeding 2 ounces in weight, can be sent any distance for one halfpenny; from Fleet street, London, to Broadway, New York, or from one side of Fleet street to the other; from Canada to Algeria; from China to Peru. This plan of charging a uniform rate, for 100 yards or 10,000 miles, is perfectly reasonable, for the actual cost of conveying a packet weighing ½ ounce to the other side of the

world is but a small fraction of a penny. *We can send a ton of goods to New Zealand for £2.* The cost of checking weight is saved; that of collection and delivery remains to be met. But this cost of collection and delivery is precisely the same for a letter as for a printed paper, while the letter is only a fourth of the printed paper's weight. They are conveyed in the same train or ship, sorted by the same staff, delivered by the same hands, and from first to last give exactly the same trouble. On what ground, then, is the charge for a letter five times that for a printed paper? We have universal halfpenny postage for 2 ounces of printed matter; why should we be denied universal penny postage for half an ounce of written matter?

It was general considerations like the above which induced me, in August, 1905, to issue to representative men of all kinds in the United Kingdom an appeal to join a league for the establishment of universal penny postage, and I was the more encouraged to do this as knowing that the peoples of all the principal foreign nations were in hearty sympathy with the project, and that at least two countries were willing to adopt the proposal forthwith. This appeal of mine met with amost gratifying response from the bearers of a long aray of illustrious names.

But it is a question, in fact, of figures. Is it feasible? Is it practicable? Will it pay? Nearly all conceivable objections to Universal Penny Postage are met by the success of Imperial Penny Postage. Thus the distances to be covered is not so great under the former as under the latter system. And the question whether the reduction of rate would lead to a remunerative increase of correspondence is already answered by the fact that our letters to and from the colonies have more than doubled in number since 1898.

On this subject let us take the evidence of three experts. Among those who responded favorably to my appeal for the formation of a World-wide Penny Post League was General Lord Grenfell, who wrote:

"My first act on assuming the position of Governor of Malta was to reduce the postage to 1d., under great opposition. In six months the post office had the advantage of an increased revenue."

Similarly Sir Thomas R. Dewar, M. P., wrote:

"Speaking as regards my own company alone, the percentage of letters is now treble what it was before the Imperial Penny Postage was introduced, and we are now in touch with our customers in tea plantations or the bush by means of circulars and letters in a manner which was impossible before we got into direct communication with them. Altho we have no reciprocal tariffs with other countries, yet the penny postage is a good medium for encouragement of present trade, and there is no doubt whatever that it has contributed very largely toward strengthening the bonds of union between the mother country and her many colonies in all parts of the globe."

From Mr. Percy M. Thornton, M. P., came this, while others wrote in the same strain:

"If the system you desire to initiate should become general, there will probably be a great increase of epistolary communication and a correlative financial increase will delight our own as well as other Chancellors of the Exchequer."

In this connection it is pertinent to remember that the principal post offices in Europe, Africa and Asia are worked at a profit—our own being by far the highest, amounting to nearly five millions sterling. But I maintain that an excessive postal surplus means bad finance. It is right to tax luxuries, especially pernicious luxuries. But it is culpable to levy taxation of a repressive character on the communications of the people. Such taxation is an offense against economics when applied to the domestic correspondence of a State; but when it restricts intercourse with those who have emigrated it is worse than a crime; it is a blunder. What statesman would venture to propose a tax on the initial operations of commerce—say by requiring commercial travelers to take out costly licenses or by imposing heavy stamp duties on seed or samples? "We do not put a calf in the plow," wrote Johnson; "we wait until he is an ox." We follow this mistaken policy, however, so long as we exact unnecessarily high postage on business letters—on the national output in the embryo stage.

Moreover, it is difficult to see how any loss could arise from the creation of extra machinery to deal with the increased traffic which is certain to result from a world-wide penny post. The cost

of conveying a letter weighing one ounce to any part of the world is one farthing for handling and despatching and another farthing for delivery—total, one halfpenny. At the present time the establishment of universal penny postage would not involve the employment of a single extra ship, coach, train or postman — the existing machinery being amply sufficient for its purposes. This is easily provable by the fact that 2,400,000,000 letters are dealt with in this country every year, and that the total number sent from the United Kingdom to all the foreign countries of the world and all the King's dominions beyond the seas only amount to about 60,000,000 per annum.

It is doubtful whether those who would maintain the present unjust anomalies of our postal system have realized how small is the booty at stake, as compared with the commercial interests imperiled. Our imports and exports amount annually to £1,000,000,000—one thousand millions sterling; while the loss of postal revenue under universal penny postage would be, in the first year, about £125,000, and in the third or fourth year, thanks to the development of correspondence under the lower rate, there would probably be a profit.

The initial sacrifice of £125,000 is arrived at thus: We send abroad each year 60,000,000 letters, but it is certain that we should send twice as many, even in the first twelvemonth, under the penny rate:

Loss of 1½d. on each of 60,000,000 letters	£375,000
Set off 1d. on each of 60,000,000 additional letters	£250,000
Net loss	£125,000

To European countries we send 40,000,000 letters (or two-thirds of our total foreign mail) and the first year's loss, after allowing for a doubled output would be £83,000. In the same way, after allowing for increase, it would cost us about £25,000 to establish penny postage to the United States.

Among the so-called financial obstacles in the way of a world-wide penny post is what may be called the railway difficulty. The last generation of postal experts arranged, at a Postal Union Congress, that mail bags containing letters should be conveyed by rail at five times the rate charged for mail bags containing printed papers. It was absurd to pay more for the conveyance of mail bags (which are never out of the custody of a postal employee *en route*) than for ordinary valuable goods; and in the case of letter bags the absurdity was quintupled. But the foreign railway managers, holding the routes to be traversed, insisted on blackmail, just as the ancient Highlanders did, and as the Khaibar Pass Afridis do to this day. Yet it would puzzle one of these rapacious gentlemen to tell a letter bag from a printed papers bag.

Last year the weight of the letters sent abroad was 1,200 tons, while the weight of the printed papers (newspapers, circulars, etc.) was 12,000 tons. So the astute railway magnates do very well.

Some of the leading nations have already adopted international penny postage as between themselves and neighboring peoples. More than a quarter of a century ago the United States and Canada formed a "restricted union," the inland postage in each country franking also letters despatched to the other. For a generation Americans have paid 1d. on a letter to the Dominion and 2½d. on a letter to the United Kingdom. There are several of these "restricted unions" in existence. The German and Austrian empires form one "Post Verein." On what principle does the German Government (one would respectfully inquire) charge one and a half times more postage on a letter to the territory of its Italian ally than on one to the territory of its Austrian ally? Or why should we charge 2½d. on a letter to our ally, Japan, 11,000 miles, and only 1d. on another letter to New Zealand, 16,000 miles? Most Britons object to pay 150 per cent. more for a letter from Dover to Calais than from Dover to Shanghai.

First of all, take the case of France. There are 42,000,000 people in Great Britain and Ireland and 40,000,000 in France. A narrow channel 21 miles across separates these two great and friendly nations. Penny, or 10 centimes, postage exists thruout the British and French empires, embracing a population of 490,000,000 and an area of 14,600,000 square miles.

At present the postage is 1d. to Fiji, 11,000 miles from London; and the postage to the Society Isles, 10,500 miles miles from Paris, is 10 centimes or 1d. Yet it is 2½d., or 25 centimes, between Dover and Calais, 21 miles. We are like people conducting two parallel railways under rival ownership. The commercial and social benefit predicted from a costly Channel tunnel could be secured at once by a stroke of the pen establishing an Anglo-French Postal Union without alarming any military strategist.

In 1905 we sent to France 12,600,000 letters, and received from France 12,000,000 letters. We sent to France 1,500,000 pounds of printed matter and received from her 1,092,000 of printed matter. There were also sent thru France to and from the East and Australasia, 24,000,000 British letters and 8,200,000 pounds of printed papers. The postage on the letters to and from France near at hand was 1½ times heavier than on those sent thru France to Australasia, 12,000 miles. But the rate of postage on the printed papers was the same from England to France as from England to Australia. Yet mail bags containing letters and mail bags containing printed papers are not distinguishable except by experts, and receive exactly the same care and treatment.

Under Clause 21 of the Postal Union any two States may establish lower postage between themselves by forming a restricted union. Several pairs of States (e. g., Australia and Germany, Canada and the United States, Mexico and the United States) have formed such unions with penny postage. Why should not England and France form one?

Still more cogent are the reasons for the formation of a "Restricted Postal Union" between Great Britain and her eldest and mightiest daughter in the West as a stage toward the final goal of a world-wide penny post. If we are to choose a first partner, the name of the mighty transatlantic republic starts to our lips. One fact dominates our thoughts. Of the fifteen millions who emigrated from our shores in the last century no fewer than ten millions went to the United States. They and their descendants never forget that they are our own flesh and blood. In a recent year they sent to poor relatives in the British Isles no less than £1,250,000, mostly in small remittances; a pious tribute which makes every one of us, rich or poor, personally grateful. It is doubtful if his Majesty's Government would propose a more popular measure than a penny postal union with the United States, embracing all Anglo-Saxondom in its beneficent activity. Who among us would object? Not the merchants, manufacturers and operatives who dispose of £35,000,000 worth of goods annually in the American market. Certainly not the humble folk who keep up correspondence with sons and brothers living under the Stars and Stripes. The first year's cost would be a comparative trifle, but the rapid ensuing multiplication of correspondence would in a short time raise the postage receipts to the present total. For there is here no costly land transit to pay for.

The transatlantic freightage on a ton of valuable goods should not exceed £2 ($10), but the postage on a ton of letters amounts to £746 ($3,730). Correspondence is more ruthlessly amerced than are jewels, foreign paintings or opium. The British Government pays 1s. 8d. per pound for the carriage of letters to New York in American or German steamships, but she pays 3s. per pound for conveyance of letters in English steamships, thereby paying £50,000 a year more for this preferential treatment. While not objecting to this favoritism, the letter writers could have penny postage to the United States for half this sum, which would cover the first year's loss, but we maintain there would be no loss at the end of three years.

An American can send a letter 5,000 miles by land (say from Mexico to Alaska) for 2 cents (1d.); but must pay 5 cents (2½d.) for a letter of half the weight sent 3,100 miles across the ocean to England. An Englishman pays 2½d. on a letter crossing the Atlantic, 3,100 miles, and 1d. only on one crossing the Indian and South Pacific oceans, 16,000 miles, to New Zealand.

The long pilgrimage of Sir J. G. Ward and the Hon. Austen Chapman to Rome in 1906 was amply rewarded by the memorable vote of the United States,

throwing all the weight of eighty millions of English-speaking people, the richest, the most progressive and mighty of nations, into the scale in favor of penny postage. The British members stood coldly by. They did not recognize that this was a great historic occasion, a worthy parallel of that solemn scene on the 4th of July, 1776, when the Declaration of Independence was adopted. For if the Americans are willing to establish penny postage to all parts of the world. it follows that they are ready to establish it to the British Empire, and form with us a "Restricted Postal Union."

I do not believe that any British Minister can long resist the impulse to make a bond of union which will excite the admiration and envy of the rest of the world. Both nations are persuaded that Anglo-American penny postage would be a good thing, and that the question is wholly a financial one.

His Excellency, the Hon. Whitelaw Reid, at the Independence Day banquet in London on July 4, 1906, said:

"The American people hoped for closer and cheaper communications with all other nations as the best means of promoting better acquaintance and perpetuating friendship. They were gratified to find the British Apostle of Penny Postage at this moment focussing his efforts on what ought to be the easy task of persuading the authorities on both sides of the Atlantic that it was as cheap to carry a letter from London to New York as from London to Calcutta or from New York to Manila —and quite as useful."

The suggestion has not so far been rapturously welcomed by foreign governments; but their acceptance of it is merely a question of time, and the approval of it by a single great power will decide the rest. Many are determined to resist any reduction whatever. But the United States, Australia, New Zealand and Egypt have definitely called for the penny rate; public opinion in Great Britain is overwhelmingly in its favor; and it is highly probable that France, Germany, Italy, Canada, South Africa, Japan, Belgium, Holland, Denmark and Sweden would need little more than an invitation from our Government to accept it.

The French Government has officially sounded ours on the subject. And the German Emperor has declared that, if we establish penny postage to the United States, Germany will do so—he might have said *must* do so.

It remains for Great Britain and the United States of America to reap the greater glory of being the pioneers of a world-wide penny post. Once let this be established, and I doubt not that our Postmasters-General will be deluged with letters similar to this which I received from a simple Scotch lassie in Australia, soon after the penny rate became universal thruout the British Empire:

"Dear Sir—It may seem a liberty to write to you, but I feel I must, and congratulate you on the penny postage to Australia. We all have much to thank you for. My niece brought me five letters by the mail a fortnight ago, saying, 'Why, Aunty, here are five letters, all for you, and from home.' Well, I said there was something wrong, but, no, it was all right, all carried penny stamps, and at last we have the penny postage. Such a treat—five letters —one in three months was about the average. You know a Scotchman loves his pennies.

"I remain, yours respectfully,

"Maggie Cowper."

This Scotch lassie is only a type of millions who would feel as grateful to the British and the American governments for the inauguration of a world-wide penny post as the slaves whom their generous policy once emancipated.

Carlton Club, London, England.

Croesus and Rockefeller

BY JOHN A. SCOTT

Professor of Greek in Northwestern University

"ROCKEFELLER gives more in a single day to education than the entire wealth of Crœsus" appeared in many papers the day following the announcement of Rockefeller's recent gift to education. The popular opinion is that no previous age has produced men whose wealth compared with present fortunes.

No man in ancient times so inspired the world with wonder at his riches as did Crœsus. Altho others may have possessed greater wealth, he was the first to reveal to the eye of Greece the opulence of an Asiatic despot. Crœsus was King of Lydia in the middle of the sixth century before Christ, and, while most of our men of affluence began in comparative poverty, he inherited riches gathered by a long line of wealthy ancestors, each of whom combined in his own person financier, monopolist and king.

Lydia was a land of great agricultural resources and fabulously productive in gold and silver, but, more than all, it was the first country to coin money and to use it in international commerce, so that Lydia was the financial center of her day. By the time of Crœsus, Lydia had extended her rule over the Greek cities of Asia and the shores and harbors of the Ægean Sea. Crœsus was brother-in-law of the King of Media, had formed military and trade alliance with Nebuchadnezzar, King of Babylon, and also with Greece and Egypt. It is doubtful if any nation of our day is so at the center of things as was Lydia in the time of Crœsus.

Here, then, we have a king and a financier, who inherited a fortune steadily increasing thru many generations, who had control of wide realms of agriculture, rich mines and the commerce of wealthy and populous nations. If the monopoly of a single industry can now produce hundreds of millions in a single generation, what could measure the wealth coming from a monopoly of many industries for nearly two centuries? Crœsus had other advantages. He was forced to employ no expensive constitutional attorneys to find flaws in restrictive legislation, he supported no lobby, contributed to no campaign fund, he had no rivals to divide the business or to keep down the margin of profits. He might take all he could get, and he took nearly all there was.

This illustration, altho concerning a near contemporary and not concerning Crœsus himself, will show how crude the modern methods of getting profits are. The plain of the Chorasmi is surrounded by mountains, thru which there are five natural channels; the source of the Aces River is within this valley, the waters of which were diverted thru the five channels, and thus the Aces furnished the water which produced the wealth for six prosperous peoples, five without and one within the valley formed by the mountains. An ancient captain of industry conceived the idea of putting a gate at each channel to shut off the water, thus at the same time the crops within were destroyed by flood, those without by drought. As this financier had government authority there was nothing for the poor people to do but to make terms with him; thus by the payment of annual sums the water was allowed to go in its old channels, those within paying not to be flooded and those without for water for irrigation. He received a steady income from six peoples for leaving things as they were.

Before we can arrive at a just estimate of the value of ancient and modern fortunes we must fix on a standard of comparison. Many ancient coins have been preserved, so that their weight and fineness is known. By counting a piece of gold of the same standard and weight as a twenty-dollar gold piece as worth twenty dollars, and by keeping the ancient ratio of 13—1 between gold and silver, we can arrive at the exact modern equivalent. But money had a

much greater purchasing power then than now, as these prices will show. From accurate records from the time of Crœsus we learn that a fat ox sold for a dollar, a sheep for twenty cents, a bushel of wheat for twelve cents, while a day's wage was from twelve to twenty cents. Cattle were thus cheap out of all proportion, but a fair average of the whole list shows that the sum of gold found in one dollar put the owner in possession of more purchasing power both of produce and labor than ten dollars could now.

In ancient, as in modern, times it is possible to arrive at the value of great fortunes by very certain and circuitous methods. No estimate of the wealth of Crœsus from any one of his own age has been preserved, but there are certain data from which we may draw fair inferences.

Crœsus was overthrown by Cyrus, and the devastation which accompanies an Oriental army followed, plot and counter-plot took place, each succeeded by another invasion and more destruction. Cambyses succeeded Cyrus on the throne of Persia, Cambyses was followed by Darius, and Darius by Xerxes. Thus by the times of Xerxes, Lydia had for many years been a subject and tribute-bearing nation, plundered again and again, stripped of her commerce, her tribute and her power, so that her wealth could have been only a trifling fraction of what it was in the time of Crœsus. When Xerxes led his great army to Greece, which later met defeat at Salamis and Platea, he past thru Lydia; while on the march he was given entertainment by a Lydian named Pythius, supposed to have been a distant relative of Crœsus, but so little known that his name had never reached the ears of Xerxes. During the entertainment Pythius informed the king that when he heard of his approach he had made careful count of all his ready money, that he had on hand in gold and silver $24,000,000, and that he wished to present it to the king as a token of regard. The king hesitated about taking his money lest Pythius might be reduced to want, but Pythius replied: "My lands, estates, slaves and income-bearing property are still untouched." This sum of money was simply cash on hand which he had not yet invested. At the rate of ten to one in modern purchasing power, Pythius had ready money equalling $240,000,000. Here is in Lydia, after several reigns of foreign oppressors, a man almost unknown, who had on hand in ready money more than twice the estimated value of property of all kinds in the estate left by Marshall Field, the largest estate ever probated in America. Yet Pythius's wealth made not the slightest impression on those who were familiar with the wealth of Crœsus and his ancestors.

Aside from fiction, poetry and fable, we have one certain means of appreciating the vastness of the wealth of Crœsus, and that is his gift to foreign temples. He was the patron of many religious shrines in his own and foreign countries. However, we have the official record of but one particular gift, all of which was given in connection with one occasion, and this gift was not unique, as we have the record that an exact duplicate was sent, at the same time, to one other non-Lydian shrine. As this gift consisted largely of gold and silver, the offerings must be weighed in and an exact record of them kept in the temple, so that no one could scrape off or hollow out the gold. These gifts were genuine and solid, since the acceptance of shams would have ruined the keeper who was responsible for making good the recorded gifts.

This gift was made to the temple and people at Delphi, and the weights and measurements are taken from the official records, so they are as reliable as the clearing accounts of a bank. They are given by Herodotus, who copied them from the records, and is a competent and reliable authority in all matters in which facts were attainable.

This one gift to Delphia was a pyramid of one hundred and seventeen bricks surmounted by a lion, the bricks each eighteen inches long, nine inches wide and three inches thick. The four top bricks were of pure gold and weighed over two hundred pounds each. The other one hundred and thirteen bricks had a certain alloy of silver, the ratio being three parts of silver to seven of gold. The lion on the pyramid was

of pure gold and weighed about eight hundred pounds. The value in gold and silver alone in this offering reached $3,500,000. If we add 15 per cent., or $500,000 for the work of the artists who made them, for transportation, and the cost of a proper foundation, we shall put this one gift at $4,000,000. Accompanying this were two enormous bowls, each containing fifty-four hundred gallons, one of solid gold, the other of silver. The weight of the gold bowl was about eight hundred pounds. The thing about these bowls which was most remarkable was the artistic workmanship, as they were the product of the most renowned and skilful artists. If we add to the value of the metals the probable cost of making these bowls we shall have another million dollars. He also sent a golden image of a woman, said to be his bread baker. This image was nearly five feet high, and when one considers the great weight of gold we can hardly appraise it at less than one million dollars. Besides, he sent many vases of gold and silver, the necklace and girdles of his wife, a large lustral bowl of pure gold. A later historian adds to this list three hundred and sixty adorned bowls, each of solid gold and weighing a pound, and beside all this he sent a present of twelve dollars in gold to each man in the city of Delphi. This offering was accompanied by a sacrifice of three thousand head of each of the different animals used in worship.

We are conservative if we estimate this single offering and sacrifice at $10,000,000, which means $100,000,000 in modern currency, and as he gave an exact duplicate to the temple at Branchidæ, the total sum spent purely for display is not less than $200,000,000. Thus he spent as a trifle, on a single occasion, on two foreign divinities, in whom he was only remotely interested, a sum rivaling the total combined gifts of all sorts made by both Carnegie and Rockefeller.

We have a long list of other temples of which he was a patron, but this single gift is the only one officially recorded whose records we know. The gifts to his own temples are unknown, but since no one in ancient or modern times is likely to exhaust himself on foreign missions, this gift must be regarded as a small part of his fortune. This single gift shows that any estimate of the riches of Crœsus that does not count his wealth by the billions is wide of the mark.

The royal house to which Crœsus belonged had held the power of Lydia for many generations; his four predecessors had reigned more than one hundred and fifty years. The first of the dynasty, Gyges, had usurped the throne. Among all the different traditions about him and his usurpation there is no doubt of his enormous wealth. Indeed, Gyges was quite as famous in his own generation as was Crœsus in his. The obscure position of Lydia at that time makes one think that Gyges won his throne by his wealth, rather than his wealth by his throne. Men were not made kings then by a "Simon says thumbs up" method more than now. In Gyges the business interest of Lydia usurped the throne. Business man that he was, he became an imperialist, and extended his trade by means of his troops. This policy was the one followed by each of his successors, who, one after the other, pushed out the military and commercial boundaries of Lydia. They were all militant capitalists.

When Crœsus's concentration of wealth had run its course, the people were exhausted, they had lost heart and hope. Whatever mysterious means may have called Cyrus to Lydia, and however misfortune may have joined in the issue, the people became an easy offering to the power of Persia. There were no latent resources, no recuperative ability. The fall was complete and Lydia never rallied to play a rôle in the world's history; there has been no Lydian government and no Lydian people since. In a few years her language was forgotten and even the name all but unknown. Just a few miles from the border of Lydia, at the same time, was a city whose wealth was so widely diffused that for several centuries and until its fall, it had but one citizen who ever owned as much as $200,000, and this he is said to have obtained, not from his fellow-citizens, but from spoils left by Xerxes, and there were only two or three families who had estates as great

as $100,000. Yet this city furnishes one-half of the ten or twelve really great men of the world. Every schoolboy knows of Solon, Socrates, Plato, Aristotle and Demosthenes, yet not even the expert can name a scholar, a poet, a scientist or a philosopher of Lydia. The few writers who have preserved for us the accounts of Lydia were themselves Greek, or at least used the language of Greece.

The disparity in remains of works of art is almost of great as in the literature. Every traveler is awed by the ruins and every art gallery is full of the reproduction of the artistic marvels of Greece, while Herodotus, who traveled thru Lydia within a century of the time of Crœsus, makes this striking comment: "Lydia, unlike most countries, has scarcely any wonders for the historian to describe," and the only thing he finds worthy of description is a huge funeral mound erected in memory of the father of Crœsus.

What better illustration could be found for the difference between diffused and concentrated wealth than the examples of Athens and Lydia?

EVANSTON, ILL.

The Home Treatment of Tuberculosis

BY GRACE JOY WHITE

ONE of the most serious problems which large communities have to face is the stamping out of tuberculosis in their tenement districts and among the poor.

What, it is believed, will prove a solution of this problem, was inaugurated in Boston something over a year ago. In this period it has extended beyond the boundaries of that city, bringing new hope to sufferers, and giving to those fighting the further extension of the disease fresh courage to continue what has heretofore seemed an almost hopeless warfare.

Altho not intended as a merely local movement, its first natural step was taken to meet the needs of the city in which the new plan was projected.

What these needs were may be easily seen when it is understood that, altho Massachusetts is better equipped than any other State to care for her consumptives, she can accommodate in her sanatoria and institutions but 4 per cent. of the sufferers from that disease at the present time. The problem of provision for the other 96 per cent. had to be faced and in its solution this movement had its birth.

It has been called in its largest sense the Home Sanatorium Treatment, and it has been known locally as "The Emmanuel Church Tuberculosis Class," because that church, in the person of its rector, the Rev. Elwood Worcester, has stood sponsor for the work from its infancy.

The founder was Dr. Joseph H. Pratt, to whom the system suggested itself when, as physician in the out-patient department of the Massachusetts General Hospital, he came constantly in contact with the poorest class of patients. They were men and women who barely lived upon the small stipend they earned, but who were victims of consumption, unable to pay the nominal sum asked by the State Sanatorium even had there been room to accommodate them all.

It is among people of this class that there exists the greatest danger from the spread of the disease. The tuberculosis-stricken poor man is a menace to his family and the entire community before he is aware of his condition. The disease will never be wiped out until it is systematically treated among these people, at once the most helpless and dangerous class of invalids.

The stricken wage-earner in a pitifully short time becomes a burden while the disease drags out its course, and thru it all his family depend, in part, at least, upon some charitable organization. In

all but the rarest cases both patient and doctor have bowed before the seeming necessity that every poor man, while his strength lasts, must work for his daily bread.

In this Dr. Pratt differed radically from the others. To effect a cure in tuberculosis the patient must give up everything to rest in the open air. That rest, this necessary factor in saving a man's life, would be refused any one in a community of resources Dr. Pratt did not believe. He went further, confident that communities were only waiting some practicable way of knowing the needs of their poor consumptives and how to meet them to hold out generous hands.

The economic problem he presented, leaving human sympathy out of the question, could have but one solution. What community could afford to support incapacitated working members and their families thru the possible years of duration of disease to prolonged dependency when there might be an alternative—that of giving the same support for a few months only while restoring to usefulness a wage-earner who has been but temporarily disabled.

This is the economic side of the problem, but there is another. It was assumed until quite recently that the New England climate was unfavorable for consumptives, and that a certain quality of air was necessary to effect a cure, but now it is realized that consumption has been successfully treated wherever the out-of-door life has been adopted and modern methods of treatment applied, whether in high or low altitudes, in warm or cold climates. Armed with an understanding of the conditions, Dr. Pratt originated the class system of treatment which in this short time has awakened such widespread interest.

Emmanuel Church, thru Dr. Worcester, offered financial support to the undertaking, and in July, 1905, the movement was inaugurated as the "Emmanuel Church Tuberculosis Class." It was a class because its members were to meet together to study the disease from which they were suffering, and were to learn not only how to better their own condition, but also, in knowing its danger, how to prevent the spread of consumption among their families and associates. The physician in charge was to become absolute director of the lives of the class members, who, each one in his own home, was to carry out instructions under penalty of losing his opportunity, while a visiting nurse further enforced the discipline. It has been well said of this method of treatment that it bears the same relation to sanatorium treatment that a correspondence school does to a college course.

For awhile the class numbered only three, but in a few months it had increased to a membership of nine. Only two had incipient tuberculosis, while the condition of some had been pronounced hopeless. They were all persons to whom every avenue of escape from the disease but this had been closed.

From the first the workers treated the individual case from its own peculiar standpoint, meeting the differing questions and striving to ameliorate conditions. They were greatly aided in most instances by the growing intelligence of the class members.

The patients were required to live out of doors, and for the purpose flat roofs in the city and back yards in the suburbs were utilized. The church provided for each one a tent and a reclining chair and whatever else was necessary to comfort and cure. The tent covered the patient's bed and sheltered him on stormy days, for there was no such thing in the class as a fair-weather member. Waking hours were still hours of rest, which each one was required to spend in his chair in a reclining position. There has never been any difficulty experienced in keeping the patients quiet, for they acquire the rest habit after a few weeks, and their gains encourage them to persevere.

When there is evidence that the disease is nearly arrested, the patients may exercise by prescription in gradually increasing amounts until they can approximate their former activity without bad effects.

Every class member has a record book. These books, which are the invention of Dr. C. L. Minor, of Asheville, N. C., have proved a most important help in the work, as it is by their means that the doctor in charge keeps

very closely in touch with the patients. There is a page for every day, and on it the patient is required to record his temperature, taken every four hours except at night, the number of hours spent out of doors, the food eaten, including the exact amount of milk and oil taken, the pulse rate, details concerning coughing and expectoration and any other matter which may be required by the physician. His instructions are positive. The members of the class are to eat, sleep and live as he directs. The one important factor is adherence to the rules of treatment. The class is taught the truth of Brehmer's motto that "The most profitable work for a sick man is to get well."

The work of seeing that the patients carry out the doctor's requirements is that of the nurse, who visits them in their homes, and becomes far more to them than her name would imply. She encourages and cheers all the family, she counsels them, knowing the resources at their command, and the command of the physician, she arranges the details to make the doctor's instructions a living possibility, and thru it all she maintains a firm discipline.

The patients have every possible encouragement to adhere to rules, and generally live under greatly bettered conditions while taking the treatment. There is no question of exile from home and friends, and they are upheld by the courage and interest which is lent them, no less important than more material loans.

The class meets once a week. In the course of the months, with a changing membership, it has grown more than once to its limit of twenty, which is considered a sufficient working number. The members wait their turn for individual attention not idly, but in cheerful conversation. There are no long faces among them; there is rather a holiday air abroad. As one said laughingly to the doctor: "The class meeting is my weekly picnic."

It is not all picnic, however. There is a regular program to be followed. Each one is weighed in turn, and has his temperature taken by the nurse, who, by this means, verifies the observations of the patient; then the doctor examines record books and the out-of-door-life charts which are kept, an additional showing of the hours spent in the open. It is the time given each patient for personal consultation with him or his assistant physicians, after which matters of general interest to the class are discussed.

To create friendly emulation the names of those who have won any distinction during the week are posted for all to read. The man or woman who has gained most in weight is noted here, the gains being often remarkable, as in the case of a man who lately reported an added five pounds in one week. At the same meeting two others had gained four pounds, and one had gained three.

This distinction is not a discouragement to those whose gain is less, for they often find a solace in another's honor. There is a stimulus about this meeting and comparing notes which it would be hard to produce in any other way. Each patient rejoices in the gain of another, only working harder himself in his vocation of seeking health.

When the disease is arrested the patients are graduated from the class, leaving room for new applicants to fill their places, but they are asked to return at intervals that the doctors may see they are not subject to a recurrence. Hygienic habits have been established in their homes, and so far they have all preferred to go on living the life which has benefited them.

The record of the class as a whole shows that it will bear comparison with the results of any sanatoria. Up to the present time all early cases have recovered, many of the patients having been able to return to work in six months. In a year and a half, working with small numbers, it has returned ten members to work, and in these instances there has been no recurrence of the disease. There have been but two deaths.

A new problem awaited the directors of the class when a man who had recovered could not return to the work he had done before his illness. It became a task of no small importance to place these graduates, but with the aid of sociological workers it has so far been accomplished.

A class member whose term had ex-

tended from July to March felt he could not go back to his trade of tailoring under the old condition in a crowded, ill ventilated back room. His case was taken in hand, and by the help of some generous church people he was enabled to start a little shop of his own, where he works today for a growing circle of customers with his door and windows wide open.

The first member of the class, perhaps the most interesting of all, was a dependent upon the bounty of poor relatives when she entered. An orphan since early childhood, she had gone wherever a door was open to her, being settled in no one spot long enough to fit herself for any kind of work.

Enthusiastic and quick to learn, she often assisted the nurse, and benefited both in health and knowledge until, to her delight, she was called upon to take up in a new field the work to the value of which she was a living testimony. When she graduated she became nurse and friendly visitor of another class for consumptives in Boston, one of four to be founded upon the lines of the Emmanuel Church class, this one being under the auspices of the Arlington Street Church. It is one of the pleasant experiences of the class directors that this girl, with her first savings after beginning to work, repaid the money the church had loaned her during her illness.

The work in Boston, with its remarkable results, has interested physicians and sociological workers everywhere, and the Home Sanatorium Treatment has already been adopted in many places, reaching even west of the Mississippi, while inquiries concerning it are being received from all over the country.

In New York City a class has been formed by Dr. Walter L. Niles, under the auspices of Christ Church. Ex-Governor William L. Douglas, of Massachusetts, has recently given a thousand dollars for the establishment of a class for the benefit of his employees in the big shoe city of Brockton. In Providence, R. I., where the work was undertaken by Dr. Frank T. Fulton, it awakened the interest of certain mill owners, and signs were posted in their mills announcing that arrangements would be made to care for consumptive operatives who would join Dr. Fulton's class until they were able to return to their work. In other cases individuals not representing any organization have contributed to the good of their communities by carrying on this practical charity.

The Home Sanatorium Treatment has many points to recommend it. It is economically valuable, having been proved a saving to a community. It is practicable in all parts of the country, and its simplicity has won the commendation of those who are engaged in combating tuberculosis. It unites the efforts of the physician and social worker instead of dividing them in the attainment of a single aim. The large value of the movement lies in the fact that it is a practical solution of the problem of treating consumption among the poor.

Boston, Mass.

To One Mourning

BY RICHARD BURTON

Dear one, give way to grief; and yet,
As sure as doth the violet
Smell sweeter, wet with rain, shall you
Arise enriched to dare and do,
Thru this black hour whose weight like lead
Bows you in anguish by the dead;
The very silence and the pall
May seem sheer kindness, after all,
So rest in that Divine perhaps;
The pain that stabs, the doubt that saps
The spirit, why, they may be naught
But shadows of the one white thought
That is too splendid and too bright
For the endurance of our sight.
The otherwise o'er-radiant spheres
Being tempered for us by our tears.

University of Minnesota, Minneapolis

Literature

Pragmatism

PROFESSOR JAMES says in the sub-title of the volume of his popular lectures on *Pragmatism** that this is "a new name for some old ways of thinking." This conspicuous disclaimer of essential novelty may be for the purpose of disarming the opponents of the philosophy, who, as soon as they find out that pragmatism cannot be dismissed as mere nonsense, proceed to attack on the ground that it is nothing new. But it has another purpose. It introduces us directly to one of the important features of the pragmatic philosophy—that is, how our new beliefs are formed, or, as the pragmatist would put it, how truth grows. Professor James's description of the process of changing one's mind is therefore worth quoting at length:

"The individual has a stock of old opinions already, but he meets a new experience that puts them to a strain. Somebody contradicts them; or in a reflective moment he discovers that they contradict each other; or he hears of facts with which they are incompatible; or desires arise in him which they cease to satisfy. The result is an inward trouble to which his mind till then had been a stranger, and from which he seeks to escape by modifying his previous mass of opinions. He saves as much of it as he can, for in this matter of belief we are all extreme conservatives. So he tries to change first this opinion and then that (for they resist change very variously), until at last some new idea comes up which he can graft upon the ancient stock with a minimum of disturbance of the latter, some idea that mediates between the stock and the new experience and runs them into one another most felicitously and expediently.

"This new idea is then adopted as the true one. It preserves the older stock of truths with a minimum of modification, stretching them just enough to make them admit the novelty, but conceiving that in ways as familiar as the case leaves possible. An *outré* explanation, violating all our preconceptions, would never pass for a true account of a novelty. We should scratch round industriously till we found something less eccentric. The most violent revolutions in an individual's beliefs leave most of his old order standing. Time and space, cause and effect, nature and history, and one's own biography remain untouched. New truth is always a go-between, a smoother-over of transitions. It marries old opinion to new fact so as ever to show a minimum of jolt, a maximum of continuity. We hold a theory true just in proportion to its success in solving this 'problem of maxima and minima.'"

Even if, then, we should accept Professor James's extremely modest way of putting it, that pragmatism is merely "a new name," it would not diminish the importance of it. For whatever may be its novelty, it has certainly furnished a unifying point for several dominant modes of thought in very diverse fields. In fact, the turbulence into which the usually placid waters of metaphysics have been thrown reminds one of the breaking of a freshet thru a new river channel. Just as M. Jourdain discovered to his surprise when he took his first lesson in rhetoric that he had been talking prose all his life without knowing it, so now many men of many minds—mathematicians, chemists, logicians, moralists, sociologists, theologians, and those who profess nothing but plain common sense—have discovered that they have been thinking pragmatism all their lives without knowing it. Pragmatism is playing the part of a good hostess in introducing people who have been strangers but are really congenial. All over the world people are reaching out of the windows of their studies, laboratories and libraries to shake hands with each other and even with "the man in the street."

Since many of our readers have written us to say that they could not find the word in the dictionary, we will say that it was first used by an American mathematician, Mr. Charles Peirce, in an article in the *Popular Science Monthly* of January, 1878. It lay unnoticed for twenty years until Professor James took it up and applied it to religion. Then it at once "caught on"—or, if the phrase is offensively colloquial, we will translate it into Latin and say it was immediately apprehended. It was manifestly needed to express the drift of many lines of modern thought.

*PRAGMATISM. A NEW NAME FOR SOME OLD WAYS OF THINKING. *By William James.* New York: Longmans, Green & Co. $1.25.

Pragmatism is derived from the same Greek word πράγμα, meaning *action*, from which our words "practice" and "practical" come. Its essential principle is testing the merit of a thing by its practical consequences. Pragmatism asks of every new claimant of credence: "Grant an idea or belief to be true, what concrete difference will its being true make in any one's actual life? What is the truth's cash value in experimental terms?"

From this follows the pragmatist's answer to the old question, "What is truth?"

"True ideas are those that we can assimilate, validate, corroborate and verify. False ideas are those that we cannot.

"The truth is only the expedient in the way of our thinking, just as the right is only the expedient in the way of our behaving."

In leaving his Harvard chair to appeal to a wider audience from platform and press Professor James has shown his faith in pragmatism as a philosophy for the people. It is especially suited to be such because it gives a greater recognition to the modes of thought and conduct that go by the name of "common sense" than metaphysicians of the past have been willing to accord. But people in general and the American people in particular have an aversion to philosophy of any kind, so its influence upon them, if it has any, will probably be indirect and delayed. But it could not have a more favorable introduction to the public than by Professor James's witty and unconventional style. His two large volumes of "Psychology" and his "Varieties of Religious Experience" were widely read outside of scholarly circles, and this work will probably prove equally attractive.

Progress in Philippine Ethnology

THE bibliography produced in the line of Philippine ethnology up to 1898 was very imposing, both in the number of its titles and the high-sounding character of some of them. Nevertheless, the most superficial examination of the publications in this line in the Spanish language will readily reveal their unscientific character, and the comparative valuelessness of the major portion of them. Next to Spanish, the publications in German have been by far the most numerous. A few of the German scientists who visited the Philippines during the latter half of the nineteenth century were especially qualified to make anthropological and ethnological investigations, but their stay in any given section was always very brief and their ethnological studies but fragmentary. The Bohemian academy teacher, Ferdinand Blumentritt, who has written far more on the Philippine peoples than any other person, and has attempted comprehensive classifications of what he called Philippine "tribes," was never in the Philippine Islands in his life. He drew his information mainly from Spanish sources, such as ancient relations of friar missionaries and more recent governmental reports of expeditions into the country of the Moros or of the pagans of Northern Luzon, Mindoro, Palawan or Mindanao, supplemented by data supplied to him directly by unscientific Spanish observers, some of them officials in the islands, like W. E. Retana. The result is that Blumentritt touched the subject (and for some years he almost monopolized it), only to confuse it; and it is evidence of the lack of really scientific research in this field that Blumentritt should until so very lately have past as an authority.

It is natural, therefore, that a part of the task of those who are now doing, under American government, the first systematic work in Philippine ethnology should be to sweep away the useless accumulations of the past. A recent paper* by Prof. Dean C. Worcester, who, as Secretary of the Interior, has had especial connection with the study and government of the wild peoples of the Philippines, points out very plainly the confusion that has governed in past tribal classifications of the Philippine peoples. Blumentritt has scheduled thirty-six different tribes of wild peoples in Northern Luzon alone, and the Jesuits (in their work of 1900, printed in translation in the Schurman Commission's report) recognized twenty-six wild tribes in the same region. Dr. Barrows, who was Chief of the Ethnological Survey in the

*THE NON-CHRISTIAN TRIBES OF NORTHERN LUZON. By *Dean C. Worcester*. Manila: Bureau of Printing, 1906. 4to, 73 pp. and 57 full-page plates. (Reprinted from *The Philippine Journal of Science*, vol. I, No. 8.)

Philippines before he became the head of the Philippine Bureau of Education, believes that all the wild peoples of Northern Luzon (apart from the non-Malay Negritos and the mixtures of Malays and Negritos) are sufficiently similar to be classed together under the one name of Igorot. Professor Worcester does not agree that the various mountain peoples of Northern Luzon, head-hunters and unwarlike "savages" alike, can properly be called one "tribe." Here, however, is involved the common source of disagreement in ethnological classifications, viz., the loose use of words, such as "tribe," "race," etc. It would appear that Dr. Barrows was using the word "tribe," as designating all the mountain-men of Northern Luzon under the one head of Igorots, really in an anthropological sense. Professor Worcester says that he is "far from denying that they may all have had a common origin," but maintains the impropriety of putting them in one "ethnological group," owing to differences in their methods of dress and ornamentations, architecture and industries, music and dancing, religious ceremonies, and customs as to war, marriage, burials, etc. On these bases for ethnological classification he recognizes six different tribes of wild people (besides Negritos) in Northern Luzon, viz.: Ilongots or Ibilaos, Kalingas, Ifugaos, Bontoc Igorots, Lepanto-Benguet, Igorots and Tingians.

To one mountainous province alone, Nueva Vizcaya, Blumentritt assigned fifteen different "tribes," besides the Christianized inhabitants. The Jesuits added two more, listing seventeen "tribes" for this province. Professor Worcester says:

"Nueva Vizcaya has been so thoroly explored that no unknown tribe can possibly exist there, and these explorations have shown conclusively that there are but three non-Christian peoples in the province, viz.: the Ilongots, the Ifugaos and the Isinays. Of the remaining tribal designations employed by Blumentritt, Ibilaos and Italones are synonyms of Ilongots; Alimut and Ilamut are synonyms; and the Bungananes or Bunnayanes, Mayoyaos, Quianganes and Silipanes are all Ifugaos, to whom the names of their *rancherias* (or in the case of the Alimut, the name of their river valley) have been applied as tribal designations. The Altasanes, Ifumangies, Ileabanes, and Panuipuyes do not exist. In all probability, these latter names have been taken from those of *rancherias* (settlements) which have long since disappeared. While some of the larger *rancherias* in Northern Luzon are very old, others are of recent origin, and the names and locations of these settlements are constantly changing."

Professor Worcester, at intervals when he could get away from his duties at Manila, has made some famous "hikes" thru unexplored or little explored regions of Northern Luzon. Any one who will follow on a map the itineraries of his various trips as given in this paper, and particularly those of 1903, 1905 and 1906, will realize this, tho but faintly even then; some personal experience in the regions visited is necessary fully to appreciate these "vacations" of a busy official. Moreover, of the 198 photographs reproduced to show the peoples, their dwellings, implements, diversions, etc., in Luzon's wild regions, just one-half were taken by Professor Worcester himself, and these are but a fraction of his great collection.

German Ideals of Today

In the thought which they contain, rather than in the style of Prof. Kuno Francke, lies the chief value of the essays and lectures which have been collected and published in a substantial volume, under the name of *German Ideals of Today*.* Anything that Professor Francke might have to say upon this subject would, of course, be entitled to deference. For in this somewhat too prosaic country few have devoted themselves with more heartfulness than he to the consideration of the great moral and spiritual problems of the day or are better qualified to venture on comparisons between the thinkers, writers, poets and artists of the Old World and of the New.

The purpose of the publication is very frankly stated by the author. It is "to arouse sympathy with German views of public life, education, literature and art." And, roughly, it may be said that his own views of education are largely those of the reformers, practical and theoretical, who believe that classicism, in its extreme form, has become dangerous; so much so that in Germany, as in Amer-

*German Ideals of Today and Other Essays on German Culture. *By Kuno Francke.* Boston: Houghton, Mifflin & Co. $1.50.

ica, it is gradually being replaced by an enlightened modernism. The central thought which, as he hold, most clearly expresses the ideals of contemporary Germany, is "social justice." It matters little to the patriotic German that, in order to attain or approximate to this "social justice" the individual may have to become subordinate to an intelligent, tho perhaps oppressive, system of governmental paternalism. Nor is it sure, if one may judge things by the general attitude of the American public during the past year or two toward the trusts and the President, that ere long the ideal of Germany may not be even more popular here than in the land which first consciously or unconsciously adopted it.

Nowhere, as Professor Francke tells us truly, are the literary ferment and the dramatic upheavals of the day more evident than in the German-speaking world. They may assume strange forms at times and become so desperate in their earnestness that to the normal mind they appear vile, vicious and utterly abominable. Yet even in such repellant and horrific works as Frank Wedekind's "Box of Pandora" and "Spring's Awakening" may be found a perverted idealism, a striving to replace old and, as some call them, wornout creeds, methods and theories, by others, answering more closely to our modern needs. So, notwithstanding the wave of sordid pessimism which has swept over the Fatherland, it may be right to attach less importance to the grossness and the cynicism of some gifted German writers than to the beauty and the poetry of others, who, in their most pessimistic moods, still seem to know that they have souls. "Social justice as the controlling force in the development of political institutions, social efficiency as the goal of education, universal sympathy with life as the guiding principle of literature and art"—there is the completed German ideal. And, if it excludes, or omits to include, religion from its field, at least in a broad way, it respects and tends to the promotion of morality.

There are exceptions, especially in literature. In the dramas and mock dramas of such writers as Otto Erich Hartleben, Hermann Bahr, Frank Wedekind and Arthur Schnitzler, morality is too often either ignored or mocked at. Nor, however charitably one may be inclined, is it, in the cases of the last three of these authors, easy or indeed possible to avoid feeling that the cynics who sneer have lived thru the iniquities which they have dramatized. Either that or they are madmen. After reading or watching the performance of a delicate and pathetic little play like the "Liebelei" of Arthur Schnitzler, which, under the title of "The Reckoning," was produced this year at the Berkeley Lyceum, one quite naturally grows curious to make the acquaintance of some other work from the pen of its author. What do we find? Either novels marred by indecency or studies of "fast" Viennese life and character, put into the form of dialog, after the fashion of "Gyp," so shameless in their treatment of the themes with which they deal that not even all the lightness and the grace of Schnitzler's style redeems them. The pity of it! None the less, "Anatol," with its story of the caprices and light loves of a Viennese idler, has run thru many editions and is greatly admired in the cafés of the Ringstrasse. As for Frank Wedekind, who has had too large a place in the public eye, some of his lucubrations are so appalling in their brutality that they can scarcely be hinted at. But in his "Frühlings Erwachen" ("Spring's Awakening"), which is a series of loosely yet logically connected episodes, shaped as dialogs, the purpose of the author is so serious that it helps one to be indulgent to his crudities. The subtitle of this work—"A Tragedy of Childhood"—largely explains its object, which is to point out and to denounce some crying sins of the old-fashioned educational system, with its ruthless pedantry and its perilous prudery. Chiefly Wedekind joins issue with two specific evils: the stupid and cruel overtaxing of the brains of children incidental to the competitive plan of education, and the mistaken reticence of teachers, parents and guardians with regard to certain essential truths. As a result of the unnatural strain to which his brain is subjected, at a critical age, by the professors at his college, one of the characters in this near-play commits suicide; owing to her very innocence and the omission of her mother to be open with her, another child

is ruined, while a third becomes insane. There is nothing in "Frühlings Erwachen" that could commend it to the casual reader. It is unpleasant enough to content George Bernard Shaw.

How differently two men of different minds and temperaments may handle the same theme will be apparent to those who compare "Frühlings Erwachen" with a play (this one a real play) entitled "Flachsmann als Erzieher," which achieved success some years ago in Germany without offense to the most sensitive.

Prof. Kuno Francke has given much thought and time to the two dramatists most prominent on the German stage today. Three of his essays are devoted to some of the more recent plays of Hauptmann, whose medieval poetic drama, "Der arme Heinrich," arouses him to enthusiasm. It is with something of a shock that, in another essay, the reader of *German Ideals of Today* finds him equally eulogistic of Sudermann's painfully forced and imitative work, "Drei Reiherfedern." On the whole, however, most of us will agree with him in his distinctly optimistic estimate of contemporary German art. German artists have at least this great advantage over their American rivals. They know that they will be judged with earnestness.

The Empress Eugénie. By Jane T. Stoddard. New York: E. P. Dutton & Co. $3.00.

The third edition of Mrs. Stoddard's life of the Empress Eugénie is another of those fat volumes which seem at present the only allowable form for biographies of women. Happily this, with its large, clear type and pleasant paper, shows its English make in a weight not in accord with its dimensions. Print and paper are not all that point to an English source, for Queen Victoria's affection for Eugénie seems to have gone a long way in determining the biographer's point of view. It is a point of view, however, that rather fails to emphasize than denies faults in its subject. Dangerous as were the Empress's extravagances to a newly settled dynasty and unwise as may have been her procedures in certain crises, it is no longer possible to lay the blame for the final catastrophe upon her shoulders. If her influence did not hinder the march of events, neither could she by any means have stayed it. A critical life can hardly be written during the lifetime of the subject. Certainly this does not attempt the task. Eugénie had nothing of the statesman in her. She had all the faults and all the virtues pronounced typically feminine. It is as a woman simply that her biographer is interested in her, and it is with the same interest that the reader follows thru the gorgeous and tragic scenes of her romantic career.

Poets of Virginia. By F. V. N. Painter. Richmond: B. F. Johnson Publishing Co. $1.50.

After reading a book of this character one makes a futile attempt to draw from its pages some permanent impression other than the indisputable fact that it deals with a large amount of mediocre detail. The South has, for a long while, lain under the charge of provincialism in literary matters, and, in the field of criticism, it has accumulated much adulation and very little discriminating reserve of opinion. Every compiler or editor attempts to preserve for immortality the name of every local lyrist and orator who, in their separate spheres, may have done their work nobly and well, but whose utterance was never destined to do more than to enthuse the fleeting moment. As a mere matter of local record, Dr. Painter's studies may interest Virginians, who have a just right to be proud of their achievements, but much of whose poetry—a small part of which is commendable—might very well be forgotten, to the benefit of Southern poetry in general. Name after name is crowded upon these pages, from Captain John Smith to the most minor poet of the year 1907. No one wishes to gainsay that the author has been zealous in his hunt among the Virginia Muses; and that he has read most of the volumes he mentions. That part of the work strikes us as an overpowering task which we should not envy any person the doing. But there is a false charity in the author's desire to give each the highest praise or the least blame possible. He has, therefore, produced a book which is not a contribution, tho to some

it may serve as a record. It does not attempt to reach any conclusions based upon the actual conditions which make Southern literature of value as a sectional study, simply because such literature came and still comes as an expression of a certain definite and peculiar social life.

A History of Hungarian Literature. By Frederick Riedl, Ph.D. New York: D. Appleton & Co. $1.75.

This is a remarkable book, as it is the first history of Hungarian literature in the English language. The Hungarian Academy chose Professor Riedl, Professor of Hungarian Literature in the University of Budapest, to write the volume for the "Literatures of the World Series." Less than any other literature has the Hungarian been influenced by other nations, but it is very closely related with Hungary's history, its patriotic feelings and its struggles to preserve political liberty. Therefore it is well that the book begins with the history of Hungary, giving a very interesting sketch of the people, their high qualities and their weaknesses, and explaining the origin of the language, which has little resemblance to any other, and has been a barrier to the knowledge of Hungary's beautiful and idealistic literature. The author devotes a whole chapter to the great poet Michael Vörösmarty (1800-1866), of whom he says:

"Vörösmarty's first poems ushered in the golden age of Hungarian literature. His importance is due to three great achievements. The first was the creation of a new poetic language. . . . His second achievement was to unite the hitherto contrasted qualities of the different literary schools in his creations and so to form a higher and more perfect type. . . . His third great achievement was to become the poet of a really lofty style. No other Hungarian author ever soared so high. His voice is the noblest in the great symphony of Hungarian poetry. . . ."

A great part of Vörösmarty's idyllic poem, "Beautiful Ilonka," is quoted. The orators Stephen Szechenys, Louis Kossuth, Franz Deak, and the novelists, Eolvös, Jocai and others are next discussed. The two following chapters, the most brilliant and interesting ones of the book, are devoted to the other great poets of Hungary: Alexander Petöfi and John Arany, who are, together with Vörösmarty, called "The Triumvirate." Riedl starts his biography of Petöfi as follows:

"In 1841 a young actor stepped into the sacred bower of Hungarian poetry, and suddenly everything became changed there. New flowers sprang up from the soil, and the very air seemed different. This revival of poetry, which occurred simultaneously with the political revival, was brought about by Alexander Petöfi (1822-1849). His personality was extraordinary as his life and poetry. At the age of eighteen he was a private soldier, and at twenty a strolling actor leading a life of great privation. Yet, by the time he was twenty-seven, he was the most famous poet in Hungary, and in the same year, on July 31, 1849, he died on the battlefield. He always put at the foot of a poem the name of the town in which it was written, and those names would furnish a list long enough to teach us the geography of Hungary. During the last year of his life he was again in the army for the third time. Three times he left Transylvania to return to Hungary, and three times he went back to Transylvania, where, on the third time he met his death."

Many of Petöfi's poems are included in good translations, and also some of Arany's beautiful ballads. He, like Petöfi, started his career as a wandering actor, but lived a long life of quiet work (1817-1882), which allowed him to complete his epic trilogy, "Toldi." Biographies of Madach and Telecki, a very good translation by C. Hagberg Wright of a part of Madach's drama, "The Tragedy of Men," and a chapter on modern writers, conclude the book.

Jenifer. By Lucy Meacham Thruston. Boston: Little, Brown & Co. $1.50.

Few Southern writers of fiction surpass the charm and freshness of Mrs. Thruston's literary style, and since she wrote that angular story of the Virginia Tidewater a few years ago she has learned what appears most difficult for Southern writers to learn, the art of dramatic construction, so that this last novel is a firm, smooth piece of work, without those early marks of the amateur. *Jenifer* is an example of how circumstances develop the nature and conscience of some people until they appear to be lively green shoots of foreign growth grafted upon the hardy trunk of their primitive selves. He begins by getting his fortune unscrupulously. He is too ignorant to feel public opinion. He is endowed with a kind of obtuseness which keeps him honest in spite of his dishonesty. He is so lacking in taste

that he marries an apple-blossom adventuress without a misgiving. The awakening comes first to finer distinctions thru his contact with the very luxuries that his ill-gotten wealth brings. In the valley of humiliation he learns the rest. The love affair and the scenery are both interesting, and the author's best work perhaps is her interpretation of the simple mountain folk.

The Problem of Faith and Freedom in the Last Two Centuries. By John Oman. New York: A. C. Armstrong & Son. $2.75.

Professor Oman, now connected with Westminster College, Cambridge, and known favorably heretofore as the translator of Schleiermacher's *Reden,* has written a book which deserves to rank with Sabatier's "Religions of Authority and the Religion of the Spirit" and Harnack's "What Is Christianity?" as an exposition of the principles of spiritual religion. The matter of this treatise was delivered as the Kerr Lectures before the Glasgow College of the United Free Church in 1906. The thesis is that the religious man is free, bound to no authority, whether of church or book, and that this freedom, so far from being a peril to faith and devout life, is in fact the exclusive basis of genuine faith, upon which a stronger and worthier belief than the Church has yet attained, is certain to be established. The writer is a Protestant of Protestants, and has brought the principles of Protestantism into clear and vigorous statement to a degree not often witnessed. His book is full of courage and hope, accepting joyously and eagerly the results which the best scholarship has attained, and yet cheered with the outlook for true religion and for the higher interests of humanity. Deep religious feeling and warm piety characterize the author, who is evidently one who has walked beneath the stars with Abraham and felt with the saints of all the ages the burden of the sins of men. The lectures are not easy reading, for the author handles the deepest themes, but his thought is clear when once you arrive at it, and his pages are enlivened with apt characterizations and striking comparisons. For example, when he has called the system of Hobbe's "secularized Jesuitism," what more needs to be said? When Luther tacked up his theses on the Wittenberg Church door, the problem of the law and the gospel, with which Paul struggled so mightily, came again to the fore. How could there be faith without authority? Under absolute freedom how could morals and the creeds be accounted safe? It is well known that Luther and his followers hardly dared the full consequences of their own assertions, and that Protestantism soon lapsed into bondage, scarcely less oppressive than that which had been assailed. For the last two centuries the pendulum has swung back and forth between freedom and authority, a process which is traced at length and with great skill and penetration by Professor Oman. The clearer vision of the duty and responsibility of freedom which has obtained in these later days is set forth with equal enthusiasm, and one who has the patience to follow such a presentation of high themes will find his understanding of true spiritual religion measurably increased, and his pulse quickened with some of the larger enthusiasms of manhood.

The Army in 1906. A Policy and a Vindication. By the Right Hon. H. O. Arnold-Forster, M. P. Pp., xviii, 568. New York: E. P. Dutton & Co. $4.00.

Ever since the Duke of Cambridge resigned his position as Commander-in-Chief of the British forces in 1895, the English Government and English society have been occupying themselves with the reforming of the British army. "Our army is reformed, or deformed, in your drawing-rooms," said Mr. Will Crooks, the Labor Member of Parliament, to a fashionable audience in London which he was reproaching for its callous neglect of the children of the nation; and altho it is scarcely correct to attribute the work of Arnold-Forster or of Haldane to the ladies who are the leaders of fashion in London, it is nevertheless true that no subject on which the House of Commons has been engaged during the last twelve years has aroused more interest in fashionable society than the repeated and almost chronic efforts to reform the army. Each new Minister of War brings out a new scheme of reform. Each scheme is weighed and found

wanting by its author's successor. Mr. Arnold-Forster's book will no doubt be serviceable to American students of military economy who are desirous of knowing just how the British army stood before Mr. Haldane brought out his latest scheme of reform—the scheme that held the attention of Parliament in the summer months of 1907.

Literary Notes

....Those who lead or love the simple life will be glad to know of a new edition of Thoreau's best works in five pocketable volumes. (Crowell, set $2.50.)

...."The Book-Plate Booklet" is a neatly printed and very attractive little magazine devoted to book-plates in general and to California book-plates in particular. It is edited and issued in February, May, August and November by Sheldon Cheney, Berkeley, Cal. The magazine is the official organ of the California Book-Plate Society. Those who are interested in the book-plate cult will want to see this publication.

....An editorial in THE INDEPENDENT some time ago, pointing out how inadequate the average public library is to answer the needs of men engaged in industrial and commercial pursuits, aroused much interest and some resentment. A practical contribution to the question of what can be done to remedy the deficiencies we held to exist is given by the experience of Mr. G. W. Lee in managing the library of a large engineering corporation, which he gives in a pamphlet published by Stone & Webster, Boston.

....John D. Morris & Co., of Philadelphia, Pa., issue a little booklet entitled "Book-Plates designed for True Book-Lovers." The booklet is copyright, 1907, by the publishers, and contains the following note: "The plates in this brochure are from artists' drawings, the originals of which are in our possession; all rights reserved." Those who buy book-plates of this concern are thus assured of getting plates controlled by Messrs. Morris & Co. In this connection it is interesting to note that Design No. 7, appearing in this book, is from a plate owned by John Herbert Corning, designed by Hy. Sandhard, and illustrated in "Allen's American Book-Plates," on page 354; No. 17 is based on a plate owned by Marcus Beujamin and reproduced on page 369 of the same volume; No. 13 is from Prof. Brander Matthews' plate, designed by E. A. Abbey (page 99); No. 41 is derived from the plate of George Alexander Macbeth, Pittsburg, Pa., facing page 79; No. 50 is based upon the plate of Edmund H. Garrett, which faces page 138 of Allen's book; No. 32 was originally the plate of Ch. Guinot, designed by Henry Andre, of Paris. It appears in Walter Hamilton's book on "French Book-Plates." No. 34 is from the plate of L. Delatre, on page 240 of the same book; No. 3 is an adaptation of Walter Brindley Slater's plate, as designed by E. J. Wheeler, which is reproduced on page 244 of "Castle's English Book-Plates"; No. 11 is adapted from the plate of Walter Marks by H. S. Marks, page 242; No. 31 is from the plate of E. J. Wheeler, as designed by the owner (see page 243); while No. 43 was originally the plate of Henry Tait, by J. D. Batten, as on page 225 of the last-named volume. Purchasers of the plates to which reference is here made will at least have the satisfaction of knowing that they follow in their ownership some very good men.

Pebbles

NOTHING succeeds like failure.—*Life.*

YOUNG POLICEMAN (running in Old Offender)—Mind the step there.

Old Offender (scornfully)—Garn wi' yer! I knowed these 'ere steps afore you was born. —*Harper's Weekly.*

"I'M ashamed of this composition, Charley," said a teacher in one of the local schools this morning. "I shall send for your mother and show her how bad you are doing."

"Send for her—I don't care," said Charley. "Me mudder wrote it, anyway."—*N. Y. Sun.*

IN THE CEMETERY.

HAND in hand they strolled along
The well-kept winding walk,
Unmindful of the passing throng
And idle, worldly talk.
They took their way with rev'rent tread
On through the "City of the Dead."

The flowers with perfume filled the air;
Birds joined in cheerful song.
Mother and little daughter there
The monuments among,
The mother reading with intent,
The epitaphs on monument.

"Oh, mamma, whose is that big stone?
I really want to know."
"A man thruout the State well known,
The Honorable John Doe,
In statesmanship quited noted, for
They talked of him for governor.

"Was 'boss' or judge, I don't know which—
He used to keep a 'store,'
Where, it is said, he skinned the rich
And gave it to the poor;
And so when he to glory went
They built for him this monument."

And thus they walked from place to place,
Mid tombstones high and low,
Read epitaphs—poetic grace
With warmth of love aglow;
And ending, "Yea, we are content,
For well we know to heaven they went."

The hour was up—the train was due,
They hasten to their home;
The little one was not quite thru
Wanted again to come.
"Mamma, we'll come and bring our dinners,
Then show me where they bury sinners."

Delicacy and Indelicacy

"Don't you think it rather indelicate," said the so-called artist who has sent his wife to France that she may get a divorce there so that he may marry a later affinity, to an inquisitive reporter, "to talk about my next wife when my wife hasn't even left the house yet, and before a divorce has been asked for by her?" A day or two later he wrote to a journal: "Mrs. Earle nor I sees any indecency in receiving into our home the person who made this sacrifice possible for me [that is, the new affinity he expects to marry], nor any indelicacy in acting contrary to mere convention and custom when no outsider is harmed by such 'a triangle'," the "triangle" being the man with an artistic temperament, the French wife who willingly consents to get a divorce that he may marry the third, who is visiting the two and arranging with them the resignation and the succession. All this is not indelicate to do; not indelicate to tell the world of it, and to push his wife forward on the steamer to be photographed for the papers; but it is not delicate for a reporter to ask questions of the new affinity about the prospective marriage, after Earle had introduced him to her. And so it is no more indelicate for a man to change wives, and to bring the second to his house for weeks to discuss and settle it with the first, than it would be to change cows in his stable. Why should it? it is no "outsider's" business.

We do not understand that his wife needs sympathy, for it is reported that she, too, has "advanced views," and does not believe in permanent marriage any more than he does. She has reason to be congratulated on getting rid of a man with such a "temperament." She will no longer have to knock her head against so thick a skull. Why, look at his poetry! He says he has been working two years on half a dozen sonnets that will give his ideas about marriage, and he proudly gives two of them to the press, and a more rotten lot of fourteen meaningless lines we have seldom seen. Here is the octet of one of them:

"Love's purest spring is memory's gratitude
From the first kiss of April in the blood,
From the last tear upon its seaborn flood,
From out the spirit's icebound altitude.
On from the bosom's deep beatitude
Uprising like the water lily bud,
Foam white, though nurst in common clay and mud,
The river of true marriage is renewed."

The rimes are *udes* and *uds* and three of them identical in *tude;* and so vain is he of his "sonnet" that he gives out the rest of it, rimeless and meterless, a medley of tetrameter, pentameter and hexameter:

"Its countless brooklets rise as in a dream
And flow beyond the hights of youth.
Some driven in mighty tumult by strange passion,
Some led through winding fairyland.
Fondly each dream cleaves to its own inevitable bed
Until the last sweet drop is sucked to heaven."

The reader doubtless expected us to say some severe things about the wickedness of this vulgar incident; but we do not see the occasion—the man is not worth it. One who can write such poetry has no artistic sense and presumptively no other sort of sense, moral or intellectual. A parrot or a crow may talk or be mischievious, but we don't look to it to understand delicacy or indelicacy, morality or immorality. It can talk or squawk, and we are merely amused. When this man says he does not believe in free love, but in the freedom of love, we smile.

But on one point we wish to say a serious word. He says he has an "artistic temperament." There is no such thing as an artistic temperament. It is an excuse, a pretense, a cover, for laziness or vanity or vice. What makes an artist is not some strange lawless temperament, but a clear, keen sense of beauty, an

active mind and tireless work. That is not temperament; that is congenital brains and the moral power of application. It was not an artistic temperament that made Whistler cheat his tradesmen; it was thievery. To be a good artist, just as to be a good merchant or scholar, one must have ambition; but ambition is not temperament. One must push forward, aim high, aspire, and aspiration will give heart to art. The dabster in verse who would rime grati*tude*, alti*tude* and beati*tude* has no artistic temperament, or artistic anything else, and is likely to be a daubster in paints.

He says, and she says, and the other she says—they all say—that they are Socialists of some sort or other, and they war against the "conventions" of accepted morality. Doubtless some who take the name of Socialist mean it as lawlessness. They do not understand how inherently and severely under law true socialism would be. President Roosevelt describes it as a kind of social tyranny. What socialism of the better type is Milton has told us in his description of Eden, when he says of wedlock:

> "sole propriety
> In Paradise, of all things common else,"

where "propriety" has the Latin sense of personal and individual possession.

We would not forbid divorce for causes which destroy marriage. We do not approve the severe divorce laws of South Carolina or New York. But that one should send his wife to Coventry or France simply because his fickle "temperament" has changed, and he has got tired of her and has found some one who just now pleases him better, is not to the good of society, and therefore is immoral. His excuse is thus given in an interview in a most reputable journal:

> "I believe we are married before we are born, thru heaven-directed affinities, and that marriage continues after our death. I came to see that my wife was not my affinity."

That is mere nonsense, as senseless as the sonnet, while it adds profanity in charging God with having directed this new affinity. This would allow tandem marriages, as many in succession as the twelve yoke of oxen which Elisha drove, and he with the twelfth, each marriage counseled and approved by its predecessor. Would that be "indelicate"?

What Became of the Three Billion Dollars?

If three billion dollars, or two or one billion dollars, has been squeezed out of stock values in the last few weeks, as the financial columns of the newspapers say, what has become of it all? Is the nation one or three billion dollars poorer than it was, as we should all agree it would be if a billion or more bushels of wheat should be destroyed by fire or flood? Or did these stock values never have any real existence outside of the speculative imagination? If they were real, and have not been lost to the nation, what has become of them? Who are the lucky individuals that have come into possession?

These may sound like silly-season questions, or like the questions that children put to all-wise parents. Perhaps they are, but it is well now and then to become as little children in things intellectual, as well as in things pertaining to innocence and simplicity of life. It is a good way to take some of the kinks out of our thinking.

Values in general, including values of stocks, are not wealth, but are estimates of wealth. Real wealth may measure up to market estimates or it may not. These estimates, which we call values, are made in the market, chiefly the produce and the stock markets, by a process of bidding essentially like the bidding in an auction room. When people in an auction room get excited they sometimes pay high prices for junk. Corn merchants, coal barons and railroad magnates not infrequently do the same thing in a large and liberal way, as becomes their station in life. The values so created can be extinguished on some later market day without destroying any real wealth that the community has ever possessed.

Real wealth, however, is something more or something less than mere mass of material goods. The essential element in wealth is the utility that material things have *under given conditions*, not merely the utility that they might have under the most favorable possible conditions. Thus the utility of a million bushels of wheat when wheat is abundant and nobody is hungry is a very dif-

ferent thing from the utility of so much wheat in the day of famine. Values, then, are estimates of the utility that material commodities are likely to have *under given actual conditions.*

Now, commodities are roughly divisible into two great classes, namely, (1) commodities ready for consumption in satisfying human wants—food products, for example, and clothing; and (2) commodities that are essentially means of further production—as machinery, railroads and steamships. The stocks that are bought and sold on the stock exchange are for the most part titles of ownership in means of production, rather than in consumers' goods. The values of stocks, therefore, are market estimates of the probable utility; that is to say, the probable productiveness or earning power of the chief means of production, especially the great manufacturing and transportation properties. It follows that the values of stocks do not depend altogether upon the mere extent of manufacturing and transportation plant, nor altogether upon some combination of extent, quality and present usefulness. Quite as important a factor is the prospective usefulness or earning power. The business mind anticipates the future and fixes a price today for the probable wealth of tomorrow.

Accordingly, when the values of stocks fall, the phenomenon may mean something a little different from the discovery of the auction-room bidder that he has bought an article that is not now of any use or satisfactory to him. Railroads and manufacturing establishments may be in first-class order, their capacity may be equal to any probable demand upon them, but conditions of production thruout the country, or the world, may have changed for the worse, and it may be foreseen that actual earnings must decrease. The factor of expectation in stock values under these conditions must diminish.

The real question, therefore, about the recent extinction of stock values is this: Has there been an impairment of the quantity or the quality of natural resources and productive plant in the United States? Or, quantity and quality of resources and productive plant remaining unimpaired, has something happened to diminish prospective earnings? Or, finally, were the values of stocks before the decline absurd estimates, out of all proportion to underlying realities, like the bids of auction-room people who have lost their heads?

If former stock values were fictitious, there has been no diminution of national wealth because of the shrinkage. If resources and productive plant have become impaired to the amount of three billion dollars, the loss of national wealth is appalling. There is not the slightest reason to believe that this has happened. There is little reason to believe that the stock values of a year ago were to any great extent fictitious. The actual fact, apparently, is that prospective business will be less in realization than was anticipated. New enterprises, such as new railroads and new manufacturing establishments, will not be able to earn in the next twelve months enough to pay satisfactory percentages on the values of a year ago. The curtailment began, as practically it always begins, with a shortage of crops. The crops are the fundamental economic fact. When they are big, year after year, values in general continually improve. When they are short, year after year, values in general continually fall.

The loss of three billion dollars in stock values, therefore, was not, in the main, an extinction of national wealth already in existence. It was, in the main, a reduction in the anticipated wealth of the next two, or three, or four years. We have merely discovered that we are not likely to produce in that period quite as much as we had hoped and expected to make.

Christianity and Culture

Dr. Percy Gardner, of Oxford, who is a scholar, a master of clear English, and a delightful Broad Churchman, has recently published a book entitled "The Growth of Christianity," which presents, in an attractive and stimulating manner, the difficult question of the relation of the Christian faith to the various systems of thought and types of culture with which it has come in contact. Everybody knows that Christianity came into the world as a very simple thing. Dr. Gardner finds its essence in the petition

of the Lord's Prayer, "Thy will be done," and defines its germ as "a passionate devotion to the will of God as cooperative in the world."

This is certainly not far from a fair statement of the truth which was preached in Galilee. But in the course of the ages Christianity has become something very different from a pure and quiet life in the love of God and man. It has framed intricate creeds, wherein are some things hard to be understood: it has built about itself a mighty organization, with officials of high rank and of great glory; it has constructed elaborate rites and rituals, and taught men to observe them with great diligence; it has done a hundred other things which were certainly never dreamed of when the peasant of Nazareth sat and talked with the fisher folk on the shores of Galilee.

How shall these creeds, organizations and rituals be regarded? Shall we put them down as innovations, departures from the true faith, and evidences of its degeneration? Protestants generally incline to this view, but while Dr. Gardner is a thorogoing Protestant, possessed of a strong belief in what he calls "spiritual" as opposed to "materialized" Christianity, he looks upon the changes which have been wrought in Christianity under the influence of the successive cultures which it has confronted in a manner somewhat different from the ordinary Protestant. He finds that just as Jewish morality was ennobled and beautified by the teaching of Christ, and yet made an essential element of that teaching, so the philosophy of Greece, the mysticism of Asia, and the civic virtues of Rome were taken up by the Christian religion, which, while remaining Christian, was modified by their influence. This process cannot fairly be called degeneration, but growth, such growth and development as is the privilege of every truly living institution. They are very eloquent and instructive pages in which Dr. Gardner describes "The Baptism of Hellas," "The Baptism of Asia," "The Baptism of Rome," indicating by this expression that each successive culture was made to repent of its heathenism, take on a Christian soul, and assume its place submissively under the regimen of the Nazarene. It was as if the new and mighty faith, like a stronger Jacob, announced to each new race it met, "I will not let thee go unless thou bless me," and gripped with each antagonist until it had possessed itself of whatever virtue and merit they possessed.

This is very alluring doctrine, of great attractiveness to the tolerant and optimistic temper of these times. Yet the tendency to get back to Galilee is also strong, and it is difficult to believe that anything which came into Christianity by way of Hellas and Rome has as good a right there as that which entered earlier thru the Judean door. There is naturally no small hesitation about the admission of these baptized claimants as constituent elements of the faith. Are we sure that they sincerely and earnestly repented of their sin? Did Greek philosophy, for example, which, as Dr. Gardner points out, was not the philosophy of Plato and Aristotle when it asked for baptism, but the weaker thought of five centuries later, repent of its spirit of sophistry, its over-fondness for rhetoric, its atmosphere of unreality? Did Asian mysticism, when it also applied for baptism, forsake its fondness for idle transport and become converted to the gospel of the Good Samaritan? Did Roman legalism, when it was baptized into the forensic theology of scholasticism, become sweet and gentle and of true Christian spirit, or did the sternness of the Roman adhere to it still? Every one has heard of the young woman who desired to be baptized a second time, because the first time it did not "take"; and a similar doubt arises in the mind as to some of the candidates of whose sufficient christening Dr. Gardner appears convinced.

It should be said that Protestants have just as much need as Catholics to examine the elements of thought and practice which they have learned from various philosophies. The Decrees of the Council of Trent are not exactly the Lord's Prayer, but neither is the Westminster Confession. The Syllabus of Errors proclaimed by Pius IX or Pius X does not read exactly like the Sermon on the Mount, but for that matter there is some difference between the Sermon and the Congregational Creed of 1883. It may be difficult to justify scripturally the

sacrifice of the mass or the confessional, but not more so than to establish a good case for the prayer meeting as a regular weekly institution on the basis of the New Testament. As far as antiquity and precedent is concerned, there is a better argument for image worship than for the Sunday school, for the latter is no older than Robert Raikes, while the former certainly goes back to Basil the Great.

It is not, however, a question of what is new or what is old, but of what is good and true, and what has preserved the spirit which is worth preserving. A religion must have the privilege of growth, of adapting itself to the new life of changing times, of finding new vehicles for the conveyance of its truth. We cannot exclude as non-Christian, or even as extra-Christian, all that did not exist in similar form and manner in the days of Jesus and his Apostles. This is the truth which comes clearly to light in the fascinating pages of Dr. Gardner, and it is refreshing to find one who is not content with a stagnant faith, of whatever merit. Christianity has met successively the great civilizations of the world, and it has not remained uninfluenced by them. Unyielding isolation, however, is not a Christian virtue; it is sufficient if one mingle with the world and yet overcome it, and this Christianity has done, and is not only the stronger, but also the richer in content, for its conflict.

Facts About Vaccination

At almost regularly recurring intervals visitations of smallpox occur in this country. The usual interval between these epidemics is from seven to ten years. In a country like ours, where vaccination is enforced by law in most States for all children that attend school, it has seemed to some people that this is an argument against the value of vaccination. If vaccination, they say, actually protected as much as it is claimed by its advocates, these epidemics should not occur among a people almost universally vaccinated.

As a matter of fact these recurring epidemics tell just the opposite story, and are an argument in favor of vaccination, and of its repetition at regular intervals until the individual has come immune to smallpox. It is generally conceded that the protection afforded by vaccination runs out, according to individual susceptibility, in from five to ten years. Each epidemic scares people into being vaccinated, and as the result of this widespread renewal of immunity the disease dies out. A few scattered cases occur thruout the country, however, among careless individuals, tramps, wandering laborers and the like, and these perpetuate the disease.

In spite of this evidence of the protective power of vaccination, and in spite of the almost universal consensus of trained medical workers and thinkers there are a number of people who refuse to believe in the efficacy of vaccination. Every now and then, therefore, the evidence that we have for the value of vaccination as a protective agent must be repeated. It needs repetition, not so much while we are in the midst of an epidemic, when usually the dread of smallpox is quite sufficient to make most people take the precaution of vaccination, even tho they do not entirely believe in it, but at a time like the present, when our last smallpox epidemic is three or four years away, and when the immunity of city populations is beginning to lessen again, and the danger of smallpox therefore to increase.

It is often said that the only argument in favor of vaccination is one derived from statistics, and that statistics are proverbially fallacious, and that tho figures in themselves do not lie they can practically be made to tell any story that a clever manipulator wants them to tell. A distinguished authority on smallpox in England said, with regard to it, some time ago: "Is vaccination a preventative of smallpox? To this question there is, there can be, no answer except such as is couched in the language of figures." It must not be thought, however, that the figures with regard to vaccination and smallpox are all collected from one standpoint and merely show that since the introduction of vaccination there has been a great reduction in the mortality from smallpox. This is what those who are opposed to vaccination usually insist, but it is not true, for the statistics are gathered from many other standpoints,

and some of them become so striking, because of the character of the evidence they convey, as inevitably to carry conviction to any mind that is open to conviction.

Take, for instance, the paragraph in the bulletin of the Department of Health for the City of Chicago issued for July 20th, 1907. This paragraph contains an account of the status of smallpox in Chicago for the previous week:

"Four cases of smallpox were sent to the Isolation Hospital during the week of July 13th. One was an unvaccinated sister of a woman sent to the hospital a week previous. Another was an unvaccinated man from Indianapolis, who saw a case, 'just like his' on the car on which he was traveling just two weeks before the eruption appeared on his face. Another is an unvaccinated man from La Grange, Ill., where he wandered about for ten days after he was attacked with the disease."

This paragraph, while giving an excellent idea of how smallpox will spread from place to place, and probably providing for nervous people abundant opportunities for creepy feelings, because it is a somewhat appalling reminder of the ease with which a man suffering from smallpox may go wandering around a city, tells its own story with regard to vaccination. Chicago's last epidemic of smallpox is sufficiently near in date so that most people are protected. Notwithstanding that opportunities for infection then are abundant, Chicago people do not take smallpox in large numbers, and out of the four cases reported three are in the unvaccinated. The unvaccinated in Chicago's population probably do not constitute more than one-twentieth of the city's inhabitants. Good authorities would say that even less than this are unprotected by vaccination, because of the widespread fear of the scare of three or four years ago. Three-fourths of all the cases of smallpox reported occur among this unvaccinated remnant. Of course the numbers are very small, and too much weight must not be placed on them, but over and over again the Commissioner of Health of Chicago, in his weekly bulletin, has called attention to the vastly preponderating number of the unvaccinated among his smallpox cases, tho so few of the population comparatively are without the protection of vaccination.

Other phases of statistics are quite as striking. The director of the Budapest Statistical Bureau procured from physicians in Hungary exact information as to the vaccination condition of some fifteen thousand persons who died from various causes, including smallpox, in some Hungarian hospitals twenty years ago. It was found that the unvaccinated constituted 14 per cent. of those who died from other diseases than smallpox. If vaccination has no influence on smallpox, then the unvaccinated should have formed also about 14 per cent. of those who died from smallpox. The numbers in this case are sufficiently large to tell the story without exaggeration of significance. The unvaccinated who died of smallpox actually formed 87 per cent. of the whole number of those stricken with that disease. To be unvaccinated made the danger of dying from smallpox in Hungary six times as great as if one had the protection of vaccination.

The statistics of the nurses in smallpox hospitals are very interesting. In the epidemic of 1871 there were 110 persons engaged in actual attendance on the smallpox sick in the Homerton Fever Hospital in England. All these, with two exceptions, were revaccinated before being allowed to begin their work, *and all but these two, who had evaded the regulation in the matter,* escaped smallpox. In the same hospital five years later all the revaccinated attendants escaped smallpox, while the *only one who had not been revaccinated took smallpox and died of it.* A committee was appointed to report on this question of the occurrence of smallpox among nurses in England. Of 1,500 persons in practical attendance on cases of smallpox 43 contracted smallpox *"and not one of these 43 had been revaccinated."* Of 734 nurses and attendants in the Metropolitan Asylums Board Hospitals in London, 79 had had smallpox and did not take the disease. Six hundred and fifty-five were revaccinated on entrance, and all of them escaped infection. Ten were not revaccinated, *and every one of the ten took smallpox.*

It is often urged that there are serious dangers attached to vaccination. The dangers, however, are due not to vaccination itself, but to complications that

ensue mainly thru the fault either of the patient or the physician. The best proof of this is to be found in the German statistics. Out of 2,630,000 vaccinations done in Germany in a single year not one was directly answerable for any death, and there were only eight deaths from late erysipelas after vaccination, three per million vaccinations. Erysipelas is a disease that used to be very common. It is of itself contagious. It used to spread thru hospital wards during the Civil War with awful mortality. If erysipelas occurs it may prove fatal, but not very frequently, and the infection was an accident and not directly connected with vaccination. The statistics of the German army, where revaccination is compulsory, show not only that there is very little danger associated with the practice, but also that ordinarily healthy individuals are very little affected by it.

All this, of course, will not convince the opponents of vaccination, because they belong to that class of people who will not be convinced, but it will furnish for those of the community who are open to conviction the evidence on which to base their conclusions, and if neglect of vaccination does not become so common, as is unfortunately always the case as we get farther and farther away from the last epidemic of smallpox, and its salutary effects in convincing people against their will of the value of vaccination, we shall probably escape to a great extent the next septennial visitation of smallpox, which causes so much suffering and death, besides disturbance of commercial and industrial enterprises.

To Teach Authorship

It is desirable that every boy and girl should learn to write correct, grammatical English; it is not desirable that the effort be made to teach all reasonably bright youth to create literature. To learn to love good literature is the privilege of the multitude of intelligent people; to learn to create it is the ability of the few. Millions can admire and use the telephone; it was the gifted inventor who could create it. And yet it seems to be the suggestion of Mr. Walter H. Page that the creation of literature should be one of the offices of the university.

Mr. Page advises that a university department should be established, the teachers in which should be required to practice good literature and to teach it to aspiring youth. He could have every one who wants to be a writer go thru a well-reasoned course of study, which should not merely give the principles which enable the scholar to be critic enough to distinguish the good from the bad, but such a course as would require him to create, say, a sonnet a day, or a daily theme of a thousand words. We must follow, he says, the example of other crafts and "have professional post-graduate schools to teach men and women how to write."

We doubt the need of this scheme. We ask for no special post-graduate school for inventors. We would have general technical schools to teach the difference between the good and the bad in mechanics, so that a bridge, or the plan for a bridge, can be correctly judged or tested, and the rules of mechanics well understood. Just so we would have schools teach the rules of rhetoric and give students practice in correct writing, and make them judges of what is beautiful in the literary art, whether in prose or verse. But it is given to only a very few to be real artists. Such a one, who has had the teaching which tells him what is good and what is bad, which has given wise direction to his native genius, one who has learned to love his Homer and Æschylus and Virgil and Horace and Shakespeare and Milton and Tennyson, and to delight in the simplicity of Chaucer, the leisured melody of Spenser, the harsh strength of Kipling, and the deep music of Lanier, will gather the impulse and the art for himself. When he has learned as a boy that a sonnet has fourteen lines, with rimes arranged so and so, Wordsworth and Milton and Petrarch will be his teachers, and he will put his lines beside theirs and find out for himself what he lacks. No teacher can make him a literary artist; he can only make him a critic and teach him the mechanism of the correct.

We have no lack of fairly good writers. The woods of Maine and the prairies of Indiana and the sierras of Cali-

fornia blossom pink with very decent versifiers. There is no lack of encouragement and instruction for those who have the ability to make second and third rate poets, or to concoct grammatical and interesting novelets. What we lack is men and women of that genius which rises above mere art. We have not one great literary genius now in the mid-heaven of his splendor, unless it be Mark Twain, and we are slow to count him as rising above the extravaganza. There is perhaps one in England. But those of the rank below are abundant enough. They have not needed professors to tell them to write a sonnet a day; and what dreary sonnets those would be! What a task of criticism to put on Professor Longfellow or Professor Lowell!

The Farmer's Problems

Two problems confront the farmer; first, how to secure sufficient help, sufficient to cultivate his crops and sufficient to gather his harvests. He is handicapped, every season of the year, by the increasing deficit of that sort of aid which will bring agriculture to its maximum of production. According to the best estimates, he is losing at present about two-fifths of all that which should be turned into the channels of consumption, out of the soil. This difficulty is rapidly increasing, and we have got to look forward to something approaching disaster, unless we can devise relief. Laborers from abroad do not belong to the farm; only about 3 or 4 per cent. being willing to till the land. Forty or fifty years ago only 4 or 5 per cent. of our immigrants failed to turn up somewhere in the country. They might spend some of their initiative days digging canals or laying railroads, but nearly every Irishman and German who reached America wanted land, and he got it. The German went into truck gardening, while the Irishman managed to buy out the Yankee. Today, while the percentage of our increase of population is much more favorable for the country, it is made up of those who hire help rather than give it. Country employers have enormously increased; country laborers—that is, those who live by hire—have astoundingly decreased.

For this reason, if for no other, we hold that all farmers should be found in opposition to any law that bars an honest laborer out of this country—certainly for the reason that he will work for lower wages. Evidently, if production can be increased from one-fifth to two-fifths as soon as our farms can be cultivated up to date, and with no waste of products, we should be greedy for men from all over the world. Is it a fact that we are actually throwing away so large a percentage of our agricultural wealth, because we are determined that our help shall come to us across the Atlantic rather than across the Pacific? It is possible to urge objectionable features to all classes of immigrants; it is not possible to discover new arguments that have not already been urged against those who now constitute our most welcome assistants. As early as 1640, "The Simple Cobbler of Agawam" counted as one of the chief evils of Massachusetts that foreigners were allowed to enter into the colony and crowd the natives. We have had more or less of this sentiment expressed in all the periods of our history. The fact still remains that we need laborers more than we need anything else; and common-sense policy demands of us the free admission into the United States of everybody who can work and will work.

Just where this help problem is going to lead us it is hard to foresee. The farmer is not alone in his troubles. The railroads, which first drew the help away from the farm, are themselves in a tight place. The Canadian roads are importing Hindus. Some 400 of these East Indians recently landed at Vancouver and were set promptly at work. They include Brahmins, Sikhs and Mohammedans, are a slender set, but good workers. The fact that they get $1.65 a day will induce a large number of followers. But a little farther south we find that every effort is put forth to debar Asiatics from our coast. This whole question has got to be overhauled, and we have got to make a more thoro study of the relations of races, and the interdependence of all parts of the world. It will be well if our Southern States succeed in diverting a large per cent. of European immigrants into their section, for there they must be-

come agriculturists—in some sense of the word.

Of course, we have got to go into our common schools and create a new sort of sentiment for our whole educational system. Industrialism has come to the front, and it must and it will create a new public sentiment. Boys and girls must be educated, not only to know how to think, but how to work, and to honor labor. A pitiful feature of a lot of school children is hand awkwardness. The hand must regain its place in education. The school must cease to be a means of rising above hard work. The coming revolution will not take the boys away from the farm, but will glorify labor, and we think will very greatly tend to relieve the present pressure for help. Technical schools are increasing, and the agricultural schools are gaining a powerful influence over public sentiment. Notwithstanding the real shortage of workers there often seems to be a surplus, because so many of our school graduates are unwilling to take hold except in a professional way. Young graduates are naturally ambitious to make their education pay. They have been taught that success means getting a place high up. In fact, the differentiation of labor and the superb development of manufactures does call off and use up a very large share of those who were formerly at the beck of the farmer.

The other problem, that of haulage to market, is a new one comparatively, but it is growing in its vexatious features. The enormous expansion of the railroad system sent the farmer into the farthest corners of the land. He took possession of the Northwest, up into the Dakotas and Washington, then began to turn the dry lands of the Southwest into gardens; and since the Civil War he has encroached upon the old Southern States, to make them rivals of New York and Ohio in agriculture, as well as in manufactures. Suddenly he finds himself stranded by a transit system utterly inadequate to his demands. Mr. James J. Hill tells the whole story in a nutshell. He says that the railroads of America need, at the present moment, not less than $1,250,000,000 of new equipment, and this they cannot get without serious delays—serious to themselves as well as to the farmer. One of the officials of the Atlantic Coast Line writes that the development of Florida has been so astoundingly rapid that his road cannot possibly keep pace with the demands. The result is that the peach crop and the pear crop, the orange crop and the melon crop, suffer enormously. Transport is so uncertain that, during 1906, many carloads of melons and peaches were dumped into rivers before reaching the Baltimore and Philadelphia markets. For the last two or three years the Northwest has found it impossible either to reach market or to secure in season its supply of winter fuel. This state of affairs covers the Pacific Northwest as well as the mid continent, and California is bearing its heavy share of the loss.

The outlook ahead is not at all promising. We confess that we do not see any certain outlook for the farmer. It will be impossible for the railroads, under the wisest management, to catch up and keep pace with agricultural development. Traffic has got so far ahead of the railroads, as they are at present equipped, that it is likely to remain ahead. Notwithstanding the pledge of some of our main lines. we see no possibility of their fulfilling those pledges. Meanwhile the people are not inclined to believe that these huge corporations are sincere. They believe that the trouble is greed. Certainly things have gone on for the worse during the last three or four years. The roads have more freight to carry than their cars will with the best management and absolute honesty be able to transport. Car builders are two years behind orders. Thousands of miles of new trackage has got to be laid or the country must suffer worse than it has already suffered. Meanwhile the tracks that are in use are wearing out and breaking down. We are facing a tremendous crisis of an industrial sort. Would government ownership and management improve affairs? Such an experiment is possibly to be taken. Looking at the matter from any viewpoint, we do not see any chance for immediate relief. The problem remains how to secure sufficient help to make our productive interests more economic and more thoro; and how to secure haulage and transit, prompt and sure and abundant, between our barns and our buyers.

"Devil-Wagons"

We will not call them devil-wagons, but the reckless racing automobiles justify the name. Here is a day's record of accidents in a single journal: Five men seriously injured, three of them dead, in an accident at an Italian race, and the news cabled only because of the social prominence of two of them; seven hurt, one probably mortally, when an automobile crashed against a horse and buggy in Mineola, L. I.; a child killed at North Wilbraham, Mass.; two injured, one dead, in an accident at New Rochelle, N. Y.; two injured and one other killed while racing at Pittsburg, Pa.; child killed at Dunkirk, N. Y. Nearly all accidents came by over-speeding. It is a craze to go fast, even on the public roads where horses are driven and where pedestrians walk and children play. An automobile ought to be registered not to go beyond the legal limits of speed; and if people will wilfully buy automobiles built to break the laws, purposely purchased for criminal purposes, and then drive them criminally, they ought to suffer for it. Our sympathy is wholly with the constables who watch for these malefactors. When caught they ought not to be let off with a mere fine, but should be sent to prison, or the automobile confiscated.

Poets and Pool-sellers

Under the system of free interpellation that prevails in Parliament the members of the British Cabinet have many hard questions put to them, but it is not often that they are stumped as was the Attorney-General a short time ago. He was asked whether the limerick craze did not come under the lottery law as demoralizing to the masses by encouraging the spirit of gambling. Many newspapers in England have been publishing limerick verses with one line left out and offering a prize to the person who supplies the missing line, each contestant accompanying his poetic proposal with a postal note for sixpence. One newspaper received 80,000 answers in a single week, amounting to $11,000. The Attorney-General, Sir J. Lawson Watson, said that the Government did not regard the scheme as a lottery because it involved the exercise of some skill in the art of completing a riming verse. Whereupon another member wanted to know if, in the opinion of the Attorney-General, it did not constitute a greater element of skill to spot the winner of a horse-race than to supply a rime. There was no answer from the Government bench.

Senator Bailey on the Civil War

Several months ago we gave an account of Senator Bailey's address before the Texas Legislature on the occasion of his re-election to the United States Senate, and his venomous vow that he would do all in his power, and lay the duty on his children, to consign to eternal contempt or oblivion those who had opposed his election. We now have the report of his late address before the Confederate Veterans at Paris, Tex., in which he glorified secession and gave frankly the reason for it. Secession, he said, had its birth and origin in the North, for certain counties in New York seceded and created the State of Vermont. This is false history, for before the Revolution there was debate between New York and New Hampshire as to which colony Vermont belonged to; and after the Revolution New York gave up its claim on the payment of $30,000 damages. Then he referred to the separation of West Virginia, which did not precede the secession of Virginia. The reason for secession, he said, was that they did not want "an emancipated and enfranchised negro":

"It is an unchangeable decree of fate that the negro can live in this country only as a subordinate. When he begins to believe that he is as good as a white man he ought to leave the South; if he attempts to put that belief in practice he will be compelled to leave. . . . . There is only one way to settle the negro question, and that is a way that guarantees justice to the negro, but preserves and insists on the supremacy of the white race."

It was the greatest crowd Paris ever saw that listened enthusiastically to the speech, and this is the kind of teaching that cultivates ill will between the North and the South. We hear in the North no diatribes against the South, such as Senator Bailey indulged in against New England, which he said ended slavery solely because it was unprofitable:

'New England awoke to the enormity of the sin of slave trading after she had sold us her slaves. They were no longer profitable. Manufacturing was growing in that section, and the negro could not be profitably used in the fac-

tories. He could not till the soil profitably, for the soil of that part of America is three parts rock and one part sand, so the slaves were sold to Southern planters and New England pocketed the cash. I don't think much of the conscience of a man who rails against a sin and keeps the proceeds of that sin in his pocket. She sold us her slaves for the love of money and took them away from us for the fear of God."

That is what passes for history and interstate courtesy, and such speeches explain how it is that the negro finds it so hard to get even justice.

The Cost of Living

We have received the following letter from Harry Ainsworth, the vice-president of a manufacturing plant at Moline, Ill.:

I take your magazine regularly, and read the article by Mr. Alfred Britt in the issue of August 22d, on the comparative rise in wages and the expenses of living between 1896 and 1906. Mr. Britt states that, while the cost of living has increased 40 per cent., wages have risen only from 20 to 30 per cent.

Such a conclusion is, I believe, very misleading. It is true that if you take a full day's wage in 1906, as compared with 1896, the rise is perhaps only 20 to 30 per cent. on the average, but the statistics quoted do not take into consideration the fact that at the present time a man can work every day of the year, if he wants to, while in 1896 he was working only about half the time. I believe also that our own experience is typical of the manufacturing establishments in general.

In 1896 our payroll was less than half what it is now. That is, workmen of Moline and their families are receiving more than twice as much from Williams, White & Co. now as they did in 1896. I have looked over our payroll and taken a few of our machinists, and I find that individually they are receiving now just about twice what they received at low-water mark in 1896. I believe that you will find this experience general thruout the country. The men are actually making nearly twice as much as they were getting in 1896, in fact, in many cases men are working overtime at high rates, and making more than twice as much as they did at that time, and, but, of course, overtime is exceptional, and yet very frequent, under present pressure.

I believe that our experience is typical of manufacturers generally thruout the country, but such facts are not taken into consideration, apparently, by Mr. Britt.

I am, of course, computing from low-water mark up to practically high-water mark. I understand Mr. Britt is figuring on the same basis.

I do not mean to say that I think the workmen are now getting too much wages, but it is evident that workmen employed in manufacturing establishments are now receiving more in proportion to the cost of living than they were receiving in 1896, or at the low-water mark during those dull years.

Organized labor and capital were never so well off in this country as during the past decade. It is the unorganized laborer, the farm hand, the salaried ministers, clerks and foremen, that are poorer off than formerly; and if you doubt it, ask their wives. The annual investigation of the United States Bureau of Labor just given out shows that in 1906 the wages in manufacturing and mechanical industries increased faster than the cost of living in 1905, and that this was more marked when compared with the decade from 1890 to 1899.

Sully-Prudhomme

That three of the six men of letters who have received the Nobel Prize—that is, Mommsen, Carducci and Sully-Prudhomme—should have since died does not indicate that there is a fatality connected with that honor, but merely emphasizes the tendency of the Nobel Committee to reward past achievement rather than contemporary effort. It has been over twenty years since M. Sully-Prudhomme has produced anything of special excellence, altho no one has arisen since then to challenge successfully his established position as the greatest of French poets of the time. He was distinctly a classicist, a *Parnassien,* in his steadfast adherence to the theory that poetry is confined to the expression of noble and lofty sentiments in strictly regular versification, yet he was decidedly modern in his thought and language. Owing, perhaps, to his early scientific training he made use of the conceptions and phraseology of modern science to an extent and with a success very unusual in poetry. Lucretius, whose first book he translated, was evidently his ideal in many ways. Our readers will find an analysis and some examples of his poetry in THE INDEPENDENT for January 23d, 1902.

Where Damnation Is Just

That Pilate and Herod could combine in a common act we learn from sacred history, but it would surprise us to learn of Pilate and Paul thus in partnership; yet we have just seen something of that sort in Georgia. The religious men and women, the ministers and the churches were praying and working for State prohibition of the

saloon. It was a worthy end they had in view, and was largely meant to prevent negro vice. On the other hand, T. W. Hardwick, M. C., had for years been fighting for negro disfranchisement by the most oppressive legislation, but the people were satisfied with what they had in that way. At last Hardwick had got Hoke Smith to accept his platform, so that he might carry the ignorant poor white vote, but that would not give him the Legislature. Hardwick wanted his disfranchisement measure carried thru the Legislature, and the prohibitionists wanted their measure carried, and so the two joined forces, Pilate and Paul, Satan and the Archangel, and both were successful, each by the help of the other. It is not the first time that evil was done that good might come, and with just damnation. The negroes protested and pleaded, but they had only justice on their side, and no votes. What could they do against both hatred and the religion of love? So a law was enacted worse than any in Mississippi or the Carolinas, for even the negro who can read an article in the Constitution must prove to the satisfaction of the registrar that he understands its meaning aright. And this is the treatment the negroes get so soon after there has been started a movement led by Governor Northen to make peace.

Brown University's Charter

Brown University wishes to rid itself of its Baptist charter of 1764, which says:

"The number of the trustees shall and may be thirty-six, of which twenty-two shall forever be elected of the denomination called Baptists or Anti-Pedobaptists; five shall forever be elected of the denomination called friends or Quakers; four shall forever be elected of the denomination called Congregationalists, and five shall forever be elected of the denomination called Episcopalians."

Of the Fellows it says:

"The number of the Fellows, inclusive of the President, who shall always be a Fellow, shall and may be twelve, of which eight shall be forever elected of the denomination called Baptists or Anti-Pedobaptists. and the rest indifferently of any or all denominations."

Just why Brown University wishes to get rid of its sectarian charter, which requires that it shall be ruled by Baptists as a Baptist institution, may be gathered from the fact that under the Carnegie Foundation Brown University can get no annuities for its aged professors, because it is by its charter sectarian. Amherst can get annuities, altho the majority of its trustees are always Congregationalists, for there is only a tacit understand- and, and no *litera scripta*. When Amherst asked for a charter it wanted—for it was the way in those days—a charter provision tying it to evangelical Congregationalism, but those were the days when Unitarianism was mighty, and the General Court eliminated that provision, greatly to the grief of the college then and to its satisfaction now. We hope Brown University will amend its ancient and timorous charter.

A Real Federation

Some little time ago THE INDEPENDENT discovered, in a cozy but distant corner of the United States, a very pleasing illustration of what THE INDEPENDENT has always stood for—that is, religious fellowship. It has been our good fortune to note the coalescence of rival camps of Christians, but heretofore we have found very little to encourage us in the way of local churches becoming a unit for religious work. In the little village of Sunnyside, in the State of Washington, we have discovered a federation of this very sort. The preamble to their work declares that they believe the spiritual interests of the community can be best promoted by united efforts. A federation is therefore formed, to continue for five years, the object being to lessen the expense and the diversity of effort and the waste of power among the churches. The plan does not disturb any one's denominational work or preference. There are six churches, but there is only one Sunday-school organization, only one Christian Endeavor organization, only one prayer meeting, and the pastors of the various denominations fill their turns in the pulpit. The federation has been in existence for six and a half years, and it is said to have worked admirably. In other words, there is a single church building, but six churches. The building cost about $7,500. The women are federated as well as the men, and do things all together. There has been no quarreling, no rivalry, and not a hint that the federation will ever be given up. It is a little curious that six ministers should be

needed; they constitute, however, practically a board of spiritual advisers, and their salaries, we imagine, are not extravagant. The next step in this cooperative movement is to place our churches on a business basis. The "Abraham Lincoln Center," in Chicago, is a church building seven stories in hight. The upper three stories are devoted to offices, the rental of which pays the expenses of the three lower stories, which are filled with auditorium, pastor's study, church library, classrooms and all the other appurtenances of an institutional church. Are we coming to an age when steeples will give way to stories, and the churches will be supported by rentals? It looks as if this might be one of the features of the industrial age. A church on a business basis will be no less a church, and will be more attractive to those who dislike the almost compulsory contribution to all sorts of fairs and affairs for raising funds. If this evolution occurs it will dispense with all excuse for withdrawing $300,000,000 of property from taxation. The present economic position of our churches is not only anomalous, but it is without parallel in its wastefulness. We note that the experiment at Sunnyside provides that all running expenses of the federation shall be provided for by public collection.

Exactly why any American citizen should wish to get a foreign title we do not see, but it must have been to please a woman that Cardinal Gibbons and Archbishop Farley secured from the Pope the title of countess given to Mrs. Thomas F. Ryan, a woman who has given millions to the Church—more than five millions in the last five years. She built the Cathedral at Richmond at a cost of about $1,000,000, and a dozen other churches are credited to her bounty. The prohibition of the Constitution does not touch her case. It forbids Congress or any State to give a title of nobility, and it also prohibits "any person holding any office of profit or trust" under our Government from receiving any "title of any kind whatever from any king, prince or foreign state." She is not an official, and the Pope does not rule any foreign state. We doubt not that any British Government, Conservative or Liberal, would have given as high a title to any man or woman who had made equal contributions to an election fund.

In the September number of *The Biblical World* Professor Breasted reports the discovery by a German expedition, at Elephantine, at the fords of the First Cataract, of a letter in good Aramaic, on papyrus, addressed by the high priest of the temple of Jehovah in Elephantine to the Persian governor in Palestine, in the fourteenth year of Darius (410 B. C.), complaining that, during a revolt, the Egyptian high priest had destroyed the Jewish temple which the Egyptians had allowed to be built before the Persians conquered Egypt in 525 B. C. Sanballat is mentioned. The astonishing thing is that, altho it was contrary to the ritual rule in Palestine to worship in any temple out of Jerusalem, here in the generation immediately succeeding Jeremiah a temple with priests was built for the Jews to worship Jehovah in the extreme south of Egypt. It will be remembered that in Isaiah 19:18, is the prediction that in five places in Egypt Jehovah will be worshiped. Here was one at Elephantine, and the temple may yet be excavated.

It is characteristic of the patchwork method of legislation in England, in which logic and consistency count for nothing, that the bill recently past removing the disabilities on the marriage of a man to his deceased wife's sister, leave untouched the prohibition of the marriage of a woman to her deceased husband's brother. How did the Englishman ever get his traditional reputation for fair play? Does he confine it only to sports? Or has he taken to heart the elder Sam Weller's warning: "Bevare of the vidders"?

The Ministers' Union of La Crosse, Wis., found out that their union was not the kind of union that has place in a labor union, when they were admitted only to be expelled again. They were proved guilty of un-unionlike conduct in attacking the breweries, to the damage of the Brewers' Union. The fact is, that they did not form a union for the same purpose as the laborers formed theirs. It was not to protect their wages, and strike together when oppressed.

Insurance

The Fire Hazard of the Skyscraper

GEORGE W. BABB, president of the New York Board of Fire Underwriters, has sounded a warning note regarding our modern skyscrapers and the fire hazard signified by them. In an address delivered last week Mr. Babb prophesied that disaster by means of fire would sometime overtake the financial district in this city, and that the devouring element would then leap from skyscraper to skyscraper far above the reach of firemen and out of the range of the most powerful water tower. This was, he said, bound to occur sooner or later. The commission on the limitation of the areas and hights of building appointed by the Building Codes Revision Committee of the Board of Aldermen to secure the advice of architects, insurance writers and builders regarding the question of limiting the hight of skyscrapers, was informed by Mr. Babb that the Board of Fire Underwriters feared and fully expected such a unique conflagration as one result of the present massing of tall buildings on narrow streets. Such a catastrophe was unpreventable at present, and with the increase in the number of skyscrapers erected the danger of loss was constantly being multiplied:

"With our present unlimited hight of buildings in the financial center, where the streets are being converted into narrow cañons by the walls of thirty and forty storied buildings, we are courting a disaster that would outdistance that of any other great fire in the country," said Mr. Babb. "The San Francisco fire has taught that so-called fireproof buildings cannot withstand the attack of an uncontrolled wave of flame. How much more dangerous would a fire be when it was sweeping thru the top levels of our lines of lofty buildings.

"Fire experience has taught that a high building of great area nurses the hottest fires. It is not only not beyond the range of possibility, but the fire underwriters fear that there is a very strong probability of a fire starting in the nest of skyscrapers and beating across streets from the windows on the top floors to other buildings. All systems of sprinklers and all attempts at fireproofing would not avail in the least in an instance of this kind. The firemen away down below could do nothing. The fire would gain such headway that when the edge of the skyscraper zone was reached there would be a blaze of such proportions as to imperil the whole city. Reliance cannot be placed in any fire department even under the most favorable conditions when once a fire is sweeping uncontrolled."

In order to prevent a skyscraper fire Mr. Babb made the following recommendations, viz.:

"For non-fireproof buildings to be used for commercial and manufacturing purposes, a hight of 55 feet and an area of 5,000 square feet, to be increased a little when the building extended thru the block or was situated on a corner; in fireproofed buildings provided with automatic sprinklers and designed for office use only the area could be extended to between 20,000 and 30,000 square feet and a hight of 125 feet could be permitted. Any area or hight above these figures increased the fire risks to excessively dangerous points."

Fire Fighting in Japan

IN Japan public officials in high towers are constantly on the lookout for fires. When these men see a blaze they ring an alarm bell. Yokohama, with 200,000 inhabitants, has perhaps the finest fire department in the empire. It boasts of three American steam fire engines, which are, however, very much inferior in management and equipment to those even in the smaller American cities. The department is maintained by the insurance companies for their mutual protection. The Japanese police lend a hand at all fires and also provide the life-saving apparatus, including hook and ladder service and a canvas net so constructed as to require ten men to hold it.

Richard Mansfield, who died last week, carried life insurance to the extent of $280,000. His estate, valued at about $900,000, was left absolutely to his widow. Mansfield's personal estate, from published reports, will not exceed $10,000.

Financial

Locomotive Exports

AMERICAN-MADE locomotives continue in demand in foreign markets. During the seven months of the current year ending with July the exports of these machines were valued at $4,729,255. The figures for the same period in 1906 were $2,997,242, and for 1905 they totaled $2,486,281, showing an exceedingly healthy growth in demand for export. The exports in detail for 1906-07, according to compilations made by *The Wall Street Journal*, are given below:

Exports to.	1906.	1907.
Europe	$6,000	$501,025
British North America	154,211	1,184,190
Central America and British Honduras	939,782	753,582
Mexico	338,580	314,005
Cuba	154,061	250,795
Other West Indian Points and Bermuda	6,100	12,688
Argentina	172,165	100,766
Brazil	530,780	529,406
Other South American Countries	482,856	516,330
China	22,207	5,925
British Australasia	84,000	353,923
The Philippines	.....	5,266
Other Asiatic Points and Oceania	106,500	201,354
Total	$2,997,242	$4,729,255

The price paid for these locomotives by foreign purchasers averaged something over $9,000 each. The largest gain in the value of shipments appears in those made to British North America, which also indicates a growing preference there for American-made locomotives over the Continental types. The purchases of our locomotives during the seven months of the current year, as compared with the corresponding period of last year, showed a difference of $1,029,979 in favor of the current year. Railway development in that section has been particularly heavy during the past few years, which accounts in part for the very considerable gain shown in the table.

American engines have also increased in popularity in Europe because of their greater serviceability. The Far East, notably in Japan, has increased its purchase of American locomotives during recent years. Exports of our locomotives to Central and South America have also been fairly active, in spite of the falling off during the past year shown in the present table.

Financial Notes

....There will soon be completed a trolley line from Chicago to St. Louis, on which passengers can ride in sleepers by night and in parlor cars and dining cars by day. The regular fare will be 1½ cents per mile.

....The Congress of Chile has approved a bill providing for the construction of a north and south railway extending from the frontier of Peru to the Straits of Magellan, a distance of 2,600 miles. The cost is estimated at $37,500,000.

....The total par value of the new securities authorized in this country since January 1st by railway, traction and industrial companies, according to the *Journal of Commerce*, is $1,106,738,900, against $882,370,214 in the corresponding period of last year.

....Daniel LeRoy Dresser, formerly president of the Trust Company of the Republic, who was recently discharged from bankruptcy, says that in the approaching trial of his suit for $2.200,000 against the Mercantile Trust Company, Col. John J. McCook, James H. Hyde and others, the entire history of the memorable collapse of the United States Shipbuilding Company project in 1903 will be disclosed, and that he will spare no one of the persons involved.

....The bulletin issued by the Interstate Commerce Commission for the three months ending March 31st relative to railroad accidents sets forth that the total number of casualties to passengers and to employees while on duty during this period was 20,563 as compared with 20,944 reported in the preceding three months. The total number of passengers and employees killed in train accidents was 421 and the number of injured 4,920. The total number of collisions for the quarter was 2,078 and there was 1,913 derailments, of which 323 collisions and 229 derailments affected passenger trains. The damage to cars, engines and roadway amounted to $3,536,110.

VOL. LXIII NEW YORK, THURSDAY, SEPTEMBER 19, 1907. No. 3068

Entered at the New York Post Office as second-class mail matter.

Survey of the World

A Two-Cent Fare Law Rejected

At the recent session of the Pennsylvania Legislature a two-cent railroad fare law was enacted. It was to take effect on October 1st. The Pennsylvania Railroad Company promptly attacked this law, bringing suit in the local courts to restrain the county of Philadelphia from collecting the fine prescribed for violation of the statute. Other companies took similar action in various counties. At the hearing in the Pennsylvania's suit, the company contended that the two-cent rate had been fixed without proper investigation, and that the law was unconstitutional, being confiscatory because it would not permit the company to make a fair profit. A decision in favor of the company has been made by Judges Willson and Audenried, in the Common Pleas Court, where the proceedings took place, and the desired injunction has been granted. The court finds that the statute does not infringe upon the province of Federal legislation, but holds that it violates (with respect to certain lines) a contract between the company and the State, made by law in 1846, and also that it is unreasonable and confiscatory. The law of 1846 empowered the company to fix passenger rates below and up to a maximum of 3½ cents a mile. Reviewing the figures submitted by the company, the court sustains the latter's assertion that the reduction would cause its intrastate passenger business to be conducted with a profit so small that it would not meet fixt charges, to say nothing of dividends:

"Public service corporations in Pennsylvania are entitled to look for a rate of return, if their property will earn it, of not less than the legal rate of interest; and a system of charges that yields no more income than is fairly requisite to maintain the plant, pay fixed charges and operating expenses, provide a suitable sinking fund for the payment of debts, and pay a fair profit to the owners of the property, cannot be said to be unreasonable."

The question now goes up to the Supreme Court. Pending appeal, the company, it is said, will obey the law.——In its answer to the suit of the Government against the anthracite coal combination, the Reading Company asserts that the agreements for an advance of prices in 1900 were due to the violence and intimidation of the miners on strike, to the failure of the National and State Governments to protect the companies, and to the importunities of Senator Hanna, then chairman of the Republican National Committee, who urged that the election of Mr. McKinley and Mr. Roosevelt would be endangered if the strike should not be speedily settled. Therefore, the company asserts, the mine-owners ended the strike by a 10 per cent. increase of wages, and then increased the price of coal because of this addition to the cost of production.——A report issued last week by the Interstate Commerce Commission shows that on June 30th, 1906, the number of persons on the payrolls of the railways of the United States was 1,521,355, and that the sum paid to employees in wages and salaries during the year ending on that date was $900,801,653, plus about $27,000,000 reported in records that were lost in the San Francisco fire.

The Railroad Rate Laws

The Pennsylvania Court of Common Pleas' declaration that the two-cent railway passenger rate is unconstitutional follows the action of Governor Hughes in vetoing such a law enacted by the New York Legislature, on the ground that it had been past with no adequate consideration of justice. Governor Hughes's action has not been generally condemned, and does not seem in the least to have affected his popularity. This class of legislation has been very prevalent during the last year. In seventeen States either the Legislature or the Railroad Commission has enacted such a restriction, generally making the rate two cents a mile, but in a very few cases of Southern States making it two and a quarter or two and a half. In Wisconsin the rate was made two cents by the Legislature, after the commission had declared that two and a half cents was as low as would allow a fair profit. In Missouri, Georgia and other Western and Southern States the Federal courts have been appealed to by injunction to suspend the enforcement of the two-cent fare, and in North Carolina, Alabama and Georgia this has led to the raising of the question of the relative authority of the State and Federal courts. Ten States have reduced the rates on freights, generally by a horizontal cut of 15 to 20 per cent. In five States laws have been past as to the distribution of freight cars, and some as to the number of miles a freight car must move in a day, and forbidding a railroad company to fail to provide cars to shippers. Eleven States that did not have them before have created railroad commissions, and in other States their powers have been enlarged. The extreme is in Nebraska, where the commission is given full power over all railroads in the State. We quote from the New York *Sun:*

"Various States have legislated as to the working hours of trainmen and telegraphers and as to the minimum number of men in a train crew; as to the investigation and report of accidents, and as to the liability of employers. The Federal and State legislation limiting the hours of telegraph operators will compel the New York Central to employ in the State of New York four hundred and ninety-one additional men at an additional annual wage cost of $350,000. The increased wage account for the railroads of the country for telegraph operators alone will run into the millions. Enactment in many States has been specific to a considerable degree of detail, as in Montana, which decrees that only eight-wheel cabooses shall be run; in Texas, which specifies that all train locomotives must have electric headlights; in Vermont, which imposes a fine of $3,000 upon a railroad company for employing trainmen known to be dangerous because of their drinking habits, and prescribes imprisonment for a person intoxicated while in train service."

It is the charge of unfairness which has been a chief argument in favor of such legislation. The defense of the railroads is that the increase of business has been so rapid and sudden that the railroads have not been able to keep up with the demand. Mr. J. J. Hill, president of the Northern Pacific, has said that for the necessary expansion and improvement the annual expenditure should be $1,100,000,000 a year, and another competent authority puts it at $900,000,000. The conflict between the Federal and State authorities has been acute in the South. The North Carolina Legislature past two acts, one fixing the passenger rate at two and a quarter cents a mile and the other reducing the freight rates from 15 to 20 per cent. The United States court issued an injunction against these orders as confiscatory, but the State authorities disregarded the injunction and brought indictments against numerous agents of the Southern Railway Company for disobedience to the law. Finally the railroad agreed with the Governor to yield as to the passenger rate, pending the decision of the courts, while the old freight rate should be retained. An extraordinary law in Alabama provides that if any railroad seeks an injunction in a Federal court it shall no longer be allowed to do business within the State, and the license of the Southern Railway Company was actually revoked, but the State yielded in view of an imminent clash with the Federal courts.

Land Fraud Cases

Before the trial of Haywood, in Idaho, it was both asserted and denied that United States Senator Borah, leading counsel for the prosecution, had recently been indicted for conspiracy to defraud the Government of public land.

It was true that he had been indicted, but the indictment was withheld from the public until after the completion of the Haywood trial. Among those indicted with him, the press dispatches now say, were ex-Attorney-General Frank Martin, J. T. Barber, Sumner G. Moon and seven other persons. Barber and Moon are said to be millionaires interested in the Barber Lumber Company. The trial of the Senator is to begin on the 23d inst., unless it shall be delayed by the protests of counsel for some of those indicted with him, who assert in a plea of abatement that the indictments were procured improperly by District-Attorney Ruick. At the suggestion of counsel for the Government, and on account of this assertion, the charges against Ruick are to be considered by a special grand jury on the 19th. Several members of the indicting grand jury are said to have made affidavit that Ruick argued the case before that grand jury and insisted that indictments should be signed before he left the room. Factional politics and the Haywood case are involved. It is alleged that the indicted men obtained $1,000,000 worth of land by fraud.——The conviction of John A. Benson, at San Francisco, probably points to his conviction a second time at his trial in Washington, in January next, for bribery and conspiracy. Benson, a millionaire whose fortune was built up by land speculation, criminal and otherwise, has repeatedly been accused of such offenses. To avoid trial on several indictments he spent a few years in Holland. The case against him at Washington involves the corruption of employees in the General Land Office. The evidence upon which he was convicted in San Francisco, as well as that which will be used against him at the capital, was obtained by the famous detective, William J. Burns, who has assisted Francis J. Heney in Oregon and California. Heney consented to take up the work of prosecuting the thieves in San Francisco only upon the condition that Burns should be employed to help him there.——James L. Bradford, a wealthy lawyer of New Orleans, was convicted of conspiracy to defraud the Government of public land and sent to the penitentiary for two years. Owing to his extreme age and physical weakness, the President has commuted his sentence to four months.

Conflicts of Federal and State Authority

A multitude of writers are now raising the question whether the meaning of the Constitution has not been too seriously strained by decisions of the Federal Courts, and by utterances and acts of President Roosevelt. Inasmuch as the address delivered last Saturday at Jamestown by President Edmund J. James, of the University of Illinois, is one of the weightiest and most comprehensive utterances on the subject, we condense it in part. He says that the process of construing the Constitution has been carried so far that the confidence of the average man in its protection and guarantees has been profoundly shaken, and further that:

> "The fact is that we have come face to face in our national development with problems of such complexity and such magnitude that they cannot be solved without a large co-operation of the Federal Government; and this co-operation cannot be extended within the limits of the Constitution as it is—unless indeed we are willing to adopt new and enlarged principles of construction which would practically nullify the most important provision in the Constitution and convert it from an instrument delegating certain limited functions, into an instrument vesting an unlimited and ever widening authority in a government which by its very magnitude would become ever more irresistible."

Our leading statesmen, he says, seem unwilling to face this issue. Meanwhile, we have gone so far in the way of straining the Constitution, because we had to, that we cannot go back, and able statesmen urge that we go on further and further in this road. Thus it is proposed to limit the growth of fortunes by a Federal progressive inheritance tax. The purpose is social legislation, for which the Constitution gives no power, and it is proposed to use the taxing power to reach it indirectly. The obvious purpose of the taxing power was to raise revenue, but we have used it to drive State bank notes out of circulation, to build up protected industries, to destroy the manufacture of artificial butter, and now it would be used to limit large fortunes. The Federal Government, he says, cannot be held in check by the courts. The courts, he says, are no check upon the

Federal government, but in the long run have been the most powerful apologists and defenders of Federal encroachment upon individual and State rights. He declares that our Constitution is antiquated:

"The fact is our present Constitution has been so changed by construction and interpretation that its authors would never recognize it. And if we had not thus changed it, our Union would have gone to pieces long ago. It is full of ambiguities even now, though the American people have spent more blood and treasure in giving it a definite meaning than they have spent in all the wars of defense and offense which they have waged in the century and a quarter of their existence."

The Constitution, he says, proved inadequate to enable the nation to progress peaceably from a state guaranteeing the existence of African slavery to one abolishing it; and it is inadequate to enable the nation now to solve many pressing problems relating to our society, industry and politics. Such are the regulation of commerce, the government of our dependencies, the control of insurance and banking, factory laws, labor of women and children, arbitration laws, the regulation of swollen fortunes, of overgrown corporate power, taxation of absentee landlords and public education. Inasmuch as such new conditions have arisen since the Constitution was adopted, such as its framers never conceived, and for which the Constitution makes no provision, because it does not consider the needs of the total people as well as of the nation and the States; he says we have three courses before us—one, to observe the Constitution strictly, which would be suicidal; second, to keep interpreting it away, which will undermine the respect of the people for all law; and, third, to call a national convention and frame a new Constitution.

Campaign Contributions in 1904

The controversy over contributions to the Republican campaign fund in 1904, and concerning the assertions made by E. H. Harriman in the letter to Sydney Webster (published in April last) has been revived by the New York *World*, which asserts that the fund raised by Mr. Harriman in the closing days of the campaign of 1904, and after his interview with Mr. Roosevelt, was $260,000, and that the names of the contributors, with the amounts given by them, were as follows:

Edward H. Harriman	$50,000
H. McK. Twombly (representing the Vanderbilt interests)	25,000
Chauncey M. Depew (personal)	25,000
James Hazen Hyde	25,000
The Equitable Life Assurance Society	10,000
J. Pierpont Morgan	10,000
George W. Perkins (New York Life Insurance Company)	10,000
H. H. Rogers, John D. Archbold, William Rockefeller (Standard Oil Company)	30,000
James Speyer and banking interests	10,000
Cornelius N. Bliss (personal)	10,000
Seven friends of Senator Depew, $5,000 each	35,000
Sent to Mr. Harriman in smaller donations	20,000
Total	$260,000

This statement is accompanied by a long and circumstantial account, alleged to be true, of conferences and negotiations in which Mr. Cortelyou, Ex-Governor Odell, Mr. Cornelius Bliss, Senator Depew, and Mr. Harriman took part, and which are said to have preceded the raising of the $260,000. It is asserted that the money was paid to Mr. Bliss (treasurer of the Republican National Committee), that he gave it to Mr. Cortelyou (the chairman), that the latter retained $60,000, giving $200,000 to Mr. Odell (chairman of the New York Republican Committee), and that the entire sum was used in the State of New York during the week preceding the election. Concerning these assertions, Secretary Cortelyou said, immediately after the publication of them:

"When the proper occasion arises, I shall be perfectly willing to give the public a full and frank account of my stewardship, both in and out of public life. I am quite content to await that time and to abide the result. Meanwhile I shall adhere to my rule of not replying to charges of this sort, even though they be as false and mendacious as those published in this morning's *World*."

Senator Depew said to reporters that he never discussed ancient history, and that they must get their information from Mr. Harriman. The latter declined to discuss the subject. This was also the attitude of Mr. Twombly and Mr. Hyde, who are in Paris. Mr. Speyer denied that such a contribution had been made by himself or by banking interests with which he was connected. At last accounts, other per-

sons named in the list had not been found by reporters or had refused to talk about the matter. The New York *Times* asserts that the Standard Oil Company had been induced by Mr. Bliss and others to contribute $100,000 before the fund alleged to have been raised by Mr. Harriman was collected. Ex-Judge Alton B. Parker, Democratic nominee for the Presidency in 1904, has written for publication a long letter relating to this controversy. He deplores the failure of Congress to adopt the Tillman resolution, providing for an investigation of the campaign funds of 1904, and repeats the charges made by himself in the campaign of that year. Referring to contributions from corporations protected by the tariff, he remarks that "both the solicitors and the contributors regarded the beneficiary as under obligation to preserve their power to mulct the people, and the beneficiary has kept the faith." He urges that Congress should "enact a statute forbidding, under penalty of imprisonment, corporate contributions toward the election of a President or a member of Congress," and that every State should "forbid, under like penalty, its corporations from contributing money for any political purpose."

The Philippine Islands

William W. Cocks, a Republican member of the House (from New York), in an address before the Cebu Chamber of Commerce on the 10th, deplored the political situation in the islands, saying that the people were under the control of ultra-radical leaders. They appeared to be ungrateful, he added, and to have had too much self-government for their own good. There has been published in a Manila newspaper an interview with David P. Barrows, Superintendent of Public Instruction, who says:

"If the Assembly petitions for absolute independence without the aid of a foreign power and without imposing responsibility upon the United States I believe the petition will be granted. Americans consider the Phillipines as representing an annual expense of $15,000,000 for the maintenance of a military and naval force in the islands."

As Mr. Barrows visited many States during his recent vacation in this country, and is said to have discussed the condition of the islands with many prominent persons, the native press regards his remarks as semi-official utterances. Representative Hull, of Iowa, chairman of the House Committee on Military Affairs, has been talking to newspaper correspondents about the islands. "We are not going to sell them," he says, but he regrets that we have them. We must "face the music," and do the best we can. He would like to see less discrimination against Americans in the islands. He lost money in a lumber venture there:

"The plain truth is, that no American capital can be induced to go to the islands until we stop some of the foolish discriminations that are now imposed on American business men, and give certain advantages to which the islands are entitled. We must give free trade to the islands and definite inducements to our people to go there and invest. I do not believe in awarding monopolies, but if some Americans start a sugar establishment or a big lumber industry, I believe in dealing directly with them and making concessions that will be to their advantage. My investment was a total loss, because of unfair and unreasonable discriminations. I would also stop this infernal talk about self-government. We must put an end to stimulating these half-civilized people with the idea that they are fit to govern themselves. We are going to keep them, and some day, if they are fit to govern themselves, they will have a Government like our other Territories. They will not be fit for this for fifty years, and in the meantime we must stop this independence talk among them. I would say to them: 'If you are good we will reward you, and if you are not good we will spank you, but under all conditions we are going to keep you.' When they understand this they will settle down. As things are now, they interpret our kindness and indulgence as fear. Many of the leading natives told me this when I was last in the islands."

Mr. Hull thinks Secretary Taft's views about the Philippines have recently undergone a change and that he is less optimistic as to the development of the natives toward capacity for self-government. Representative Reynolds (Republican), of Pennsylvania, said a few days ago, when leaving Manila for this country: "My confirmed opinion is that we should continue as we have begun. We should not cross the bridge of independence until we reach it, and we are not yet near it."

Cuba

Additional cases of yellow fever were found at Cienfuegos last week—four on the 12th and three on the 13th. The discovery of these

cases was due to the increased efficiency of the medical patrol. The disease was also found in Alacran and Nueva Paz. Reports to our War Department show a great neglect of sanitary precautions in many cities since the withdrawal of the Government of Intervention and a culpable disregard of the provisions of the fifth stipulation of the Platt Amendment, which required the republic to execute the plans devised for the sanitation of these places. It appears that the local health authorities of Cienfuegos were not aware of the presence of yellow fever there until the death of Sergeant Merritt was reported to them by American army surgeons. There were cases of the disease in a private hospital which was in the same building with the army hospital, and the Cuban physician who conducted this private hospital used no screens to prevent mosquito infection.——On the 14th, the Mary Kingsley Medal was awarded by the Liverpool School for the Study of Tropical Diseases to Dr. Charles Finlay, who originated the theory that yellow fever is carried by mosquitoes, and to Col. William C. Gorgas (now sanitary officer of the Panama Canal Zone), who, as chief sanitary officer at Havana, gave practical effect to Dr. Finlay's discoveries.

Asiatics in Vancouver

There has been no repetition of the rioting of last week at Vancouver, but the situation is still critical, and the antagonism to Asiatics is becoming stronger and more thoroly organized. No deaths have resulted from the four attacks upon the Japanese quarter on Saturday night, and twenty-six of the leaders of the mob have been arrested. The Japanese and Chinese purchased arms and ammunition in quantity until the gun stores were closed by the police. They appear upon the streets freely and show a disposition to resent insults and maintain their rights. They struck work for two days and those in domestic service left their places and joined their countrymen. The quarter was roped off at night by the police, who were reinforced by 200 special deputies. The steamer "Monteagle," of the Canadian Pacific, arrived at Vancouver September 11th, bringing 901 Hindus, 149 Chinese and 115 Japanese. Mayor Alexander Bethune notified the captain that he could not afford protection to the immigrants. The ship accordingly turned back to Victoria, where the Japanese and Chinese were landed under protection of a special police force. The "Monteagle" then returned to Vancouver, but the crowd was so large and threatening that the Hindus were kept on board for two days, then secretly landed. Over a hundred were rejected as unfit by the medical examiners. The Mayor telegraphed to Sir Wilfrid Laurier as follows:

"Nine hundred Hindus arriving to-day. Neither accommodation nor employment for them. Shall we house them in Drill Hall at Dominion Government's expense?"

To which the Premier replied:

"I would understand from such a request that these Hindus are paupers, therefore liable to deportation. Minister of Interior will send to-morrow special officer to deal with the questions."

The Hindus, however, could not be rejected as paupers, for they had with them $30,000 in gold, and as British subjects they could not be refused the right to travel or reside in any part of the empire. A fund was raised to send them by special train to Ottawa, "with the compliments of Vancouver," but there is no reason to think they either wish to go or can be made to. The treaty between Japan and Canada, ratified by the Canadian Parliament at its last session, provides:

"The subjects of each of the two high contracting parties shall have full liberty to enter, travel or reside in any part of the dominion and possessions of the other contracting party, and shall enjoy full and perfect protection for their persons and property."

There was an agreement that the number of laborers coming from Japan should not exceed 500 a month, but nothing was said about the Japanese coming from Honolulu, as they are now in great numbers. The English papers lay the blame for the Vancouver riot on the Americans, both because they set the example in San Francisco and Bellingham and because some of the leaders of the anti-Japanese and Korean League, from California and Washington, were in Vancouver when the outbreak occurred. The riot, or at least the demonstration preceding it, was planned to impress Baron Ishii, chief of the Bureau of Foreign

Commerce, who was in America to investigate the situation, with the strength of the anti-Asiatic feeling on the Pacific Coast. The Cooks' and Waiters' Union has given notice to the proprietors of all hotels and restaurants that all Japanese and Chinese must be discharged, and the labor unions have given all employers of Oriental labor thirty days to replace it by white, under penalty of a general strike. American papers have held that the recent events proved that Vancouver was the same as San Francisco, but the Japanese do not think so, as the following comment by Count Okuma, in the *Hochi,* shows:

"The latter occurrence must not be placed in the same category as the former. The San Francisco authorities directly or indirectly countenanced the acts of the rioters, while the Municipal Government was a center of corruption, almost a state of anarchy prevailing. I liken the San Francisco riot to the Boxer outbreak. President Roosevelt's attitude at first was very fair and admirable, but after his conference with a delegation from San Francisco a change came which sadly disappointed us.

"The Vancouver incident was quite different. It was an outrageous act, limited to laborers and unsupported elsewhere. The local authorities sincerely did their utmost to suppress the riot and protect our countrymen. They even went so far as to give permission to our compatriots to take measures of self-defense. The sincerity so fully evidenced of these really worthy local authorities of our ally in their effort to protect our rights makes us confident of effecting a satisfactory solution of the deplorable situation."

The Voyage of the "Lusitania"

Great interest was excited on both sides of the Atlantic by the maiden trip of the new Cunard liner "Lusitania," which is an advance over anything previously attempted in steamship construction in size, elegance of furnishing, convenience of arrangement, and the use of the turbine. The turbine is, in principle, the simplest and oldest form of the steam engine, as it was described by Nero of Alexandria two thousand years ago, and resembles the well-known form of water-wheels and windmills, jets of steam striking against the paddles of concentric wheels, alternately revolving and fixed. It occupies less space, is cheaper to construct, more economical to operate, and shakes the vessel less than the ordinary reciprocating engine. There was some disappointment that the "Lusitania" did not break all records and maintain the speed of 24 or 25 knots an hour, of which she is capable; still, the results were so satisfactory as to stimulate the making of vessels of this type in the future. The log of the "Lusitania" showed the following days' runs: Monday 561 nautical miles, Tuesday 575, Wednesday 570, Thursday 593, Friday 481; total mileage 2,780; average speed 23.01 knots per hour. The "Deutschland," of the Hamburg-American line, in August, 1900, made a day's run of 601 miles, and the "Kaiser Wilhelm II," of the North German Lloyd, in June, 1904, maintained a speed of 23.58 knots. The "Lusitania" made the run from Daunt's Rock (five miles out from Queenstown) to Sandy Hook in five days and 54 minutes. The best previous record over the same course was that of Cunard "Lucania," in 1894, 5 days, 7 hours, 20 minutes. The dimensions of the "Lusitania" are: length 790 feet, breadth 88 feet, depth 60 feet, displacement 45,000 tons, load draught 37 feet 6 inches, turbine engines, 70,000 horse power. She carried 486 first-class, 483 second-class and 1,121 steerage passengers, and 750 crew. The ship passed thru the new and straighter Ambrose Channel, in the lower harbor of New York, now being dredged out by the Government for the accommodation of such large vessels.

Liberal Church Movements in Germany

The *Monistenbund,* of Germany, a national organization rapidly growing in numbers, and the pronounced followers of the philosophy of Monism as advocated by the famous zoölogist of Jena, Prof. Ernst Haeckel, and his "World Riddles," has undertaken to organize religious societies thruout the Empire, with a fixt ritual and form of worship, in which the principles of this philosophy are to be utilized to supply the religious demands of those who have broken with Christianity. Monism is, accordingly, no longer to be a mere philosophy, but like Positivism, to be a religion. The Bund employs a large number of lecturers who have entered upon this propaganda, and Haeckel himself has delivered courses in Berlin that proved exceedingly popular.

Particularly are the Social Democrats, who have failed in their program of a general exodus from the State Churches, becoming adherents of the new creed, which in its radicalism is so anti-churchly and anti-Christian, denying even the existence of God and reducing all religion to a set of simple morals, that even Bremen, the most ultra-radical city, religiously speaking, in the Fatherland, has forbidden its pastors, Drs. Stendel and Mauritz, to continue their connection with the Bund. Another movement looking to the establishment of a new religious communion to take the place of the Church is that headed by Wilhelm Winsch, a Berlin physician, who has written a series of works against the principles of the Church. He has lately issued an "Appeal," with the central theme: "Away from the Christ of the Church and back to the true Jesus of history," in which he pleads for the organization of congregations that deny the divinity of Christ and are content to find in him a great moral model and to draw their religious strength from the inspiring influence of his example. This step is all the more significant because, at the Weisbaden convention of the Liberals recently held, it was declared necessary, before peace could be established between modern thought and the Church, to rid the latter of its "Christological yoke." Harnack, in discussing the doings of this remarkable assembly, declares that the central church and religious problem of the day is really the question as to the character and nature of Christ, or Christology. Winsch justifies his propaganda by the claim that the educated world of today has practically broken with historic Christianity, which the conservatives emphatically deny.

Foreign Notes

The French at Casablanca, Morocco, having discovered by means of a balloon that the Moorish camp was located at Taeddert, General Drude made an early morning attack upon it in the fog. The French force moved forward in two detachments, and having carried the breast of the hill, charged down the valley, where 600 Arab tents were pitched. The natives made a brave but short resistance against the combined bombardment of the French field artillery and the guns of the "Gloire," then were driven from the camp in disorder by a bayonet charge. The tents were set on fire and the whole camp swept clear.——King Leopold of Belgium has turned over the "domain of the Crown," consisting of the most valuable lands of the Kongo and covering an area ten times larger than Belgium, to a joint stock company in which he is said to be interested. The King had been compelled to agree to the annexation of the Kongo by Belgium, and a month ago commissioners had been appointed, four representing the Free State and four Belgium, to arrange the details of the transfer. His present action will leave the victory of the Belgians over their King a barren one, since large areas of the most profitable parts of the region had already been conceded to companies, some of which were under the control of prominent American capitalists.—— President Fallières of France has commuted the sentence of Soleilland to penal servitude for life. Soleilland was convicted of an atrocious murder of a twelve-year-old girl, and on account of the frequency of crimes of this character against young girls in France there was a great popular demand for the enforcement of the death penalty, which has been gradually going out of use. The Government bill formally abolishing capital punishment was introduced into the Chamber of Deputies at the last session, and the Chamber struck out from the appropriation bill the provision for the salary of an executioner. A parade of many thousand men, women and children past thru the streets of Paris expressing indignation against the President for his clemency, and demanding increased vigilance and severity on the part of the police. ——The police have investigated the dynamite explosion at Glenahiry Lodge, near Clonmel, August 13th, which was supposed to be an attempt of the Irish to assassinate Lord Ashtown, an obnoxious landlord. They find that the materials for the bomb were procured on the estate, and the inference is that the explosion was planned by Lord Ashtown himself or some domestic for the purpose of discrediting the Irish cause.

La Belle France

BY MAXIM GORKY

I WALKED a long time thru the streets of Paris before I found her. I asked many people where she lived, but no one could tell me accurately.

One old man, apparently a wag, sighed and shrugged his shoulders.

"Who knows?" he said. "Once upon a time she lived in Europe."

"In the bankers' street," a workman informed me rudely.

"Go to the right," another man told me.

It was noisy and unpleasant. Everywhere in the open places cannon and soldiers, and workmen crowding the streets. According to a habit recently acquired in all countries, the soldiers kept up a constant shooting, the cavalry bore down upon the people, waving their bared sabers, and the workmen threw stones at the soldiers. The stifling atmosphere of the gray city hummed with malicious imprecations and sharp words of command. Here and there the pavement was spattered with blood. People with broken heads, clenching their fists in impotent fury, skulked homeward. Those who could no longer stand upright and had fallen to the ground were humanely snatched from under the feet of the soldiers and horses by the police, and carried off. Spectators looked from the windows, and passed remarks upon this familiar picture of life in a Christian city.

Finally some one said to me:

"France? To the right. At the Alexander III bridge."

The bureau of police in which she was living was an old edifice, which presented nothing striking to the eye either in grandeur or beauty. At the door stood two soldiers. Their trousers were made of red banners of freedom. The remnants of an inscription adorned the door: Lib.....gal...rat..nité. I was reminded of the gang of bankers, who like vermin defile the country of Béranger and George Sand. I entered. My nostrils were assailed by a moldy odor of putrescence and debauchery.

My heart beat faster. For I, too, like every revolutionist, had in my youth loved this woman, who herself had loved sincerely and much, and had made revolutions so beautifully.

A man dressed in black approached me. His manner reminded me of a marquis. Smiling affably, he led me into a semi-obscure vault, where I could admire the elegance of the *style moderne* of contemporary France.

Pasted on the walls were copies of the notes of the Russian loans. Hides of natives of the French colonies lay on the floor. The skins were artistically tattooed with the declaration of the rights of man. The furniture was constructed of the bones of the people who had fallen on the barricades of Paris fighting for the liberty of France. The alliance treaties with the Russian Czar were sewed into the furniture coverings. The walls were hung with the armorial bearings of the European governments, made of living human flesh inlaid with iron—the armor-clad fist of Germany, the slip-knot and nagayka of Russia, the beggar's sack of Italy, the black cowl and the greedy, bony hands of the Church of Catholic Spain, and the fat stomach of a bourgeois of France.

On the ceiling was represented the open mouth of the Emperor of Germany with his sixty-four teeth and menacing mustache. Heavy curtains hung over the windows. It was dark, as always in the reception rooms of women of Balzac age, who have not yet lost hope of captivating men. The air was heavy with the smell of false delicacy and spiritual depravity. I breathed with difficulty, and my head reeled.

She walked in, and scrutinized my figure thru her lashes with the air of a connoisseur of men. I greeted her.

"You speak French?" she asked. Her manner was that of an actress who had long ceased to play rôles of royalty.

"No, madam, I speak only the truth," I answered.

"Who needs the truth?" she asked, shrugging her shoulders. "Who listens to it? Nobody finds truth pleasant even in beautiful verses."

She went to a window and half drew apart the curtains, but immediately walked away again.

"They are still making a noise out there on the streets" she said discontentedly. "Such babies! What do they want? I can't understand them. They have a republic and a cabinet of ministers not equaled in any other country. One minister is even a Socialist. Isn't that enough for the happiness of the people?" Tossing her head pettishly she added: "Don't you think so? But you've come to speak to me——"

She sat down beside me, looked into my eyes coquettishly, and asked:

"What shall we speak about? Love? Poetry? Ah, my Alfred de Musset! My Leconte de Lisle! Rostand!——" She rolled her eyes upward, but when they encountered the teeth of the German Emperor, she dropped them.

I did not interrupt her pretty tattle about the poets. I waited in silence until she would begin to speak about the bankers. I looked at this woman. Only a short while ago every knight had carried her image in his heart. Now her face was the face of one who has loved overmuch. Her lively colors had faded, wiped off by a thousand kisses. Her skilfully penciled eyes wandered restlessly, her lids were swollen, her lashes drooped. The lines on her neck and temples bore mute evidence to the tempests of her heart, her cheeks and chin, to waxing corpulency. It was apparent that now the poetry of the stomach spoke louder to this woman, grown wrinkled and stout, than the great poetry of the soul. Now the rude call of the belly drowned the voices of truth and freedom that had once pealed from her mouth and rung over the entire world. Nothing remained of her former grace and power of movement, save the habitual ease of a forward hussy, a market-wife in the international market. She had exchanged the charm of a heroine fighting for the happiness of her people for the coquetry of an old dame, of a heroine of countless amorous adventures.

She wore a dark gown trimmed with lace. It reminded me of the rust on the Statue of Liberty in New York Harbor. Her voice sounded weary. She seemed to speak merely in order to stifle recollections of something great and honest. At times memory still pricked her cold, worn heart, in which disinterested feelings no longer found a place.

I looked at her and was silent. It cost me an effort to restrain a cry of agony at the pitiful sight of this tormented spirit. I thought: Is it possible that this is Madame France? Is this the heroine of the world, whom my imagination always pictured as garbed in the flame of bright thoughts, great words—Equality, Fraternity, Liberty?

"You're not a cheerful companion," she said to me, and smiled wearily.

"Madam," I answered, "these days no honest Russian can feel himself happy as a guest of France."

"Why?" she asked, with a false smile. She lifted her lashes in astonishment. "In my Paris everybody makes merry—always."

"I just noticed it in the streets. Exactly the way they make merry in Russia, too. The bloody play of the soldiers with the people, the favorite sport of the Czar, your friend."

"You're a gloomy person," she observed, with a grimace. "When the people demand everything the king possesses, he must not give them even that which he is able to. Kings have always reasoned thus. Why should they think differently now? You should take a simpler view of life. You are not yet an old man. Why so despondent? As long as a man can love, life is very beautiful. Of course, Nicholas II—he is—what shall I say?—he yields too much to the influence of bad people. But really he's a good little—why, look, he gave you freedom——"

"We wrested it from him. The price was thousands of lives. And now that we've torn it from his hands, he demands more and more blood in payment. He wants us to return to him what he gave us only under threat. And now you have provided him with the money to take it away from us."

"Oh, no!" she exclaimed. "He won't

take it away, believe me. You know, he's a gentleman, and he can keep his word, I assure you."

"Are you aware that you gave money for the perpetration of murder?" I asked.

She threw her head back into shadow, so that her face could not be seen. Then she said calmly:

"I had to give it to him. You know this Nicholas is the only one who can help me when that mouth up there wants to bite my head off." She smiled, and pointed to the ceiling, where the teeth of the German glistened decoratively. "That greedy mouth, I must confess, does lead me into a little wrongdoing. Besides, wrongdoing is piquant sometimes."

"Isn't it loathsome to you to lean on the shoulder of a man who is covered with the blood of his people?"

"If there's no other shoulder to lean on? It's hard to find kings with hands unstained by the blood of their people. You've got to take them as they are. I can't tell what they're going to be. I'm a woman. I need a friend. Of course, for a republic and an Asiatic despot to go hand in hand thru the world isn't very nice. But it's original, don't you think so? Like all poets and revolutionists, you don't understand politics. Where you see politics, don't look for beauty. You'll find only a stomach and a mind that obediently subserves the stomach."

"Doesn't it seem to you that you stifled the well-deserved glory of France with the money you gave the Czar?"

She looked at me with wide-open eyes, laughed, and moistened her painted lips with the tip of her sharp tongue.

"You're only a poet. Your ideas are out of date. We live in a rude age, when it's all very well and good to write verses; but to carry poetry into everything—that's impractical, to say the least." And she laughed with an air of superiority. "My Shylocks, it seems to me, have done an excellent business. They have extorted an amount of interest from your Czar equivalent to a pound of his flesh."

"But in order to pay the interest, the Czar will have to get the flesh of all his people."

"Of course—that is, probably. What else was to be done?" she asked with a shrug. "The government engages in politics, the people pay for it with their labor and blood. That's the way it always was. Besides, I'm a republic, and I cannot prevent my bankers from doing what they please. The Socialists alone don't understand that this is a normal procedure. It's all so simple. Why fret and fume? Why fly in the face of sober common sense? My Shylocks have given much, and ought to give still more, so as to get back at least something. For as a matter of fact they are in a very dangerous position. If—not the Czar conquers —but——"

She was afraid to utter the word which had created her glory.

"They might remain poor, and even if he does conquer, I don't think they'll get their interest very soon. Why, they're my children, aren't they? Rich people are the strongest stones in the edifice of a government. They are its foundation. The poets, they are only an ornament, a decoration of the façade; they can be dispensed with. They do not increase the stability of a structure. The people are only the ground upon which the house stands, the revolutionists are simply madmen. To pursue the simile, you might say the army is a pack of watchdogs which guard the property and the security of the occupants of the house."

"Do Shylocks live in the house?" I asked.

"They and all the other people who find it convenient. But let's drop the subject. When politics isn't profitable, it's a bore."

I rose, and bowed in silence.

"Are you going?" she asked indifferently.

"I have nothing to do here," I said, and walked away from this procuress of the Czar and the bankers.

I had not found her whom I wished to see. I had found only a cowardly, cynical *cocote,* who for money, not trueheartedly but cold-bloodedly, gives herself away to thieves and hangmen.

I walked along the streets of great Paris, on that day held in captivity by the hired soldiers, the dogs, of the old, greedy woman, with their bayonets and cannon. I saw how the Frenchmen gathered at the corners, and like true heroes of truth and freedom, counted the

forces of their enemy in silence, ready to wash away with their blood the shameful stain on the face of the republic. I felt that the spirit of old France, the great mother of Voltaire and Victor Hugo, was springing into being again, was growing, and waxing strong—the spirit of France that had sowed seeds of freedom wherever the cries of her children, her poets and warriors, had penetrated.

I walked along the streets of Paris, and my heart sang the hymn of France:

Who, O France, in the early morning of his days did not love and adore thee?

In the days of his youth a man's soul bows before the Goddesses of Beauty and Liberty, and thou, O great France, dost seem their only shrine.

France! Every brave and honest man bore the name in his heart as he bore the name of his own passionately beloved bride. Thy past abounded in days great and glorious! Thy wars, they are mankind's holidays, thy sufferings, its lessons.

What beauty and strength erstwhile in thy quest for justice! Honest was the blood thou didst shed in the struggle for liberty. Can it be that this blood has dried up forever?

France, thou wast the belfry of the world. From thy tower three strokes resounded, three shouts rang out, rousing the peoples from their slumber, Liberty, Equality, Fraternity! Thy Satan-faced son, Voltaire, battled thruout his life against triviality. His sage's laugh held a powerful venom. One line of his poisoned even the priests, who had been able to devour thousands of books without spoiling their stomachs. Yea, thru him the very kings, defenders of lying, were forced to respect the truth. Great was his power and his courage in striking at falsehood. France, grieve because thy son is no more. He would have dealt thee a slap—be not offended; a slap from such an one is an honor to so mercenary a mother.

Thy son Hugo, one of the brightest jewels in the crown of thy glory! A tribune and a poet, he sent a trumpet call thru the world, stirring to life everything beautiful in the soul of man. He created heroes everywhere. With his books he created heroes no less than thou, when, O France, thou didst advance before the people, the flag of liberty in thy hand, a merry smile on thy beautiful face, hope for the triumph of truth and goodness in thy honest eyes. He taught all to love life, beauty, truth and France. Well for thee he is no more. He would never have pardoned the meanness even of his France, whom he loved as a youth loves, tho his hairs were already turned white.

Flaubert would have turned from thee in disgust—Flaubert, the knight of beauty, the Hellene of the nineteenth century, who taught the writers of all countries to respect the power of the pen, to comprehend its beauty; Flaubert, the wizard of the word, impartial as the sun which shines alike upon rubbish in the street and precious laces on a lady's gown; yes, Flaubert, for whom truth was in beauty and beauty in truth, would not have pardoned thee thy greed, would have turned from thee in disgust.

Thy best children are not with thee. In shame of thee, stay of the bankers, they have drooped their honest eyes, they would not see thy fat face. Thou hast become a market-wife. Those who learned from thee to die for honor and freedom no longer understand thee. With pain in their souls they turn away from thee.

France, greed for gold, has disgraced thee. The alliance with the bankers has corrupted thy honest soul, has poured the muddy water of triviality on its burning fire.

Thus, thou, mother of liberty, thou Jeanne d'Arc, hast lent strength to beasts, that they may crush humankind under their feet once again.

Great France, once the world's leader in progress, dost thou grasp all the hideousness of thy deed?

Thy mercenary hand has placed an obstacle in the path of liberty and culture for a whole country, and if that obstacle remain no longer than a day, thy crime will be none the less. But thou hast not halted the progress toward liberty for a single day alone. Thy gold will cause the blood of the Russian people to flow again.

Let this blood paint thy worn-out cheeks, let its red cover the eternal shame of thy lying face.

My beloved!

CAPRI, ITALY

The Women Reply

[In publishing in our issue of August 22d an article by a well-known but anonymous clergyman on "My Opinion of Women," which, we knew, would arouse much dissent among our readers, we asked for comment and criticism. The letters we have received, altho not numerous enough to alleviate the deficit in the Post-Office Department, yet are sufficient to give a comprehensive and diversified argument, as the following quotations show. In fairness to the writers, it should be understood that very few of the letters are published complete. Sometimes only a few sentences are extracted containing some point not otherwise covered. To have published the selected letters in full would have involved too much repetition, for many of the writers use very similar and often identical language in expressing their opinion of the clergyman and his views. If this fact is regarded as indicating that unanimity of sentiment and uniformity of mental processes are characteristic of the feminine mind, it is referred to whichever party finds it serviceable as an argument. For the consolation of those who do not find their words in print, we will add that all of the letters have been forwarded to the author at his request, and we trust that he will read them in a humble and teachable mood to the profit and edification of his soul. The article has been so thoroly discussed that we do not think it necessary to add anything. But in our editorial columns will be found a restatement of THE INDEPENDENT's policy in regard to the treatment of controversial topics which some of our correspondents have misunderstood. To the many contributors who sent us various and satisfactory explanations of the significance of the pictorial decoration at the head of the clergyman's article, we are especially grateful.—EDITOR.]

Ask the Japanese.

Is the bird heading the article intended as an editorial comment? If so, does it indicate the editor's opinion of the writer, the subject or the article? Is it a gander or a goose? Or a wild-goose chase? Which?

ANXIOUS INQUIRER.

MASSACHUSETTS.

Brief But Pointed.

Your clergyman has the egotism and lack of original thought common to most men of his calling. For a pen-portrait of himself I advise him to read Bernard Shaw's "Candida."

EDNA MERCHANT.

CAMPVILLE, CONN

A Thinking Man.

Will you allow a mere man the observation that "My Opinion of Women," in your issue of August 22d, written by a man who "has served, for several years each, four important congregations," seems to answer fully the question often raised of late years—"Why are thinking men keeping out of the churches?"

E. H. J.

CONNECTICUT.

What She Resents.

What I resent is, that after years of admiration for THE INDEPENDENT, I, a woman, should read such sentiments from its pages, and that I, a *church woman*, should find them expressed by one belonging to a class who at least are supposed to have the courage of their convictions and not be found guilty of the cowardice of an unsigned article, or, worse still, a signature cloaked by an office, which may, in the eyes of many, bring reproach upon that office.

A CHURCH WOMAN.

Read Mazzini.

Granted that the clergyman is right in his criticism of woman, the reason is not far to seek. The ordinary girl of eighteen or twenty is fitted by nature for great thoughts, deep feelings, and much active responsibility. At the age when Jane Addams's father was reading Mazzini with her, I imagine that in the families the clergyman knows the ordinary girl thinks and feels as best she may without much guidance and active responsibility; the most important element in her training is denied her by the circumstances of her life.

The result is that the mind of the ordinary young woman remains the poor, half-developed thing the clergyman so well describes.

JANE E. ROBBINS [M. D.]

BROOKLYN, N. Y.

As Man Made Her.

Why is it that "man" is so prone to discuss "woman" as tho she were a genus quite distinct from himself? Man has undoubtedly been endowed by nature with one characteristic—force—in larger measure than woman, and their lives are so bound up together that she necessarily becomes what his dealings with her make her.

As a little girl, he coddles her or conventionalizes her; treats her as a plaything, a household utensil, or a parlor ornament. As a young woman, he turns her attempts at equal friendship into lovers' episodes. As a woman in the most intimate private relation, he assumes that the situation is *his* by right, and quietly, but firmly, ignores her woman's point of view. Why should she reason and be logical?

A NEW YORK WOMAN.

Philosophical.

Another man butts his head against the wall of woman's nature until it aches. If he would only stop going about the task in that bull-headed objective way, and do a little subjective thinking, he would arrive somewhere. I mean by this to note carefully one's own desires and impulses, especially the little movements of the mind on the borders of the subconscious, the ways in which ideas are associated and blended. Men and women are the same at bottom and the reason they differ is because of different kinds of education and pursuit, which produce different habits of thought. If men and women are educated in such manner as to emphasize differences they will understand each other less and less, and there will be more men to bore the world with their lucubrations about women's ways.

PRAGMATIST.

NEW ORLEANS, LA.

Her Opinion of His Opinion of Her.

. . . The most important thing to be said of the clergyman's article is this: That it is largely true, and also true of himself. He has described the mental blemishes, not of the species *femina*, but of the *genus homo*. If a woman were to defend herself in the manner in which she has been attacked, she would probably answer as follows:

SHE.	HE.
1. She argues in a triangle.	He expects her to follow his straight line.
2. She is vague.	He is tactless.
3. Her thoughts are not consecutive.	He plods along, while she jumps the unimportant.
4. Her memory is contrary.	Pluck out the beam.
5. She takes offense at trifles.	She takes offense at the clergyman in question.
6. Her moods are variable.	His only mood is the Imperative.
7. She loves to mystify.	He loves to disillusion.

A WOMAN.

EASTON, PA.

The Pastor and his People.

As a religious woman of the old school, I wish to express my sympathy for the clergyman who told us his opinion of women. He has apparently had to deal, for the most part, not with the serious, busy women of his parish, but with those idlers who hang about the parson, flattering him by an assumed air of interest in his sermons and collection notices, by asking him to dinner and pretending to be offended when he must decline, by asking his advice and seeming for the minute to take it, to make him think that he plays a real part in their lives.

. . . It is not often that I go to my spiritual adviser about anything, but how can I ever do it again after hearing what this supposedly representative divine says about the women who do come to him? He does not wish to give advice unless they will almost surely follow it. The Founder of Christianity was willing to bear the sins of the world; this disciple is not willing to even hear about them.

HELEN C. MACNAMARA.

NEW YORK CITY.

Birds of a Feather.

. . . Ministers are a peculiar class. Unlike the members of other professions, they are comparatively isolated, are allowed to have their say on Sunday without criticism, and are listened to by a sympathetic and often an admiring audience, drawn together by similarity of views and aims. They are of all varieties, from the Rev. Billy Sunday and Sam Jones to Washington Gladden, Lyman Abbott and Edward Everett Hale, and each congregation takes its character from its minister, or the minister may be chosen to meet the characteristics of the congregation.

That there are many foolish and weak women in every city—as there are men to mate with them, goes without saying, and they all go to the church which most attracts them. The remarks which your clergyman makes are not at all a reflection on women, but on himself, for attracting that kind of women to his ministrations from whom he draws his narrow and partial generalizations. The class of unthinking and prejudiced men and women whom he represents is a large and familiar one, and his remarks excite no surprise; the surprise is that a paper of such standing and established reputation as THE INDEPENDENT should stoop to publish them.

B.

The Church to Blame.

. . . The spirit of Christ in the churches has done much for women. Men have been civilized into believing that a woman is a human being with a soul. Unfortunately, however, from the time of Paul the churches have fostered the egotism of men and have subjected the women to the same pernicious training. Why they have ignored the Savior's fair and impartial treatment of men and women is, to me, a mystery. . . .

. . . . Yet the Episcopal Church compels women to perjure themselves and admit their slavish position when they take the sacred marriage vows. They impress upon them their lowly state by the rule forbidding them to enter a church with uncovered head. The Catholics go further, and openly teach the inferiority of women. Our present privileges of education and fair legal status are due largely to the work of such churches as the Congregational, which recognizes no sex in its government and ceremonies. . . .

Most women are man-made. They are like birds whose wings have been broken to keep them from flying. At first women were imprisoned to keep them in slavery. Then a better way was found, and men crippled their bodies; but the surest way of all is to dwarf their characters and blight their intellect, and men have not scrupled to do both.

EDITH M. FITCH.

HURLEY, S. D.

You May Submit the Article.

I have read the clergyman's thesis with great interest, and I think I understand all but the significance of the drawing above the title.

Before advancing because's for the minister's why's, I wished to be sure that his questions were fair, so, of course, I applied the personal test: Is *my* mental process like an Irish snake? Is my pride groveling, and my modesty arrogant? Does a minor detail impress me more than a major premise?

It was at this point that I had to own myself convicted, for even as I read the brilliant analysis I found my appreciation brought up short at each instance of the "reformed" spelling which is used by THE INDEPENDENT. Those final o's and u's (which were no more intended to be final than a woman's judgment) took more of my attention than was held by the critic's wisdom. I recognized the state of mind they induced as the same that is caused by an eloquent preacher's playing with his eye-glasses, exaggerating his consonants, or using "will" for "shall."

And so I admit that the charges in this "laudatory" article are fair; and, therefore, it is useless for me to answer the author's questions, since I could not give explanations that he would understand. But wouldn't I like to write "A Woman's Opinion of Clergymen"!

F. L. M.

Abnormal Women.

That the clergyman is fully justified in his opinion, when based upon such data as he has available in his realm of experience, I shall not attempt to gainsay. But I am led to believe that his necessarily limited activities as a clergyman have given him an intimate knowledge of pathological rather than normal phenomena. . . .

It is a matter of actual statistics, that among lunatics whose affliction is not the result of some specific bodily injury or mental shock, an inordinate number are the only sons or daughters of their parents. This is evidence to the mental derangement incident upon excluding from the human mind all knowledge of life's pressure, and removing the individual beyond the pale of economic necessity. It therefore follows that any class of human beings, whose environment precludes the possibility of all personal knowledge of life's struggle, are rendered more or less irrational. Man is by nature as inclined to be illogical as woman, but the schoolmaster of experience stands ever ready to correct the error, until thru many repetitions he comes to err less frequently in his reasoning. Women who have felt the pressure of economic necessity are brought perforce to adopt the same processes of reasoning that men have been compelled to adopt. . . .

It would be hard to conceive of a human being, more removed from the corrective experiences of life, than the woman of a well-to-do congregation. Her mental processes are the direct outcome of her environment, and this, in turn, is the result of her social and economic condition. . . .

(MRS.) LILLIAN HALE DEAN.

PHILADELPHIA, PA.

Overworked.

. . . The poor, deluded creature with delirium tremens never imagines for one moment that the snakes he sees, the lizards, with ice-cold feet, creeping over his body, are in reality not there. The insane man who believes himself king is at a loss to understand why the world does not treat him as such. The minister, who, according to his own statement, has accomplished the following in a half week:

Two funerals	3 hours
One marriage	15 minutes
One conference	2 hours
One lecture	4 hours

(One luncheon outside of working hours does not count for time.)

is perhaps unable to see that he has actually worked nine hours and fifteen minutes in one half week. Less than one day for a busy merchant or one night for the ordinary physician. I implore you, dear sister, have compassion on the busy minister, lest he fall from exhaustion. In such a case the family physician will be called, and who will pay the doctor's bill?

I shall answer a few of his questions, picked at random: "Another asked me to dinner, but does not state the hour." Bless your soul, brother, do you think dinner comes in the morning? Another is, "One came to me with a frightful quarrel to settle—she was angry with another woman. Next day when I called they were driving in the park together." The clergyman remarks that this was very strange, but is it not the teaching of Christ? Did not Christ teach us to forgive our enemies? In another place we find, "Do not ask his advice unless you intend to use it." How absurd and ridiculous for this clergyman to think that all the women of his congregation should bow in humble submission to his advice regardless of whether they agree with him or not. . . .

(MRS.) W. W. BALLAINE.

BELLINGHAM, WASH.

At Least He Stopped a Game of Bridge.

A surgeon friend interrupted a game of bridge to read to us women the clergyman's article, "My Opinion of Women." We enjoyed it very much by reason of genuine mirth created by its logic (?) and its diction. It is, of course, absurd to take seriously such a palpably weak flaunt of a small, red rag to "stir up the animals." The clergyman unwisely confesses that the article was ordered and hastened by THE INDEPENDENT, and so, presumably, well paid for, and it has, therefore, at least two reasons for its perpetration: one, always and painfully true, the clergyman needed or wanted the money; another, THE INDEPENDENT, gaging the quality of the man, scented a paying business venture in the "stir,"

not entirely concerned with altruistic aid for Uncle Sam and his stamp sale. . . .

When I consider the large, and, from a public standpoint, strangely silent number of these thinking, intellectually emancipated women to be met with and inspired by, today, but gone indignantly out, for the most part, from the church pews, I wonder that you, in places of authority, have not realized the continued exodus and given her more of a reckoning. I have found even editors of the old school strangely attracted by her, yet fearful of displeasing, by her too precipitate introduction, their clientèle of readers still absorbed in ancient ideals. It is gratifying that in THE INDEPENDENT, such pure, independent thinkers as Mrs. Charlotte Perkins Gilman and Miss Ida Husted Harper get a hearing. And by this token of your appreciation of these women who live in the purple altitudes of unprejudiced, unlimited thought, I see the wink in the tail of your eye, as you exploit the *mélange* of that unfortunate clergyman, and there is a tallying, responsive, appreciative wink in mine.

And so, yours merrily and sincerely,

M. W. S.

From a Private Letter, by Permission.

. . . As I read these words the pathos of that article in THE INDEPENDENT comes over me. There is something "soul-shriveling" and "man-crushing" in the old creeds and the attitude toward life which they beget, particularly at the present time, when they are uneasily felt to be at variance with truth and progress. It is pity more than indignation I feel for this ministerial soul in his prison, made by his environment, as we all are to a large extent. These women he pictures are drawn from nature. They do not strike me as being altogether caricatures. He has had to live with them, to work with them, to keep a straight face while groaning in spirit. With shriveled soul and crushed manhood he embraces the opportunity to put his tormentors in the pillory and grin at their grimaces. That is his revenge. They were the cause of his undoing, they made him what he is, they and the obsolete view of life, the unwholesome spiritual atmosphere, the empty, unsatisfying social *milieu*.

Poor fellow! I wish he could have had the privilege, so richly bestowed on me since my childhood, of knowing women—gentle, sympathetic, womanly women—capable of sustained reasoning, able to attend to their own business, ready to take their part in the public life, full of devotion to high ideals, free from petty prejudices, and great enough to allow for the tyranny of tradition and circumstance, and sympathize and co-operate with men, even tho they be not perfect, for the elevation of all human life.

As for the editor, his words, "If the replies are sufficiently logical to refute his view or characteristically illogical enough to confirm it," show beyond a shadow of a doubt that he is not in sympathy with the poor clerical jester who jokes to relieve his pain and his *ennui*, and who does not realize that his wrong attitude makes him preach in vain even to ears that would profit from listening. The office boy who brought in the goose should have a ducking.

NATHANIEL SCHMIDT.

CORNELL UNIVERSITY.

Echo Answers "Why?"

Paul—Saint Paul—also "did what he would not and did not what he would," so *that* queerity in the woman's make-up is clearly hers, because she was made out of a man. Because, sometimes, the man trying to "persuade and convince" waxes loud, and a wee bit of a trifle domineering, and she is "convinced" for the sake of ending a discussion; and, left alone, recants. But Galileo, also, would not "stay put" when "persuaded and convinced." And she is not wiser than your wisest, is she, O man?

Now, how does this clergyman, who, I believe, never read that about a certain clergyman should-be-attribute that "thinketh no evil"—*how* does he know she "apes humility," and is not meek in her modesty? Did ever she *tell* him so? and if not told by herself, how dare he impute motives and assign evil for what she proclaims to be good? If he has never thought her thoughts behind her brain-cover, how does he dare, out of his own bitter cud-chewing, assign this motive or that motive to stigmatize the face-value of her expressed sentiment as "lies—lies—lies?"

She has, sometimes, a finer than fine honor-sense, but a wise man wrote "do not go about *explaining* yourself to the world"—or a woman wrote it; somebody that was wise. *She* knows—and her conscience is her keeper. Laughs, when angry, to keep tears down; weeps, when glad, *because* glad!

Because she muses and nurtures all the infancy and helplessness of the human race—at her breast and under and on her heart, she *always* champions the weak side; the helpless side, the "under dog," because it *is* weak, because it *is* the "under dog," and *needs* help.

And do you know, I think, privately, this man has spent much valuable time in conning feminine abnormalities that I Corinthians 13 could better have filled, and, taking some queer freakish trait in this and that woman, labels all womanhood in blind assumption that all women are alike in all things!

And no one woman is like another—she is, always and only, but her own self!

And her capacity for forgiving is most divine of all her capacities!

And why does a *man* woo a woman with ardor that would draw "an angel down," and grow cool to her when she lets him know she loves him? *Why?* And *why* does a man court one woman and marry another? And *why* does a man pet a sweetheart for dainty dress and scold a wife for extravagance? And *why* is a man voluble in love-making and voiceless of love in marriage?

And *why* cannot a man remember small commissions for downtown?

And *why* will a man buy himself luxuries and look like a martyr over the necessities of the wife?

And *why* will a man bully his own family and be utterly charming to other folk?

And *why* will a man rail at his sister's cat and pay $50 for a heathen puppy?

And *why* will a man growl and grunt at his own table and converse like a learned angel at his friend's table?

Why? B. L.

Man's Incompetence.

Of the five things, where he said women forgot, I think he lacked wit if he could not answer each. First, the woman gave her name and the year. He could have asked the clerk of the church to send the record of all her children baptized. He could have looked on the envelope for the post office address for the marriage certificate. He could have telephoned to ask the dinner hour; he could have telephoned about the meeting; he could have written Miss so it would do for either Miss or Mrs. I fear he lacked imagination or wit. As for forgetting, let me give a short list of things men forgot or blundered over in building one small house:

1. A complete kitchen sink was ordered. It was sent with no trap, no strainer, no faucets and only one leg. The sink was packed so it came broken.

2. Ordered wash tubs right size. The *man* sent more expensive, larger ones, allowing only two tubs for the space where three were needed.

3. A lavatory ordered. The men sent and put up the one she refused to take.

4. A toilet with base was ordered. One was sent and put up without marble base.

5. Door locks sent for wrong side of doors when the man had the specifications. Key put above door knob.

6. Bolt ordered for back door. It was put on the front door, where there were two, already.

7. An electric light put where a door would hit it.

8. Cut nine inches from kitchen hearth and put up range, and the whole thing had to be taken out and a new hearth put in.

9. Ordered an iron damper for kitchen range. The man put in wooden-handle damper.

10. Ordered fire spark guards without brass mountings. They were all sent with brass mountings.

11. Ordered a chair upholstered in green and white. It was sent with solid green cover.

12. Ordered table carefully packed. It was sent so one leg was broken.

13. Ordered mahogany sofa carefully packed. It came with poor wrapping; varnish scratched.

14. Dining table of walnut ordered left its own color. It came stained mahogany.

Why does *man* think after this fashion? Has he any special mental trait? Or does he lack moral sense when dealing with a woman—the desire either to work off poor things or to make her pay for more expensive things than she orders? A WOMAN OF BUSINESS.

A Logical Analysis.

I greatly enjoyed the article you published recently—"A Clergyman's Opinion of Women"—on two accounts. First, the reverend gentleman's exposition of feminine character was so strikingly original and unique; second, the article was itself such an excellent illustration of the pre-eminently logical nature of the male mind. To make this fact plain, I shall simply review the article a moment, giving the mere underlying skeleton of the argument, and rejecting all the less essential points.

I. In many years' experience as a clergyman he has found that woman, taken as a class, has the following admirable characteristics:

A. She never makes decisions on other than sentimental grounds.

B. Even then she invariably acts on impulse.

C. She cannot grasp a general principle; she must take a detail at a time.

D. She is unreliable, not to be depended on, as she seldom sticks to her decisions.

II. General facts established:

A. The mental processes, in women, are either lacking or worse than useless.

B. Women have absolutely no memory.

III. Real underlying reason for this state of things:

A. A woman's lawlessness is law unto itself, inevitable; it is absurd for any woman to attempt to ignore her essentially irrational nature.

IV. As a matter of course, in view of the facts given, it is best for men to keep women the adorable beings that have been described; in fact, they should strengthen and encourage, thru education, the present traits. (Why? Oh—just "because.")

V. Conclusion—advice to church-going women:

A. You have no memory, and can't have any, and it is desirable that you should have none; then *do* try to remember when you write your pastor to put in all essential details.

B. You always act on impulse; then never lose your temper.

C. You never make a decision on other than sentimental grounds; then do not judge a candidate for your pulpit according to his personal appearance.

D. You are incapable of grasping anything as a whole; then don't judge individual statements in this article, but consider it as a unit.

(MISS) FAY MARIE HARTLEY.

LINCOLN, NEB.

She Sees Herself.

I never realized how feminine I am until I read this paper, and laughingly confess "All them things he says I is, I *is*"; possibly he may be some of them, too.

This gives me an opportunity for self defense, which I have longed for and have felt was due to myself, in common with all other

women. Sometimes I have been talking with a man, perhaps a clergyman, and would see him look at me suddenly, lift his eyebrows and gasp a little, then get rather vague and uncertain in his speech, and shortly after terminate the interview. On recalling the occasion and hunting for the reasons for his curious actions, I would find that he or I had been talking on a certain subject and that something had been said which started a train of thought in my mind in an entirely different direction. This would flash by like lightning, bringing me simply miles beyond where we had been speaking, so that my next words would be apparently on a subject entirely distinct from the first. It often happens that owing to the length and boredom of the necessary explanations one seems even to be telling untruths. It is actually only a part of the truth, but there is no time to make the whole manifest.

I don't know anything whatever about men's mental processes, but from the results I see in most men these processes must be painfully slow and plodding. For instance, I am reading just now a most interesting book (Santayana's "Reason in Common Sense"). He takes two pages to state a fact which is self-evident. Geometry always seemed to me utterly futile. Why, when one could *see* that two right angles equaled each other, should one go all around several blocks to explain that they do so? Not *why* they do, but that they do, merely. It is that Why that interests me more than anything else, and I thoroly sympathize with my five-year-old boy, who is a living interrogation point.

To answer the clergyman's questions categorically, and speaking individually: It seems to me from my own experience and from observation of other women that a woman's curiosity may be much greater than that of men in certain lines, determined by her sympathies, but his curiosity is much greater than hers in general matters. Personally, my neighbor's affairs do not interest me in the slightest degree, but my husband delights in collecting and retailing all the small gossip of a suburban town, and so far as this particular town is concerned, the same is true of all the other husbands and wives. It is the men who gossip, going to and fro on the trains, tho they would indignantly deny the accusation.

Speaking for myself, tawdry, made-up, intentional mystery nauseates me, but in the great mysteries, the "ultimate questions" of life, I am keenly interested.

In expressing the thanks, which I am sure all women who read THE INDEPENDENT feel toward you for giving them these occasional opportunities for self defense, I am sorry to add that I feel what I have said is very inadequate, and while I have intended to tell "the truth, the whole truth, and nothing but the truth," actually I have left many gaps, speaking only half truths and giving but a partial revelation.

I am one of the many to whom I believe the clergyman referred,

AN AVERAGE WOMAN.

John's Wife.

It was half-past eight Tuesday morning. The family was just thru breakfast. "The family" consists of John and me, three boys and two girls, ranging in ages from three months to twelve years. We live in the city because John's business is here, and he has a salary of $75 a month.

I mention the salary as my justification in being at work so early in the morning. In our immediate neighborhood are the homes of several clergymen. I have frequently taken a stroll about eight in the morning to see if any one is astir in these "divine" homes. All the curtains down!

That Tuesday morning I started John off with a faithful glance at his linen, and a final whiff at the bud in his lapel, which I never fail to pin in its place not more from sentiment than from philosophy. No man of my acquaintance has ever been sent to jail with a bud in his coat. There may be other things in his coat, but never a rosebud! I noticed that the bottom of John's trousers was getting frayed, and I went immediately in to make a note of it on the family tablet, exactly as a preacher makes a note of some new thought connected with his next sermon.

I had been at work ever since five. An hour or two in bed with Baby is all the time those two, John and Baby, get in the whole day to make acquaintance. I had moved softly to not wake the children, putting the living room and hall in order, picking up yesterday's newspapers, and filling the vases. An hour this way alone in the morning all by myself makes the day's work glide along smoothly; very much, I suppose, as a clergyman's sermon glides along smoothly when it has the right start. I hadn't found time the day before to look at the new INDEPENDENT and couldn't resist the temptation to glance at it now, though I knew I shouldn't before the work was done. We've had THE INDEPENDENT on both sides of the house ever since our grandfathers' day, for those worthies were preachers, and couldn't get along without it. No more can we get along without it, preachers tho we are not.

When I opened THE INDEPENDENT the first article I saw was "A Clergyman's Opinion of Women," with the picture right above it like a guardian angel or something. I thought, "Now here will be something to help me all day."

In my joy I tipped the chair over that held the broom and immediately there was a general stir in the house. But I wasn't to be cheated out of a minute with that "Opinion" on account of any stir whatever; so I brought out the baby, who always wants a little snack after he has been awake an hour, and as I usually put in his nursing-time at reading I began on the "Opinion." At this moment I am wondering if the essence of that "Opinion" trickled down into the fountain to flavor the reflections of the little chap when he grows up. I hope not, for I counteracted the possibility by saying over the Twenty-

third Psalm before the baby was done, on purpose to settle my mind. I have found baby sleeps better on the Twenty-third Psalm than on anything else. Nevertheless, I found my mind recurring to the "Opinion" as soon as I laid baby down. It got into the coffee pot and the griddle cakes, and the children's cereal, and, I suppose, into my face, for John asked what made me so "solemn," when it was "the prettiest morning alive." For answer, I tucked THE INDEPENDENT into his pocket, thumb-nailed at the "Opinion," for him to read at the noon hour, while he is taking his lunch at the café downtown. It's a way I have always to tuck something for him to read into his pocket, for I get time to make selections while I am nursing baby, and John has so little time.

And all that morning my work "dragged." I couldn't get that "Opinion" out of my mind. It worked like yeast hid in three measures of meal. I think it was enough to have worked ten measures. As long as I live I shall never catch up with that morning work. But oh, I would love to catch up with that clergyman and ask him to loan me his "bi-focal glasses" a minute to look at him with. I was unable to take up the "Opinion" step by step, as I wanted to, on account of its being more of a see-saw than a step-ladder; and besides, I realize always that I am not "logical." And I never do try to "reason" like a man. I wouldn't if I could, unless to be like John. When John came home that night and laid THE INDEPENDENT on the window seat, he said: "Well, dear, all clergymen do not hold the same opinion. I've talked with three in the office today, and all take exceptions to this particular "Opinion"; not from any courtesy to women, either, for you know there wasn't a woman in the office except the typewriter, and she never hears anything unless she is addressed. The clergyman evidently meant that bird at the top of the page for a stork, but, as our pastor said today, 'Any man can see without bi-focal glasses that it's a goose.'"

What did John and I care that the children were sliding down the lean-to roof, dog and all, or that the dinner was getting hotter or colder in the kitchen! We two have postponed other pleasures many's the time to discuss some theological point. Not that the "Opinion" is at all a theological point—far from it. Had it been a theological matter the clergyman might have referred at least once to "those women who labored with me in the Gospel," quoting a more ancient clergyman. John put his feet on the fourth shelf of the bookcase and tilted his chair in a comfortable way he has when he wants to talk with me. I opened THE INDEPENDENT at the "Opinion," and found it dotted with John's pencil marks as thick as little Johnnie's face was dotted when he had chicken pox. John said he started out to indicate "certain points to call my attention to, but the whole thing was guilty." I took up the tray of spoons and began rubbing them with the whiting. I always have something to do ready to hand so as to not waste my time while I may be talking with John. John read the "Opinion" out loud, clause by clause, and when he was done he put his feet up one shelf higher and laughed. "That clergyman is tall, and angular, and has straight sandy hair," he said. "Never a clergyman with crinkly, black hair and mild dark eyes holds an opinion like that. And I wouldn't question for a moment that he has served 'four' or even an indefinite number of congregations. He will be serving another straightway. And it surely is not difficult to realize why he 'withholds his name.'

"You look tired, my dear, as if you had been taking this very illogical 'Opinion' seriously. You are almost as tired and overworked as the clergyman. You mustn't 'take offense,' as, in his 'Opinion,' this man of the cloth evidently expects you to. Just sit down this afternoon and give it back to him. He may turn the other cheek and he may not. You have no personal cause, you know, to take offense or to be one bit worried. The clergyman lives in New York, you know, and that's a big little village. It isn't at all likely he will ever come as far West as California."

"I wish he would come to California," I replied, laughing. "No, indeed, I haven't the slightest personal cause to be offended. You know yourself, John, I never do take to clergymen, any way. I'd as soon go tell my troubles to Superintendent Quinn, of the Dye Works, as to tell a clergyman. He isn't the only clergyman I have known to complain about how busy he is!"

John jumped up and said he was hungry. Just as he was starting for the table he kissed me on the back of my neck and both elbows, murmuring something about "these new fashions of elbow sleeves and low necks being becoming to women of the mother age." As John was going down the path to work and kissing back at baby in my arms, I noted, with satisfaction, that yesterday's frayed trouser bottoms looked as good as new where I buttonhole-stitched them in the gray dawn of the morning. Some people think, and even write, about woman's work being monotonous. I think her work anything but monotonous. There's variety enough; and for my part I'd rather be in my shoes than John's any day, and both pairs are pretty well worn.

John reminded me again to "get it back on the clergyman." But I told him I couldn't. I'm not logical by nature or grace, and don't pretend to be anything but a happy-go-lucky house-mother of pretty near middle age with a strong tendency to theology inherited from both sides of the family, John's father and mine. Oh, no, I couldn't really "give it back" to the clergyman, but as I go about the work, cooking and sweeping, and cooing to the baby, I can throw bits of walnut shells and apple cores at him over my shoulder (tho, as everybody knows, a woman never hits the thing she throws at).

(MRS.) ELIZABETH GRINNELL.
THE BIRD'S RETREAT, PASADENA, CAL.

The Leopard Frog

(*Rana Virescens*)

BY B. S. BOWDISH

[Mr. Bowdish is a special inspector of wild birds and animals for the United States Department of Agriculture, and in charge of the School Department of the National Association of Audubon Societies.—EDITOR.]

OF the really aquatic frogs common to the Eastern United States there are only about three species, the big bullfrog, whose guttural voice furnishes half of the night life to the marshes and ponds; the green or spring frog, which is less decidedly an aquatic species, and the subject of the present paper, the leopard frog. There are four geographical varieties of this frog, one form occurring from Maine to Texas, one in Florida, a third in Mexico and the fourth in the West and Southwest. The first-mentioned form, which is the one here considered, varies in color from bronze to green, depending partly on the nature of the location where it is found. Over each eye there is a blackish spot, there are two rows of dusky spots along the back, and two rows of lesser spots on each side. The throat is whitish, the under parts yellowish. The eyes are large, the pupils being black, the iris golden yellow.

Early in the spring the voice of this frog is heard from the swampy places, a guttural "chock-chock." Subsequent weather seems to affect it. The present spring, near the home of the writer, the pleasant and unusually warm weather of late March brought out a full chorus of leopard frogs. Thereafter the cold and backward weather seemed to entirely silence them and they were little in evidence for some weeks.

Under the lower jaw the males have what is known as a "vocal sac," that is, the skin is loose and capable of being greatly distended. On the ponds in the swamps they may be observed with head alone above the water, and as they prepare to emit their weird note the vocal sac is distended until it is nearly the size of the head. With legs nearly full extended, body in an inclined position and head just protruding from the water, they will lie for a long time perfectly quiet, save as the throat sac is inflated and emptied to produce their note.

The writer in the summer of 1904 had a family of four of these frogs in a wire netting enclosed box where they had both water and moss. In the early summer, when flies were rather scarce, these were caught by hand and placed in the cage one at a time, but one of the smaller of the frogs appropriated two-thirds or more of them to himself. Later, as the flies became abundant, the result of a day's catch in a fly-trap (often one hundred or more) were released at once in the cage. Then there was a lively scene. When a fly on the roof of the cage attracted the attention of a frog the latter poised himself for a second, then launched forth as tho from a catapult, with an aim that was usually unerring. He seemed to have no care how hard he banged his jaw against the wire. As he approached his victim his tongue shot

out, appearing immense in proportion to the frog's size, and like a shapeless white sponge. The fly was simply engulfed and disappeared.

On the walls of the cage flies were taken in the same manner, and the frogs captured those which fell in the water. Dead flies were invariably refused. If the frogs had not been fed recently and were hungry, usually five minutes sufficed to clean up all the flies of a day's trapping. If not hungry the frogs were often apathetic and allowed a few flies to remain for some time.

The writer's father mimicked the voices of these frogs remarkably well and could usually draw out a ready response, especially when the family were hungry. These creatures seemed to show a much greater approach to intelligence than some salamander cage-mates, appeared to distinguish between those to whom they had become accustomed and strangers, and were very interesting pets. When they were released late in the summer to allow them to seek winter quarters it was with regret that they were allowed to go.

Charges against this frog must be few if any. The good that they must do in the way of destroying injurious and annoying insects should entitle them to our consideration.

NEW YORK CITY.

The Land of Heart's Desire

BY EMILY HUNTINGTON MILLER

"SOMEWHERE," he mused, "its dear enchantments wait,
That land, so heavenly sweet;
Yet all the paths we follow, soon or late,
End in the desert's heat.

"Some time," he sighed, "when youth and joy are spent,
Our feet the gates may win"——
"But I," she smiled, with eyes of deep content,
"But I have entered in."

"And still it lures us to the eager guest,
And calls us day by day"——
"But I," she said, her babe upon her breast,
"But I have found the way."

ENGLEWOOD, N. J.

A Forty Days' Troth With the Forest

BY MRS. L. H. HARRIS

NOTHING is more difficult to accomplish in words than the truth; first, because the descriptive ones have been coined out of the imagination and sustain but a lying—or, at best, an ornamental—relation to reality; second, because the truth is not so obvious as we think it is, and, third, even when it is obvious there is an inner vision, a mirage of mind, an emotion or a prejudice which colors and renders every expression of it more or less fanciful. However, with these limitations taken for granted, my purpose in what follows is to give an experience in resting for the benefit of those who are still capable of it. Not every one is. For to rest is to perform a kind of passive miracle. And if any one doubts this let him study the definition of that little quiescent verb in any unabridged dictionary. It is an intransitive state of being to which the active modern mind refuses consent. And it differs as much from the changes and diversions of a mere vacation as it does from hypnotizing oneself with fake philosophies concerning Nirvana, or from the more popular and expensive "rest cures." But most people do not discover the fact until after the exhilarating effect of the vacation has passed, or until the philosophic quiescence they practiced proved to be an injurious, nervous trance; or until they have to get on without the magnetic rubbings of the nurse in the rest cure sanitarium. One of the strongest delusions I ever witnessed was a company of brain-fagged men from New York who imagined they were taking a rest in New England. Now every one who knows that section knows that the Creator himself could not have rested on the first seventh day if he had been in just New England. The whole country is a prayer book of the most drastic exercises, either industrial, intellectual or spiritual; and one cannot so much as take a walk in it without coming in sight of a movement which starts a train of the most exhausting historical reflections. So these "resters" bestirred themselves with puritanical energy from one arduous pastime to another. And when every other exercise failed, they went skunk hunting by the light of the moon—altho it is certainly the nature of a normal man to avoid skunks, not to chase them. But the fact that their restlessness drives them to such diversions indicates what an obsession activity becomes in people who have lost the noble instinct for leisure.

And if this is not enough to illustrate my point the magazines are full of accounts of vacations where the victims work harder than felons. Even if one of them collapses and is ordered to "take a rest," the next one hears of him is an exhilarating article—say, in *Outing*—describing his sensations as he jumps up and down, with a kind of dying vigor, in the icy waves off the coast of Maine.

Now all this is very well for people who regard vacations as a phase of the strenuous life not to be neglected—but it is not resting. Here in the South we do not know yet how to take such vaca-

tions, and it is only within recent years that we have felt the need of these changes and massages. We had the high noon of the long summer days, in which every man gave up his ghost for the time being to the invincible heat and rested as completely as the swooning earth beneath him. But now, apt as not, our next door neighbor is a Yankee who does not know it will kill him to work with the thermometer at 99 in the shade, and whose exasperating energy keeps us indignantly busy by the very law of competition. To be sure, we could still outlive him on the old siesta plan, but not before he had sold us out of house and home. For this reason most of us are in favor of passing a law making it a criminal offense in the South to do business in the middle of the day. But, pending this deliverance, here is the experience already referred to, which proves that it is still possible to rest provided you give up all preconceived notions of vacations and of cures, and submit to the very few conditions of primitive existence—bearing in mind that the primitive man was neither a laborer nor a thinker, but that he was pleasantly lazy and naturally dull—which may account for the fact that there is no record of his ever being tired or nervous.

During the first week in July the two of us—a poor pen-viper and a preacher, married and middle-aged—climbed up out of the city for a breath of clean air, and we came, quite by accident, upon a high wooded hill that has not been used since ten thousand Federal troops were intrenched upon it during the Civil War. It has a crown of flat rock, as if nature had made it bald-headed, and the forest encircles it like a mighty laurel wreath. To the north lies the city, an illuminated tablet, written over with the poetry of towers and church spires and with long flourishes of factory smoke. On the south the forest gives way to meadows and fields; and, beyond all, on every side, is the boundary of dim blue hills.

The next day we cut the buck bushes, raked away the bullets and broken bayonets, and pitched our tents upon the crown of it with the zest of pioneers. For a week we labored with the little wilderness, not knowing that it was still the fever of the city in our veins and the bondage of false ideals which energized us and caused us well nigh to destroy the privacy of our retreat. But at the last moment—when the gray pate of the hill began to show thru, clean swept, and the birds had fled in horror at the desecration — we realized our mistake, and crept into our tents dismayed and ashamed. Since then we have lived here and kept a sort of troth with the forest. There is no more desecration and very little conversation. We do not work, because there is nothing to do. We do not read, because, by the side of nature, all books are tinkling cymbals and sounding brass. And we do not have company, because one cannot be as dull as nature intends in the presence of one's friends without giving offense. It is one of the morbid characteristics of social life among human beings that they cannot take one another for granted in silence and peace, like other creatures nearer nature's heart, but they must exasperate each by prodding the mind into a contest of wit or a conjugation of tedious experiences, just to make conversation, as if silence were a reflection upon their respective intelligences.

The point I am trying to make is the very one that should not be made in a story, namely, that nothing happened on the hill. When you are resting nothing ought to happen. You pass from morning till evening with no more change than the leaf shadows make as they flirt with the sunshine, with no more diversion than the wit of bird talk or the fiddling of katydids in the green gloom below. And from night till morning you are lost out of the body. You are a spirit waif, eased of all material sensations as the tent leaps and strains in the gale like a white sail upon an enchanted sea. The world that you lived in and wearied of is withdrawn and hangs like any other star upon your horizon.

The spell began to work first with the pen-viper, who, at the end of a week, recovered in some measure that primeval sense of hearing which makes the falling of leaves audible and the breaking of a twig startling. Also, she began to take a natural interest in simple phenomena without reference to literary expression. Her imagination ceased to be an ink-pot for extracting ideas, composition became

a sort of travesty, and she conceived, for the first time in many years, an indifference to editors and all their works. Meanwhile, the less she accomplished the stronger grew the young raven faith in her that she would be fed—somehow. It is different from any other faith and of that take-no-thought kind which enables the robin to face the prospects of the severest winter with nothing but his feathers.

The preacher was longer in yielding to this enchantment, laboring as he did under the disadvantage of certain spiritual notions. For whatever peace of mind a preacher has is not natural, but ascetic, and it is difficult for him to rest even in the green heart of a forest, sustaining as he does a sort of agonized relation to Heaven. He will not trust his soul to rest, whatever else must rest. And he suspects any Kingdom of Heaven that appears to him too obvious. But he must get it out of a prayer book or off some Patmos of his own scripture-trained imagination. So the pen-viper argued with the preacher one night against the need of family prayers under the circumstances, contending that this form of devotion was to offset the woes and temptations in the world from which they had escaped for the time being, and was not needed in this hill-top existence where they were already encompassed about by the evident good-will of God and the many mercies of trees, overlooked by stars, and cradled in the very winds of Heaven; in view of which facts it was greedy to ask for more.

"But it will not last," said he, ever dodging the world of reality.

"Neither will you," replied the Viper.

"I believe in immortality," he retorted severely.

"So do I, and the memory of this hill shall be a part of mine. I take Heaven where I find it—here first, for sure, and hereafter if I may."

"Your faith is too evasive."

"So is immortality—nothing more so."

"You do not believe in it, then?"

"I believe in life as long as I live."

"And afterward?"

"If I live again I shall believe."

"That is not faith."

"But it's the truth you have to sit down upon at last!"

Then the preacher withdrew in high dudgeon to his tent for prayers alone, while the pen-viper remained in the universe outside and watched the white moths fly past like the candle seed of souls let loose in the dark.

But all this happened in the beginning. As the days passed the poor, creed-ridden preacher's faith dissolved into something nearer peace, and the pen-viper's pagan peace tightened into thoughts that stretched up more like faith. In the forest, when the mind is not obsessed by a theory, nor dominated by a book, nor controlled by company, every man becomes his own intimate. And his mind, freed from customary routes of thought, travels into far countries, where before the soul had wandered blind and companionless. Things that were mere matters of faith, or even of speculation, become evident and binding upon the intelligence, like new realities seen in a vision upon distant stars.

I am aware that many who mistake that acquisitive restlessness of the mind for a proof of intellectual development will complain of the monotony of the existence I have tried to interpret as being a form of stupefaction, if not actual stagnation. But such is not really the case. Having become perfectly passive, the mind becomes wonderfully receptive, and is capable, as at no other time, of correcting false impressions which were gained in the more active state. For example, having conceded all the prevarications of the animal story writers as being conceited efforts of the human imagination to assign human motives of action to the creatures, the pen-viper received many revelations of the truth, in particular about birds. In the first place, so far from studying them, she was herself the object of their inquisitive investigations. Two thrushes, a mocking bird, four redbirds, a mob of robins and an apparently widowed dove all made the effort to understand the two new and obnoxious creatures that had come among them. But they had the same difficulty that we have in understanding them—a limitation within themselves. They have no cue to the motive of our existence and we have none to theirs. Not long ago I read a book in which a bird was a hero. He showed all the traits of a sixteenth

century knight and all the shrewdness of a twentieth century financier. And the whole thing was an egregious presupposition. There is no chivalry in birds unless you misinterpret them, no sense of ownership. Their amazing liberty of action depends upon this lack of sense. You cannot surprise one because every one of them is hatched and startled so by his own wings that it is impossible to add anything but swiftness to his panic. He does not know anything and he does not care anything. He sings from instinct and flies without reason. And during the forty days we spent in their company we made but one discovery concerning them, which we were not able to verify.

One Sabbath morning the preacher returned to the tent from the laurel wreath where he had been to review his sermon.

"My dear," he said, do you know why the human being is so obnoxious to the bird being?"

"I do not," replied the viper, "unless it is because he is afraid of us."

"That would be his reason if he could reason—but he can't. The robin of this year does not know he is an orphan because we killed his egg parents of last year."

"Well, what *is* the explanation, then?"

"It is our clothes. They must look very ugly and unnatural to a bird, which feels instinctively that we could not have been hatched with such things upon us. I am convinced that if we did not wear clothes those robins would not resent our presence, but would be as familiar with us as they are with one another!"

"Have you selected your hymns for the morning service?" inquired the viper, primly.

"Yes, certainly; but what has that to do with my idea about the birds? Wasn't it a good one?"

"Yes, excellent; but not practical and not what your congregation would call decent!"

"But, my dear——"

"Never mind, you would not have the courage to become such a naturalist. The forest life is telling upon you. We'd better go home," said the viper, glad of the rare opportunity afforded her to rebuke his godliness.

However, I give his idea for any who may wish to experiment with it.

And thus ends this record of a holiday in which there was rest, perfect peace, and the keenest intellectual enjoyment.

NASHVILLE, TENN.

The Closing Session at Westminster

BY JUSTIN McCARTHY

THE Parliamentary Session at Westminster was prolonged much beyond the usual time for opening the recess. The autumnal holiday of the members who are devoted to their parliamentary work will therefore be much put out of time this year and many members on both sides of the House withdrew early from the somewhat dreary work and went to enjoy themselves in brighter scenes and more agreeable occupations. The Government were determined to do their best in forcing their immediate measures thru the House of Commons first, and the House of Lords after, and the next session is expected to see the opening, and we may hope the closing, of the great struggle between the representative chamber and the hereditary chamber of the British Parliament. The Cabinet itself is well known to be troubled by some division among its members, a certain number being, like the Prime Minister himself, advanced and resolute Radicals, Home Rulers, and genuine advocates of political and social reform, while on the other hand a few of the Ministers are what we commonly describe as Imperialists and little disposed to encourage the movement for Irish Home Rule and for further improvement in the laws relating to the possession of

landed property. On the other side of the House the Conservative party is very much divided by the fact that while some of its leading members have entirely re-

DAVID CHRISTIE MURRAY.

nounced all faith in the doctrine of Protection, others who are still followers of Mr. Chamberlain really believe that the country can be brought back again to a faith in Protection, and are trying in spite of all obstacles to work out that impossible revolution. Meanwhile the Socialist movement is spreading much thruout the country and we have now for the first time members in the House of Commons who frankly describe themselves as Socialists. This fact introduces a new element into the whole political situation and an element which appears likely to expand and to strengthen in its influence. We are, therefore, evidently at the opening of a new era in the political history of the Empire.

Meanwhile the difficulties and troubles thruout India still continue to create much uneasiness among all statesmen in this country. With regard to this subject I should much like to draw the attention of my American readers to a letter which I have lately received from an eminent, influential and highly intelligent native of one of the Indian provinces, who is well acquainted with the conditions of political life in England and who is sincerely devoted to the continuance of British rule, provided only that that rule can be prevailed upon to give full consideration to the political claims and the national sentiments of the Hindustan populations. The writer of this letter tells me that "the present political situation of India is a very critical one, and unless the highest statesmanship inspires the counsels of the government of India difficulties will, I am afraid, arise of which no man can foresee the end." Then he goes on to say that "a political leader of the Punjab has been arrested and deported to Mandalay without trial." "This," he tells me, "is done under a very old regulation—regulation III, of 1818. The disturbances at Rawalpindi have led to numerous arrests, including some barristers and pleaders—a most unheard of thing in India. Orders have been issued by the Government of India prohibiting students and teachers from attending political meetings and forbidding public meetings being held in the proclaimed areas in the provinces of the Punjab and of Eastern Bengal and Assam, unless a written notice of the intention to hold such meetings and of the time and place of each meeting has been given to the Superintendent of Police at least seven days previously, and that in the opinion of the district magistrate such meeting is not likely to promote sedition or dissatisfaction or to cause a disturbance of public tranquillity." Then he adds that "in the eyes of the officials all that is in India looks seditious and mutinous at the present moment." I desire to call especial attention to the sentence which immediately follows:

> In my opinion India is entirely free from sedition; there is no native who wants or desires to overthrow the British rule; that there is discontent, deep and widespread, even the man in the street cannot for a moment doubt. It behooves our rulers to find out the causes and their remedy.

My correspondent gives me his idea as to some at least of these causes:

> A main cause is the horribly bad treatment accorded to the natives. There is no social

intercourse and the gulf between the rulers and the ruled is daily widening. Courtesy costs nothing and goes a long way in winning one's heart. A major portion of the bitterness will disappear if the Anglo-Indians only learn how to behave themselves.

One word more before I close. India still has faith in the sense of justice of the British public, and when that faith has gone her fate is doomed. A deputation of some of the leading Indian gentlemen is soon to visit England, I understand, and upon the success or failure of this mission must depend our future, at least in a great measure.

This letter, I should say, bears date of May 27th, 1907, and was sent to me from one of the Indian health resorts. I have since, however, received from the same writer a letter dated July 10th, which does not seem to note any immediate sign of improvement in the conditions which thus far tend to create dissatisfaction and even disturbance among the Indian populations. My friend has, I feel quite sure,

SIR T. H. G. ESMONDE.

made known his opinions and his sentiments to leading English statesmen and writers and I cannot doubt that his representations will have much effect on those to whom they are addressed. My friend suggests:

> that some thoughtful, broad-minded, independent, justice-loving Englishmen—in which term I include your countrymen and the Scots—come out to India in the cold season and mix freely with the natives of India of all classes, educated and uneducated, from the highest to the lowest. In this way you can easily get to the very bottom of the whole affair, and at once see how popular or unpopular the British rule in India is, and why.

He explains that the information thus gathered by those visitors could not but have a great effect in the guiding of public opinion here at home. It is quite certain that among the leading members of the present English Government there is no feeling whatever in favor of the application to India of any measures of mere oppression. Those who know, as I do, men like Sir Henry Campbell-Bannerman and John Morley, must know very well that the heart and the intelligence of these men are influenced altogether by the desire to make India a loyal, peaceful and happy country, ruled by just and equitable legislation. The immediate difficulty is, of course, with the representatives of British authority who are stationed in India, and who apparently do not see any way of ruling that land except by mere military force, and the suppression rather than the consideration of all expressions of native discontent. If England would now act toward India as she did toward Canada at the opening of Queen Victoria's reign, and send out there some British statesman as Lord John Russell sent out the great Lord Durham to Canada, endowed with the privileges of a temporary dictator, the result, I feel convinced, might be like to that so happily accomplished in Canada, and make India that which Canada has ever since been—a free, contented, loyal partner in the empire of King Edward VII. I sincerely wish that John Morley might be entrusted with such a mission.

The Irish National party has had some internal trouble during the later weeks of the present session, a trouble which, of course, has been immensely exaggerated by some of the leading London newspapers, by those journals which have always been opposed to every

national movement in Ireland. Some few, some very few, of John Redmond's parliamentary followers — among them Sir Thomas Grattan Esmonde—have lately, to all appearance, become weary of the parliamentary efforts, which thus far have only ended in the hopeless Irish Councils Bill, and are inclined to give up all parliamentary agitation as futile. My fellow countrymen in the United States need not, however, attach too much importance to these displays of an impatience which is at least intelligible, but certainly is not judicious or in the true sense patriotic. I have the best authority for the conviction that the Irish party and the Irish constituencies will, on the whole, give full support to the leadership of John Redmond, will recognize the wisdom of the policy adopted and carried out by Charles Stewart Parnell, the policy which is founded on the fact that for a country like Ireland, placed under the dominion of England's overwhelming power, there can be no means of achieving Home Rule except by patient, steady, unceasing work in the House of Commons, the one platform from which enlightened public opinion in England can be impressed, convinced and won over. I had a long conversation only two or three days ago with a very leading and influential member of John Redmond's party, and he assured me that the party, with very few exceptions, remains quite loyal to its pledged policy, and that the movement for Home Rule will go on steadily, as it has thus far gone, until it obtains what it is certain to obtain before long—its full success by the creation of a genuine Irish Parliament. The clouds now threatening will soon pass away, and only the union of Irish Nationalists is needed to put an end to that state of things created by the so-called Act of Union. The "Sinn Fein" policy, as it is designated in the national language of Ireland—the policy of acting by "ourselves alone"—may have something in it suggestive of the heroic and even the romantic, but I am quite unable to see how it can be made to count for much in the very practical conditions of our working lifetime. The policy of Parnell has achieved some marvelous reforms in the legislation dealing with the system of land tenure in Ireland, in the development of religious equality there, in compelling a great English Government to bring in a measure of Home Rule and to carry it successfully thru the House of Commons—of course to be rejected by the House of Lords, as every measure of important political reform has been in the first instance—and in making the policy of Home Rule a part of the proclaimed purpose and political creed of every administration. Sir Henry Campbell-Bannerman has already announced again and again that he is determined to do his best toward the realization of such a measure for Ireland, and the failure of that mere first step in the path of "devolution," the Irish Councils Bill, is but an accidental mishap in the progress of a great constitutional reform. Ireland has, according to my conviction, but to hold on steadily to that course of action which her national party in the House of Commons has so long maintained and she is sure before long to find her best hopes brought to a full realization.

The world of letters has lately had a severe loss by the death of David Christie Murray, novelist, dramatic author, journalist, war correspondent, lecturer and traveler. Mr. Murray began his working life as a reporter on a Birmingham newspaper, and settled in London during 1873, when I first came to make his acquaintance and when he was a remarkably handsome and attractive young man. He wrote for daily and weekly newspapers in London and he became war correspondent for the *Times*, and he afterward delivered lectures thru Australia, the United States and Canada. I do not venture even to guess at the number of novels which he brought out, for he seemed to be incessantly adding thus to the literature of romance, but I know that many of his novels won a distinct success and are worthy to be long remembered. He loved travel, and his special recreation in quiet times was found in landscape painting. He was a brilliant talker and endowed with a wonderful memory. When one was conversing with him over some great book which he had read—and there were very few great books which David Christie Murray had not read—it was amazing to find how he could pour forth passage

after passage from the author's text without the need of a glance at the volume itself. He had lately fallen into ill health, and I am much inclined to believe that he wore out his life prematurely by incessant work and incessant movement. His temperament was especially nervous, and indeed he owed much of his success to the quick and thrilling vibration of those nerves; but a constitution of such an order does not tend to the prolongation of life in this world. He had not long passed his sixtieth birthday, and I think his case was that which is only too familiar to literary and artistic work—that of "the fiery soul working out its way and o'er-informing its tenement of clay."

London, England.

Confessions of a Prospective Senior

BY MAZIE PATRICK

I HAVE been in college for three years, and during that time I have been greatly surprised at the lack of sympathetic agreement between alumnæ and students. But gradually, as I have entered more into the life of the college, I have concluded that the trouble lies in the fact that the alumnæ cannot distinguish, it seems, between our college problems and their domestic ones. At their banquets they discuss seriously such questions as: "Why do not more of our students marry?" "Should we establish a cooking and sewing course?" "Does college fit you for married life?" etc. We try to listen patiently and politely, remembering that these women are out now, that they have too wide a perspective to get us properly focused, and that, above all, they have forgotten what is really happening. Now, before I get outside and thereby assume the alumnæ "'Rah, 'rah for the alma mater" point of view, I wish to tell what we, the students, consider the vital questions of college life.

I came from the Far South, where we know little about large colleges, where everybody is a democrat, and where everybody has ideals. I therefore had all the ingredients for making a typical freshman—ignorance, democratic opinions and sentiment. For the first month or so I did not realize that I was "green," nor did it occur to me that I should follow advice given me by upper classmen and curb my personality. I reasoned that it was the special function of college to develop individuality. Then suddenly I "caught on" and began to look about me. It did not take me long to learn that democratic principles were in ill favor and that sentiment was out of fashion. Even so early as my freshman year I found that college was infested with political parties—"the society class," "the religious class," "the 'non' class," and now, at the end of my junior year, another, our new "socialistic class," the members of which seek to protect themselves against certain professors whose code of scholastic ethics is wrong.

In every college of the East that I have visited, as well as in my own, I have found that the "society class" consists entirely, I may say, of those girls who are members of the clubs or sororities—both organizations may be classed as the same in spirit at least—and that to the average freshman it is very important that she become a member of one of these organizations. Each club stands for a certain thing—one for wealth, another for family, another for scholarship, etc.—and consequently their members perforce stand for the same. The "per-

national movement in Ireland. Some few, some very few, of John Redmond's parliamentary followers — among them Sir Thomas Grattan Esmonde—have lately, to all appearance, become weary of the parliamentary efforts, which thus far have only ended in the hopeless Irish Councils Bill, and are inclined to give up all parliamentary agitation as futile. My fellow countrymen in the United States need not, however, attach too much importance to these displays of an impatience which is at least intelligible, but certainly is not judicious or in the true sense patriotic. I have the best authority for the conviction that the Irish party and the Irish constituencies will, on the whole, give full support to the leadership of John Redmond, will recognize the wisdom of the policy adopted and carried out by Charles Stewart Parnell, the policy which is founded on the fact that for a country like Ireland, placed under the dominion of England's overwhelming power, there can be no means of achieving Home Rule except by patient, steady, unceasing work in the House of Commons, the one platform from which enlightened public opinion in England can be impressed, convinced and won over. I had a long conversation only two or three days ago with a very leading and influential member of John Redmond's party, and he assured me that the party, with very few exceptions, remains quite loyal to its pledged policy, and that the movement for Home Rule will go on steadily, as it has thus far gone, until it obtains what it is certain to obtain before long—its full success by the creation of a genuine Irish Parliament. The clouds now threatening will soon pass away, and only the union of Irish Nationalists is needed to put an end to that state of things created by the so-called Act of Union. The "Sinn Fein" policy, as it is designated in the national language of Ireland—the policy of acting by "ourselves alone"—may have something in it suggestive of the heroic and even the romantic, but I am quite unable to see how it can be made to count for much in the very practical conditions of our working lifetime. The policy of Parnell has achieved some marvelous reforms in the legislation dealing with the system of land tenure in Ireland, in the development of religious equality there, in compelling a great English Government to bring in a measure of Home Rule and to carry it successfully thru the House of Commons—of course to be rejected by the House of Lords, as every measure of important political reform has been in the first instance—and in making the policy of Home Rule a part of the proclaimed purpose and political creed of every administration. Sir Henry Campbell-Bannerman has already announced again and again that he is determined to do his best toward the realization of such a measure for Ireland, and the failure of that mere first step in the path of "devolution," the Irish Councils Bill, is but an accidental mishap in the progress of a great constitutional reform. Ireland has, according to my conviction, but to hold on steadily to that course of action which her national party in the House of Commons has so long maintained and she is sure before long to find her best hopes brought to a full realization.

The world of letters has lately had a severe loss by the death of David Christie Murray, novelist, dramatic author, journalist, war correspondent, lecturer and traveler. Confessions of a Prospective Senior

BY MAZIE PATRICK

I HAVE been in college for three years, and during that time I have been greatly surprised at the lack of sympathetic agreement between alumnæ and students. But gradually, as I have entered more into the life of the college, I have concluded that the trouble lies in the fact that the alumnæ cannot distinguish, it seems, between our college problems and their domestic ones. At their banquets they discuss seriously such questions as: "Why do not more of our students marry?" "Should we establish a cooking and sewing course?" "Does college fit you for married life?" etc. We try to listen patiently and politely, remembering that these women are out now, that they have too wide a perspective to get us properly focused, and that, above all, they have forgotten what is really happening. Now, before I get outside and thereby assume the alumnæ "'Rah, 'rah for the alma mater" point of view, I wish to tell what we, the students, consider the vital questions of college life.

I came from the Far South, where we know little about large colleges, where everybody is a democrat, and where everybody has ideals. I therefore had all the ingredients for making a typical freshman—ignorance, democratic opinions and sentiment. For the first month or so I did not realize that I was "green," nor did it occur to me that I should follow advice given me by upper classmen and curb my personality. I reasoned that it was the special function of college to develop individuality. Then suddenly I "caught on" and began to look about me. It did not take me long to learn that democratic principles were in ill favor and that sentiment was out of fashion. Even so early as my freshman year I found that college was infested with political parties—"the society class," "the religious class," "the 'non' class," and now, at the end of my junior year, another, our new "socialistic class," the members of which seek to protect themselves against certain professors whose code of scholastic ethics is wrong.

In every college of the East that I have visited, as well as in my own, I have found that the "society class" consists entirely, I may say, of those girls who are members of the clubs or sororities—both organizations may be classed as the same in spirit at least—and that to the average freshman it is very important that she become a member of one of these organizations. Each club stands for a certain thing—one for wealth, another for family, another for scholarship, etc.—and consequently their members perforce stand for the same. The "per-

force" element of club life became apparent to me early in my membership. Altho by the time I had joined the club of my choice I had begun to be less ignorant of college life and more reserved in my "all-for-the-people" platform, I still believed enough in my original ideal of personal freedom to fight hard against becoming part of a system. I joined a club under the impression that I was simply gaining twenty or thirty friends which as a "non" I would not have. After three weeks of membership I found that, altho I had gained friends, I also became a member of a "ring," as firmly united as any political circle of the outside world. I learned that my club stood for certain principles in respect to college society, to class and college government, and to religion. As soon as I joined I was given to understand that I could no longer act independently, in that now, as a member of the club, whatever sentiments I expressed would be looked upon as the sentiments of the club generally. When I saw myself so restricted I considered withdrawing, but I went no farther than considering it, for I had been in college long enough to know that it was given to few girls to be influential without the backing of a "ring." I consequently remained where I was, was absorbed by my club, and am now such an ardent constituent that whatever success I achieve I think of it mainly in reference to my club rather than to myself. I admit quite frankly that I am no longer an individual, tho I have the influence of a thirty-fold individuality. Nevertheless, it still remains a problem for colleges whether they shall countenance club "ring" rule, or if they do not, how shall they rid themselves of the system.

In opposition to the "society class" there is the "religious class," which is probably the strongest of the college factions because its members do much in the name of religion that the laity, being merciful, cannot do. The presence of this class accounts, I believe, for what our mothers and fathers, aunts and uncles, etc., term "the lack of spiritual life in colleges." I know that as a freshman I was anxious to identify myself with some religious element, but I was unfortunate enough to join a club, thereby being cast into the outer darkness of the "religious class." For, as I have learned from subsequent observation, our "good ones" in college will have none of us club people, whom they deem of the world worldly. Of course they allow us to join their organizations and pay our dues, but we are granted no speaking or praying privileges in their assemblies. We are looked upon as publicans and sinners and treated accordingly. And so we, who are the dust of the earth, reason that the Lord will understand, and we bear as gracefully as we can the criticism of "religious indifference," tho we secretly long for some Solomon to rise from amongst us and answer the question, "How are we to Christianize our orthodox Christians as well as ourselves?"

The "nons" are the only class that enjoy typical college life. They belong to no "rings"; as a whole they are not ambitious and consequently do not object to being "worked" by other classes; they obtain offices solely thru merit and not thru political influence, unless they create it by concentrated voting. In that case they are the most powerful political force in college. They are generally fine students because they have the time. They have a good time because they have the money, and they have that because they do not feel compelled for political or ambitious reasons to belong to a number of organizations that sap you financially. In other words, they are free in that they are bound only by the most general conventions and have no problems or responsibilities save their personal ones.

But we have at least one democratic organization in college—the "socialistic class," whose members come from all the different factions and unite themselves amicably into a protective fellowship that is even now changing the tenor of college affairs. For years college girls have played the role of unassuming proletarians to the scholastic bourgeoisie of colleges—the professors. But now we are members of a Students' Union which has set about solving at least one college problem. In the past we have been the victims of vulgar jokes, inane illustrations, polite insults and sly injuries until we are finally ready to strike. We have become intolerant of those men professors who, taking advantage of their posi-

tions, bully us, and who, knowing that they are members of an august body whose members are not to be criticised, do not in any wise feel constrained to be courteous, unless forced by public opinion. Neither do we intend to be any longer at the mercy of some women professors who, while they do not employ such brutal methods as the men, do us more cunning harm. For example, in one college I know an instructor who has kept a student out of the college periodical for four years because the girl has refused to follow certain literary recipes which the professor has concocted. And yet this girl's material is accepted by the Year Book Association, which is backed by the best literary talent in college. In another institution an instructor, having received an excuse for a badly prepared report, asked before a class of fifty students, "What reason have I to believe you, Miss X?" "You have my word for it," the girl replied. "Ah, my dear young lady," was the answer, "that amounts to little. I trust no one." In my own college one instructor makes it her rule to lecture upon "psychological cheating" just before a written quiz. If we were men we would long ago have taken up such an expression as an insult, and settled it in the simplest way; but being women and knowing that we have few authorized modes of redress, we are slow to recognize insults. But we have at last been aroused, have formed our union, and have set about breaking our professors of such little tricks as throwing erasers, using sarcasm too freely, or of showing their teeth viciously to us. We know now that our bullies and sharp-edged women are afraid of public opinion, and we shall henceforth furnish the public opinion.

Now, I would not have you think me a croaker and therefore no fair judge of college affairs. On the contrary, I am the usual type of college girl, and consequently realize that these conditions which I have set forth as the "problems" of college are only undercurrent problems, which will possibly grow right as the spirit of the college world changes.

In everyday life we talk about the same things, read the same books and magazines, and have the same mental attitude toward the two great college subjects—food and men. On Sunday we revert to our uncollegiate selves and read *The Smart Set, Ainslie's* and the *Ladies' Home Journal,* tho I believe we read the latter from a certain sporting spirit that will not allow us to give up until Lady Betty has done all that a well-bred girl can do—and we have learned that *Ladies' Home Journal* heroines are always well-bred. Then, of course, when the magazines are old we have ever with us "Nedra," "The House of a Thousand Candles," "The Fighting Chance" and "The House of Mirth," which has never ceased to have a certain grisly fascination for us. Recently, for the sake of improving our Sunday reading, the alumnæ have planned to establish in the various halls libraries of Dickens, Kipling (tho we do not object to him so much), Cooper, etc., and cover the reading tables with *Outlooks, Nations,* INDEPENDENTS, *Critics* and a stray *Harper's* or *McClure's.* Naturally, we listen respectfully to all such plans, for we realize the literary value of this material they are offering us, but we won't read it on Sunday. That is our day. We will be submissive during the week; we will read what Mr. Wells has to say, tho it makes us fairly back our ears to think what we may be in the course of a few hundred years; we will even read what Mrs. Gilman and Mrs. Harris have to say about "the home," tho the majority of us have determined that we will not discuss the matter, but will go on in spite of economic pressure, and follow the old, steady plan of having a conventional family. What these writers have to say upon the subject is interesting, but we are the future generation—not they—and we are not going to take the risk of establishing a new order of things. But as for the problem of our Sunday reading, we have long since decided that we read nothing on that day which requires consideration.

As I have already said, our surface problems are food and men. The one we discuss at all times, the other only when we need them. The fact is, we have lost our perspective in the matter of men. We no longer think of them as individuals, but as commodities. The question is, "Have you a man for the stunt?" not, "Is Mr. Smith coming?" And if Mr. Smith does not come he is reviled, not because he individually did

not appear, but because his hostess has been deprived of a masculine background. We look upon them as a great care. They must be introduced and entertained more or less, and it is with a joyous "God speed you" that we bid them good-bye. However, I would not have any think that we are not sentimentalists, for we are, to an extent. We are as ready as ever to believe in the old story of the prince who runs away with the imprisoned princess, our only stipulation being that the prince be a college man.

MOBILE, ALA.

Japanese Wrestling

BY HITACHIYAMA

[Hitachiyama is the athletic callname of Taniemon Ichige, now in this city on a visit, who is the celebrated champion of champions of Japanese wrestling, and is noted for his Samurai birth and good education so uncommon to Japanese *Rikishi,* or wrestlers. He came to this country for the express purpose of acquainting himself with the Western athletic methods in compliance with the advice of many prominent men, including Baron Kaneko and American Secretary of War Taft, who became an ardent admirer of Hitachiyama while in Japan on his recent visit there. Hitachiyama was born in 1874 in the province of Hitachi under the feudal lord of Mito Clan, a tributary of the Tokugawa Shogun. His sumo career had begun at his seventeenth year, and he soon made himself distinguished by winning the title of *Yokozuna* in recognition of the championship in 1903. The champion weighs slightly over 330 pounds and is well proportioned, to say nothing of his fame as the handsomest and most manly wrestler Japan has ever produced.—EDITOR.]

SUMO is said to have originated far back in the days of Izanami, a god, and Izanagi, a goddess, but this is rather mythical and not to be relied upon as authentic. The first sumo contest told by authentic history is said to have been fought between Osumino Hayato, or Knight of Osumi, and Stano Hayato, or Knight of Ata, when the fortieth Emperor, Temmutenno, ordained the performance on the occasion celebrating the building of Okamoto Temple at Tobitori, Yamato Province.

In the time of the forty-fifth Emperor, Shomutenno, there was a very dry summer season which seemed to ruin the rice crop. Anxious at this fatal outlook, the Emperor decided to soothe the anger of the gods by dedicating a performance of sumo to their spirits, and immediately ordained his people to perform sumo at twenty-one different temples, including those at Kamo, Kasuga, Imamiya, Wakamiya and Kifuna, on July 27th of the third year of Shinki era according to the old calendar. This was the origin of feast wrestling or *Miya Sumo.*

At the time of this feast wrestling, the young folks were called together by the beating of a drum on an elevated seat called yagura. This is the origin of the name of the sumo drum which is so familiarly connected with the sumo performance.

Ever since its introduction this sumo has never been suspended either in peace or in war, and it was looked upon as a sacred performance. Consequently there are many ceremonial performances before the contest is fought. For instance: The *doyho* or outer ring is a square elevation of earth banked with twenty-eight sand-stuffed straw baskets representing grain. At each corner of the *dohyo,* there is a pillar colored with red, white, black and blue respectively. The pillars are connected with the tri-colored (black, red and yellow) long cloth, called *mizubiki,* and its top-knot is made at the northwest pillar in token of the purity of *dohyo.*

An inner ring is drawn within the outer ring, and the contesting parties are grouped outside the outer ring on the eastern and western sides. When each contestant comes into the ring, he salutes his rival by twice clapping his hands, which means the Heaven and Earth, and thrice stamping his feet in the ring, which signifies the Three Virtues, Intelligence, Mercy and Courage; all necessary virtues for a wrestler.

A wrestler must strictly observe the following doctrine and rules:

A wrestler must be cool and fearless and his muscles must be free from any excessive firmness or shrinkage. He must carry himself as if walking on glass.

He must always be ready to use his tactics as circumstances require.

The essentials of a wrestling match are to push when you are pulled and push also when you are pushed. These tactics are the most manly ones and a victory by pushing is the greatest and most honorable triumph in the sumo. These tactics are sometimes called *tomete,* or stopping tactics.

Slapping cheeks, kicking or striking foul blows and pulling hair are prohibited.

There are four principal features of sumo tactics: The tactics with head-power are called *sori,* those with hand-power *hineri,* those with loin power *nage,* and those with feet *kake.* Each of these tactics is divided into twelve branches. It is almost impossible for one to know and employ all these forty-eight tactics, and I myself must confess my ignorance of more than a dozen of them. I hardly believe there has been any one who has attained perfection in all these tactics.

HITACHIYAMA.

As to the training of the Japanese wrestler, I cannot tell how many years it requires, for it all depends upon one's ability. There are some who attain thoro development in a few years, but most of them require more than ten or twelve years. Training must be pursued every morning in the 365 days of the year for four or five hours, of which, however, one hour's lesson is all that is needed by one person. The health, especially of the stomach, must be carefully preserved. For this reason only *kayu,* rice porridge, is served in the morning, sometimes with a few raw eggs, but if possible nothing should be eaten in the morning. Liquor, of course, is strictly prohibited during training hours. One must go to bed at 10 P. M. and get up at 6 A. M.

As is the case with any contest, heavier weight has advantages over a lighter one, but so far as the art is concerned, the lighter weight is usually more apt to attain the tactical talent than the heavier. This is due to the fact that the lighter is always placed in a position of disadvantage, and therefore he is, of necessity, obliged to have more talent in tactics to overcome his heavier rival.

It will not be right for me to criticise or compare the American method of wrestling with that of our own, for I have never yet had the pleasure of witnessing American wrestling in spite of my burning desire to do so. But I hope that I will be able to tell you something about what I think of American or rather the Western method of wrestling later. I am told that in the American wrestling method one must force the enemy's two hips or shoulders to the ground to be victorious, while ours is settled by a simple fall or touching the earth with any part of the body except the feet.

This would make a contest between the two methods almost impossible; so I do not expect to challenge an American, tho I may show our method by contesting with my company while abroad.

NEW YORK.

The Era of Good Feeling in South America

BY L. S. ROWE, Ph.D., LL.D.

[Dr. Rowe is Professor of Political Science in the University of Pennsylvania, and was Delegate of the United States to the Third Pan-American Conference.—EDITOR.]

THE remarkable influence of Secretary Root's tour thru South America has puzzled European statesmen and is but imperfectly understood in the United States. It is a matter of common knowledge that, especially after the Mexican War, the feeling of distrust toward the United States gradually increased in strength and was fomented by European statesmen who were anxious to utilize this feeling to prevent a closer understanding between the United States and Latin America. Every assurance by our Government that we were anxious to foster the most friendly relations with the South American Republics, to be helpful wherever possible, and that there was no thought of exercising dominion or authority of any kind, was received with polite attention but was interpreted as a mere diplomatic expression, behind which the real intent of the Government was to be sought.

It seems almost incredible that the visit of one man, no matter how eminent he may be, should serve not only to destroy much of this distrust but to give way to a desire for closer relations with the United States. The influence of Mr. Root's visit can only be adequately understood if it is interpreted in the light of the influences that have been silently at work preparing the way for a better understanding of the purposes of the United States and of the part which our Government is called upon to play in the economy of the American continent. These influences have been partly political, partly economic and partly educational.

The founders of the South American Republics, and more particularly the framers of the present constitutions, were all ardent admirers of the United States from whose example they drew the inspiration for their work. Thruout South America the Constitution of the United States was used as the model after which the institutions of the newly founded Republics were patterned. For many years the preparedness of these countries for the introduction of republican institutions was a matter of bitter discussion among the native historians. The best historical work of recent years has produced a profound conviction among the leading men of South America that in adopting republican institutions a wide gap was created between the form of government and the traditions, habits and mode of thought of the people. During the entire nineteenth century this lack of harmony has been the cause of serious disturbances in the body politic and has distributed in no small measure toward the instability and even lawlessness which have at times prevailed.

This recognition of the shortcomings of their institutional development is one of the most hopeful signs of progress. It is especially marked in the Argentine Republic where it is generally recognized that the adoption of the constitution of 1853 inaugurated a Federal Republic in form but that the real basis of democratic

institutions has been lacking. Elections have been "made" rather than "held." The great mass of the population have abstained from voting and intimidation and bribery have been freely used to discourage anything approaching an independent movement.

It is evident that these conditions had to be clearly and frankly recognized before further institutional progress was possible. The dissatisfaction with existing conditions is one of the most hopeful signs of the times, especially when combined with the desire for the further development of democratic institutions. This principle has become the political creed of a new party. The most important pledge of the present President of the Argentine Republic is his promise to follow a policy of civic regeneration which shall include free elections, the elimination of intimidation and bribery and the fostering of a wider participation of the people in the political life of the country. Whatever the value of these promises may be the fact that an increasing number of thoughtful men are lending their aid to the movement is an indication of

CORNER OF AN INCA FORT NEAR CUZCO, PERU.

the higher civic standards which are slowly bringing about a closer harmony between the form of republican government and its actual operation.

In this movement the United States has again assumed a position of exceptional importance. It is generally recognized that in no other country have republican institutions reached so high a degree of development. In fact, South American public opinion has, to a certain extent, idealized the political life of the United States. In their aspiration for better things they have come to picture certain political ideals which are supposed to be incorporated into the life of the people of the North. However exaggerated their idea of the perfection of our institutions may be, it is evident that this attitude has again given to the United States the position which it occupied during the early decades of the nineteenth century. This movement is serious treatises on political problems are constantly admonishing the Government and the people to follow the example of the United States.

Another influence which is contributing to the same end is the growing admiration for the marvelous industrial progress of the United States and the desire to instil something of the same spirit of individual initiative and enterprise into the growth of the country. Here again the Argentine Republic furnishes the most characteristic instance of the new tendency. The World's Fair, the Pan-American Exposition and the Louisiana Purchase Exposition contributed much toward bringing before the people the remarkable progress of the United States. It was pointed out that in many respects conditions in the Argentine at present are similar to those which existed in the United States in the forties and fifties, and that with the same energy, the same

MOUNT ILLIMANI, BOLIVIA.

so clearly defined that it has contributed in no small measure toward counteracting the distrust which for so many years has threatened to destroy our influence in South America. The political leaders, the newspapers and even the more spirit of initiative and enterprise the Argentine would soon push forward at the same rate of progress. There is a profound conviction among a large portion of the more intelligent classes that their country is destined to be as rich

and as powerful as the United States and this has given rise to the desire to imitate the "Yanqui," as he is here called.

The third influence which is gradually bringing the countries of South America into closer touch with the United States is the gradual recognition of the important part played by our system of common school education in the civic and industrial advance of the country. Here, again, the Argentine furnishes the most typical example. The country has never forgotten the repeated admonitions of President Sarmiento to follow the example of the people of the United States in developing a system of public education. In some of the Northern provinces of the Republic—especially Entre Rios—American teachers were secured to organize the Normal schools. All this has left a deep impress upon the popular mind. It is not surprising, therefore, that now, when the country feels itself sufficiently wealthy to expend large sums on public education, the authorities should turn to the United States for the model upon which to organize the system. Teachers are being sent to the United States to study our system of instruction, a pedagogical museum is being formed with material collected in the United States, the finest school in Buenos Aires is modeled after the New York schools; in a word the country is turning to the United States for inspiration and guidance in the great work of preparing the country for the important part which it is destined to play in South American affairs.

A STREET IN LA PAZ.

All this means grave responsibilities as well as great opportunities for the United States. We must be prepared to place the best results of our experience at the service of our sister Republics to the South. The consciousness of the influence which we are exerting cannot help but react favorably upon our civic life. When the American people once realize that their example for good or evil extends to the remotest corners of South America, the responsibilities of the situation cannot help but act as a steadying influence.

The opportunities presented are no less important than the responsibilities. The change of attitude toward the United States which is spreading thru South America is giving to the Monroe Doctrine a new significance. It is no longer regarded as an expression of a policy of aggression but rather as one of helpful-

ness and solidarity; a policy the maintenance of which is of greater moment to the Republics of South America than to the people of the United States.

Finally, this new movement is paving the way for American merchants and capitalists. With a little greater adaptability on our part, a greater willingness to supply the people of South America with the goods which *they want* rather than with the products which *we want them to take,* there is no reason why the United States should not assume a position of commanding influence in the commerce of the South Atlantic and the South Pacific.

WASHINGTON, D. C.

From Hight to Hight

BY HARRIET FAIRCHILD BLODGETT

ARE all the old gods dead?
Apollo, with the golden head
And silver lyre,
And Venus with her heart of fire,
And Jove, with thunders round him spread—
Are they all dead?

When was it that they went?
Who knows the way their footsteps bent?
To what far hight
Above our little day and night,
With feasting, chase, and music spent,
The day they went.

Pan knoweth—Pan, who kept
His watch the while all others slept.
In swaddling bands
The cradled World, her helpless hands
Stretched out to reach them, woke and wept,
His watch he kept.

And then—where did he go
As gently bending down below
The great Christ came
Unto the World and called her name,
And stooped above her, smiling so—
Where did he go?

Be sure he never went,
But, hidden, buildeth now his tent
Where woods are green,
And watching thence, tho never seen,
This World of ours, he is content—
Pan never went.

The World is young, so young
She stammers with a lisping tongue
And may not say
One word of all she strives today
That Christ has taught and prayed and sung.
The World is young.

Upon unsteady feet
She wanders, where the cross-roads meet,
Narrow and broad,
Both sloping surely up to God,
Thru frost and cold, thru fire and heat,
With falt'ring feet.

And Christ, who leads her on
The way, in blinding rain or sun,
He whispers: "Love!"
To win her step by step above,
His watchword till the task is done—
He leads her on.

And then—if Christ should go?
The patient Christ, who guides her so,
Ere she can see
The turrets of Eternity
Break thru the mist that rolls below—
If Christ should go?

She would not be alone,
Since now and ever, bending down,
Tho skies be dim,
The God of ages draws to Him
Her heart to beat with his as one
Never alone.

While Pan, within the wood,
He laughs across his solitude,
And, piping, brings
Upon his reed the feathered things
To rest, and all of life is good
Within the wood.

So all of life is true,
The far away and near to view,
Present and Past,
Both woven into one at last,
The done, and what we strive to do—
All life is true.

While thus, from hight to hight,
We struggle upward for the light,
Till in the blue
The smile of God comes breaking thru
The clouds, and all that is is right,
From hight to hight

ODESSA, N. Y.

Literature

Clem

THIS is a wonderful little book* full of the glare and glory of one woman's personality, as if she had invaded the small, dark chamber in a mellow old house where all else denotes the tone of time. The author has accomplished a difficult thing in an excellent manner—a manner that is more than literary. It is fine and natural with a certain kindness of measure which is not emotional but just. She might even have been a sort of involuntary literary god-daughter of William Dean Howells but for the noble boldness with which she interprets Clem's boldness, which is elemental rather than coarse. But Mr. Howells could never be guilty of any kind of boldness. He would strip an angel of his halo rather than use a garish word to describe it. Not so Miss Kenton. She divides her gifts of interpretation impartially between a set of what we may call well-bred American snobs and a woman with that naturally conspicuous nature which comes from having been born of an actress mother and a silver-king father who gambles in mines with his hat on the back of his head and the cigar in the corner of his mouth turned up at an acute angle. He brings his daughter up with "all sorts," and then entertains social ambitions for her which flower out in the usual manner at a summer hotel. She becomes engaged to the cub-heir in one of these socially overwrought, high-bred families. And to break the engagement, the mother of the cub invites Clem to be one of a small party at her country house. The small party making up that esoteric circle puts Clem and all her kind beyond the pale by the very quality of their minds and spirits.

The interest of the story consists in the way the girl endures this delicate persecution and proves herself with a certain flaring grace superior to it. This is probably the first time such a type of woman has been justified except upon sentimental grounds. First you get this vision of her from her friend Lowe:

"She looked the primitive woman. She might have been *the* primeval woman walking untrodden sands, pressing the springing earth when the world was young. She was so nobly unashamed and so purely human—ah, yes, she was! The very atoms of her might have been scooped up from the virgin earth, from sea-born clay just washed ashore; and a Rodin hand might have modeled her!"

The author evidently thinks it is the alto sentence in her book, but it is not really so good as the description of Clem which comes later on:

"Here was a woman who had attained, thru some processes, to a man's standpoint of honor and conduct of life, and a man's standpoint on a few other trifles as light as air to the average woman. He wondered calmly how much of that which was really higher and finer had been lost in such attaining."

The conclusion of the experiment is best told in Clem's own words when she shakes the dust of their little lives from her strong young feet and fares forth with the palms of victory in her brave young hands:

"I am leaving you, feeling that, if to be your sort I'd have to be exactly like you, self-complacent and pitiless to every one outside of my little one-two-three crowd, I'm glad, glad, glad that I am Clem Merrit, what I am: a woman who's seen enough of life of all sorts to know for all eternity that no one side of life can afford to sit back in a smug little corner and say, 'I'm It.'"

The Asiatic Labor Question in South Africa

WHAT is perhaps the most pressing problem now confronting Natal and the Transvaal is dealt with in Mr. Neame's book.* In both these British colonies there is need for more labor than is available. Natal as far back as 1860 began

*THE ASIATIC DANGER IN THE COLONIES. *By L. E. Neame.* New York: E. P. Dutton & Co. Pp. xvi, 192. $1.25.

to import coolie laborers from India; and since 1904 there have been from forty to fifty thousand Chinese coolies at work in the mines at Johannesburg. But in the two colonies the system of importing Asiatic labor has been different. In Natal the coolies from India are imported under the indenture system. Each coolie binds himself to work for five years with a Natal planter or mine-owner, and at the end of that time three courses are open to him under the terms of the contract made with him when he left Madras or Calcutta. He can sign a second indenture and tie himself to another term of service; he can stay on in Natal as a free Indian by taking out a license that costs him £3 a year, or he can have a free passage back to India. This, in brief, is the system in Natal. In the Transvaal only the mine-owners were ever permitted to import Chinese coolies, and under the Transvaal system the coolies could be employed only at the mines, and at the end of their terms of service they were compelled to go back to China. The first contingents of Chinamen are already at the end of their three years' terms. Many of them are already back in China; and by 1909, if there is no change in the policy of the Botha Government, not a Chinese coolie will be left on the Rand.

It is the Transvaal system of importing Asiatic labor that Mr. Neame advocates. He condemns the Natal system for the same reason that it is condemned in Natal and the Transvaal—because it leaves the Indians free to compete with white men at the end of their term of indentured labor. There are now about 70,000 of these free Indians in Natal and about 12,000 in the Transvaal. Thousands of them are engaged in retail trade. The Indians have secured almost a monopoly of trade with the Kaffirs in both countries, and only by the shabbiest of devices are they prevented from securing a hold on retail trade in the towns and cities. Their natural increase is much larger than that of the white inhabitants, and there is great alarm lest South Africa should wholly cease to be a white man's country.

For the British Government the problem raised by the presence of these Indians in Natal and the Transvaal is one of the most serious that ever confronted the Home Government in connection with South Africa. Unlike the Chinese who are now on the Rand, all these Indians are British subjects, and discriminations against them — discriminations such as those now in force in the Transvaal—involve native unrest in India and many difficulties with the Government at Calcutta. Both the Natal and the Transvaal governments have had some experience of these difficulties with the Indian Government; and in the case of the Transvaal the Indian Government has refused to permit the recruiting of 10,000 coolies for Government railway service, because of the discriminations existing in the Transvaal against the Indians who are already there. It is one of the ironies of South Africa that while, in the days of the Boer Republic, the treatment of the Indians was a subject of bitter complaint from Lansdowne, Chamberlain and Milner, today the Transvaal, as a British colony, is treating the Indians infinitely worse than when Kruger was in control.

Manorial Life

If Dr. Davenport's Manor of Forncett in Norfolk[1] is fairly typical of English rural life in the centuries which lie between the Norman Conquest and the reign of Queen Elizabeth, the English rural laborer of today has some reason to sigh for the good old times. Of political freedom and the right to the franchise, the villeins and serfs of medieval days knew little. They were subject to some restrictions and calls for service from which the modern laborer is free; but certain things they had in abundance—far greater abundance than is enjoyed by their descendants of today. Land there was for all—some of it held on very easy terms—practically nominal—such as a hen and a few eggs yearly. Some of it was held in exchange for a limited amount of service, such as plowing for the lord of the manor on a specified number of days in the winter and spring. Other tenants were subject to much

[1] The Economic Development of a Norfolk Manor. 1086-1565. *By Frances Gardiner Davenport, Ph.D.* University Press, Cambridge. New York: G. P. Putnam's Sons. Pp. x, 105, cii. $3.00.

heavier calls—rents, Dr. Davenport informs us, were unusually high on this Norfolk manor. These more heavily burdened tenants were called upon for labor on the lord's demesne for two days in each week thruout the busy seasons of the year. The holdings of these tenants were small, averaging about two and a half acres, but during the days of labor for the lord the workers were fed liberally from the lord's table, and as each tenant could keep pigs, hens and in many cases also cows and sheep, there can have been no miserable poverty in Merrie England.

The generous food scale of the laborers for the lord of the manor is brought out more in detail by Mr. Nathaniel J. Hone in *The Manor and Manorial Records.*[2] Mr. Hone does not, like Dr. Davenport, confine himself to a single manor, but from the rolls of a large number of English manors he gives a more general survey of medieval rural life. On the Manor of Inkpen, under the Abbot of Titchfield, the tenants who harvested for the lord received a daily meal at three o'clock which consisted of bread, with beer or cider, broth and two sorts of fish or flesh; and for supper, a wheaten loaf weighing forty ounces, and two herrings or a mackerel. The manors under ecclesiastical control, Mr. Hone points out, were generous to their tenants and exacted smaller rent services than those under lay management—a fact which does not in the least conflict with the other well-known fact that boroughs which grew up on ecclesiastical ground found it much more difficult to obtain political freedom from their lords than those which owed fealty to an earl or a baron.

England of the Middle Ages is no longer an unknown region of romance and fairy tale. Neither is it any longer a subject of speculative theory. The work so well begun by John Richard Green, William Cunningham, Frederic Seebohm, Paul Vinogradoff and Mary Bateson has been continued and supplemented by many workers, both English and American. Especially useful are the monographs descriptive of individual estates, among which the present work by Dr. Frances G. Davenport has a just claim to an honorable place, for its careful accuracy and the excellent selection of essentials amid the great mass of material offered by the manorial rolls. Dr. Davenport's work carries the imprint of the Pitt Press, of Cambridge University—in itself a certificate of scholarly work. *The Manor and Manorial Records* is more general and popular than Dr. Davenport's volume. The first half of Mr. Hone's work is but slight, and seems scarcely worthy of the large amount of research which he appears to have undertaken. The second half—the transcripts from manorial records—includes some very useful and illuminating extracts from court rolls, illustrating the administration of justice in manorial courts, and also some account rolls giving details of manor expenditures. The manor houses and house plans which illustrate Mr. Hone's books, as well as the account rolls, show plainly the modest scale of life of the lords of the manor, and the great gulf that separates these rural magnates of medieval England from the modern multi-millionaire.

Burbank's Work

A GOOD deal is written about Luther Burbank, but it may be noted that he does not write much about the rest of us or even about his beloved plant creatures. His occasional catalogs of "New Creations" are models of concise and dispassionate writing. A few written out addresses and an occasional letter to the editor of some horticultural journal compose the rest of his literary output. He turns out more new fruits than words, which isn't altogether a bad thing to do for a man whose work and joy it is to do precisely that.

But now from his own pen comes a modest booklet under the title of *The Training of the Human Plant.*[1] The title tells you at once the foundation thought in the book, which is that it should be profitable to draw a lesson from the analogy between plant development and growth and life and human

[2] THE MANOR AND MANORIAL RECORDS. *By Nathaniel J. Hone.* New York: E. P. Dutton & Co. Pp. ix, 357. $3.00.

[1] THE TRAINING OF THE HUMAN PLANT. *By Luther Burbank.* Pp. 99. New York: The Century Company. 60 cents.

development and living. When one talks with Mr. Burbank it is quickly obvious that here is a man known to all the world for his interest in plant kind whose first interest after all is human kind. Human behavior, human thought, human possibilities are really the first interests of this great horticulturist.

"Now, about these extraordinarily varying poppies, Mr. Burbank," says your visiting student of heredity and variation.

"Ah, yes—exactly," replies the master grower, "but did you ever think of the much more wonderful variations in people, in children, the children who are going to be the people of the next generation?"

And so no wonder he has written a little book overflowing with love for children, with earnest hopes and advice and almost passionate impatience — if so sweet-tempered and quiet a man as Burbank can be passionately impatient—concerning their upbringing.

From the scientific point of view the suggestions for the nurture and culture of children rely too much on the argument from analogy. But for all the scientific man knows these suggestions may be the very best, the sanest and the most firmly grounded that can possibly be given. And so the reviewer, who is only a scientific man and knows children only to love them and to wish for them the best care and culture possible, takes neither issue nor part with Mr. Burbank in this generous and earnest attempt of his to help the child of today.

Even while we are reading what Luther Burbank has written there comes to us another new book[2] written about him. Profesor de Vries, the Amsterdam botanist, chief apostle of the theory of species forming by heterogenesis or mutations, author of several large books and numerous recent papers, appears in this latest book as a kindly describer of the ways and results of certain of the world's most effective plant-breeders; in particular of two, namely, Nilson, of Sweden, and Burbank, of America.

Dr. de Vries calls the attention of the reading public to the fact, a little likely to be obscured by the mass of fulsome magazine and newspaper writing about Burbank, that there are other plant-breeders now living, still others now dead, and that some of these others are also great ones. But chiefly Professor de Vries uses this new book to fight again for his pet theory of species-change. He finds in Burbank's results, referred to copiously, much evidence for mutations, and in Nilson's work and attitude a veritable triumph for his theory.

Whether one cling to Darwinism or be ready to go over to de Vriesism, one can read this last contribution of Holland's master biologist with lively interest and great profit. The chapter on the association of characters — correlation biologists usually call it—is simply rich in its array of facts and its suggestiveness, and the keen analysis of the methods and results of plant amelioration is equally admirable. The whole book is perfectly comprehensible by the general reader.

[2] PLANT BREEDING. *By H. de Vries.* Pp. xiii, 360. Chicago: Open Court Publishing Co. $1.50.

Ghetto Comedies. By Israel Zangwill. New York: The Macmillan Co. $1.50.

Israel Zangwill has a strange and perverse genius. He paints his people with apparent accuracy, yet he sets the portraits in such an unlovely light that one cannot help wondering whether his Jewish models are fairly treated. The reader feels as tho he had been wandering in a land of grotesques. More than a touch of exaggeration mars some of his best tales. *Ghetto Comedies* is a bitter book, as tho Israel Zangwill had eaten of the sour herb of disillusionment, and, disappointed with his people, had taken his revenge in these stories of unsatisfactory and often exasperating Jews. They can talk; they cannot act. They debate; they cannot fight—even in self-defense. They are musicians, actors, poets, philosophers, traders; but they are never complete men. And we pause to remember that it is a Jew who satirizes rather than portrays his people. He scorns their isolation from other races, and he equally scorns their attempts toward union with them, as in "Anglicization." Why should they remain a people apart? "The English came from Denmark, and they are nation enough." The Colonists came from England, and they, too, are nation enough. To our

mind there is no good reason for Zionism or Nationalism, and the loyalty to the land of one's birth or adoption is a finer thing than perverse race segregation, where conditions are at all tolerable. We with English blood in our veins do not dream of a triumphant return to England, which could not hold us all, anyway, why should the Jewish blood yearn for Palestine? But the Hebrews are incorrigible idealists, in spite of their apparent materialism:

"It seemed to hint . . . that a plague of doctors of philosophy had broken out over the Pale, doctrinaires spinning pure logic from their vitals, and fighting bitterly against the slightest deviation from the pattern of their webs. But the call upon Israel was for Action. Was it, he wondered, with a flash of sympathy, that Israel was too great for Action; too sophisticated a people for so primitive and savage a function; too set in the molds of an ancient scholastic civilization, so that, even when Action was attempted it was turned and frozen into philosophy? The habit of actualities had been lost."

On Art and Artists. By Max Nordau. Translated by W. F. Harvey, M. A. Philadelphia: George W. Jacobs & Co. $2.00.

Times have changed since the appearance of Max Nordau's views on "degeneration" and "degenerates" incensed and amused the world. People no longer treat him quite so like a Terrible Turk of literature as they did a few years ago. But he has still a following, ready to welcome him and his theories with respect, tho not, as in the past, with awe. There is much that is instructive, much that irritates by its bumptiousness, and not a little that seems tedious, in his book, *On Art and Artists*, which has now made its appearance in a careful English translation. Exception, by the bye, might very properly be taken to the title of the work. It is more comprehensive, more suggestive of finality and order, than the contents of the volume. The chapters are really detached essays; and, tho the author has at the end of his book, made an attempt at summing up, he has not (as one might have expected from the title) given us a new gospel of criticism. In his opening essay he demolishes, much to his joy and comfort, the dogma of "art for art's sake." Art, as he rightly affirms, has almost from the beginning had a social mission. However personal and objectless (save as an expression of emotion) it may once have been, it was soon turned to useful purposes, to the propagation of ideas, as, for example, morality or religion, the glorification of men and other things. Paradoxical as it may seem to say so, art is therefore unquestionably in a sense utilitarianism. But—despite passing popular crazes which may be invoked as arguments to the contrary—if it is truly art, it is always beautiful even when most useful. Possibly, indeed, it is most useful when most beautiful, tho as to that there may be room for argument. Nordau has no patience with the apostles of ugliness in art, and sneers savagely at the works of Edouard Manet, Bastien Lepage and other realists who in the last quarter of the nineteenth century had so many admirers. Nor has he much more patience with that antithesis of realism, the mock-idealism of Puvis de Chavannes, with its affectation of simplicity and its dishonesty in drawing. Rodin is to Nordau a perverted and sadic personage, who has been forced from his originally high aims by the exciting clamor of praise with which the "degenerates" have hailed his crimes against art. In contrast to these artists and their imitators, Nordau holds up, as wholly worthy of our reverence, the great men of the School of Barbizon —and chiefly Millet.

Lord Beaconsfield, and Other Tory Memories. By T. E. Kebbel. Pp. xii, 360. New York: Mitchell Kennerley. $4.00.

Mr. T. E. Kebbel is frankly a Tory of the Tories. He was born in a Leicestershire vicarage, into a Tory environment; and all thru his long and quietly successful life he has been a Tory journalist. His work brought him into contact with Beaconsfield, Salisbury, Balfour and other of the Tory leaders; and his heart has been in his work, because he is in full sympathy with Tory traditions and principles, and with Tory aims in English politics and social life. He has been content with things as they are in England; with the political and social dominance of the territorial aristocracy, and with the stratification of English social life due to feudal and territorial influences. Mr. Kebbel's acquaintance with Beaconsfield was not long or continuous.

But no other journalist who has published his reminiscences was ever much in personal contact with Beaconsfield; and if Mr. Kebbel's memories are not so intimate as those of Boswell, of Johnson, he comes nearer to being Boswell to Beaconsfield than any man who has yet written of the Tory leader. The chapters in the book—most of which have the virtue of being self-contained—are very uneven in value. Some are distinctly trivial, and scarcely worth publication, even in an English Tory magazine. But the chapters on Beaconsfield are informing; and there are glimpses of electioneering in England, and some insight into Fleet street in the days when Tory writers who believed in the creed they had to preach were not numerous, and the Liberals had distinctly the best of it in the daily press. American readers will find most interest in the chapters which depict social conditions; for these show how party lines and church affiliations divide social England; and especially rural England, where there is no strong and wealthy middle-class, and where consequently, social dominance and to some extent political dominance as well, fall without question to the squire and the parson of the Established Church. It is a long time since the attitude of these big-wigs of rural England toward the farmer, the inn-keeper, the small tradesman, and the agricultural laborer has been so well described as it is in Mr. Kebbel's pages. Radical newspaper writers in England never tire of describing the patronising attitude of the squire and the rector; but Mr. Kebbel writes from the inside, and it is this fact that makes his descriptions of social conditions in rural England all the more significant.

The Human Element in the Gospels. A Commentary on the Synoptic Narrative. By George Salmon. Edited by Newport J. D. White. New York: E. P. Dutton & Co. $4.50.

During the later years of his life, George Salmon, provost of Trinity College, Dublin, a thoro scholar and author of a conservative Introduction to the New Testament, copied with great pains the entire Greek text of the first three gospels, in all the sections where it runs parallel, and noted skilfully the indications of priority and interdependence of the several evangelists. His purpose was to ascertain which of the gospels was the earliest, to what degree they used common material not now extant, whether one evangelist employed the work of another, and in general to extract all possible information from the text itself as to the inter-relation of the gospels and the credibility of the record. The conclusion of Dr. Salmon is that all three writers made use of a common source, which he entitles Q. Mark abridged this material in some places more than the others, and in certain sections supplied special information from his intercourse with Peter. This does not agree with the judgment of most recent students of the synoptic problem, who hold that Mark was the earliest gospel, upon which the narratives of Matthew and Luke were based; that both the latter had access to a collection of discourses of Jesus, and each found additional material not accessible to the others. This theory is simpler than that of Dr. Salmon, does fuller justice to the character of Mark as an original writing, and more completely accounts for all the facts. The significance of this posthumous essay is not in its particular theory, but in the fact that by thoro, independent investigation a cautious New Testament scholar was led to the conclusion that documents embodied in the evangelic record are our real authority, and not three or four independent writers. This conclusion may not diminish reliance on the credibility of the gospels, but it cannot fail to affect the manner in which their testimony is combined in order to construct the history. Dr. Salmon himself says that

> "in comparing two accounts of the same occurrence, we cannot help judging on the same principles as would guide us if we were judging between two different accounts of a contemporary event. And in that case we naturally give a preference to the account most in harmony with our ordinary experience."

Possibly the most significant thing about this volume is that the Fourth Gospel is left entirely out of consideration. It is a striking fact that a scholar of the breadth and thoroness of Dr. Salmon, who gave so many years to this problem, apparently paid no attention whatever to the works of Continental scholars. Doubtless his notes were completed before the

publication of Wellhausen's "Einleitung in die drei ersten Evangelien" and Harmack's "Sprüche und Reden Jesu," but it is strange to find neglect of such works as those of Wernle, Holtzmann, Weizsäcker and Bernhard Weiss. It is commonly supposed that the Germans weight their treatises with innumerable details and produce great tomes very difficult of perusal, while the English succeed in establishing clearer conclusions in briefer compass and more graphic manner. But if one take to hand the little handbook of Wernle on "Die Quellen des Lebens Jesu," it will soon be seen that the Teuton has the advantage in point of brevity and clearness, as well as forcefulness of argument and potency of conclusion. No one would refuse admiration for the aged student who worked thru the gospels so painstakingly, but the publication of his detailed processes of investigation affords to those who seek to follow his footsteps more labor than result.

The Collector's Manual. By N. Hudson Moore. New York: Frederick A. Stokes Co. $5.00.

This manual is a small encyclopedia for home collectors or dealers in antique house furnishings. The book is very fully illustrated, containing 336 engravings. These illustrations are not all of beautiful objects. Brass preserving kettles, candle molds, pewter oil lamps are not really art objects. It is questionable whether it is wise to collect objects simply because they are old. A Chippendale or Adam chair can be old and beautiful and deserves an illustration, but candle molds and preserving kettles are not ornamental except in a Dutch painting. The illustrations in the chapter on "English Pottery and Porcelain" are particularly good. Fig. 31, "Fleurs and Blenheim," and Fig. 35, "View of Southampton," look almost blue, altho in black and white, they are so well reproduced. The objects in the pictures of shelves and cabinets are too small and crowded to be of much use to the reader. The borders of the pages are in brown and designed to suit the subjects of the chapters treated. There are seven chapters on furniture. The first is "Tables and Sideboards." The second is on "English Pottery and Porcelain." Then comes "Chairs and Sofas." The two most interesting chapters are those on "English Pottery" and "Cottage Ornaments." The fine illustrations, as well as the information, make the pottery chapter valuable. The illustrations in the chapter on "Cottage Ornaments" are not distinct enough to be very interesting, but the subject is fresh, and one wishes that the Bennington pottery had been continued. It is pleasant to learn where the speckled cow cream-pitcher was made, and to know that there artists liked their work because they could make their own designs. "Antique Glass Ware," "Old Pewter," "Brass and Copper Utensils," "Luster Ware," are titles of other chapters in the book. These chapters are all full of information, given in a popular, chatty way from the collector's standpoint, giving account of shrewd bargains and the money value of things, rather than of their artistic merit.

Personal and Literary Letters of Robert, First Earl of Lytton. Edited by Lady Betty Balfour. 2 vols. New York: Longmans, Green & Co. Pp. ix, 348, 448. $6.00.

The deepest impression left on the mind after coming intimately in contact with the life of Earl Lytton is one of failure. A remarkably handsome and striking personality, a heritage of some literary fame and honor from his father, Edward Bulwer, Baron Lytton; a social position secure and honorable; a mind endowed with brilliant intellectual and poetical gifts, and a moral character above reproach, Earl Lytton early enjoyed fame as a poet; later honor as a diplomatist and ambassador, and reached the summit of ambition in his four years' rule as Viceroy of India. He was most happily married to a wife whom he continued to adore to the end of his life. His home life was without flaw, in spite of the sorrow cast upon it by the death of his eldest and second sons; and no man in English life ever enjoyed more loyal friendships from men whom all the world honors. Yet in spite of all this success and all these favorable circumstances, Earl Lytton continually failed to reach the level to which he aspired and which his gifts and position seemed to make possible for him. As a poet, "Owen Meredith" has long ago been ranked

among the minor or third-rate poets of Queen Victoria's reign, and despite the one-time popularity of "Lucille," he is now scarcely read at all. As a diplomatist he was happy and successful as long as affairs went smoothly and his duties remained of a social and routine character; and history has long ago recorded his failure as Viceroy of India and his colossal blunder in bringing on the calamitous war with Afghanistan; tho time has absolved him from the bitter accusations brought against him of dishonorable, perfidious or self-seeking motives and conduct. His mistakes and failure were due to two causes—a lack of steady, well-balanced judgment and an utter incapacity to understand the English nation, whose representative he was.

A Revolutionary Princess. By H. Remsen Whitehouse. New York: E. P. Dutton & Co. $3.00.

The Princess Christina Belgiojoso was one of the picturesque actors in the drama that closed with the coming of Victor Emanuel II to the throne of United Italy. Lacking correspondence, the main interest often of modern biography, this still succeeds in being essentially a character study. Without glossing her faults and her foibles, Mr. Whitehouse has yet drawn a sympathetic portrait of the sometimes fantastic, always patriotic, noble woman, and tho the reader does not meet a wholly great soul, he does find one dominated by a mighty enthusiasm. Before pleasure, admiration, all to which her bizarre tastes might have tempted her, the Princess counted the freedom of Italy. As a girl she intrigued with the Carbonari. As an exile her salon at Paris was the center of the Italian interest. On her estate she strove for the betterment of the peasants. At Rome she was organizer of the soldiers' hospitals and a tireless nurse, while always, everywhere, her pen was busy for the cause she had at heart. Guided tho it was by a whimsical and ill-balanced mind, yet hers was a valuable service. In its general sanity and happiness of effort her career is a noticeable contrast to the restless and thwarted life of a more gifted woman, Sonya Kovalevsky, belonging also to an oppressed land. Shut from labor for her own people, it seems as tho the brilliant Russian wandered bewildered thru a painful world, while the flighty Italian, steadied by a great practical object, made a whole of what might well have been a broken and meaningless existence. Mr. Whitehouse has given the English reader an interesting account of a romantic personality, and he is to be congratulated on a volume that tho solid in appearance is yet light to the hand.

Decorative Styles and Periods in the Home. By Helen Churchill Candee. New York: Frederick A. Stokes Co. $2.00.

This book has 126 illustrations. The first is of a Venetian bed. The author describes a Renaissance bed as "an enchanted castle of sleep, where one may give himself over to unconsciousness or the celestial irresponsibility of dreams thruout all the enchanted dark to purple twilight, and wake to harmonious surroundings, which breathe a benison on the waking day." In spite of such fine writing, this book is a valuable one and full of information. It is written from the art standpoint and there is not one unworthy illustration in it. The text also grows more simple and direct when the author really gets to work. The decorative periods and their historic connection are described intelligently and fully illustrated. The author states that decorative style came from Italy to France under François I, and that Louis XIV "developed a style of such magnificence that now only palaces and hotels *de luxe* can attempt to reproduce it in its perfection." "A degree of lavishness —and sometimes perfection—rarely seen outside the homes of the unnecessarily rich." This perfection was due to the Royal Academy of Painting, Architecture and Sculpture. The author has a catholic taste and seems to admire all the styles about equally well, but the late black walnut period, she says, "must remain a horror to all who remember it."

The Birth of the Nation. By Mrs. Roger A. Pryor. New York: The Macmillan Co. $1.75.

Mrs. Pryor has told vividly and well the tragic story of the Jamestown Settlement. That earliest mystery of Raleigh's company—one hundred men

and women and little Virginia Dare, who vanished utterly, leaving no trace of their fate—was but the forerunner of continuous disasters from 1607 to the great massacre of 1622. The followers of Powhatan wear none of the glamour thrown about the Northern red men by Cooper and Longfellow, but Mrs. Pryor makes a welcome defense of the romance of Pocahontas, and gives the friendly Chanco the recognition his faithfulness deserves. The Indian girl is truly human, a gay little barbarian at first, a saddened dweller amid English civilization at the end. Percy, from his picturesque antedecents, and John Smith, from his own personality, are the heroic figures in the somber scenes. With flagrant faults, doubtless, Captain John Smith fires the imagination and touches the heart, as he wages his dauntless and futile war against enemies without and within the camp, against discouragements and treachery. Tho the book was prepared for the year of the Jamestown celebration, it escapes every fault of the timely pamphlet and the made-to-order history. It is the careful, finished work of one who loves the task for its own sake, and who has lived long with her materials.

A Short History of Social Life in England. By M. B. Synge. New York: A. S. Barnes & Co. $1.50.

More and more history concerns itself with the social life, as the basis upon which is built up the political life, of a people. Mr. Synge's book is exceptionally helpful in giving an idea of the occupations, the pleasures, the manners and customs of the English people of all ranks from the days of the early Britons to the present. The treatment is popular and the style simple and pleasing. One is enabled to see the great masses in distant times in their daily round of life. The meagerness of comforts in the early days is especially borne in upon the reader. Most of the things which civilized mankind today considers as necessities were utterly unknown to the people of the Middle Ages, and many of them unknown to the people of a century ago. Possibly the most interesting feature of this book is the attempt to give dates for the appearance of the various comforts in food and household living and of articles of dress. Take, for instance, the present-day common precautions against getting wet. Our ancestors were not so particular. The first umbrella seems to have appeared about 1756, and the Londoner who carried it was promptly mobbed. It was some years later before its use became general, while the mackintosh did not appear until 1825, and rubber overshoes probably not until some time after. Hundreds of such dates are given for the curious. Many glimpses are given of the people in their associative life—their gatherings, sports, pilgrimages; and one may trace herein the fluctuating position of woman, now one of comparative freedom and again one of marked subordination. Of the Middle Ages (say to the year 1500) we are told: "Boys and girls were educated together; they had games in common; together they hunted, together they went shooting. It was also an age of romance, of lovemaking and of great immorality, for the which both sexes were punished equally." Children were pitilessly flogged in Henry VIII's time, as they probably had been for centuries before, and as they certainly continued being flogged for many generations after. It it not just certain when the Saxon custom of wife-beating began to decline. But it seems to have lasted well into the reign of bluff King Hal, if not into that of Elizabeth. Altogether the book is most interesting and instructive.

Ian of the Orcades. By Wilfred Campbell. New York: Fleming H. Revel & Co. $1.50.

The author of this novel is better known as a poet. It is said, indeed, that if there were such a degree to confer, Mr. Campbell would be the Canadian poet laureate of the British Empire. And however that may be, this story of the mad earl of Girnigoe Castle, on the North Sea coast of Scotland during the reign of Robert III, shows many qualities which are peculiar to Highland verse. The author appears to have inherited that melancholy fancy from some Ossian forefather of his muse which stirs the gloom of far centuries and shows terrible visions of crime within. Yet is the story told in a kind of argent prose which lies above the dark deeds done as the white mist lies above the

mountains. The book is to be valued, not merely as a thrilling tale of bygone times, but as a curious work of art by which an author has produced the impression of a chant with words that are common and are musical simply by imparting into them the meaning of old fancies.

Literary Notes

....Miss Clara Barton, in response to many requests from her youthful admirers, has told the story of her childhood in a booklet published by Baker & Taylor.

....Those who hold that the stage is necessarily the teacher of immorality would have to modify their opinion if they saw or read Clyde Fitch's new play, *The Truth,* published by Macmillans (75 cents). It is an interesting and lifelike drama, with the strongest of moral lessons. A good play to "read 'round" in a literary club.

....The Rev. Dr. James M. Gray's *Antidote to Christian Science* (Fleming H. Revell Co. 75 cents) will be of little avail, except in the case of those who hold to the plenary and literal inspiration of the Bible, since the "Antidote" depends for its efficacy upon this theory. Dr. Gray is dean of the Moody Bible Institute.

....Those interested to know what manner of sermons are preached by Mr. Rockefeller's New York City pastor, the Rev. Charles F. Aked, D.D., recently imported from Liverpool, may be informed through *The Courage of the Coward* (Fleming H. Revell Co. $1.25). They impress us as devout, evangelical, constructive, and sufficiently forceful in thought and earnest in feeling to be called good preaching.

....It has hitherto been very difficult to get reliable information about the progress of the work on our great national undertaking, the Panama Canal, and both the criticisms and the eulogies that have been past upon it have been deficient in numerical backing. It is, therefore, a good idea of the Isthmian Canal Commission to start a weekly journal, *The Canal Record,* published at Ancon, Canal Zone, which gives the details of excavation, expenditures, etc., as well as some account of the social life of the Zone.

....Any one with a taste for the antique and well-established will find *The Parish Clerk,* by Mr. P. H. Ditchfield, M.A. (New York: E. P. Dutton & Co.), a delight to the eyes, and also a book to be desired to make one wise. It is full of quaint and curious information of the picturesque, semi-clerical personages who have now almost disappeared from the parishes of England, but whose memories are certainly deserving of the tribute of kindly and generous appreciation which Mr. Ditchfield accords them. The book is a useful addition to the history of English ecclesiastical institutions.

Pebbles

"Ah," said her father, "did you want to see me?" "No," said her lover, "but there didn't seem to be any way out of it."—*Cassell's Saturday Journal.*

FIFTY YEARS AGO.

The Wisconsin Board of Education recently resolved "to erect a building large enough to accommodate five hundred students three stories high exclusive of the basement." Tall scholars!—From The Independent, August 27, 1857.

LITTLE JACK HORNER.

Chaucer—

A ladde ther was—Jock Hornere was he clept;
A gret Yule pye of mynse-meete didde he gette
To eten whiche in cornere sate hym don,
Ne sheren it ate alle with ony oder on.
With greedye thumm he hamerd atte the cruste
And whan abuve a plumm, it crake and buste.
And eke the wordes he to hymselfe hath sedde
Doth shew a veray parfitlee sweld hedde.

Coleridge—

Mince-meat, mince-meat everywhere
On fingers, nose and chin;
Mince-meat, mince-meat everywhere,
Much more outside than in.
Yet tho he felt right good at first,
Eersoon he felt forlorn;
A sadder and a wiser boy
He rose the morrow morn.

Shakespeare—

To eat or not to eat—that is the question;
The pie it seemeth good, yet I may suffer
The wrath of outraged Bridget if I take it.
Who steals mince pie steals hash!
This quality of mince-meat is not strained.
And stomach-ache—the worst of all the ills
That flesh is heir to—doth murder sleep;
But if I do sleep—
Why then perchance I'll dream—ay there's the rub.
What ho! Footsteps! The cook!
One little plum I'll filch and then skidoo.

Tennyson—

Come into the kitchen, Jack,
For our black, fat cook has flown.
Come into the kitchen, Jack;
Make the pies and answer the phone,
And all of our Christmas cooking this year
Will have to be our own.

Longfellow—

On a corner of the teepee,
Sat the little Hiawatha,
Eating pie in messy mouthfuls,
Feasting on the greasy pie-crust,
Feasting on the juicy mince-meat,
With the plums his thumbs adorning,
Murmuring to himself the meanwhile;
"You're the stuff, oh Hiawatha!"

The Vancouver Race Riot

THE accursed prejudice of race is making trouble everywhere. It is unchristian; it is inhuman; but narrow vanity and arrogance maintain it against all decency and policy. The trouble on our Pacific Coast, in California and Washington, had not blown over when it broke out again, worse than ever, in Vancouver and British Columbia. There the attack is on Chinese, Japanese and East Indians, the latter British subjects, the Japanese being special friends under the new treaty with Great Britain. If the trouble was awkward for us it is doubly awkward for Great Britain, and we anticipate that she will deal with it with somewhat more determination than we have done.

And yet it must be considered as to what the Home Government can do with the very loosely attached Dominion of Canada, and equally what Canada could do with British Columbia, with its population largely from the United States. Intimidation and force are hardly to be thought of. England would not send an army to coerce Canada, and Canada could not coerce British Columbia if she were to try. It is a case to test to the utmost the persuasive powers of diplomacy, for Japan will not be satisfied to be humiliated, and those who have refused to allow the Asiatics to land are not likely to yield. They will try to patch up some agreement by which Japan will dissuade her sons from coming here, and equally the authorities will prevent Hindus from going to British Columbia. Already the British possessions in Africa have taken measures to limit the influx of Asiatics. Chinese are being sent back from the Rand as fast as their time is expired. Australia and New Zealand entirely exclude Chinese, Japanese, Hindus and Malays. We have shut out the Chinese from the Philippines, but not yet the Japanese. Even Sumatra and Java put a close limit on Asiatic immigration. What we have done to exclude the Chinese, and are trying to do to exclude the Japanese, is no more than the arrogant English-speaking peoples have done elsewhere. We are not, then, surprised to see this outbreak in Vancouver.

But Great Britain is in a less favorable condition to exclude Japanese laborers than we are. She has no treaty which gives her any right to do this, while our treaty with Japan distinctly provides that, while allowing the citizens of either country to enter, travel and reside in the other, this agreement does not annul any laws as to the immigration of laborers which have been or may hereafter be enacted in either country. This gives us a legal, but not a moral, right which Great Britain does not possess.

The excuse made in British papers for the outbreak—that it was produced by the advent of American labor agitators, has no validity. The Canadians on the Pacific Coast are just as eager to prevent competition as are our people. Their unions have the same purpose to exclude all competition. It is a general phase of trade or class or race selfishness, to whose vicious force is added the ugliness of race hatred. We are not yet altruists, not to say Christians. We have not yet, many of us, even reached the breadth of those extreme French Socialists who refuse to allow their patriotism to compel them to hate the Germans. A Catholic priest, just after the Franco-Prussian War, was telling the French Canadians in his church in North Adams, Mass., that they might, during Lent, fry their food—*aliments*—in lard, and his unfamiliar tongue pronounced the word like

Allemands (Germans), greatly to his hearers' delight. We have not yet got very far beyond such racial antipathies, but it is our business to rebuke it and fight against it in every way. That hatred has done us sad injury of late with Japan, even in business. It has done the same in China, where we have been boycotted for it, and deserved it. It is our one occasion of trouble in the Philippines. It is nothing else but the supercilious, arrogant and domineering attitude of the Englishman to the native that is just now actually endangering British rule in India. It is the great wrong of English-speaking people the world over. How Great Britain will settle her new difficulty with her Eastern ally we wait to see; but it is a sad thing that the sympathetic peace of nations can be endangered or wrecked by a small fraction of ignorant people in some distant land who have no sense of international comity, and who have not learned the alphabet of the oneness of humanity.

The Emancipation of the Mob

Mr. Victor Grayson, the first Socialist elected as a Socialist to the British Parliament, has been telling why he is a Socialist. Briefly, his reason is that he believes in "the emancipation of the mob."

The phrase has quality. It is one of those happy combinations of words that suggest facts, conditions and ideas that in turn suggest other facts, conditions and ideas indefinitely. But, first of all, it raises a question. What is "the mob" to be emancipated from?

Mr. Grayson and his fellow Socialists would answer, we suppose, that the mob should be emancipated from what some of them rather crudely call wage slavery. Mr. Grayson, with more precision, would probably say: From an economic thraldom consequent upon privilege enjoyed by a land-owning and capital-owning class. The means of production he would undertake to show are monopolized. The mob can live only as it is more or less advantageously employed by the propertied class. The mob can be emancipated from exploitation and poverty, he would argue, only by transferring the ownership of the means of production from a privileged class to the people collectively.

A hundred years ago if any one had talked about the emancipation of the mob he would have meant political enfranchisement. The political ballot was enjoyed only by a class. Property and other qualifications made it not a common right, but a privilege monopolized by a class. Even the United States of America, with its political system professedly based upon the principles of the Declaration of Independence, knew nothing of universal suffrage. Its government was republican, not yet democratic. Even now an entire race, emancipated from chattel slavery by the Civil War, is practically barred from participation in political life by the constitutions and laws of Southern States. Thruout the North, however, property qualifications have been mostly swept away and universal suffrage gives to "the mob" the power to emancipate itself to any further extent possible by legal or governmental means. If, then, the mob does not make an end of economic thraldom it must be for one of two reasons. Either something more than political and legal measures is necessary to this end, or the mob does not know how to use its power.

A little reflection will probably convince most people who are interested in the question that to a very great extent economic emancipation could be achieved by political and legal means. It is not disputed, we suppose, that our present economic system rests altogether too largely upon privilege. Franchises and corporate rights have been granted too freely and thoughtlessly, and economic opportunity has thereby been unjustly distributed. The people have become very much alive to this fact, and they agree with President Roosevelt that the chief political issue at the present moment is the question whether this country shall henceforward be ruled by the people, or by a class of very rich and very powerful men who have shown a disposition to be, as the President describes them, both lawless and predatory. There is no doubt, then, that by fighting out this

issue to the end a great deal of economic emancipation can be achieved.

Everything, however, depends on the ability of what Mr. Grayson is pleased to call "the mob" to use its political power wisely, and this consideration suggests that the mob may possibly be in need of emancipation from thraldoms neither political nor economic.

It needs but a cursory study of American political history to discover that a large majority of American voters has always had certain mob characteristics. It has moved in herds, under the influence of party traditions and shibboleths. The percentage of really independent voters has always been small, and it has always been exceelingly difficult to obtain a decisive vote upon the merits of any particular question, however important. Political meetings are swayed by emotional excitement and the political influences that act upon voters individually, when they are not massed in great gatherings, are typified by the sensational newspapers with their shrieking headlines, rather than by the calm argumentation of substantial political discussion.

These facts, true of America, are true also of England, of France and of Germany. The mob is still the mob because of its mobbishness, and this is a large part of the inner content of that bit of ancient esoteric philosophy which declares that the curse of the poor is their poverty. In America and in Europe popular education has achieved wonderful results in quickening the intelligence and enriching the knowledge of the multitude, but it has not yet succeeded in emancipating the mob from that impulsiveness, emotionalism and unthinking solidarity which makes it the pliant tool of designing leaders who invariably play into the hands of a privileged class, thereby riveting the fetters of the mob at the very moment when the mob imagines that it is "breaking out" into freedom.

The emancipation of the mob, therefore, will not be the work of a decade or of a generation. The centuries have been contributing to it, and it may be that centuries more will pass before the end is attained. The emancipation of the mob is the emancipation of the human mind and of the human will, and that is a large enterprise.

The Coming Episcopal Convention

No more important question will come before the Protestant Episcopal Convention in Richmond next month than that of separate missionary districts for negroes, in which they shall meet by themselves, govern themselves under a negro bishop with some sort of subordinate designation and guided by a white advisory board. Already the denominational journals are giving pages on pages to it, and we observe that *The Churchman* is strongly opposing the plan as proposed by several Southern bishops, especially the three bishops of the two Carolinas. A similar question is to be a principal bone of contention in the coming Methodist Conference. Indeed, the negro question is bound to be a disturbing one everywhere, so long as it is based on the postulate that the negro is essentially and necessarily an inferior race, to be always kept subordinate.

The Carolina bishops recognize the fact that their Church is not attractive to the colored people, and does not grow. They see the strong and self-reliant Baptist and Methodist African churches, and they think that if the negroes are set off by themselves they will acquire self-reliance and strength. They recognize the fact that the separation of the negro ecclesiastically would be "an extraordinary departure from the law and custom of the Church," but in the present conditions they think it necessary. The Bishop of East Carolina thus states the case:

"We all know that in the South there is separation between the negro and the Caucasian in school, in church, and in all things tending toward social life. This separation is more decided now than it was twenty years ago; and there is no probability of its ever growing less. Some twenty years ago the diocese of South Carolina passed a law excluding all negro clergymen and laymen from their Convention. For the past two years the diocese of North Carolina has been discussing the exclusion from their conventions of the negro clergy and laity. If the General Convention does not act, this diocese surely will, and at once. In East Carolina the negroes have, as yet, all the formal rights of the white man; but this formal position is hardly more satisfactory. In the first place, they take no real part in the de-

liberations of the Council. The clergy go as their duty; but the laity hardly ever attend; they sit on back seats, have little or nothing to say, and they get little or no good out of the work of the Council. In the second place, I *know* that if the work among the negroes grows in East Carolina, the diocese will exclude all of them from its Council: the growth of the Church among the negroes thus assuring their ecclesiastical disfranchisement. The condition of these three dioceses makes a good picture of the state of affairs in the Church in all the Southern States.

"Thus, we see, outside of their own parishes or missions, these negroes have no standing in the Church; they have no really representative gathering, they form no part of any law-making body, and they have no voice in any real Church council. They are not treated like the white man; for they are given no opportunity to develop as men in meeting with their equals for free discussion of their hopes and perplexities, and in bearing the responsibility of making laws which affect their religious welfare. Now, I ask, is this fair or wise?"

We let him state his case at length. He agrees with us that this is not fair or wise, but his conclusion is, not to give the negro equal rights in the Church, but to put him out by a Jim Crow law into a separate district where he will contaminate nobody. Is it any wonder that the States frankly disfranchise the negro when the Church acts in this unbrotherly and unchristian way to its poorer brethren.

But what do the negroes themselves think of it? They have consistently voted, for the sake of principle, to oppose the separation, even tho it would give them a certain ease; for at present, as one of the most noted white clergymen of the Carolinas, who has been devoted to their interests, said to the bishop whom we have quoted: "The present condition in the Church in regard to the negro is simply *intolerable*." In the diocese of Southern Virginia, where the organized work of the Church among the negroes is oldest, where two of her strongest and best known institutions of learning for them are located, and where there are over 1,520 negro communicants, they have earnestly protested against the proposed separation, and have, in convocation assembled, petitioned the council of the Church to oppose it. In North Carolina, where the colored Episcopalians have a meeting by themselves, the bishop met them the other day and advised that they be formed into a separate jurisdiction, with a bishop of their own, and asked their vote on the subject. They unanimously voted that they preferred the present diocesan arrangement, but, "in case that cannot be retained," they approved of the bishop's plan—evidently a matter of submitting to necessity.

The serious question is: What is Christianity worth? Has it any principle or power? We have a way of saying now that the essence of Christ's doctrine is expressed in the words "Our Father," that God is the equal father of all men, and all ye are brethren. Is the notion of a Christian democracy false? Some think so.

Deuteronomy

THE impossibility of attaining an adequate knowledge of the Bible by means of the International Sunday school lessons is illustrated by the selections from the book of Deuteronomy for the course now in use. There are but two lessons from Deuteronomy, and one of these is the last chapter, which is of the nature of an appendix. Yet the last book of the Pentateuch is one of the most important literary documents the world contains, and unquestionably has had larger influence for good upon religious thought and practice than any other portion of the Biblical legislation.

The vogue of Deuteronomy among readers of the Bible is not extensive. The name is unattractive, and it is not particularly inviting to be asked to read a second lawbook when the first has proved uncommonly dull. Leviticus and Numbers have already tired out many, and they skip over to Ruth and Samuel, where the prospect both for interest and profit is known to be much brighter. It is commonly of small use to quarrel with a popular verdict, but in this case it is certainly mistaken, for if one read the earlier chapters in large sections he will find himself delighted with persuasive oratory of a high order, while the spirit of wisdom and humanity, coupled with deep religious passion, which prevades the later portions of the book, must perforce be of interest to all but the dullest spirits.

Deuteronomy is oratorical legislation. As its title indicates, it is a restatement

of law, but the contrast in spirit between the legislation of the central books of the Pentateuch and that of the last book is very great. The former are severe, monotonous, dry; the latter is humane, charitable, eloquent, and on fire with religious fervor. What other book of law in the world gives reasons for its enactments? But Deuteronomy is continually at pains to explain why the commandments are thus and so, and it argues and pleads for the enforcement of its laws, as if it despised the obedience of force or fear. "Thou shalt love" is its typical law, as it is also its highest. The commandment to love is illogical, and it is not at all in the spirit of a lawgiver, but the author of Deuteronomy was not a legalistic logician, but a seer and prophet, whose lips were eager with moral truth and religious zeal, and his book is one of the few in the world in which oratory, legislation and poetry lie side by side.

The student of Deuteronomy is made to face one of the most interesting and important problems in the Higher Criticism of the Old Testament, and one in which technical and philological knowledge is not requisite to a decision. On the face of the book it was composed by Moses immediately before his death and on the eve of the conquest of Canaan, say 1150 B. C. But students are quite generally agreed that it did not originate until 400 years later, or not long before the discovery of a book of law in the temple at Jerusalem by Hilkiah, the priest, in the eighteenth year of King Josiah—*i. e.*, 621 B.C. This view has been much spoken against, and has been declared to imply "fraud" and "forgery" on the part of the author, but the reasons for it are cogent. They are not chiefly philological and literary, but historical, and we can summarize the argument by saying that there is no evidence of the existence of Deuteronomy before the age of Josiah, but, on the contrary, very clear proof that it was not in existence before that time, and finally there is a clear and explicit statement of the promulgation of the Deuteronomic law by Josiah and of its great influence upon the nation.

That Deuteronomy did not exist much before Josiah is shown by the fact that Gideon and Samuel, Saul and David, Elijah and Elisha—in fact, all the best men of the nation—habitually conducted themselves in violation of the plainest precepts of Deuteronomy, with no thought of disobeying the commandments of God, but rather in sincerest effort to do His will. Deuteronomy commands a central sanctuary, and condemns all other places of worship as belonging to heathen cults. That this was a new requirement in Israel, unheard of in the greatest days of the nation, any one who reads the books of Samuel and Kings with his eyes open to the question cannot fail to perceive.

Deuteronomy condemns the use of images, yet Gideon made an ephod in honor of Jehovah, and there were teraphim in the home of David—not at all in disobedience to law, but in simple ignorance of it. It is inconceivable that such a law book as that of Deuteronomy should have been in existence since the time of Moses, and have borne his authority, while the religious ideas and usages of the nation, as revealed in the books of Judges and Samuel, were as they were.

A full statement of the argument may be read in Robertson Smith's "Old Testament in the Jewish Church," a book which still retains its exceeding value. This is the view which is taken by Hastings' "Dictionary of the Bible," not only in the special article by Professor Ryle, but on hundreds of pages thruout the work. Professor Orr, in "The Problem of the Old Testament," has labored strenuously on the other side of the question, but he has not succeeded in weakening the ramparts of the critical position to any appreciable degree. Perhaps the best brief article on Deuteronomy is that of Prof. George F. Moore, in the "Encyclopedia Biblica," while a good, scholarly commentary is that of Canon Driver, in the International Critical Commentary series.

One might write a book on the influence of Deuteronomy upon the religious life of the world. It has been given to but few men more deeply to impress their fellows than this unknown Hebrew of the seventh century before Christ. The authors and editors of the Hebrew histories patiently followed his footsteps, and judged their kings and princes for

centuries by his standards of religious and moral right. The first commandment of Judaism, "Hear, O Israel, the Lord thy God is one Lord," and the greatest commandment of Christianity, "Thou shalt love the Lord thy God with all thy heart," are from the book of Deuteronomy. This author was the first to enact the commandment of love in the relation of God to man, and the first to declare that love is the prime attribute of God.

Jerusalem, the holy city of Jew and Christian, which made Judaism possible and which quickens the Christian's imagination of the life to come, was the creation of the Deuteronomist, for it was his law that centralized Hebrew worship there. The book of Job sprang from the problem which Deuteronomy introduced into Hebrew thought; Paul wrestled with the doctrine of election because of the teaching of this book; and even Emerson, little as he may have known it, was stirred to his noblest utterance, the "Essay on Compensation," by influences from the prophet-lawgiver of the seventh century before Christ.

Norway's Music Master

Edvard Hagerup Grieg, who died rather suddenly on September 4th, at Bergen, Norway, where he had lived thruout most of his life, was undoubtedly the greatest of Scandinavian musicians; had been esteemed highly by the leaders in his art from the days of the supremacy of Liszt as the musical arbiter of Europe even unto the present, and in America, at least, where the pianoforte is the national instrument, was the most popular of contemporary composers with those people who have any liking for real music as distinguished from ragtime claptrap. While his widest reputation with us rests on his pianoforte pieces, he holds also an enviable place as a writer of orchestral and chamber music; and American music lovers have some acquaintance with his rarely beautiful and original songs—tho not so extensive as they deserve, for these songs (and he published no fewer than 125 of them) are far finer than most of his later piano works, which, indeed, are mainly transcriptions of his songs tricked out with frills and arabesques that do not enhance their originally simple and haunting beauty.

Born in Bergen on June 15th, 1843, Grieg was a descendant of a Scottish Covenanter, a merchant who emigrated from Aberdeen soon after the Battle of Culloden, and his grandfather and father successively served as British Consul at Bergen. His mother was a patriotic daughter of Norway, and a woman of wide musical culture, a pianist and a singer of more than ordinary ability, and it was from her that the boy received his earliest musical training. Doubtless it was from his mother also that Grieg inherited the intense national spirit that characterized all his work after he had found himself. As a child he had composed several little pieces, but it was not until Ole Bull visited his parents when the boy was fifteen years old that he had any serious thought of music as a career. A thoughtful lad, he had inclined rather toward the church. After listening to the boy's own playing of some of his youthful compositions the celebrated violinist gave him enthusiastic encouragement and urged his parents to send him to Leipsic. They raised no objection and thither he went, in 1858, to remain a student at the conservatory for four years and to be graduated with honors in 1862, despite an attack of pleurisy which destroyed one of his lungs and compelled him to return temporarily to Norway.

At Leipsic Grieg came under the dominant influence of Mendelssohn and Schumann, and his own individuality for a time almost suffered eclipse. On returning home, however, he fell in with Rickard Nordraak, a brilliant young Norse composer, who was ambitious to produce genuinely Scandinavian music. Of Nordraak's influence Grieg wrote:

> "The scales fell from my eyes. It was from him that I first learned to appreciate the popular melodies of the North and to be conscious of my own nature. We became determined adversaries of the effeminate Scandinavianism, which was a mixture of Gade and Mendelssohn, and with enthusiasm we struck out the new path now trodden by the Northern School."

Nordraak died in 1866, but Grieg had been set upon his own feet. From that time forward he strove unceasingly to

give expression in all that he did to the Norse spirit and the Norse character. Before he was forty he had won world-wide recognition as a composer of original and remarkable genius and a European reputation as a conductor and pianist of eminence. He received many honors, among them the degree of Doctor of Music from Cambridge University in 1894.

In all of his music Grieg utilizes the characteristics of the folk-songs and folk-dances of that Northland he loved so ardently, often etherealizing them into things of weird but compelling beauty. And this gives to his work an exotic touch, and at the same time a certain fascination for he succeeds in evoking as if by magic the moods of the place and the people. On the wings of his music we are carried to the Land of Fjords, we breathe its inspiriting air, and our blood dances and sings with its lusty, yet often melancholy, sons and daughters. In a sense he is an impressionist in music—and always a remarkable individuality. After Chopin he is, perhaps, the greatest nationalist among composers, and he possesses unmistakable affinity with the great Pole, for he speaks in no dialect but in the universal language—he has raised his nationalism to a cosmopolitanism as broad as the love of music. Technically Grieg never learned some important lessons that are essential to the composer who would do big things in the grand style. His artistic development seems to have halted half-way. In his later years he wrote nothing that surpassed, even if it equaled, the work of his early prime. His genius was not epic. He produced no great symphony, and he could not for he lacked a comprehensive grasp of elemental things. His nearest approach to symphonic breadth is to be found in his charming piano concerto, his sonatas for violin and piano, his string quartet and his "Peer Gynt" music. But in these compositions as in everything he wrote his lyric quality predominates. His abiding characteristic is an exquisite delicacy of feeling. He is a master mosaic worker in music. Our own poet, Thomas Bailey Aldrich, once sang:

"I would be the lyric,
Ever on the lip,
Rather than the epic
Memory lets slip."

It is a mood common to most of us sometimes, and to some of us at all times. It is the mood that Grieg satisfies perhaps better than any other of the world's great musicians. The mosaic has its place in art—and it is by no means an insignificant or an unworthy place.

How the Other Half Thinks

Some years ago Colonel Robert J. Ingersoll and the Rev. Dr. Henry M. Field had an interesting newspaper discussion on the authenticity of the Bible, and at its conclusion Colonel Ingersoll proposed that they "make a sandwich of the articles" and publish them in a book. But Dr. Field refused on the ground, as he expressed it, that most people would regard such a sandwich as slices of very ordinary bread with a layer of poison between.

Some of our readers evidently regard The Independent as such a sandwich, for we have received several letters of the following tenor:

"In asking that my subscription to The Independent be immediately stopped, I feel that I should give the Editorial Department my reasons. I am convinced that America is in a critical state, that the brute in all humanity is lying exceptionally near the surface in our people at the present time. It takes very little yellow journalism to rouse our nation to acts of injustice, or even deeds of horror. We should make no appeal to low ideals, unreason and bitterness.

"This being so, I regard the opening of the columns of a paper like The Independent to an article such as the one on women in your last issue as pernicious. My attitude is just such as it would be were you to publish a rankling, anonymous diatribe on the negro by Vardaman or an attack on the Jews. To give such things wide circulation is not broad-minded and catholic; it is shortsightedness to the point of harm. I am confident that you would not dare to insult the Jews or negroes with their powerful interests behind them as you have insulted women.

"Of what assistance is it to the triumph of right to make a short editorial comment favorable to woman's admission to hotels, or give a few lines on injustices at Ithaca, when thirteen columns of insult to women are dished up for benighted innkeepers and 'Cornell kids'? It is infatuation to believe that nothing you print weighs one feather's weight—no matter how or by whom written, how able, how long—when opposed by a single word from the Editorial Department."

In reply we would say that we have been guilty of the very things that our correspondents think we would not

"dare" do. We have often published articles, both signed and anonymous, stating the Southern side of the negro question, even in its most intolerant forms, and the only reason we have not had an article from Governor Vardaman is because he has not consented to write for us. As for the Jews, it is, fortunately, difficult to find, on this continent, a literary exponent of anti-Semitic feeling that unquestionably prevails to an alarming extent, but we did the best we could in obtaining an article by Prof. Goldwin Smith on what he called "the parasitic race," which, we are glad to say, called forth a chorus of disapproval from our readers.

THE INDEPENDENT was founded for the specific purpose of combating race prejudice, which at that time was directed chiefly against the negro. We have ever since consistently and persistently applied the same principles of equal rights and the recognition of the value of the individual to Italians, Slavs, Irish, Jews, Chinese, Japanese and women. We believe that it is a safe statement that THE INDEPENDENT has done more to secure for women the educational, property, industrial, marital and political rights she now enjoys in America than any other periodical, except, perhaps, those devoted specifically to that cause. And we hold that a record of fifty-five years of such work entitles us to publish an article on "the other side" whenever we think it advisable without having our own position misunderstood.

THE INDEPENDENT is taken in many homes where there is no other periodical except fictional magazines and local papers. It is their only window on the great outside world. Therefore we believe it our duty to give not only a strictly impartial record of bare facts, as we do in our "Survey of the World," but also to secure the ablest possible discussion of these facts from diverse standpoints. We aim to have every important cause or movement presented some time to our readers by its authoritative advocates, even when, or rather especially when, their views do not coincide with our own.

In considering in the Editorial Conference the advisability of publishing a controversial or provocative article we try to exclude from our thoughts the fact that we shall inevitably lose subscribers by it, altho we regret the alienation of a friend as much as the Publication Department dislikes to lose $2. The only question considered is whether the subject is of sufficient importance in itself or commands a sufficient following to engage the attention of thinking people.

In the case of the woman article we reasoned somewhat in this way: "Here is a rather novel expression of an old but not extinct idea. It is unusually frank because of its anonymity, and obviously sincere in spite of its tone of satiric exaggeration. It may interest our feminine readers to know just what a man of this standing and presumably many other people, including some of their own sex, think of their mental characteristics."

We have a great many prohibitionists among our readers. So far as we know none of them subscribe to *Beverages,* the official organ of the Liquor Dealers' Association. We thought it was important for them to know, if only from a tactical point of view, what the editor of that journal thought of the "Growth of Prohibition," and what efforts were being made to counteract it. Therefore we published such an article two weeks ago. The medical heresies of Christian Science and Osteopathy are undeniably attracting a large number of people. Altho we are not in sympathy with them we were the first to publish articles by Mrs. Eddy and Dr. Still.

It is, of course, natural that the policy of THE INDEPENDENT should be so often misunderstood, because it is radically different from other periodicals. Most magazines conform to the rule of the dinner table, avoid mentioning politics, religion or any other subject on which people differ widely and feel intensely. The aim of their editors is to attract as many and offend as few as possible, and they have their reward in the shape of mammoth subscription lists. A pleasant love-story, kept within conventional lines, an illustrated article on the cathedrals of Italy, without reference to their purposes and uses, a critique of Blake, not mentioning our common everyday mystics, a study of ant life, proof-read by the President; all these are perfectly safe and satisfactory materials of which to

make up a popular magazine. Then there are the recognized organs of associations, parties, churches, movements and interests, and the periodicals of general literature which have taken up the advocacy of particular reforms or the exposure of specific abuses. These do not usually give space to the competent presentation of the opposite side, and in the interests of their cause they avoid publishing articles on other subjects likely to provoke antagonism or give offense.

It is with magazines as it is with wives. Some husbands want a docile wife who will never say anything that they do not agree with. But there are those who really prefer a trifle of independence and originality in the woman they have subscribed for, and, altho they may get mad at her occasionally, and even scold her, never think of getting a divorce for incompatibility of temper.

A Plea From a Convict Camp

BIRMINGHAM is in Jefferson County, Ala. Like many more of the Southern States, Alabama is largely prohibition territory thru the local-option law. They are trying to prohibit saloons in Jefferson County, but the large city vote in Birmingham and Bessemer is slow to accept prohibition. The convicts, at hard labor in Slope No. 10, Pratt City, have taken a hand in the discussion, altho they cannot vote.

In a big, barnlike room, with whitewashed walls, rough benches, a rusty stove and small, iron-barred windows, sat two hundred men, mostly negroes, dressed in the broad black and white stripes that brand the convict, resting on the Sabbath day. But the men were intent upon the report of their committee, and they lost never a word that fell from the lips of a young white convict as he read the following paper:

"To the Voting Citizens of Jefferson County, State of Alabama, Greeting:

"FELLOW CITIZENS—In view of the approaching campaign against the liquor trade, deeming ourselves eminently qualified to judge intelligently on this question, greatly deploring our own hard conditions, and not unmindful of the host of victims whom liquor threatens with a like social banishment, we, the inmates of Slope No. 10 prison, Pratt Mines, do most heartily subscribe ourselves to the following prayer:

"Whereas, Strong drink has been the cause, directly or indirectly, of our several crimes for which we are imprisoned; whereas, this penal condition is most grievous to be borne, since it visits upon ourselves and upon our loved ones innumerable hardships, and since this same unholy traffic is the prolific source of every sort of crime—a broad avenue along which multitudes of our fellow countrymen are destined to stagger into the penitentiary; whereas, in the event of the liquor business being outlawed, crime of every sort will be greatly diminished, while the prosperity and happiness of the general public will be immeasurably increased, we hereby severally pray that every well disposed citizen in the county of Jefferson will unite in voting out of existence the greatest of all modern evils—the whiskey curse.

"We submit herewith a tabulated statement of facts, the result of a personal canvass made by certain convicts among their fellow inmates, for the purpose of ascertaining the sentences of those who were either directly or indirectly made criminal thru the influence of strong drink:

	Years.
"30 white men	791
"115 colored men	4,090
"Total	4,881"

"Shall we submit this paper to the voters of the Birmingham district?" asked the chaplain in a clear, authoritative voice.

There was a shuffling of feet upon the bare floor as the one hundred and forty-five men sprang to their feet, many of the excitable ones shouting: "Aye! aye!" and one burly young negro adding:

"Tell 'em whisky done brung me heah! An' tell 'em I loves it so much dat I prays de good Lawd dey gits it out ob de country afore I gits out ob heah! An' I thinks dey will, 'cause I'se got ten yeahs yit."

"Dey'll *sho'* do it 'fore I gits out," cried another with a sorry attempt at a laugh. "I wuz proud ob bein' de wust niggah in Bumming'um, all on account ob whisky an' totin' a gun. Now I'se in fo' a hundred yeahs."

"Yes, yes, men," answered the chaplain, a bit wearily. He had evidently heard these words and such as these many times. "The question is decided, then, that we shall send our committee's report just as it stands to the people of Jefferson County, Ala., as a truthful statement of facts, and our plea that they vote for prohibition, to take effect January 1st, 1908."

The "Lusitania"

We give elsewhere the record of the "Lusitania's" maiden trip across the Atlantic, in which she beat all previous records for the shortness of the passage from shore to shore, but not of average speed. We doubt not she will take that record also when she is well in hand. But this does not prove that the turbine engine is to replace the old sort. She must be tested by a dozen passages across before her strength or her weakness can be known. The Cunard Company is in no hurry to build a racer like her, and the Germans will wait and see. It is her bulk that will give her popularity as well as her speed. A boat that is as big as an island, and floats nearly as steady as solid land, resting on the waves from crest to crest, will be the favorite of travelers. The White Star line is building one nearly as long, and wider (and slower), and therefore even steadier, and the Germans will not be behind. It would be extremely reckless, even with the simple mechanism of the turbine, to put a great and costly ship in an ocean race against time, with no more accurate knowledge of her behavior than could be had from the trial run. Every marine engineer knows that new engines, however perfectly built, do not run quite true in their bearings. This is always a matter of adjustment, and such adjustment is effected when the ship "finds herself"—automatically, if the workmanship is good. Some bearings require more careful watching than others to maintain the continuous films of lubrication, and which these are can be determined only by such knowledge of the temperament of the engine as comes from intimate acquaintance with it. To have started the "Lusitania" on her maiden voyage with instructions, or even permission, to strive for a record, would have put a very large investment in peril, and it was not done. Her remarkable speed was well within her capacity, and is the more significant because it was attained without risk of damage to ship or engines. It is safe to say that the "Lusitania" belongs in a new four-day classification,, and that, if no misfortune befalls her she will ultimately break previous records. The "Lucania's" record was not made until the third year of her service; that of the "Etruria" was not made until her tenth year. The only generalization which the maiden voyage of the "Lusitania" warrants is that the steam turbine has "come to stay," and that the era of the reciprocating compound marine engine is ended. Meanwhile, the fight between rival lines is making passage eastward very cheap just now, when the travel that way is light and the various lines are competing for it. And it is to be never forgotten, and with no pride, that these great boats and lines are all foreign. Why should not the United States have steamship companies that own as fine vessels as the English, German and French companies? Simply because Congress forbids it. Congress protects American shipwrights by refusing to allow a vessel to fly the American flag that is not built in the United States. But we cannot build a ship as cheaply as they can abroad, and so we have none. To be sure, we have coasting vessels which we build, but Congress shuts out that commerce from foreign-built craft. Meanwhile, the Government will hire foreign-built tramp vessels to carry coal to foreign lands, but will not allow an American to run that business. It is a stupid policy, but we will not change it.

Papal Honors

We noted last week the grant of the title of Countess by the Pope to Mrs. Thomas F. Ryan, in recognition of her very large gifts to churches and institutions. Such Papal grants of title are by no means unusual, but are a part of the policy of the Church continued from the time when it was a civil State. Among American citizens now living who hold such Papal titles may be mentioned Marquis Maloney, who controls the Philadelphia gas interests, and who has been very generous in his gifts. There is also the Countess Leary, of this city, who built the church for the Fathers of Perpetual Adoration, and brought the order to this country. Such grants of titles and positions are a large source of revenue at Rome. The Italian ecclesiastic Grimaldi printed a book, since suppressed, giving the regular tariff for Roman favors; so much for canonries, monsignori, the miter, civil titles and various kinds of dispensations. The

Dataria is the office for public dispensations, and its revenue is said formerly to be from $800,000 to $1,000,000 yearly, now very much less. Besides this, there is the Pœnitentiaria, which has similar revenues for secret dispensations, such as cover kinship, marriage, illegitimacy, vows, etc. The European bishops are expected to pay a considerable expense on receiving the miter, according to the wealth of the diocese, the lowest being about $40, but American bishops, we understand, have refused to do this. The Cardinal's hat comes high. Two messengers have to bring it from Rome at a cost of $5,000. Of course the payment is not regarded as simony, not for the holy thing, but for the expenses connected with it. The various indulgences are allocated to various orders, or to the Holy See itself, with the receipts attached. Thus if one wants the Papal blessing, of value *in articulo mortis,* and believed by the recipients to insure the safety of the soul, he gets it for two dollars and postage from a shop in Rome. Some sisters, perhaps, do the engrossing and painting, and a bundle of them is taken to the Pope for his blessing in bulk, and then they can be obtained at the regular price. Of course the shopkeeper gets his commission.

Conscience in Georgia

When it came to voting on the bill designed to disfranchise the Georgia negroes, not every single member voted for it. A correspondent, a white man, sends us with some pride the speech of the Hon. W. J. Neel, of Bartow County, "One of Nature's noblemen," giving reasons for voting No. He was not satisfied to show that the bill was unwise and unconstitutional, but he added:

'But there is a more serious objection and one that involves my conscience and my oath. I took an oath at the beginning of this session to support the Constitution of the United States. That Constitution directly and in terms prohibits us from passing laws that make any discriminations on account of race, color or previous conditions. The advocates of this disfranchisement measure openly declare that its purpose is to disfranchise the negro. This violates the spirit, if it does not violate the letter of the Constitution which I have sworn to support. At heart I do not have as much respect as I might for the Fourteenth and Fifteenth amendments to this Constitution, but as long as they stand as a part of the fundamental law of our country I am bound to give them my support. And certainly I should not openly and knowingly violate them. Holding the views I do of this measure, I would violate my oath and override my conscience if I gave it my support."

We should think that such words, and more of the sort, would have made other legislators hang their heads.

Fast Day Abstinence

The Roman rule of abstinence from meat on Fridays and other fast days is one that can be changed at any time, and, indeed, the rule differs in different countries, and the bishops in the dioceses have great liberty in modifying it. In Spain and its colonies no Friday abstinence is required. The MacDermot (not *Mr.,* but The MacDermot) has written a letter to the Cardinal Archbishop of Dublin asking the Irish bishopric to request the Pope to change the rule so that it shall be abstinence from alcoholic liquors that is required, instead of abstinence from meat, and the Cardinal's answer was more sympathetic than one might have expected. He said:

"Personally I am inclined to fall in with your view. Indeed I have more than once expressed myself in favor of an effort made to have some change of the kind made, but not on quite so extensive a scale."

On the face of it the request seems abundantly reasonable and would be helpful to the souls of the people. Indeed, an ex-president of the Irish Royal College of Surgeons has written saying that "there is no one who would not be better for a day's fast from stimulants, but from a long experience of those who eat meat I am convinced that the loss of it for a single day lowers vigor." The reply of the enemy is that more people are hurt by eating too much than by drinking too much, and that total abstainers would not get any fast at all. An interesting proposition is to leave the Fridays as they are and to remove the rule of abstinence from all other days for those who have been total abstainers for twelve months and intend to continue such. Nevertheless, we do not believe that any change will be made, wise as this would be.

The Zionists are giving Mr. Schiff abuse enough for his protest against Zionism as lacking in American patriotism, but we presume he can stand it with equanimity, and we presume it will not interfere with his giving their colonies a comfortable donation when they are in trouble. Yet they are half right. A man can be a good American, and prefer to keep his home and allegiance here, and yet believe that Palestine ought to be again the seat of a Jewish state, where Hebrew will be the spoken tongue, and where he will be glad to have those unfortunate people go who will better their condition in this way. Then, if they can build up a temple in Jerusalem and get rid of the Turk, Mr. Schiff and the two million Jews in America will be glad to visit it, and come back and be better Americans than ever.

In an article to *The Outlook*, Mr. McKelway makes the acknowledgment that, altho he predicted some years ago that the educational clause of the North Carolina suffrage amendment would be a stimulus to negro education, he was mistaken. We are glad to say that we were not mistaken when we said that giving the suffrage is a vastly greater stimulus to education than the withholding of it. A law limiting the suffrage to those who can read will not stimulate those who have proved to have little ambition, and never will stimulate the voters to diminish their own power by giving an education which will enlarge the electorate.

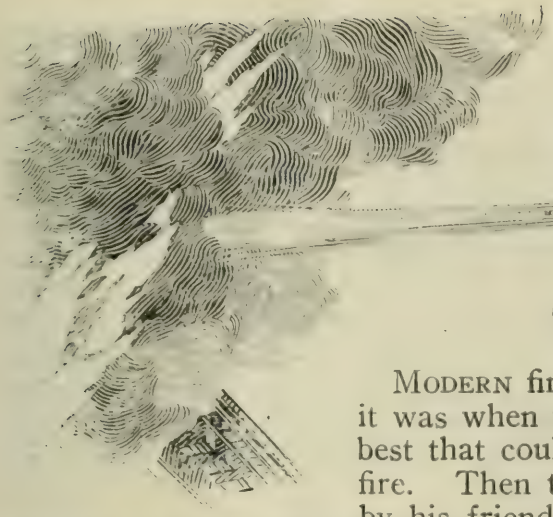
Not long ago we published an editorial on the danger to infants from the unwillingness of mothers to nurse them. Now we are told by Dr. H. W. Wiley, Chief of the Bureau of Chemistry of the Department of Agriculture, that the average span of human life is increasing, and that one reason is that it is again becoming fashionable for mothers to nurse their infants, having learned that "baby foods" are a poor substitute for the natural sustenance.

Our readers may have been surprised at the frankness with which Mr. J. F. O'Reilley, editor of the liquor organ, *Beverages*, spoke of the evil character of saloons, which threatens the liquor trade, but he speaks even plainer in his own editorial columns as follows:

"It is an unfortunate circumstance that most wine rooms, parlors or whatever else these places off saloons where women assemble may be called, are nothing but assignation retreats and covers for the social evil. They are not family resorts, and it is a misnomer to call them such. No saloon keeper who has adjuncts of this character to his business is entitled to public consideration, and no business that tolerates them can be otherwise than looked down upon and scorned. . . ."

That Governor Hughes is no pessimist may be judged from what he told the farmers last week at the State Fair:

"Let me say a word in conclusion. It is that what we need in this State more than farmers, more than hay or apples, the fruit of any tree, we need to grow men, and, thank God, the crop of good men is greater to-day than ever in our history.

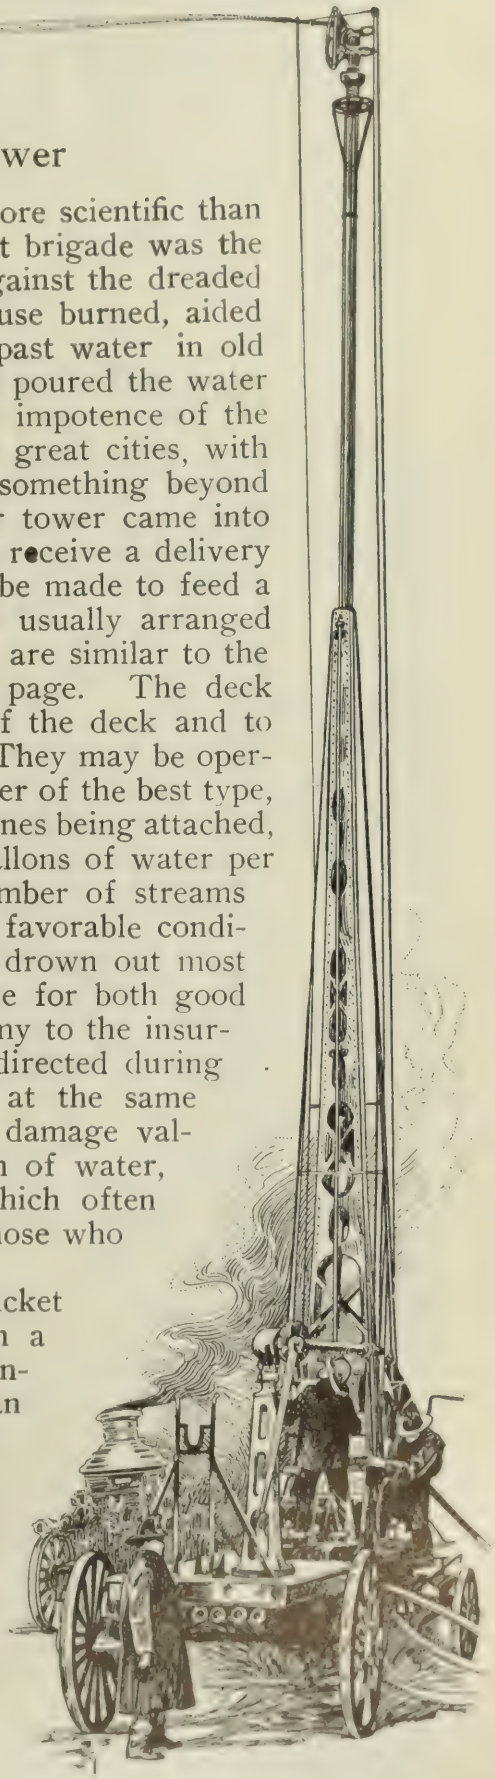


"We have men who are devoting themselves to the needs of their fellowmen. Never did philanthropy reach such hights as in these opening years of the twentieth century. Never did noble desires of American men find such opportunity; and the parting word I have to offer you is a word of good cheer, for as I look into the faces of this typical American assemblage I read the prophecy of prosperous years and of a happy and prosperous people."

The negro soldiers coming back after two years in the Philippines are to be quartered in New York State. Somebody says that somebody has objected. We doubt it much. New York is not as insane as was Brownsville, Tex. We do not question that these negro troops will be as decent and well behaved as any white soldiers.

Lieutenant-Governor Lewis Stuyvesant Chanler, of New York, is being boomed as the Democratic candidate for the Presidency. Why not? The last Democratic candidate for the Vice-Presidency was selected solely for his great wealth, altho an octogenarian; and Mr. Chanler's chief asset is his money. His name has not yet got into "Who's Who?"

What kind of seamen have they in Russia. Think of the imperial yacht, with the Emperor on board, going on the rocks just on the near coast of Finland! If that is the best they can do at home, it is not strange that their battleships were sunk off the coast of Japan.



INSURANCE

The Water Tower

MODERN fire fighting is far more scientific than it was when the old-time bucket brigade was the best that could be marshaled against the dreaded fire. Then the man whose house burned, aided by his friends and neighbors, past water in old leather fire pails, slowly filled from well or stream, and poured the water upon the fire. If a strong wind chanced to blow, the impotence of the fire pails was painfully apparent. Modern life in our great cities, with the growing hight of our business blocks, called for something beyond the engine that replaced the fire buckets. The water tower came into use about 1880. Most of these towers are arranged to receive a delivery of at least six engines. Sometimes eight engines can be made to feed a water tower as now constructed. Water towers are usually arranged with one or more so-called deck turret nozzles. These are similar to the nozzle at the top of the tower which figures on this page. The deck nozzles are arranged to be operated from the level of the deck and to throw water into the lower stories of a tall building. They may be operated simultaneously with the tower nozzle. A water tower of the best type, at its full capacity, a sufficient number of steam fire engines being attached, would easily be able to deliver from 2,000 to 5,000 gallons of water per minute, according to the size of the tower, the number of streams thrown and the size of the streams. Under the most favorable conditions the water from a well-managed tower ought to drown out most fires. The water tower of today is a mighty machine for both good and evil. It is at once a great friend and a great enemy to the insurance companies interested in a risk upon which it is directed during a conflagration. It quickly puts out a big fire, but at the same time its tons upon tons of water destroy or greatly damage valuable property. The power and force of the stream of water, delivered practically on a line with the fire, and which often washes out the fire, is hardly to be comprehended by those who have never seen one of these towers in operation.

The contrast between the superannuated bucket brigade and an up-to-date water tower combat with a great fire is tremendous. The water tower is so constructed that it lies horizontally when at rest, and can then be easily and quickly transported to any desired locality by means of trained fire horses. When the scene of the fire is reached the tower is mechanically raised to an upright position, the top being from 55 to 75 feet from the ground, and the nozzle at the top can be operated and deflected by a fireman from the ground, so as to direct the stream of water in any direction. Without the water tower, or some adequate substitute therefor, fires in the so called skyscrapers would be insurmountable problems to the best firemen.

Financial

New York's Bond Sale

Six years ago New York City was able to borrow on bonds at rates yielding a net income of a shade over 3 per cent. On the 10th inst. the city accepted subscriptions for $35,000,000 of 4½ per cent. fifty-year bonds, at prices averaging 102.063 and upon an income basis of 4.39 per cent. Owing to the failure of the June and August offerings at 4 per cent. to attract bids at par or better, the interest rate for last week's offering was raised to 4½ per cent. But the price realized for the long-term bonds was only 102.063, and the average for $5,000,000 of ten-year bonds was only 100.30. The bonds were in good demand, however, for the sum of the 886 good bids was $207,159,420, and awards were made to 376 bidders. Prominent among these were the Mutual Life, $5,000,000; J. & W. Seligman and William A. Read & Co., $3,750,000; the Morgan syndicate (including J. P. Morgan & Co., the National City Bank, the First National Bank and Harvey Fisk & Sons), $3,508,200; Kuhn, Loeb & Co., $3,000,000; the Equitable Life, $2,500,000, and Mrs. Sage, $2,000,000. There were many successful bids for amounts below $1,000, and one of only $50. Of course, the city's credit is good, altho recent unsuccessful experiments in bond offerings have not exhibited much financial sagacity. Investors would not take 4 per cents at par because they could do better in mortgages and other securities. Similar conditions exist elsewhere. This is shown by the experience of other cities in this country and in Europe. A world-wide strain upon loanable capital has raised interest rates. The figures of last week's bids for New York's bonds from great banking houses indicate that our leading financiers expect no decline of the prevailing rates in the near future.

....The American Bankers' Association will hold its thirty-third annual convention at Atlantic City, N. J., on September 24, 25, 26, 27. Edwin C. Stokes, Governor of New Jersey, will deliver an address of welcome on the opening day of the convention. Practical banking questions will be discussed and a report of the currency commission will be presented by Hon. A. Barton Hepburn. Special meetings of the Trust Company Section, the Savings Bank Section and the Clearing House Section have been arranged.

....According to *Poor's Manual,* issued two or three weeks ago, there were 222,635 miles of railroad in the United States at the end of 1906. Gross earnings for the year were $2,346,640,286, an increase of 11 per cent. Net earnings from operation were $790,187,712, an increase of more than 15 per cent. The capital stock amounted to $7,106,408,976, and the bonded debt was $7,851,107,778.

Obituary

D. Willis James, who was one of the best-known metal merchants of New York City, died at the Mount Washington Hotel, at Bretton Woods, N. H., last week Thursday, after a lingering illness, with heart disease. Mr. James was born at Liverpool, England, on April 15, 1832. His father was a prominent merchant there. The son became interested in the manufacture and importation of metals and built up a fortune said to approximate $40,000,000. At the time of his death he was senior member of the firm of Phelps, Dodge & Co., of this city. Mr. James was widely known and highly respected in commercial and banking circles. He was prominently identified with a number of industrial, banking and mining concerns. His interest in educational and philanthropic work was large and his benefactions for these causes were very generous. He was a liberal supporter of churches and mission boards. He was for many years president of the Children's Aid Society. He had a deep interest in Amherst College and was for years one of its trustees. His suavity and courteous bearing made him much loved by all who knew him.

Entered at the New York Post Office as second-class mail matter.

Survey of the World

The Oil Trust on Trial

Testimony was taken in New York last week, beginning on the 17th, in the suit of the Government, under the Sherman Act, for a dissolution of the Standard Oil Company of New Jersey, which is the central or holding corporation of the Standard Oil interests. The proceedings in New York are before ex-Judge Franklin Ferriss, of St. Louis, who was appointed special examiner by the Federal Court. Upon evidence furnished by the company and procured elsewhere, the great profits of the company have been shown and a part of its financial history has been set forth. The limits of our space permit us to touch upon only the most prominent parts of the testimony. During the last eight years the profits of the company (which is capitalized at $98,338,382) have been $490,315,934; the net value of its assets has increased from $196,220,017 to $359,400,193, and it has paid out $308,359,403 in dividends. While the annual average of profits has been about $61,000,000, they rose to $83,122,251 last year. Testimony has been given as to the gains of the seventy subsidiary companies owned or controlled by the New Jersey corporation. It is noticeable that the earnings of the Standard of Indiana (upon which the great fine was recently imposed) were $10,516,082 in 1906, or more than 1,000 per cent. on its capital stock of $1,000,000. All but ten of this company's shares are owned by the central company. John D. Rockefeller has by far the largest holdings of the latter company's stock. His dividends since 1899 have been about $80,000,000, and it is estimated that, in the last twenty-four years, or since the Trust was formed, they have amounted to something more than $143,000,000. The list of the principal stockholders is as follows:

	Shares.	Value at present prices.
John D. Rockefeller	247,692	$108,984,480
D. M. Harkness Estate	80,000	35,200,000
Charles Pratt Estate	52,802	23,232,880
Oliver H. Payne	40,000	17,600,000
Henry M. Flagler	30,500	13,420,000
O. B. Jennings Estate	17,000	7,480,000
Henry H. Rogers	16,020	7,048,000
J. A. Bostwick Estate	15,000	6,600,000
William Rockefeller	11,700	5,148,000
C. M. Brewster Estate	10,000	4,400,000
Charles Lockhart	8,500	3,740,000
L. C. Ledyard and Payne Whitney	8,000	3,520,000
William C. Whitney Estate	8,000	3,520,000
Wesley H. Tilford	6,000	2,640,000
John D. Archbold	6,000	2,640,000
W. G. Worden	5,858	2,577,520
University of Chicago	5,000	2,200,000
Charles M. Pratt	5,000	2,200,000
Daniel O'Day Estate	2,655	1,168,200
H. C. Folger	2,145	943,800
Samuel Andrews Estate	1,050	462,000
H. H. Rogers, Jr	1,050	462,000

In this table the value is computed at the rate of $440 a share, but for a time the market price exceeded $800. It was shown by the testimony of Secretary Pratt and of the books, that 2,747 shares of the Waters-Pierce Oil Company were held apparently outside of the company for some years, during the legal proceedings against the combination in Texas. They were at first in the hands of Mr. Pratt, who sold them for $4,000,000 to John D. Archbold's son-in-law. The latter in due time restored them to the Standard for the purchase price, altho in the last year of his possession of them they had yielded a profit of $1,850,000. It is inferred that in this way the Standard's control of the Waters-Pierce Company was concealed. Mr. Pratt said he

didn't know that this course was taken on account of the attack upon the company by the State of Texas. By an order of the Texas Supreme Court, the Standard was forbidden to do business in that State. Counsel for the Government asserts that the Standard has disobeyed the order and is doing business there by means of the Corsicana Oil Company, which, he says, is controlled by H. C. Folger and C. M. Payne. Treasurer Tilford admits that these men are officers of the Standard, but says he does not know they control the Corsicana Company. Counsel for the Government also undertakes to show that the Texas court's order has also been disobeyed by a similar use of the Security Oil Company. There is evidence tending to show that the Standard of Ohio, having been ordered, in 1892, by the Supreme Court of that State to wind up its business and dissolve, continued in existence for seven years thereafter, under the same management and pursuing the same methods as before. There has been an agreement with seventeen independent companies of Pennsylvania and Ohio, binding them to sell their oil for export exclusively to the Standard, which in return has sold crude oil to them. This has enabled the Standard to monopolize the export trade. A statement now being prepared by the Government will show that the Standard's profits since organization have been between $800,000,000 and $900,000,000. It is the Government's aim to prove by the evidence that the present corporation is merely the original Trust under another name, and that it has been controlled and managed by the same men who made the original combination.——It became known last week that the health of H. H. Rogers, of the Standard Oil Company, had recently been seriously impaired, owing, it is understood, to a stroke of paralysis, from which, however, he is recovering.——John D. Rockefeller, Jr., has resigned the leadership of the Bible Class at the Fifth Avenue Baptist Church, fearing a recurrence of the illness which disabled him two or three years ago. Increasing demands upon his time, together with a desire to preserve his health, have led him to retire from this work.

Political Topics

At the election in Oklahoma, on the 18th, the new constitution was adopted by a vote of 3 to 1; the entire Democratic State ticket, headed by Charles N. Haskell, of Muskogee, was chosen by a plurality of about 20,000; Democrats were elected to fill four of the five seats in the national House of Representatives, and prohibition was approved by a majority of 30,000. The Democratic majority in the Legislature will send to the United States Senate Robert L. Owens, a Cherokee Indian, and T. P. Gore, a blind orator.——In Cleveland, the Democrats have nominated Mayor Tom L. Johnson for another term by acclamation. His opponent is Theodore E. Burton, a prominent Republican member of the House at Washington, who made public last week a letter in which President Roosevelt urged him to accept the nomination in opposition to Mayor Johnson. After speaking of Mr. Burton's usefulness in the House, the President said:

"I would therefore be tempted to protest against your leaving, if it were not for my profound conviction that it is exceedingly desirable that you should win out as Mayor of Cleveland. In view of the fact that our democratic system undergoes its most severe strain in the government of our cities, I feel that it is of the utmost importance to have a man of your experience, power and character, of your long training, theoretical and practical, in public life, take such a position as that of the mayoralty of Cleveland. Accordingly, if you ask my advice, I should say, make the fight."

Mr. Burton says that he seeks to "redeem the city from the administration of a ring." Under cover of a claim, he adds, that "the main desire of the present administration is to give the people cheap street car fare, there has been built up in the city a tremendous political machine," to perpetuate the power of which "every department and agency of the municipal government has been utilized." Mayor Johnson remarks that Mr. Burton is the candidate of the Cleveland Electric Railway Company and stands for a five-cent fare:

"Our side of the question is simple and plain, set forth in the ordinance already passed, and means a three-cent fare, revocable franchises, universal transfers, public accounting, the right in the Council to reduce fares to the cost of service. Mr. Burton's platform means that this monopoly is too big to be controlled

by the people, while we insist that the people are too big to be controlled by it. He would surrender the victory already won and postpone the fruits of it for twenty years by an immediate and cowardly compromise."

The Harrisburg Capitol Frauds

Fourteen persons named in the recent report of the Pennsylvania Capitol Investigating Commission as being involved discreditably in frauds connected with the contracts for furniture and decorations in the new building were arrested on the 18th, upon warrants which the Attorney-General of the State caused to be issued. It is expected that all of them will be indicted by a grand jury now in session. The list is as follows:

Joseph M. Huston, architect, of Philadelphia, whose commissions as architect for the Capitol Commission (which constructed the building) and of the Board of Public Buildings and Grounds (by which it was furnished and decorated), amounted to $525,000, all of which he collected, except $104,000 which the new State Treasurer withheld, alleging evidence of fraud.

John H. Sanderson, of Philadelphia, to whom was awarded the contract for furniture, lighting fixtures, painting, etc., and who collected from the State more than $5,250,000.

Congressman H. Burd Cassel, of Marietta, a prominent Republican and treasurer and executive officer of the Pennsylvania Construction Company, which has had a monopoly of the contracts for metal furniture required by the State during several years past, and which collected more than $2,000,000 for steel filing cases placed in the new building.

James M. Shumaker, of Johnstown, Superintendent of Grounds and Buildings, and executive officer of the Board of Public Buildings and Grounds during the construction and equipment of the Capitol, who receipted for the furnishings without question, and upon whose certificate and that of Architect Huston the bills for furnishings were paid.

William P. Snyder, of Spring City, who, as Auditor-General and member of the Board of Public Buildings and Grounds (being also a member of the Capitol Building Commission), approved the warrants of the contractors.

William L. Mathues, of Media, who, as State Treasurer, paid the bills of the contractors upon the certificates of Huston and Shumaker.

George F. Payne and Charles G. Wetter, of the firm of George F. Payne & Co., of Philadelphia, contractors for building the Capitol, who collected $303,000 for fitting up the attic.

Charles F. Kinsman, Wallis Boileau, John G. Neiderer and George K. Storm, all of Philadelphia, stockholders in the Pennsylvania Bronze Company, organized by Sanderson for the manufacture of the lighting fixtures, for which more than $2,000,000 was paid.

Frank Irvine, an auditor in the Auditor-General's office, who audited the contractor's accounts.

Stanford B. Lewis, of Philadelphia, assistant to Huston, the architect.

Shumaker has been a member of the Legislature and Sheriff of Cambria County. Snyder for twenty years has been the Republican leader in Chester County, and a similar position in Delaware County has been held by Mathues. It is understood that the statute of limitations has run against a prosecution of Frank G. Harris, formerly State Treasurer, and Edward B. Hardenbergh, formerly Auditor-General, who were members of the Board of Public Buildings and Grounds when Cassel's contract was awarded. Civil suits for the recovery of several millions will be brought against a majority of those arrested. All of the defendants are charged with conspiracy to defraud the State by means of false invoices. Sanderson, Cassel, Payne and Wetter are also accused of having obtained money by false pretences. Many specific instances are cited, to which we have referred heretofore in these pages. It is said that there will be no legal proceedings against ex-Governor Pennypacker, but the prediction is made that warrants will be issued for two or three prominent politicians who are said to have received considerable sums from the favored contractors in the guise of campaign contributions. The discovery of the frauds was due mainly to the election of William H. Berry, a Democrat, to the office of State Treasurer, as one result of the political upheaval caused by the revolt against ring rule in Philadelphia. The cost of furnishing and decorating the new capitol was about $9,000,000. Mr. Berry asserted that not less than $5,000,000 of this had been obtained improperly by fraud and collusion. An official investigation followed.

Canada's Japanese Immigrants

Seventy-seven Japanese laborers were expelled from the mining district of Atlin, in the northern part of British Columbia, on the 20th, by 300 white miners, who escorted them to the steamship which had landed them there. Warning was given that they

would be driven out by force if they should return. At the annual meeting of the Dominion Labor Congress, in Winnipeg, on the 18th, after an exciting debate, resolutions were adopted protesting against the admission of Japanese and calling upon Premier Laurier to give the required six months' notice for the abrogation of the commercial treaty with Japan. Thinking that the Congress had in mind the treaty between Japan and Great Britain, the Japanese Consul-General at Ottawa, Mr. Nosse, remarked that by the terms of the treaty it could not be abrogated for three years to come. The Congress referred, however, to the treaty between Japan and Canada. Having received a copy of the resolutions of the Congress, Premier Laurier replied as follows:

"I have given due consideration to your request that immediate steps be taken to terminate the treaty with Japan. I would observe that this treaty, when brought into existence some fifteen years ago, did not apply to Canada, and that some few years ago, in response to repeated expressions of public opinion, and with a view of affording to Canadian producers an opportunity of taking their share of the growing Japanese trade, the Canadian Government became a party to this treaty, and that it was unanimously ratified by the Canadian Parliament. The treaty has proved of great advantage, and our trade with Japan under it has considerably increased.

"You base your appeal for the denunciation of this treaty on the allegation that a crisis has arisen in British Columbia by reason of the unprecedented influx of Japanese. While it is true that most regrettable incidents have lately occurred at Vancouver, there seems reason to doubt that the cause was the influx of Japanese, as I am in possession of a telegram from the Mayor of Vancouver (which has been made public), which expressly avers that the disturbances were directed against Asiatics generally rather than against Japanese. Under such circumstances any precipitate action might be regrettable, and before committing themselves to such a course the Government think that they should carefully inquire into the causes which, within the recent past, have caused a greater influx to our shores than previously of Oriental people."

On the following day, at Halifax, the grand council of the coal miners' union past resolutions protesting against the employment of Asiatic laborers in Canada and asking for legislation forbidding such employment. It is reported from Ottawa that the Premier desires to amend the treaty by providing for further restriction of immigration, and that he was told by Mr. Ishii, Japan's special envoy, that it would be extremely difficult to procure such an amendment. The present restriction applies to Japan, but not to Hawaii, from which a majority of the Japanese entering Canada now come. It is evident that further restriction finds no favor in Japan, where it was said in an official statement published on the 18th that "to consent to a limitation would mean to limit Japan's status as a world power, and to this she would never consent." This statement related, however, to limitation in the main treaty with Great Britain. The Mayor of Vancouver says that the Government ought to exclude both Japanese and Hindus Several hundred of the Hindus, driven out of Bellingham, Wash., have made their way into Canada.

For Peace in Central America

Beginning on some day, hereafter to be named, in the first half of November, the long-desired peace conference of the five Central American republics will be held in Washington. When it seemed that the delay might be interminable, a special invitation was sent simultaneously by President Roosevelt and President Diaz to each of the five Governments, with the result that a protocol providing for the conference was signed in Washington on the 17th inst. by representatives of the five countries. It is hoped that they will agree in the forthcoming peace treaty to refer all their international disputes to the Presidents of the United States and Mexico as arbitrators. In order that the conferees may meet in harmony, Nicaragua and Salvador recently accepted the good offices of Costa Rica for a settlement of their differences. —— Elaborate preparations have been made in Mexico for Secretary Root's visit to that country. He starts from Washington on the 25th and will be met at the boundary by an entertainment committee. From that point to the capital he will travel in President Diaz's private car, and during his stay he will be lodged in the castle or palace of Chapultepec. A march to be played in his honor has been written by the Mexican composer, Preza. It is expected that his entertainment will eclipse anything of the kind that has heretofore taken place in Mexico.

The Hague Conference As the Peace Conference draws to its close there appears to be increasing difficulty in getting mutual concessions and agreement. Most of the projects which were brought forward hopefully at the beginning are now held up in some committee on minor differences of opinion between the Powers. It is taken as indicative of the general discouragement about the work of the Conference that the British Government has ordered that work be commenced on a fifth battleship of the "Dreadnought" type, altho it had been announced to Parliament that no more of these great ships would be built until it was determined that The Hague Conference had failed to take any practical steps to insure the peace of the world. On the question of the regulation of mines for harbor defense there is hopeless disagreement. Great Britain wishes to restrict their use and Germany opposes it. General Porter, of the American delegation, spoke in opposition to the British proposal to confine their use to three miles from the coast. He favored a ten-mile limit on the ground that ships with guns whose range might be thirteen miles would be able to bombard a city while outside the three-mile line. The proposals to prohibit the use of mines after five years, and to allow floating mines only when so constructed that they would sink in an hour failed of acceptance. The rule that anchored mines must be made so as to be harmless when they break loose was the only one adopted unanimously. The first commission approved of the principle of establishing a naval prize court. The commission to which was referred the question of the selection of the judges of the permanent court of arbitration has given up trying to secure an agreement and the project will be reported to the Conference in plenary session with this clause blank, leaving it to the Powers to arrange by diplomatic negotiation how the court shall be constituted. The larger Powers insist upon having a greater representation in the court; the minor Powers are determined to stand for equality. Various compromise plans were proposed, such as that of leaving it to the present Hague court to select the fifteen judges from lists sent in by the different countries, and that of electing them by direct votes of the governments, but they all failed to secure a majority in the commission. It is expected that the Conference will adjourn October 10th. The heads of the delegations meeting, with President Nelidoff of Russia as chairman, adopted the following resolution in regard to future conferences:

"The Conference recommends to the Powers the convocation of a third Conference within a period similar to that which elapsed between the former conferences, leaving the exact date to be fixed in common accord by the Powers. The Conference calls the attention of the Powers to the necessity of having the work of the Conference prepared a sufficient time before its meeting, so that its deliberations may be taken with indispensable authority and rapidity.

"To attain this object the Conference thinks it very desirable that about two years before the probable date of convocation a preparatory committee be intrusted by the governments with the collection of the different propositions to be submitted to the Conference, and the gathering of matters susceptible of being embodied in international regulations, and that the committee prepare a program about which the governments will agree early enough to have it earnestly studied in each country. The Conference recommends that this committee be also instructed to propose a system of organization and procedure for the Conference."

The Papal Encyclical Pope Pius X has issued an encyclical on "Modernism," in which he explains the late syllabus, and lays down rules for its enforcement. Under "Modernism" are embraced many errors in biblical criticism, and in philosophy, including the doctrine of immanence. It refers in detail to the various features of modernism and condemns it as dangerous in philosoph, faith, theology, history, criticism and reform, and arrives at the conclusion that modernism is a synthesis of all heresy and must logically lead to atheism.

The encyclical makes the following provisions:

1. The teaching of philosophy, positive theology, etc., is to be carried on in the Church schools and universities, but in a Catholic spirit.

2. Modernists are to be removed from professorships and the direction of educational institutions.

3. The clergy and faithful are not to be allowed to read modernist publications.

4. A committee of censorship is to be established in every diocese to pass upon the publications which the clergy and the faithful shall be permitted to read. No books or newspapers of modernist tendency are to be allowed in the hands of any pupil in the universities or seminaries.

5. The encyclical of the late Pope Leo XIII prohibiting the clergy from assuming the direction of publications without their bishop's permission, and providing for supervision of the work of ecclesiastical writers, is confirmed.

6. Ecclesiastical congresses, except on rare occasions, are prohibited.

7. A council is to be constituted in every diocese to combat modern errors.

The encyclical says:

"Everything must be done to banish from your diocese every pernicious book. The Bishops are to be above all human fear, to trample all fleshly imprudence under foot, and, heedless of the outcry of the wicked, are to remember our proscription and to proscribe and tear out of the hands of the faithful all bad books and bad writings. This is not only a right conferred on them, but a duty we impose on them. . . ."

"The movement of modernist errors is in the direction of agnosticism and immanence—agnostic in that it limits to simple phenomena the knowledge of men and refuses to grant to human reason the power to raise itself to God; and immanent because it explains faith in God as proceeding from the vital want of the human mind. Modernism is not so much a special error as an amalgamation of all the heresies. Logically its double principle of agnosticism and immanentism abolishes the distinction between man and God. Pantheism is its normal result."

The encyclical holds that pride, curiosity and ignorance of scholastic philosophy are the causes of modernism. In concluding the Pontiff says he foresees that the adversaries of the Church will take advantage of this encyclical to represent him as the enemy of science, progress and humanity. To that accusation he replies by acts. He has decided to support by every means in his power the "foundation of an institution which shall group the most illustrious representatives of science among the Catholics, and which shall have for its object to favor with Catholic truth for light and guide the progress of all that can be designated under the name of science and erudition."

Russia

The Imperial yacht "Standart," which was stranded on a rock near Hangoe, at the mouth of the Gulf of Finland, has been refloated by a salvage company and will be repaired. It appears that the rock on which she struck had been reported to the Russian Admiralty a year ago, but had not yet been plotted on the charts. ——It is reported from St. Petersburg that a treaty is being negotiated between the United States and Russia for the exchange of a coaling station near Vladivostok for one near Manila. Russia is also said to be trying to obtain from some South or Central American country a coaling station near the entrance of the Panama Canal. During the next five years the Minister of Railroads proposes to expend $458,000,000 for improvements in the state railway system.——All the dormitories connected with institutions of higher education at St. Petersburg and Moscow have been closed because of the many recent discoveries of revolutionary literature and arms concealed by the students in their rooms. Twenty-two more of the revolutionists who were concerned in the revolution in the Baltic provinces three years ago have been condemned to death and eighteen to imprisonment. Matuchenko, the Russian non-commissioned officer who led the mutiny on the battleship "Kniaz Potemkine" on the Black Sea in 1905, has been hanged. Matuchenko escaped after the abandonment to New York, where he worked for two years in an iron foundry, but on his return to Russia he was arrested and sentenced to death. Of the eighteen persons tried by court martial for plotting the assassination of the Emperor Nicholas last May twelve were found guilty of varying degrees of complicity and three of them sentenced to be hanged. According to the police report for August there were during that month 309 assassinations of which 107 were Government officials. In encounters with police 173 persons were wounded; 31 persons were condemned to death. A Russian statistician has calculated the losses due to the

revolutionary movement to be 47,020, of whom 19,144 were killed. It is further shown that 2,381 sentences of death were carried out, that 1,350 prisoners committed suicide, and that 21,405 persons were wounded. The largest loss of life, 12,953, resulted from encounters with the soldiers or police. The anti-Jewish riots numbered 7,962 and there were 4,540 anti-Armenian riots and 2,193 mutinies. The agrarian disorders were comparatively insignificant, only 533. The revolutionists assassinated 83 Generals or Governors, 61 Prefects and 8,079 officials of various ranks.—— Count Tolstoy's residence at Yasnaya Polyana was attacked on two successive nights by a party of peasants, who fired at the windows, breaking them and shattering mirrors in the rooms. As the gardeners and employees of the farm were not strong enough to protect the place, Tolstoy consented to call in the rural constabulary, who have arrested three peasants on suspicion of being concerned in the attack. Tolstoy has issued another tract entitled "Thou Shalt Not Kill." Alluding to the fact that a man was recently imprisoned in St. Petersburg for circulating his former tract on the same subject, published seven years ago, he says:

"One who would expect that a Government which has struggled so long and unsuccessfully with the mania for murder that dominates the Russian people would ever try to do more and more to encourage those who circulate thoughts discouraging murder; but, strange to say, the Government, on the contrary, punishes them."

He holds governments responsible for the present era of violence, because they have inculcated the belief that it was not only right, but necessary, in certain cases to kill people.

Reform in China

The kaleidoscope of Chinese politics has been given another turn and the progressives are again in the ascendancy. The failing health of the Dowager Empress and the growing power of the anti-Manchu movement, which has become a formidable rebellion, have forced immediate action if the Manchu dynasty is to be saved. Viceroy Yuan Shi-kai, of the Chi-li Province, the leader of the progressive party in China, took advantage of the crisis to memorialize the Throne in favor of administrative reforms and the establishment of a constitutional government. The Viceroy calls attention to the fact that no voice has been raised among the Powers to protest against the absorption of Korea by Japan, and the Japanese aggression in Manchuria, and he argues that the recent treaty between France and Japan may prove to be inimical to China. He gives emphasis to his petition by alluding to the fact that his health is frail and that he is liable to die of hemorrhage at any moment, and in accordance with Chinese custom the advice of an official uttered under such circumstances receives especial attention. The memorial covers fifty pages and has not been published in full. The main points are the following:

"1. The Pekin Government should carefully study the consequences of the Franco-Japanese agreement so far as it concerns China and devise means to safeguard the national interests.

"2. The adoption of a fixed and unequivocal policy regarding the introduction of a constitutional administration into China.

"3. To abolish the K'ao-sha Cheng Chi-Kuan, or Office for Investigation of Political Affairs in Pekin, which is only of nominal service now.

"4. The immediate establishment of the proposed Chih Chen-Yuan, or Ministry for Discussing State Affairs in Pekin.

"5. The extension of Tientsin local government system to the various provinces as soon as possible.

"6. The adoption of compulsory education.

"7. The establishment of Government good faith with the people.

"8. The reorganization of the Lu-Chun Pu, or Board of War.

"9. The thoro investigation of China's financial condition, so as to pave the way for the adoption of a gold standard in future.

"10. To punish all high Manchu Chinese authorities in Pekin and the provinces if they try to build up barriers between Manchu and Chinese in the employment of their subordinates."

In response to this Viceroy Yuan Shi-kai was summoned by the Dowager Empress to Pekin and made a member of the Board of Foreign Affairs and the Grand Council. At the same time, in accordance with Oriental custom of balancing opposing factions, Viceroy Chang Chi-tung, an aged and conservative but scholarly and influential official, was also made a Grand Councillor. His attitude in the present crisis is not clearly known

but it is reported that he has united with Yuan Shi-kai in urging moderate reforms. The Dowager Empress holds that the time has not yet come for the establishment of a national parliament, but has authorized Prince Pu Lun, who was Chinese Envoy at the St. Louis Exposition, with others, to arrange for the establishment of a council or ministry for the discussion of state affairs. Viceroy Yuan has succeeded in getting many of his friends, especially young men educated in foreign lands, appointed to responsible positions in the Imperial Government. Sir Chentung Liang-cheng, who has been Chinese Minister at Washington, is taking an active part in the governmental reorganization. It was announced that he would be succeeded at Washington by Liang-Tun-Yuen, a Yale graduate, but later reports state that he has been appointed Assistant Secretary of the Wai-Wu-Pu, or Board of Foreign Affairs, and that it is proposed to send to the United States Wu Ting-fang, who filled the position of Chinese Minister four years ago. Minister Wu was popular in the United States both as a diplomat and after-dinner speaker, but it was reported that on his return to China he took an active part in support of the anti-American boycott movement. Viceroy Yuan has succeeded in getting appointed three Imperial Commissioners, two of them Chinese and one Manchu, to visit separately Japan, Great Britain and Germany for the purpose of studying the constitutional systems of those countries and their adaptation to Chinese conditions. The two Manchu commissioners, Tuan-fang and Prince Tsai-tse, who went around the world last year, made a report which was very unsatisfactory to the progressives. The Government is expected to adopt radical means for the obliteration of the distinction which has been maintained thruout the present dynasty between ruling Manchus and their Chinese subjects. It is proposed to disband the Manchu banner troops situated at Pekin and to bring both officers and men into a single Imperial army; to permit the daughters of Chinamen of high rank to marry into the Imperial family; to prohibit the binding of feet of Chinese women which distinguishes them from the Manchus, and to require the Manchus to take surnames like the Chinese.

The Moroccan Situation

At the beginning of the week the French Government had hoped that the Arab tribesmen might consent to make peace on the terms which were offered by General Drude. Three delegates of the Chaouia, the principal tribe in the vicinity of Casablanca, were given by General Drude until Thursday to accept the following terms: First—The punishment of the authors of the Casablanca massacres and the ringleaders of the movement. Second—An agreement that no tribesmen shall enter with arms within a radius of twelve kilometers of the city. Third—The acceptance in principle of the payment of a war contribution, the amount of which will be fixt hereafter by negotiations between the Moroccan Government and France and Spain. Fourth—The surrender of hostages to insure the fulfillment of these conditions. But the time having elapsed without any action having been taken upon them, General Drude resumed the offensive, and on the 22d demolished their camp at Sidi Brahim, south of Casablanca. The disinclination of the tribesmen before Casablance to make peace is probably due to the fact that they are awaiting the arrival of the new Pretender, Mulai-el-Hafid. Mulai-Hafid has sent a letter to the representatives of European Powers asking them to remain neutral "until it shall appear to whom God will give the victory and the throne." He protests that he has no antagonism to foreign nations, but proposes to establish a strong and orderly government, appealing to the Koran in support of his claims to the throne. He has confiscated the property of all the Europeans at Marakesh who are suspected of favoring the reigning Sultan. The property seized includes the villas of an Englishman and a German. Sultan Abd-el-Aziz has successfully made his royal progress from Fez to Rabat, gaining in strength as he went along. When he left the capital he had only 5,000 adherents; now he is reported to have an army of 15,000.

Is the Supreme Court Constitutional?

BY THE HON. WALTER CLARK

[The Hon. Walter Clark, Chief Justice of the Supreme Court of North Carolina, author of many volumes of history and law, is among the most careful and earnest students of constitutional law. He created a wide interest among lawyers thru his lectures upon the Constitution of the United States, before the Department of Law of the University of Pennsylvania. In the following article he advances subjects for thought pertaining to the application of the Constitution to the Supreme Court of the United States.—EDITOR.]

IN the great Convention of 1787, when the Constitution of the United States was framed, a proposition was made that the judges should pass upon the constitutionality of the acts of Congress. This was defeated June 5th, receiving the vote of only two of the States. It was renewed June 6th and again July 21st, and finally for the fourth time it was urged on the 15th of August, but tho it had the powerful support of Mr. Madison and Mr. James Wilson, at no time did it receive the votes of more than three States. On this last occasion, Mr. Mercer summed up the thought of the convention, as reported in Madison's Journal: "He disapproved of the doctrine that the judges, as expositors of the Constitution, should have authority to declare a law void. He thought that laws ought to be well and cautiously made and then be incontrovertible."

Prior to this Convention, the courts of four States—New Jersey, Rhode Island, Virginia and North Carolina—had expressed an opinion that they could hold the acts of legislatures as unconstitutional. It was a doctrine never held before—nor in any other country since. It met with strong disapproval. In Rhode Island a movement to oust the offending judges was only stopped on the suggestion that they should be dropped by the next Legislature, which was done. These matters were recent and before the Convention. Mr. Madison and Mr. Wilson favored the new doctrine, doubtless deeming it a safe check upon legislation to be operated only by lawyers. They attempted to get it into the Federal Constitution in its least objectionable shape—a judicial examination and veto *before* the final passage of the bill, which has, indeed, obvious desirable features. But even in this diluted form and tho four times presented, by these two very able and influential members, the suggestion of a judicial veto at no time received more than one-fourth of the States in approving vote.

The subsequent action of the Supreme Court in assuming the power to declare acts of Congress unconstitutional is without a line in the Constitution to authorize it. The Constitution cited carefully and fully the matters over which the courts should have jurisdiction. There is nothing, and, after the struggle four times repeated and the persistent refusal to vote jurisdiction, there could be nothing indicating any power to declare an act of Congress unconstitutional or void.

Had the Convention given such power to the courts it would certainly not have left its exercise final and unre-

viewable. It gave to Congress power to override the veto of the President, thus showing that in the last analysis the will of the people, speaking thru the Legislature, should govern. Had the Convention supposed the courts would assume such power it would certainly have given Congress some review over judicial action and not have placed the judges irretrievably beyond "the consent of the governed," as well as further clothing them with the undemocratic prerogative of life tenure and making them appointive.

Such power does not exist, and never has existed, in any other country. It is not essential to security. It is not conferred by the Constitution, but is contrary to the will of the Convention. Judges not only have never exercised such power in England, where there is no written constitution, but they do not exercise it in France, Germany, Austria, Denmark or any other country which, like them, has a written constitution.

A more complete denial of popular control of this government could not have been conceived than the placing of such unreviewable power in the hands of men not elected by the people and holding office for life. The legal-tender act, the financial policy of the government, was invalidated by one court, then validated by another after a change in its personnel. The Income Tax was held constitutional by the court for a hundred years, and then, again held so, but by a sudden change of vote by one judge it was declared unconstitutional, nullified and set at naught, tho it had past, by an almost unanimous vote, both Houses of Congress, containing many lawyers who were the equals, if not the superiors, of the vacillating judge, and had been approved by the President. This was all negatived, without warrant in the Constitution, by the vote of one judge; and thus one hundred million dollars and more of annual taxation was transferred from those most able to bear it and placed upon the backs of those who already carried more than their fair share. Under an untrue assumption of authority, supposedly given by thirty-nine dead men, one man nullified the action of Congress and the President and the will of seventy-five millions of living people, and in the few years since has taxed the property and labor of this country by his sole vote one billion three hundred million dollars, which Congress, in compliance with the public will and relying on previous decisions of the court, had decided should be paid out of the excessive incomes of the rich.

One-third of the English revenue is derived from the superfluities of the very wealthy. The same system is in force in all other civilized countries. In not one would the hereditary monarch venture to veto or declare null such a tax. In this country alone the people speaking through their Congress and with the approval of their Executive cannot put in force a single measure of any nature whatever with assurance that it will meet with the approval of the courts, while failure to receive approval is fatal; for unlike the veto of the Executive the unanimous vote of Congress cannot avail against it. Of what avail, for example, will be the Rate Regulation bill if five lawyers holding office for life, not elected by the people, shall see fit to destroy it as they did the Income Tax law? Is such a government a reasonable one? And should it be tolerated after one hundred and twenty years of experience have demonstrated the capacity of the people of self-government? If five lawyers can negative the will of one hundred million intelligent people, then the art of government in this country is reduced to the selection of those five lawyers.

A power without limit, except in the shifting views of the court, lies in the construction placed upon the Fourteenth Amendment, which was passed solely to prevent discrimination against the colored race, but has been construed by the court to confer upon it jurisdiction to hold any provision of any statute whatever "not due process of law."

Nothing can obtain benefit from the growing humanity of the age, expressed by the popular will in any States or the Congress, if such statute does not meet the views of five elderly lawyers selected by influences naturally antagonistic to the laboring classes and whose training and daily associations cannot incline them in favor of restrictions upon the power of the employer. The preservation of the autonomy of the several

States and of local self-government is essential to the maintenance of our government, which would expire in the grasp of a consolidated despotism. Nothing can save us from this centripetal force but the repeal of the Fourteenth Amendment or a recasting of its language in terms that no future court can misinterpret.

The vast political power now asserted and exercised by the Court, to set aside public policies after their full determination by Congress, cannot safely be left in the hands of any body of men without supervision or control by other authority. If the President errs his mandate expires in four years and his party and himself are held accountable at the ballot box. If members of Congress err they must account to their constituents. The Federal Judiciary hold for life, and tho popular sentiment may change the entire personnel of the other two great departments of government, a generation must pass away to change the Supreme Court, which possesses an irresponsible and unrestricted veto upon the action of the other departments—irresponsible because impeachment is practically impossible, and even otherwise could not be invoked as to erroneous decisions.

The control of the policy of government is thus not in the hands of the people, but in the power of a small body of men not chosen by the people and holding for life. In many cases which might be mentioned, had the Court been elected, men not biased in favor of colossal wealth would have filled more seats upon the bench; and if there had been such decisions as in the income tax, under the tenure of a term of years, new incumbents would have been chosen to pass upon it; men upholding the right of Congress to control the financial policy of the Government in accordance with the will of the people of the present day and age, and not according to the shifting views which the Court has imputed to language used by a mere majority of the fifty-five men who met in Philadelphia in 1787. Such methods of controlling the policy of government are no whit more tolerable than the conduct of the augurs of old, who gave the permission for peace or war, for battle or other public movements, by declaring from the flight of birds, the inspection of the entrails of fowls, or equally wise devices, that the omens were lucky or unlucky.

It may be that this power in the courts, however illegally grasped originally, has been too long acquiesced in to be questioned; if so, the only remedy which can be applied is to make the judges elective and for a term of years, for no people can permit its will to be denied and its destinies to be shaped by men it did not choose and over whose conduct it has no control, having no power to change them.

Every Federal judgeship below the Supreme Court can be abolished by Act of Congress. The United States district and circuit judges can be legislated out of office by simple Act of Congress. In 1831 the attempt was made to repeal Section 25 of the Judiciary Act of 1789, by virtue of which writs of error lay to the State Supreme Courts in certain cases.

The section was not repealed, but the repeal was supported and voted for by Henry Clay, James K. Polk and other leaders of both of the great parties of that day. But what is needed is not the exercise by Congress of such limited powers as it undoubtedly does possess and in emergencies will exercise regulating the functions of the courts, but a constitutional revision by which the Federal judges, like other public servants, shall be chosen by the people and for a term of years.

It will be said that Federal judges are now in office for life and that it would be unjust to dispossess them. State judges in each State, when it changed from life judges to judges elected by the people, were under the same conditions, but it did not prevent much needed reform.

When the Constitution was adopted, in only one State was the Governor elected by the people, and the judges in none. In most, if not all the States, the Legislature, especially the Senate branch, was chosen by restricted suffrage. The schoolmaster was not abroad in the land, the masses were illiterate and government by the people was a new experiment of which property holders were afraid. The danger to property rights

did not then as now come from the other direction—from corporations.

In the State governments the conditions existing in 1787 have long since been changed. The Governors and members of both branches of the Legislature have long been elective by manhood suffrage. In all the forty-five States save four, judges now hold for a term of years, and in three of these they are removable upon a majority vote of the Legislature. In Rhode Island the judges were thus summarily dropped when they once held an act of the Legislature invalid. In England the will of the people, when expressed thru their Representatives in Parliament, is final. Even the King cannot veto it and no judge ever dreamed that he had the power to set it aside.

It has never been charged that our judges are corruptly influenced; but the passage of a judge from the bar to the bench does not necessarily destroy his prejudices or his predilections. They go upon the bench with a natural and perhaps unconscious bias from having spent their lives at the bar in advocacy of corporate claims, which will unconsciously but effectively be reflected in the decisions they make. Having attempted as lawyers to persuade courts to view debated questions from a standpoint of aggregated wealth, they doubtless end by sincerely believing in the correctness of those views and not unnaturally put them in force when in turn they themselves ascend the bench. This trend in Federal decisions has been pronounced. Then, too, incumbents of seats upon the Federal Circuit and District bench cannot be oblivious to the influence which procures their promotion and how fatal to confirmation by the plutocratic majority in the Senate will be the expression of any judicial views not in accordance with the "safe, sane and sound" predominance of wealth.

In 1820 Mr. Jefferson had discovered the "sapping and mining" as he termed it, of the life-tenure appointive Federal judiciary, owing no gratitude to the people and fearing no inconvenience from them however arbitrary in the discharge of office; possessing the autocratic power of absolute responsibility. This is glaringly evident when we compare their jurisdiction in 1801, when Marshall ascended the bench, and their jurisdiction in 1907. The Constitution has been remade by the courts since then and rewritten in the judicial glosses put upon it. Had it been understood, in 1787, to mean what it is construed to mean today, it is safe to say that not a single State would have ratified it.

If the people are to be trusted to select the Executive and the Legislature they are also fit to select the judges. The people are wiser than the appointing power, which, viewing judgeship as patronage, has with scarcely an exception filled the Federal bench with appointees of its own party. Public opinion, the cornerstone of free government, has no place in the selection or supervision of the judicial augurs who assume power to set aside the will of the people tho declared by unanimous Congress and Executive. The late Judge Seymour Thompson said: "If the proposition to make the Federal judiciary elective instead of appointive, is once seriously discussed before the people, nothing can stay the growth of that sentiment." But great aggregations of wealth know their own interests, and there is no reform and no Constitutional amendment they will oppose more bitterly than this.

Some one observed to Mr. Gladstone that "the people are not always right," to which he replied, "No, but they are rarely wrong." When they are wrong their intelligence and their interests combine to make them correct the wrong, but when rulers, whether kings or life judges or great corporations, commit an error against the interests of the masses, there is no such certainty of correction.

The Government and the destines of a great people should always be kept in their own hands.

RALEIGH, N. C.

Song of the Cedar-Maker

BY IVAN SWIFT

Of the many picturesque characters produced by American outdoor life the "Lumber-Jack" or "Timber-Jack" of the Michigan and Wisconsin woods still does credit to the memory of the older time. The Indian brave, cowboy, buccaneer, soldier and sea adventurer have passed out for want of employment; but the identical men and more of similar spirit are to be found to-day in the lumber camps and cedar swamps of the Northwest. The tatooed star and anchor and the saber scar of other adventurous lives are common in the lumber camps, and the term *Jack* may have come from the sea. They are of many breeds and are drifting men, but workers who scorn dependence. They are for freedom at any cost. What is known among them as the *cedar-maker* is an expert workman, paid by the "tally" or "scale." His work is the reduction by hand of the standing timber into a marketable product—poles, logs, ties, posts or shingle butts—and skill and judgment are required to do this with minimum waste or tare. His name requires no definition among lumbermen, and he has come to stay till the cedar, too, is a thing of the past, when his and the forest's memory will challenge our greater respect.—Author.

Deep is the wall of the cedar,
And tough is the take of the Jack;
But a man with a girl must feed her,
And the fire must burn in the shack.
Ax, spud, crooked-steel!
Chop, cut, mark, peel!

We tackled the world and shook her—
A wench with an eye for hate;
We winked at the woods—and *took* her,
For better and bunk and plate,
Whack, crack, hew, chip!
See, saw, sip, sip!

Man is a thing for labor,
Or what's the game of the trees?
The saw is as good as the saber—
And tallies are made with these.
Ax, spud, jagged-steel!
Cut, chop, skid, peel!

Our talk ain't the regular Latin—
But we cut to the cedar's core!
Our manner 'll stand some battin'—
But we pay for our beans and more!
Sim, sow, zip, zip!
Whack, skid, stack, strip!

Tough is the take of the cedar,
And rough is the lift of the Jack;
But a man with a wife must feed her,
And the kettle must boil in the shack.
Saw, spud, crooked-steel!
Trim, mark, cut, peel!

A *chew* for the church and the nation!
We *work*—and the scale is right;
Sweat be our souls' salvation,
And *freedom* is *Saturday Night!*

(Accelerando)
Whack, crack, strip, chip!
Zim, zow, zip, zip!
Ax, spud, saw, steel!
Chop! cut! mark! peel!

Harbor Springs, Mich.

Glossary

"Crooked-steel"—cant-hook.
"Jagged-steel"—One-man saw.
"Speed-steel"—For stripping the bark.
"Tally"—Count.
"Scale"—Measure.
"Take"—An allotment of timber area.

ALL PEASANTS WORK TOGETHER

The Real Russian People

BY WILLIAM ENGLISH WALLING

[In our issue of July 4 Mr. Walling, who is our correspondent in Russia, gave our readers an article on the Russian people at church. In this article he considers their village life.—EDITOR.]

THE peasants have shown as much character in their attitude toward the laws of the Czar as toward his Church. The thousands of bloodily-suppressed revolts and the hundreds of thousands of cases of rebellious peasants that have languished away their lives in prison and exile are only the lesser manifestation of the hatred for the Government. Where the people have been literally beaten into submission by the Cossacks, and this has happened at one time or another in most of the villages, there has arisen a spirit of passive resistance which has often ended by a complete victory over the Czar.

The Czars have always been able to exact from the peasant a terrible tribute of recruits and taxes. They have been able to tie the peasants to their villages and to prevent their escape from these exactions, but when they have attempted to interfere with the villagers' internal affairs, the Imperial Will has been shattered against the people's own ideas of right and wrong. When they have tried to upset the people's own laws of property it is the "autocrats" who have had to surrender. The peasants as a whole have not yet permitted the Czars to subvert their laws of inheritance or their equitable system of distributing the land.

The hundred thousand villages where the mass of the Russian people live are so many little immemorial republics. At the present moment, as at the earliest dawn of history, they are ruled by a pure spirit of democracy not only in political but in economic affairs. A large part of the land is village property used by all the villagers in common; the rest is divided and from time to time redistributed

UNDER ONE ANOTHER'S EYE.

according to the ideas of equity of the whole village. An estimate is made of each family's claims, either at the death of its head or at a general census. When it is decided what proportion of the village plowed land is to fall to each family, it is entitled to receive so much land annually at the hands of the village. But no man is ever allowed to claim a right to a particular piece of soil; he has merely a right to a certain quantity. There is no such thing as an abstract and private ownership of the land itself, since it is not a product of individual labor, but a "gift of God." The family is allowed possession of the land long enough only to secure it the fruits of its labor—that is, for the three-year rotation of crops which prevails. Even in the western parts of Russia, formerly under Polish dominion, where there is no longer any redistribution of shares and some families are richer than others in their personal rights, there is still no recognition of the right of private property to a particular piece of soil, and the same triannual readjustment prevails. This is why the peasants in the Duma can say with perfect truth that the peasants do not want the land to buy and sell, but merely to plow it. They want more land in order that they may have more work. They have never in their own experience known what rents or unearned profits from land ownership are.

The village community, since it controls the peasants' means of livelihood, has an unlimited power over his existence. But this power is democratic in proportion as it is unlimited. All the peasants live in the village and are infinitely more intimately related to one another than a country people of isolated farms. They work together and are always under one another's eye. The spirit is profoundly social, and the very fact of the village ownership of the land has made it all the more so. The democracy is, therefore, profound and rests on the feeling of full social and economic equality that is the only sure foundation of democracy in any land. The village meetings concern themselves principally with questions of the chief and only great business of every member, the winning of the daily bread. And so the democracy of the

tens of thousands of little communities has gone deeper than any other we know.

There is no conflict between this village government and its citizens. The villagers do not elect temporary masters to rule over them, like many so-called democratic communities. The *starosta,* or head of the village, is in very truth the servant of the community and remains its servant in spite of all the St. Petersburg Government can do to make of him an authority. The Czar has enacted that the *starosta* shall receive a good salary and be immune from taxes and corporal punishment. The Government has endowed him with enough insignia of office to buy the souls of the nobility of some European countries. But the village assembly considers him as its servant and gives its orders at every meeting as to its secretary or clerk. Peasants elected to the office occasionally even try to avoid the honor, and some of the villages have even had to compel their members to take their turn.

But the real business of the village is concentrated in the assembly itself, and there are few villagers that do not take an active part. There is nothing more immediate or important in their lives. Conducted on a scale sufficiently small so that all the elements of the vital questions under discussion can be understood by everybody, the village meeting has come to form a part and parcel of the peasant's existence. Public life is not a thing apart as in some externally democratic countries, where private business overshadows public affairs and politics are a mask for private interests and the greed for office. "As soon as public service ceases to be the principal business of the citizens," said Rousseau, "the state is already near to ruin." Of all modern communities the Russian villages are perhaps farthest from this calamity.

In some cases already there is complete communism, that is, both common ownership and common cultivation of the soil—a system that allows the advantages not only of every modern method of agriculture, but of large scale production and the use of machinery that no small farmer can afford. Peasant companies (*artels*) often buy or rent a piece of land from the landlord, work it together, and share expenses and profits according to a pre-arranged plan. In all the villages the peasants manage their cattle in common, cut their hay in common; in many cases they own a common granary. A large part of the peasants, and the most progressive and enlightened experts on Russian agriculture as well, hope and believe that this co-operation in production, a natural outgrowth of the prevalent social spirit, will so develop as to make it possible that common property in land will remain the basis of Russian agriculture and of Russian society. The peasants' party in the Duma wishes each State to be allowed to adopt communism if it will. This privilege would certainly be widely accepted and would result in the abolition of private property in two-thirds of the land.

The Czar's Government has looked with suspicion enough at this village nucleus of democracy and socialism. Like demigods, the Czars of the past have pondered this or that social system that might be the answer to their ends. And so Alexander II a generation ago was deliberating over the village commune or *mir.* The dangers of maintaining such a democratic institution were obvious. But for several generations the Czarism has been caught between two equal dangers—one due to the education and development of the people within the country and another due to industrial progress of the rival nations without. If the village commune were to be dissolved to give place to private property, this would do away with the immemorial village republics, but it would also hasten the economic development of Russia by creating two new classes, landless working people furnishing cheap labor, and a rural middle class to furnish capital enterprise. For if individual peasants were allowed to buy and sell land, the more needy ones would necessarily sell everything, while the few well-to-do would take advantage of their poverty to add to their own wealth. The development of capitalists and cheap labor might enable Russia to develop her industry, to accumulate wealth and to build up an army and navy fit to resist those of other modern lands. But this seemed impossible. Both working people and small capitalists are democrats everywhere, and it was they that had

brought about the European revolution of 1848. So Alexander decided to keep the *mir*. He preferred a democratic village to a free nation, a pauperized people to a constitution.

But the same Czar also used all his power to maintain another class, whose interests were in sharpest contrast with the peasant commune. He had made the landlords free their peasant serfs, but he

taxation, had protected industry, established a gold currency, built railways and borrowed billions of rubles from abroad. But a counsel of state, during Count Witte's financial ministry, was forced to confess the failure of all these measures to reach their chief aim. It declared that the Government was "powerless for the reorganization of the life of the peasants and assisting agricultural industry."

"PUBLIC LIFE IN THE VILLAGES IS NOT A THING APART AS IN SOME EXTERNALLY DEMOCRATIC COUNTRIES."

These three typical village emissaries, acting without pay, were first beaten by the officials at the provincial capital for demanding the restoration of some land stolen by a high landlord official. They then walked 2,000 miles to St. Petersburg to complain there, only to be sent home empty-handed.

allowed them to take away part of their land, while he forced these famishing agriculturalists to take on a new and crushing burden of taxes and payments of indemnity for their own freedom. The result was that the peasants starved more and more as the years went on, agriculture stagnated and even deteriorated, it became impossible to beat more taxes out of the villages, industry was without country-purchasers and the State finances were hopeless. The finance Ministers had introduced every manner of

Read for "peasants" "the mass of the people" and for "agricultural industry" "the economic basis of Russian society."

The Czars had no hope for their people. But matters could scarcely be worse, and they began to reverse their older policies. So the present Czar decided to abandon the *mir*. If there was no chance to save the mass of the people from starvation perhaps he might aid a few of the peasants to establish an agricultural middle class on the ruin and pauperization of the rest. But it was too

late even for this desperate and inhuman move. The new class, with the aid of which it was proposed to save the country from revolution, had no time to develop before the Duma met, and the majority of the peasants proposed instead of their own pauperization the expropriation of the property of the landlords, the abolition of Czarism's last support among the people, instead of the creation of a new prop to the throne, and the transfer of the power over both the landlord and the Government into their own hands.

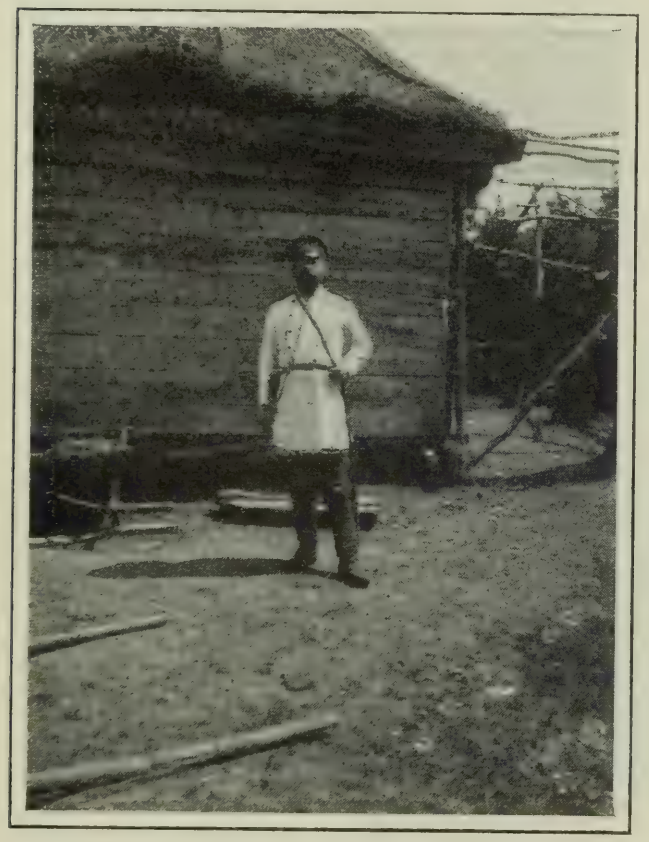
Minister Stolypin now proposes to give the last stroke to the village commune, to allow every starving peasant a right to sell his land, and to assign the communities' political powers to other higher, newer and less dangerous local authorities. It is doubtful if the villages will surrender their political power; more than doubtful if they will allow a few of their number the right to buy up the land of the rest. For the popularity of communal property has been growing, and the well-defined socialist and revolutionary politics of the peasant representatives in the second Duma, leave no further doubt of the socialistic principles Russia is about to apply to her land—that is, to the larger part of her national wealth. The great peasant institution will have given the basis of the future Russian State.

The peasants show every sign of creative power—in religion, in politics, in economic institutions. They are independent and positive in their individual thought and feeling, social and democratic in public life. Have they also the practical qualities that will bring the revolution to a successful conclusion? We can be certain of at least two of the characteristics most essential to a rapid and sound development—open-mindedness to modern ideas, and the spirit of unity among themselves. They are open-minded with regard to national institutions because Russia has had no national traditions except those imposed by the violence of the Czar. The peasants

A GROUP OF VILLAGE "INTELLECTUALS."

A woman doctor, her assistant, the school teacher, his wife, an agricultural expert and a visiting student. In city and village alike the educated classes have succeeded in establishing the most cordial and intimate relations with the people.

neither assisted in the law-making nor, except under coercion, obeyed the law. The peasants are progressive also because conditions have united them by a close material and spiritual bond with two other classes that are as progressive, if not more so than the corresponding classes of any other country, the working people and the professional element.



In Russia as in no other land, the city working people and the country people form a single whole. The city workingmen were drawn only lately from the country. All of them have relatives, in the villages most of them have shares in the village property. Most of them are in the habit of returning there from time to time, and many go back for every harvest. Often the city work, service, driving and so on, is less important than the village interests. And as if these bonds were not sufficient, the Government sends rebellious workingmen back to their villages by tens of thousands. All these workingmen have brought back with them to the village the revolutionary ideas and the city culture of the towns.

In city and village alike the educated classes have succeeded in establishing the most cordial and intimate relations with the people. It is as if the whole country were a social settlement, in which the sacrifice made by the settlement residents is not merely that of a few luxuries and pleasures, but the risk of imprisonment, exile and execution. In all the great popular organizations of the revolution the "intelligence," or educated and professional classes, have played a predominant rôle, have been gladly accepted by the people, and have acted alongside of their own leaders, who often owed their education in turn to that same class. The political parties are governed almost exclusively by these tried and cultivated democrats. The still more typically popular organizations, the Peasants' Union, the Railway Union, the Councils of Labor deputies, were managed almost equally by men of university training and by self-educated peasants and workingmen. From the greatest professors and lawyers of the land down to the village doctors and schoolteachers there has been one common movement toward the people—a movement not only for union against despotism, but for bringing to the people all the great ideas and aspirations of civilization. The culture of this educated class being in many respects superior to that of other countries, as, for instance, in knowledge of foreign languages, literatures and history, and in the sincerity of their social theories, the people secured a corresponding advantage. Some of the greatest ideas and highest aspirations of humanity are in common circulation among the masses. Many Russian peasants and workingmen are now seriously and intelligently interested in foreign history, literature and politics. The politics and economics of their own land are not alone forced before their attention by events, with a rapidity unequaled anywhere since the French Revolution, they are put into terse and readable form by the "intelligence" spread over the country in a sea of leaflets and illegal or short-lived newspapers, and read and literally devoured by the people of every village and workshop in the empire.

So there is a great unity among the masses, not excepting the educated and professional class. On the other side and in favor of the Czarism are only the landlords, officials and army officers and those who accept their pay. Neither the bitterness of class hatred of Germany nor the selfishness of the individualism created by the early conditions of the United States have existed in Russia, to plant in the minds of the people anti-social or non-social instincts that it may take generations to eradicate. The origin of the Russian people, its common struggle against those united powers of evil that call themselves the Czarism, and above all the situation in which it finds itself to-day, have joined together to create the strongest social spirit and the first socialistic nation of history.

It is not only the psychology of the people, it is the present situation itself, that has created this socialistic sentiment. For whatever the causes of the revolutionary crisis, the crisis itself demands and requires a social solution. The situation is in sharpest contrast to that which prevailed at the birth of our nation. The United States of America were formed by a democratic population, whose problem was to people a vast and

uninhabited land. The United States of Russia will be formed by a democratic nation, whose problem will be to provide a vast people with land. Our internal problem was purely political, to protect individuals from violent encroachments of other individuals. Most economic and social problems were left in the individuals' hands, and out of control of society. The result was the most developed individualism the world has known. The Russian people, on the contrary, are confronted with a problem that is at once social, economic and political.

THE URIADNIK OR VILLAGE DESPOT.
But "when they have tried to upset the people's own laws of property it is the autocrats who have had to surrender."

The political problem is to do away, not with the violence of individuals, but with that of the State. The economic problem is the common need for all classes of the nation to lift the methods of the national industry of agriculture and the condition of the whole agricultural class to the level of the times. But as the great mass of the farms and farmers are on the same low level, there is not only a common problem, but one in the solution of which society as a whole can and will certainly take an active part—assuming, at least, the functions of our Department of Agriculture, to be extended in many new directions and multiplied many-fold. Then there is the purely social problem of the present and future division of the land. If the Duma were to allow unrestricted private property, free trade in land, under the present conditions, the penniless and needy peasants would be at the mercy of such among them as had a little capital with which to buy the others' land. They are painfully conscious of the danger, and have declared at innumerable village meetings that the right of private property would mean the still further impoverishment the absolute pauperization of the many for the benefit of a new landlord class. Some are therefore in favor of the retention of the old form of property, the village commune, adapted to new needs. All are for special laws restricting the rights of the individual owner and possessor, and all are in favor of the absolute subordination of private interests as the foundation of the new law and the nationalization of the land.

The social spirit goes to unimagined lengths. It has no somber exceptions for persons of foreign race. The same feeling that holds individuals and classes together has bound into one whole—as much as in the United States—all the races of the enormous empire. Finns and Tartars, with their separate religions, have lived for centuries in friendly neighborliness with the Russian peasants all over the land. In certain sections, German and Jewish colonies have been treated in a cordial and neighborly manner for a similar period. The White Russians and South Russians have lived for generations in harmony with Letts, Lithuanians and Poles. The Siberian settlers have gotten along with innumerable Asiatic tribes, as we failed to get along with our Indians, and the English failed to get along with their native subjects. When the Czars have decided to undertake a special persecution and robbery of some subject race—like the Jews—they have not been able to get the least support of the people on racial grounds, and have had to resort to the same purely religious pretexts with which they persecuted the purest Rus-

sian sects. The few popular persecutions of the Jews on Russian territory have been, not the work of Russians, but of Poles or of Rumanians, like Krushevan. This absence of race feeling is perhaps the last and severest test of the profundity, the completeness of the social spirit that binds together this great-hearted people.

It is not merely a new race or a new nation that is coming into being in the great territory that stretches half-way round the world, from the Pacific to the Black and Baltic seas. In this vast region there are many races, and even several nations, bound together only by a common problem and a common idea. The Czarism has tried to force these peoples together into a single imperialistic nation, and under the domination of a single race. The new country, casting aside all governmental violence within and invincible to external attack in its freedom and immensity, will be held together only by the common social problem and the common social idea. By its freedom and power it will be constituted a great and almost decisive influence for peace among the nations. An essentially new people on the stage of the world, in possession of a boundless and almost undeveloped land, unhampered by traditions, accustomed to economic equality, and permeated with the social spirit, the Russians are likely soon to become the chief inspiration of the other nations, a position recently lost after having been held for a century by the United States.

ODESSA, RUSSIA.

To the Rescue of Liberia

BY BISHOP ISAIAH B. SCOTT

[The writer of this article is Bishop for Africa of the Methodist Episcopal Church and is in charge of the interests of his Church in Liberia.—EDITOR.]

THE Republic of Liberia occupies a strategic point on the west coast of Africa and its importance in this particular will increase more as the continent is developed under European supervision. Its situation at present is similar to that now occupied by Siam in the Indo-China territory in the Eastern Hemisphere in which Great Britain and France figure as competitors for spheres of commercial influence.

The political neighbors of Liberia are Great Britain and France. The territory of the former forms the northwestern and of the latter the southeastern boundary. The northwestern boundary which separates the British colony of Sierra Leone has been settled with some advantage to Liberia—as the Delimitation Commission, which was recommended by England herself, gave to it more territory than it had claimed, and which, up to this time, had been regarded as British territory.

Since this delimination, however, the Government railroad of Sierra Leone has extended nearly 220 miles across the colony, now not far from the banks of the Mano River, the northwestern boundary line. Beyond this point lies the virgin soil of Liberia, which is rich in natural products and in agricultural possibilities. Great Britain seems desirous to possess it; but cannot consistently do so, in the face of the report of the commissioner, himself a British subject, and the treaty rights of Liberia.

Nevertheless, frequent trouble is reported by England on this northwestern frontier, in which Liberia is made the aggressor, seeking, as it does appear, an occasion for the usual cry that Liberia is unable to exercise police jurisdiction over this portion of her possessions and therefore England, for the protection of her own interests, must occupy the disturbed section. Strange to say, however, no trouble arose in this section before, until Liberia undertook to exercise her treaty rights and to collect the revenue which was her lawful heritage.

The Mano River was agreed upon as

the northwestern boundary between the British colony of Sierra Leone and Liberia. Liberia had the right to expect that the line would have been drawn in the center of the river as is usual in matters of this kind, in order to give both parties to the agreement the privileges of the stream; but the strong *forced* the weak to fix the boundary beginning at its western bank at low-water mark, thus depriving Liberia of the use of the river, and making her trade with the interior difficult. The matter has since been taken up with the British Foreign Office, but as yet nothing definite has been decided. In the meantime Liberia suffers from a lack of water communication with the hinterland; but the Sierra Leone Railroad must have, not only room for extension, but traffic for the road, and the hinterland of this section offers a fitting solution.

The condition on the southeast is even more acute since the boundary line remains unsettled. Notwithstanding the cession of the Ivory coast by Liberia to France, the latter still manifests an insatiable appetite for more of Liberia's territory. France evinces an unwillingness to live up to the Treaty of 1892, and is indifferent to every effort made by Liberia to settle the question of a permanent boundary. This delay not only creates unrest and retards the progress of commerce in the hinterland of Liberia, but it puts her to a decided disadvantage in the contest—for France in the meantime continues, in the face of the Treaty, to encroach upon the disputed territory by the establishment of military posts and the exercise of undue influence over the chiefs of that section.

Before this communication reaches you President Barclay will be in London to attend a conference in which both England and France will be participants. The Franco-Liberian boundary has reached an acute state so as to render the presence of the Chief Magistrate necessary. What will be done at that conference no one can tell.

Liberia is powerless to check either English aggressions on the northwest or French encroachments on the southeast. No power can save her from the designs of these formidable nations, which regard this fertile spot as Ahab did Naboth's vineyard, but the United States. And the United States owe it to Liberia at least to manifest an interest in the subject on account of the traditional relation between the two nations; and it would seem from the following extracts that she stands committed to such a policy.

Secretary Evarts, in his instructions to Minister Hopkins April 21st, 1880, said:

"The United States are not averse to having the great Powers know that they publicly recognize the peculiar relations between them and Liberia, and that they are prepared to take every proper step to maintain them. To this end, it is not inexpedient that you, and Mr. Lowell also, on his return to his post from his present leave, should evince a lively interest in the movements of both Great Britain and France in the neighborhood of Liberia, without, however, showing any undue anxiety or offensive curiosity in the matter."

And again Secretary Blaine followed in a similar strain to Minister Smythe:

"Liberia, although not a colony of the United States, began its independent career as an offshoot of this country, which bears to it a *quasi* parental relationship which authorizes the United States to interpose its good offices in any contest between Liberia and a foreign State, and a refusal to give the United States an opportunity to be heard for this purpose would make an unfavorable impression in the minds of the Government and the people of the United States."

It is needless to say that any effort on the part of the Government of the United States to keep Liberian independence unimpaired would be received with grateful consideration by the ten millions of Afro-American citizens in that country who are interested in Liberia's future—and for that matter negroes and humanitarians all over the world without regard to race or nationality.

Dr. Lyon is the accredited diplomatic representative of the United States to Liberia during this critical period of the history of this black republic. His conduct of the affairs of his own Government—his manly bearing as dean of the Diplomatic and Consular Corps—his relation to his colleagues and the officials of the Government at Monrovia, Liberia, have been satisfactory not only to the State Department at Washington but to the Liberian authorities and all others concerned.

He has had exceptional opportunity to become familiar with the questions that are now most vital to Liberia. He made

an official tour of that section of the Republic which is now regarded by France as disputed territory, and made careful study of the boundary in question. Hence I feel quite sure that the Government at Washington has been supplied with all necessary information on the subject and is therefore prepared to give the matter intelligent consideration if it concludes to do so.

Knowing THE INDEPENDENT's interest in all questions affecting human rights without any regard to race or color, I felt that I could not do better than to present the matter affecting the interests of Liberia to the class of persons who are your constant readers and very largely sympathize with the view you present.

Liberia has need of the moral support of the United States and of good people everywhere to maintain herself against the great odds with which she is forced to contend at this most critical period of her history.

MONROVIA, LIBERIA, AFRICA.

Vacations and Holidays in the Schools

BY THOMAS L. BURT

THE working year of the average business, or professional, or clerical man is about 290 days. This number is reached by deducting, from the total of 365, fifty-two Sundays, eight holidays, ten secular days of vacation and ten half-holidays on Saturdays in summer.

The working or schooling year of the average public-school child who is never absent from school is, in our Northern towns and cities, about 185 days. This number is reached by deducting, from the total of 365, 110 Saturdays and Sundays, ten weeks of vacation in summer, one week in December, one week in the spring, and ten half days at the times of the semi-annual examinations. The teacher's working year includes these ten half days and consists of about 190 days.

The business man's year is about eight hours daily for 290 days, a total of 2,320 hours. The teacher's year is about four and three-fourths hours daily for 190 days, a total of 902, less than 40 per cent. that of the business man. The pupils actually attend school on an average only 144 days in the year, a total of 684 hours. I mean by this that absences from school, from many causes, are sufficient in number to bring down the average attendance of all pupils to 144 days, or 684 hours; less than 30 per cent. that of the business man.

These figures are not cited simply to suggest that the school days per year, 144, of the average public-school pupil are too few; but to call attention to the obstacle which the holiday and vacation habit offer to public school education. Common sense, the testimony of teachers and our memories of school days, all point to the demoralization which approaching holidays work in the classroom. A like demoralization is worked by them as they take their flight. Even after one mid-week holiday it takes almost a day for work in the schoolroom to reach its maximum effectiveness again.

If the influence of the schoolroom is greatly to affect the children it should have an opportunity to reach them, if only for a few minutes, nearly every day in the year. Its influence is, as a matter of fact, constantly broken by holidays and vacations. It is probable that school children could attend school a few more hours each year without injuring themselves. It almost goes without saying that they could easily do this if the hours of attendance were spread over a greater number of days. Their present, normal, school year is about 900 hours long. If this were distributed, as it well might be, over 300 days, it would give them only three hours each day. This is not enough for the whole year, even if it is a little too much for some of the summer months. The hours might be less in summer and as many as five or six during part of the

winter. I believe that no teacher and no expert in education would deny that this distribution of time would, as far as the pupils are concerned, enable them to cover a great deal more ground than they cover now, to cover it more effectually and to make much greater progress in the acquisition of knowledge and in the gaining of habits of attention and concentration.

The Germans understand the value of persistence and continuity in the training of the young. Their school year is 270 days long, instead of 185 as ours is. Their schools are open six days in the week, for forty-five to forty-six weeks per year. The weeks average nearly thirty-three school hours each, making a pupil's normal school year over 1,400 hours, against about 900 in this country. It is not surprising that the German children progress more rapidly in formal education than ours do.

In favor of our short and much-interrupted school year it is urged that the young people of this country are of a more nervous temperament than the German youth, and could not be in school more hours than they now are without injury to their health. The truth of this claim has not been demonstrated. The evidence that our young people are injured by their school work is not to be found. There are occasional breakdowns, it is true, but they may usually be traced to outside work or to evening games and parties. Most boys and girls in average good health go thru their public school life without receiving from it any undue strain. If this were not true the argument for the readjustment of school hours which I suggest would be thereby strengthened. The present method is one which puts on and takes off the pressure of discipline and the regimen of routine by fits and starts. Each week the teacher presses her pupils to get them again into the study habits which two days of complete cessation of routine have broken up. By the middle of the week the routine is well established again, and then the teacher keeps up the pressure that she may drive the pupils thru the week's appointed tasks before Friday afternoon is upon them. Each term the same unhygienic course is followed. A vacation of a few days or of a few months breaks up the schoolroom habits; the teacher hastens to reestablish them; the routine at last is well established; another vacation, with its preliminary examinations, is near; the pressure is kept up; school closes; and the healthful round of a moderate amount of study, with reasonable schoolroom discipline day after day, month after month, and year after year, is never reached.

The present method not only lessens the effectiveness of the schoolroom work of children and makes it more trying on health of body and brain than it should be; it also fails to affect out-of-school education as helpfully as it should. Whatever be the merits or demerits of the present system, our schools today very largely take the place of the parents. In our cities—and it is of city schools I am particularly speaking—the parents look to the schools, if they look anywhere, for the training of their children. I mean that most children in our cities get most of their training for citizenship—training in accurate knowledge, straight thinking and morals—in the schools. When the schools close they run wild in the streets. The street education has its great virtues, it is true. But how much more helpful would it be were it touched every day by a little of that spirit of respect for law and order which underlies all schoolroom work! It would be thus touched did we, with school in session almost every day, on some days make the school hours very short, the exercises simple, and the work done such as delights every child, touching closely the games, pastimes and occupations which fill the rest of the day. Thus each day would begin with or end with or be divided by at least a few moments of orderly life, where every act is of necessity courteous, and where discipline, truth and order are in the air.

The schoolmen as well as the parents have acknowledged the educational error of the long summer vacation by establishing summer schools. But why acknowledge it in this half-hearted way? Why not confess that the present method, with its ten long weeks of empty schoolhouses, idle teachers and street-roaming children, lacks grievously in the fundamental matter of time distribution, and

proceed to organize the schools for year-long and every-weekday work?

It will be objected that the custom so many families have of leaving the city would make the arrangement of continuous schools quite impossible. This is absurd, for few of the public school children of our cities go away in the summer. Those who are left crowd our vacation schools. Where classes grow small from absences a concentration would be possible, and there would thus be gained opportunities to give teachers by turns the four or five weeks vacation they should have.

Some will say a rearrangement of pupils, teachers, hours and subjects in the summer would be impossible; I reply that it is such a rearrangement as is made now at a great outlay of time and energy, for summer schools; and could be done very easily were there not an absolute break, as there is now, between the school course proper and the makeshift, nondescript course of the present summer school.

Some will say the parents do not wish the pupils to go to school all summer and all the year round. I would reply that no one has yet asked the parents. Also I would reply that parents are very glad to send their children to summer schools, and more would no doubt send them thru the summer were the schools continuous and the break between winter and summer work done away with.

The teachers themselves will say, to my suggestion of continuous schools, that they are underpaid and that their short hours, Saturday holidays and long vacations are partial compensations for the lowness of their salaries. I would reply that for the quality and quantity of work most of them do they are not very poorly paid. The education of the majority of them is meager and their acquired skill not great. This is partly because a better education for teachers is not insisted on. It is true that better educated teachers can not be secured with the wages now paid, and the wages should be higher; but the higher wages should be in money and not in holidays and vacations, and should be given only as fast as the conditions of the labor market make it necessary to give them. Better work should be demanded by parents, and the school board will then be compelled to pay higher prices to get it. A part of this needed better work will be found to consist in extending the school sessions over a greater number of days in the year. The year's work will then be less trying to health and nerves; but the results will be greater and worth the greater pay.

It will be said that the work of a teacher is so arduous, so severe a tax on the whole system and especially on the nerves, that she needs many more vacations and holidays than do persons engaged in any other occupations. In reply I would first question if the strain of school teaching for four and three-fourths hours per day for five days in a week for thirty-eight weeks per year, is greater on most teachers than is the strain of their respective occupations on many men and women who work eight hours a day, six days in the week for nearly forty-eight solid weeks each year. I say I question this statement, and I believe I can safely add that it has never been carefully verified. Its truth has long been assumed without question. It will be found that teachers of intelligence, who take pains to equip themselves for their work, who use a little of their resting time in studying to keep up with the demands of their daily tasks, who try to make themselves masters of their calling, who do not exhaust themselves by an undue amount of social life, find teaching not more wearing than is any hard, honest work, and keep well under it.

In further answer it should be noted that many teachers find that they have sufficient energy left after their day's work to teach in the evening schools, and that an increasing number find it possible to make their work almost as continuous thru the year as the plan I suggest would compel it to be, by teaching for several weeks in a summer school in the long vacation. Moreover, many teachers do outside work other than teaching and thus add to their incomes. These facts make quite absurd the claim that the teacher's work under the present arrangement of time is as much as health and strength permit her to accomplish.

Moreover, if the present school method as to hours is shown to put a severe strain on the teachers, then it is wrong

and should be changed. A most obvious way to correct it is the one I suggest—shorter periods each day, perhaps two of two hours each most of the year, the work being extended thru half as many more days in the year. This would relieve the strain on both pupil and teacher and produce far greater results on the former.

Another objection to my suggestion of greater school continuity is that the teacher needs her many hours of leisure for study. In reply I would say that she seems to take few of them for that purpose. There are summer schools for teachers, and in some parts of the country, notably in agricultural sections of the West, they are remarkably well attended. But city teachers are not given to them. If any attend them it is usually for not over 6 weeks out of the 12 in which school is not in session, and they do not usually call for any severe mental work on the student's part. As to private study out of school hours, my observations lead me to think that not much of it is done. A business man's week is 40 hours long, a teacher's about 24. The successful business and professional man is not surprised if he has to add 16 or even 24 hours more per week to his working time to retain his working place in the world. I believe few teachers will be found who apply themselves seriously outside of their 23 school hours to anything closely allied to their business for 16 hours per week—much less for 30.

The short hours, the full holidays on Saturdays and the long vacations, instead of promoting the habit of study among teachers, probably encourage laziness. The tradition is firmly fixt in teachers' minds that their work is very severe and that they need frequent and long rests. Falling in with the tradition, and often taking a reasonable fatigue for the approach of exhaustion, they again and again defer the hours of study to which they have mentally resolved to devote themselves, they are encouraged by their friends to rest and play whenever opportunity offers, and soon get out of the habit of continuous outside work for self-improvement. They are willing to teach for extra pay in vacation schools and night schools, but they do not—I believe I am speaking in reason when I say the large majority do not—pursue any systematic course of study or follow any careful course of reading, or even read at large to any great extent, in the many hours and days they have to themselves in their school year.

The advocates of the present system will say that many teachers, if not most teachers, give much time to the preparation of each day's work, to the examination of papers and to compulsory attendance on lectures and grade meetings, and that the time thus necessarily spent on their work, added to their hours in school, makes their working hours as long as those of brain workers should be.

There is a measure of truth in this statement. But in reply to it I would say that after a year or two of teaching in a certain grade the work becomes quite familiar, and, to the teacher of average ability, who is not possessed, as few are, with a strong desire to improve herself, becomes quite easy and calls for little labor of preparation. There is plenty of opportunity for work in the teacher's life, for if she wishes to perfect herself in her calling she finds the changing methods and the broadening of the curriculum make complete mastery of her profession quite impossible, even for the strongest and ablest. But I believe that superintendents, principals, general supervisors and the supervisors of special departments will admit that they meet few teachers who are giving much time and energy to more preparation than their next day's tasks compel. This is in the order of nature. Few in any calling do more than the day's work, as is well enough shown by the fact that few notably succeed in their calling. Our present custom of school hours is based on the unwarranted assumption that most school workers are different from the great majority in other callings and will cheerfully avail themselves of the opportunity the present custom gives them to spend all possible time—and it is a great deal—in self-improvement.

As to the examination of papers, this is no doubt often a grievous burden, and especially so in certain grades and under the more mechanical systems of administration. But even in extreme cases it does not apply to the majority of the

teachers—those who work in the lower grades—and it does not take so much time, even in the worst cases, as to extend over into vacation periods.

As to meetings and lectures, they take at most not more than three or four hours per week; they quite often mean a shortening of the school day, already very short; they usually mean a pleasant trip from the schoolroom across part of the city to the place of meeting; and they generally consist in being talked to for an hour by one whose presentation of the subject is not such as to stimulate any very strenuous thinking. Most brain workers would not think such things very serious additions to a week's toil.

Something should be said about the loss the taxpayers suffer from the added cost of equipment the system imposes and from the further loss he suffers thru the fact that the equipment which he pays for stands idle during more than half, or twenty-five, of the working daylight hours of all the weeks in which school is in session, and during all the working daylight hours of 120 working secular days in every year while school is not in session. It will be said that I forget the evening schools and the vacation schools. But I mention only daylight hours, counting them as an average of nine, from 8 to 5, thru the year, and I am speaking of the present system as it is advocated and paid for. The vacation school is a separate and distinct institution. It is paid for by itself. The money its teachers earn is over and above their regular salaries. Its advocates have not yet thought of making it, as I maintain it should be made, an integral part of the public school system proper. The regular public schools should make use of their buildings every day in the year save holidays and Sundays. Did it thus use them they would serve quite 50 per cent. more children than they now do; their original cost would thus be reduced by at least a third, being one-third less in extent; and the cost of their maintenance, relatively to the use made of them, would be also greatly reduced. They now stand empty hours and days—eloquent monuments to a mistaken educational creed and to the persistence of an unfounded tradition.

Our schools should continue the year round, much as the work continues, and very successfully, in Chicago University, with perhaps two or three days of rest between the four terms into which the year's work may be divided. They should be in session every day in the week save Sundays—and we may even hope that some day there will be introduced into our Sunday schools enough rationality and expertness to make them admirable and enjoyable supplements to the day schools. Teachers should work the year round, with a few holidays between terms, as suggested, and with as many weeks of vacation in the year, usually in summer, as good sense and the prevailing custom among salaried and other brainworkers may determine. Those who can and wish to do so should be permitted to teach almost continuously for several years and then receive a generous vacation, with pay.

Teachers should see to it that the public demands more of them, and then pays them more. As a class, and relatively to others of their sex, the women teachers are of superior ability. If they once get their eyes open to the wastefulness in money and energy of the present arrangement they will be the first to insist on its modification and will profit greatly by the change in both comfort and money. In the arrangement I suggest no teacher will teach all day; two, or even three teachers should occupy the same room during successive short sessions of the same day. The children should be in school a part of almost every secular day in the year; sometimes for one long session, sometimes for two shorter ones, according as age, the weather and character of studies determine. As summer approaches the schools should gradually take on much of the character of the present summer sessions, with excursions, manual work, gardening and games, all under the teacher's direction.

Boston, Mass.

Farmers' Picnics

BY E. P. POWELL

THE day for farmers' picnics is between oats and corn husking—that is, from the middle of August to the last of October. During this season you will find orchard meetings and grove meetings most abundant. The company is made up of neighbors, nearly all interested in the same topic, and all possessed of a certain measure of land-love. But you will mark one peculiarity, that every one of these picnics is a family affair. They come by families, and generally a family group is not entirely broken during any period of the feasting and toasting. We have lamented the fact that Germans could attend their beer gardens in the family way, but that Americans sought their pleasures as individuals. This was true until the farmers' organizations, with agriculture, came to the front. Note that now the family is getting a very decided social emphasis. Our granges have done a great deal along this line, and it is the most marked feature of that organization that families constitute the units of the grange. A great social revolution has begun, wholesome as it is hopeful.

The picnic spread includes pie and doughnuts, honey, fresh fruits and a great variety of jellies. Sandwiches are of home-made bread—most frequently nowadays made of whole-wheat flour. The pickle is nowhere near so common as it used to be, for the farmer and the farmer's wife are getting up on hygiene. Honey is on the comb, and in the jar, and there is so much of it that you may be sure the fruit grower among the hills has learned that the bee is his best ally; that he cannot have good fruit without the honey bee to cross-pollenize. Down these valleys and up these hills, where the bluebird and wren most love to nest, I have seen and tasted some remarkable pies; but I still contend that no woman lives who can make such luscious compositions of blackberries, whortleberries, gooseberries and pumpkin, with sugar and flour, as our grandmothers made. They invented the strawberry shortcake, the gooseberry tart and raspberry jam; glory enough this; but, alas, we know not the inventors' names. You will note that the farmers' wives look on these picnics as a sort of fair and exposition of home art. Marvelous in all ways is this art of cooking; this chemistry of the kitchen. It far surpasses, when understood (as a matter of brains), all the stitches of the embroidery. That is a woman out of her sphere who has hired a cook and given over her kitchen (her studio) to a foreigner. But these farmers' wives, and still more their daughters, are sustaining the art fairly well. Now and then I find a girl, rosy-cheeked, with a steady will, and little care for the "They family," who has no pride like her cooking pride. She is bound to make the best bread and the best butter in the town, and to be proud of it. This is really the new type of woman who is to come to the front during the agricultural age. You need not make the mistake of estimating the coming woman by city ideals; she will not be the club woman, but the rolling-pin woman.

Farmers are of all sorts. You never elsewhere find people so differentiated and individualized as at a farmers' picnic. I have noticed lately that the jolly farmer is almost everywhere to be found. It is due probably to the improved conditions of agriculture. He sees the sunny side of everything, and manages

to turn both sides toward the sun. He talks common sense—that is, the accumulated wisdom of the common people; drops in proverbs of his own making, and chaffs the sober-sided with good-natured fun. There are still a few among our furrow-makers who inherit a trace of Puritanism, and see all events from the moral side. These men are sometimes inclined to look back at the "good old times" with a tender wishfulness, but they are generally willing to confess that the world is growing materially better. Give them all the credit you can. It really is hard work for the son or grandson of an old-time Connecticut deacon like myself to allow that the rural telephone and rural free mail delivery and even the trolley are a fair compensation for the gone-out country church, as they are not. Most of these churches still stand, lonely and dilapidated, among the hills, and the old horse sheds lean at an angle of forty degrees. The town school will never be just the right thing until, on every Sunday, its big hall is open for a manly address of the school superintendent, to all the gathered neighborhood, without regard to sex or other division.

Grumpy people still live in the country, but most of them find their way into the towns; because in the country they must get up with the sun, and must work till the work is done. We have no call, out here, for the boys who shunt their working clothes at exactly six o'clock, and skip out until seven the next morning. They will not like the country, for here they will have to keep very much the same hours as the bluebirds and robins. But some of us like it. We see no hardship in having from eight o'clock until four o'clock for sleep; and after that being obliged to be busybodies and wide-awakes until the day's work is fairly finished; the milking done, and the animals well fed. There is no such thing as being a successful farmer unless you love the work. There are, of course, tribulations, and there is more or less hard luck everywhere, for we cannot always escape sickness and the loss of crops. But it is, in the majority of cases, either bad habits or ignorance that prevents country life from being reasonably pleasant. It does require early hours, and some acquaintance with the dew, and little with the owls; but the old-time task days, that left the machinery and the power with the factories and the towns, is wonderfully changed. The farmer it is who rides now, and the townsman who goes afoot.

Instead of our hardships the popular topic at the picnic is pretty sure to be our privileges. Nobody envies the townsman—who lives in a rented house, breathes what air he can get, pays water rates and gas bills, and stands the din of a sleepless racket. Civilization without Nature is the art of a treadmill. We are learning how to live once more closer to Nature—not as wild children, but as those who see that Nature and art can go together. Let those who really can find no comfort in the country go back to the crowds. We prefer the free air and the birds and the brooks. Country life is always vacation—that is from brick walls and brick pavements, and ten-times breathed atmosphere.

One topic sure to be prominent at the farmers' picnic will be good roads. It is a curious subject for discussion, because every farmer thinks he knows how to make roads, but, having been pathmaster, he finds that his knowledge is in some way unworkable. We are in an off-clearing time, when we comprehend the horror and waste of mud, but do not know just how to get rid of it. The money system has proved a doubtful success. When shall an American McAdam get hold of our highways? The fact is we have not yet quite reached the engineer era. We shall, by and by, have some of our boys educated along the right lines; and then we shall have a supply of engineers and commissioners, who will do the one great thing, just now needed, give us American highways that are dry-ways.

Another topic that is sure to get a good hearing is the rural school. We have got quite by the time for lauding the common school and the free school and the high school; what we want now is the common-sense school—not too high, in the sense that it overlooks knowledge necessary on the farm, while it stuffs the young people with a lot of facts that they can make no sort of use of. There is a general dissatisfaction with a school sys-

tem that educates away from the farm. The land-tiller begins to see that, if he is going to make the best of country life, he and his children must have a distinctive training for it. The farmer is about thru with schools that exalt the brain and despise the hand. There really is no reason why these two organs should be competitors in our colleges and universities—certainly not in our town schools. Every man must have an education for his specific life work. This does not mean a narrow education, and information of a purely technical sort; but equally it does not mean that this technical knowledge can be left out, or be made of secondary importance.

I notice that one of our agricultural colleges has issued a circular, in which it asks to what studies should a young man give his special attention (in a college course) if he desires to remain on the farm. It was exceedingly interesting to hear the comments on this circular at the picnic. One answer was that the boy ought to give a large part of his time to animal and plant life, so that he would comprehend the general principles of animal and plant development. The farm boy must know the things under his feet and over his head—the things he has to deal with, every day of his life. Another comment laid emphasis on our rivals, the bugs, and the absolute necessity of comprehending the moths and the fungi. This farmer thought that a knowledge of insects was just as important as that of Holstein cows and Percheron horses. The farmer who is ignorant on such matters must come out second best as a cultivator. A fruit-grower complained that there is a stupid waste in our orchards, from lack of educated knowledge of tree culture. Orcharding is a science, and it needs well-equipped brains as well as willing hands. In Germany the vineyardist is seldom an orchardist; but in this country it is thought possible for one grower to cover successfully all branches of fruit growing. However, I did not discover from the discussion that our farmers desire that their boys and girls shall have a narrow curriculum. The farmer knows that agriculture is coming to the front. He comprehends the fact that his sons must be equipped not only for raising crops, but for guiding in civic affairs. The farmer begins to feel his dignity and assert his independent political position.

You will find that a favorite topic at the picnic is sure to be what Secretary Wilson and what Mr. Burbank and the agricultural colleges and experiment stations are achieving. Nearly every one has a Burbank plum, and he can tell you the qualities of the Climax, the Sultan and perhaps half a dozen more of the new sorts. He wishes to know the quality of the Iceberg blackberry, and what is likely to be the value of Mr. Burbank's experiments in grains and fodder plants. He is sure to be a friend of Secretary Wilson. He fully appreciates the distinction between the genuine experiments of this brainy agriculturist and the seed-distributing work, and the semi-political farming, accomplished by most of his predecessors. He is fully alive to the newest gains in cereals. I notice that no subject starts up such a general enthusiasm as alfalfa. This wonderful new forage plant stirs the younger class of farmers in a way that shows clearly the drift of the times. The farmer of today is an experimental farmer. Ten years from now every farm will be run on the experiment plan, and the farmers will be few and far between who have not improved something. The farm shop is gradually getting to be an understood necessity, and the tendency is toward less waste—especially less spent on tobacco and drink. I observe at the picnic two or three cigars or cigarets, but they are well out in the edge of the grove.

The farmers' picnic is not complete without speakers. Grange meetings always have a good deal of singing, but a genuine farmers' picnic goes more strongly for oratory—but the orator must not soar too much. He must come down to a plain discussion of the times. The folk like to look ahead, and the speaker will do well to talk about what may be rather than what has been. If he comes to a farmers' picnic loaded with jokes and stories he will get a few shouts of laughter, but a cool welcome. This age is too much in earnest. The audience will laugh once or twice, and then scatter. I noticed this tried by one of our most famous after-dinner speakers. He was evidently surprised to find

that the people did not care for his funny stories. The politician may get a hearing by self-crowding, but he will not win a vote by his jokes. Above all, look out for patronizing the farmer. Try it if you please, and you will see that you have promptly lost your hold.

In a recent *Atlantic* there is a very neat "Apology for the Country." What we need is a well-written apology for the city. We are getting about all the urban privileges out here in the valleys and on the hillsides, tens of miles away from the congested centers. Now, what the city needs is to take in more ruralism—more trees, flowers, birds, air, elbow room, untainted water, and whatever else makes up that wonderful word the country. Are condensed milk and canary birds and roof gardens and lots given over to cabbage culture and cleaner streets and less smoke and more little parks and boulevards, are these an adequate apology for a population packed until each one has just half enough oxygen and twice his share of carbon gases? Just now the tide countryward takes the head workers; the city tide carries in, or retains, the hand workers. What we want is to create an average—a fair alliance of the brains and the hands. I am not sure that the city is degenerating as fast as the country is regenerating; but the enthusiasm of settlement workers has not yet wrought the evolution in moral conditions which the Civic Improvement Club is bound to produce in the physical conditions.

The country really needs no apology just now. It has gained so much during the last two decades that we are confident of our future. We have nearly everything now but the opera; and that we will get by wireless telephony (or is it wireless telepathy, that will do it?—and what is the difference?). If Theophrastus did say that farmers like to talk about dull oxen he knew nothing about our farmers, for not one-half of them ever saw an ox, and not a dozen of this crowd ever geed and hawed to a patient team. But an ox is not dull nor is it homely. It is built marvelously for strength, like Vulcan, the divine blacksmith. Homer calls Juno ox-eyed; and she was the most beautiful in heaven—or justly jealous of the most beautiful.

It is wonderful how close we may all interlock our interests and sympathies in this modern farming. But the shuttle of love has only been thrown once or twice thru the web of our composite fate; or, maybe, half a dozen times; and the only pity is we cannot live longer, or see what will be wrought out when the shuttle has been thrown a thousand times. There will be not only better fruits and better grains, but better sympathies and better instincts. Farm life at least will move on a deal smoother, when the instinct for destroying has been displaced by the instinct for saving and ennobling. Yes, my cat-bird! we will all have a share in that blessed new country home—where man ceases to be a tyrant, and will be able to see and hear much more of that which God gives him to befriend and love. May you live a thousand years, my singer!

If a farmers' picnic is to be held in your neighborhood you will find it well worth your while to attend, and observe. You will not find as much attention to golfing and tennis as you will find at some other gatherings, but you will learn something about the new era that is setting in. You will note that professional politicians and office-seekers do not buttonhole the country folk as freely, or punch ribs facetiously as they used to do. They are quite aware that the farmer is a new man, better posted and better balanced. He is not easy to buy, is harder to coax, and impossible to drive. If you want his vote you must appeal to him as one of the people, and not as a cog in the machine. You will conclude that the farmer is in a transition era, and is destined to become the best educated person in the community; but that his education is to be scientific as well as broad, and that it is to bear directly on the work he has in hand. You will find that many of these land-tillers, however, are still of the old sort, and others only waked up to investigate. Most of them are not yet trained to a full appreciation of the new agriculture. Still this picnic will demonstrate to you that the noisy and pleasure crazed class is a very superficial class, a sort of upper crust which society is sloughing off. The core of American society is rapidly developing a wholesome heartiness, that will become dominant before long.

CLINTON, N. Y.

Stanny Mattcvitcz

BY SCOTT NEARING

[The author is Secretary of the Pennsylvania Child Labor Committee, and writes from observation.—EDITOR.]

AMONG the hills in northern Pennsylvania is a little mining town which gives out to the world twelve hundred tons of soft coal each working day. Half of the people in this town are Slavs; the other half are English-speaking. Near the town, on a warm hillside, nestles a long, low building—a State hospital.

Stanny had already been in the hospital for over a month. His face was white and drawn with the pain.

"Why, Stanny, what ails you?"

"Broke for me de leg. Me been in de mines mit mine fadder. Me hear big noise, something hit me, and den, me wake up here."

"In the mines? But how can that be? You are not fourteen."

"Me been going on twelve and me go to the mines to help mine fadder. He take me in every day when de work been goin' on."

"Did you like to work in there?"

"Me like de work just for a little while, den de back get sore, and me tell de fadder me no can work no more, but de fadder he say, 'Go to hell, get to work,' and me work hard and hard."

"What did you do in the mines?"

"ME BEEN IN DE MINES MIT MINE FADDER."

"Me load; t'row de coal in de cars. In de morning awful easy, but in de night awful hard. De back get sore. Nights we ride out wit our driver. He was Andy Mazakawicz. You know Andy Mazakawicz? Johnnie Dutchtown? When we see Johnnie Dutchtown we all holler:

"Little Johnnie Dutchtown,
Workin' in de brest,—
Driver make a 'skinner,'
Johnnie take a rest.

"Little Johnnie Dutchtown,
Tryin' to make a 'skinner'
While de driver take de trip,
Johnnie eat his dinner."

"Den Johnnie, he say: 'Go to hell, you.' "

"Did you go to school last year, Stanny?"

"Yes, me go to school t'ree year. Me no go to English school, me go to Polish school."

"Did you like it there?"

"Me back no get sore dere, but me get tired. De teacher she say: 'How you spell cat?' And den de boys all holler 'C-a-t, cat.' Den she say 'How you spell rat?' And de boys all holler 'R-a-t.' Every day she say de same t'ing. Me no like the school; radder play baseball or chase de cows."

"Do you keep a cow now, Stanny?"

"Yes, we get a good cow from Joe Cheese for t'irty dollars, but we no haf a good barn, so de fadder send me to see de boss and get one bigger barn. De boss say: 'What you want, Stanny?' And me say: 'Want bigger barn.' 'What for you want bigger barn, Stanny?' say de boss, and me say: 'Wen de hay is in, is no room for de cow; and wen de cow is in, is no room for de hay,' and de boss say: 'Good fer you, Stanny, you will get de barn,' and we get de barn last month."

"ME GO TO SCHOOL T'REE YEAR."

"When will you leave the hospital?"

"Me no can tell. De doctor say mabbe two weeks; mebbe two months. He say de hip bone been hurt and he say take long time to get good."

"Well, Stanny, I must be going; goodby. When you get well you will not go back to work in the mines, will you?"

"Me no can tell. Mebbe yes, mebbe no. Wen de fadder say, 'Get up and put on yer mine clothes,' me got to get up or he lick me. Me no can tell; mebbe yes, mebbe no."

PHILADELPHIA, PA.

The Hightening of Tradition in the Old Testament

BY THE REV. JOHN M. THOMAS

[The present article is in line with one by the same author in our issue of June 27, and attempts to explain the origin of some of the miracle stories which have given rise to so much difficulty and debate, and to show that the theories of the higher critics, which the author frankly adopts, have very practical consequences, and can by no means remain the concern of scholars only.—EDITOR.]

IT may carelessly be imagined that zeal in writing is quite a modern disease, and that only since the printing press, and especially since the great improvements in it and in the manufacture of paper, has there occurred anything like a Noachic deluge of literature. It is from the Old Testament, however, that the proverb comes to us: "Of making many books there is no end." Receipts and contracts were as prevalent in Babylonia in the time of Moses as drafts and checks are with us today, and the correspondence unearthed at Tel-el-Amarna demonstrates that stylus was put to clay in Old Testament times with as little provocation as we now put pen to paper. It would be most remarkable, therefore, if the great events of Hebrew history had found but one narrator in each period, and if all testimony to important happenings had perished, save that of one man at each crisis, Moses at the exodus, Joshua at the conquest, and so on. The reasonable expectation is that many took in hand to write the deeds that were fulfilled among them, and that, as in the case of the New Testament, they were men of different points of view.

If, in fact, there were several authors who recorded the mighty deeds of Israel's early history, and if their works have been preserved, the conclusion must be that they have been joined together and united under common titles in our present Bible. We are not at all accustomed to such literary procedure. The lives of Washington have not been pieced together, and doubtless never will be. Herodotus and Xenophon, Horace and Juvenal, Chaucer and Piers Ploughman, are as separate and distinct as Longfellow and Whittier. We are not to blame, therefore, for a little natural incredulity when we are told, for example, that Exodus xiv, which narrates the deliverance at the Red Sea, was at one time pieced together from three different documents, one written in Judea about 850 B. C., another in Ephraim a century later, and the third not until about 500 B. C., some 600 years after the events it describes.

But Arabic historians compose their works in precisely that fashion, adopting large sections of previous writings and treating their sources with great freedom. The instance of Tatian, whose piecework Diatessaron came to be the only Gospel the churches of entire districts possessed, proves that the documentary theory of the origin of large portions of the Old Testament is by no means improbable.

If it be admitted that several authors had to do with the composition of these narratives, and that their works can be disentangled, a striking difference of religious conception comes to light. The divergences are not merely in vocabulary and style, but more especially in the views that are taken of the manner of God's influence upon human life, and of that which should be first and emphatic in the relation of man to God. Particularly do the later writings have a tendency to make unique and dramatic the acts of God, and so to increase the religious element and to highten the tradition.

Thus, in the story of the deliverance at the Red Sea, the earliest writer records that the Lord caused the sea to go back by a strong east wind all the night. Considering the locality, which was an

arm of the Red Sea, since quite filled in with sand, and also the mention of the east wind, we may say that this narrative has in mind an unusual event, in the feeling of the writer a most providential event, wrought of God for His people, but not a non-natural occurrence. A parallel might be the freezing of the North River in an exceptionally cold winter, which would be unusual, and might be hailed by some in certain circumstances as providential, but would not imply departure from the usual order of things.

In the account next later, Moses is said to lift up his *staff* and divide the waters. No mention is made of the wind, and the act is entirely non-natural, but there is no effort to highten the miracle beyond the crossing of the Israelites and the discomfiture of the Egyptians.

In the narrative latest of all the wonder is performed by Moses stretching out his *hand* over the sea, and the waters are piled up like a wall on either side, the water losing its natural property until the Hebrews pass thru, when again at the extension of Moses's hand the sea returns over the Egyptians. According to this writer both Pharaoh and *all* his chariots and *all* his horsemen are destroyed, while in the earlier accounts a small division of the army of that vast empire would satisfy the terms of the narrative.

The ordinary procedure in picturing to one's self what actually took place is to combine the features of all three accounts, precisely as we find them in the Bible: to think of the east wind blowing and Moses holding out his staff, and also his hand: the waters going back by force of the wind, and yet forming a perpendicular wall on both sides of a narrow passage. Popular imagination unites also the 600 chariots of one clause with all Pharaoh's chariots in the next, without realizing the difficulty of supposing that a world empire had only 600 chariots, and that it assembled all its forces to pursue escaping slaves.

It should seem very clear, however, that we have here a case of hightening of tradition, and that it should be our privilege—indeed, that it is our duty—to make choice of the earliest and simplest narrative, and to interpret the others as the understanding of the same occurrence which prevailed in later years. One should have the right to stand by the understanding of the matter which obtained when the event was freshest in men's memories, and that without the slightest implication of an evil heart of unbelief.

Similar discretion should be exercised in the interpretation of the stories of the plagues of Egypt. If one read by itself the earliest narrative, he is in the presence of natural phenomena, such as occur with more or less frequency in that land. It is not an unheard of thing for the water of the Nile to become foul, and of a reddish tinge, so that fish die and frogs and flies swarm everywhere, and these disasters are followed, naturally, by pestilence among animals and men. It is in the latest narrative that we read that not only the Nile, but the waters of Egypt, the rivers, the canals, the pools and all their reservoirs, became blood, so that there was blood thruout all the land of Egypt, both in vessels of wood and in vessels of stone. It is the same late account which testifies that Aaron smote with his staff the dust of the earth, and the dust of the earth became lice thruout all the land of Egypt; also that Aaron took handfuls of furnace soot, sprinkled it toward heaven, and it became boils, breaking forth with blisters upon both man and beast.

Of course it is possible to combine the narratives, or, rather, not to admit that there are two, and think of the Nile becoming red, and also of reservoirs and vessels filled with blood; to imagine a very severe pest upon cattle, and also that dust from the hands of a man caused boils on man and beast in all the great empire of Egypt. But it is certainly one's right to chose the simpler story, and interpret the history accordingly, and this only can save the credibility of the narrative for the modern man.

An instance of the hightening of Old Testament tradition where the untrained reader can distinguish the documents for himself, is the celebrated account of the sun standing still by command of Joshua. (Joshua 10:12ff.) We read that Joshua said in the sight of Israel:

"Sun, stand thou still upon Gibeon;
And thou, Moon, in the valley of Aijalon.
And the sun stood still, and the moon stayed,
Until the nation had avenged themselves of
their enemies."

"Is not this written," the writer adds, "in the book of Jashar?" It was an old poetic fragment, which he took from a book far older than his time, which, of course, has long since perished. In enthusiastic transport the poet commands the sun and gives orders to the moon, and in the thrill of victory he feels that his commandments are obeyed. No more than in the case of the stars fighting against Sisera (Judges v) do we need to suppose departure of the heavenly bodies from their orbits. But the less enthusiastic prose narrator of Joshua xii does not understand the poetic exuberance of the Book of Jashar, and he interprets the matter thus:

"And the sun stayed in the midst of the heaven, and hasted not to go down about a whole day. And there was no day like that before it or after it, that Jehovah hearkened unto the voice of a man."

This writer makes a statement on the basis of the Book of Jashar, and appeals to a quotation from the book as his authority; but most people today would understand his quotation very differently, and they certainly should have the privilege.

These three instances must serve as examples of a process which the historical books of the Old Testament witness repeatedly, that of hightening the tradition, increasing the spectacular and marvelous elements in it, in the progress of the years. The things in the Bible that bother people, which they do not like to have their children ask about, are mostly elements of the later biblical tradition. Writers whose very words have been preserved do not present awkward questions. When we catch the mighty spirit of Amos denouncing the injustice and oppression of his time, when we hear him call for justice because they have sold the righteous for silver and the needy for a pair of shoes, there is no question of how much we can manage to believe: the God of the right is speaking in words we know we must believe. The world implied by the direct words of the prophets is our own world of today, and yet it is a world in which keen-visioned men see the hand of God ordering events for His children and commanding His servants in the way of duty. The nearer we approach to eye-witness testimony as to what happened in the history of Israel, the more closely does the record conform to laws and usages of the present world, but despite the naturalness of events the hand of God is seen in them.

The less imaginative writers, whose chapters are less colored by the marvelous and the sensational, yet who are alive to the will of God in the acts they record, are in reality the most pious. There are some men who can see no act of God in the blowing of the east wind all night: you must pile the waters perpendicularly on either side before they will admit that God has passed that way. There are those who see no action of the spirit in the foulness of a river thru decaying vegetation, and in resulting plague and pestilence, even tho the disaster co-operate in the freeing of a people, but they must highten the story and make it very marvelous before they find divinity in it. The poet of the flower in the crannied wall was more truly devout than these.

The faith of the earlier writers, who told the story in its simplest form and yet told it as the record of the acts of God, is the more useful type of piety. Faith that can believe when it sees crutches in piles by a holy spring is not much needed. In the first place, there are not many cities like Lourdes: and in the second place, those who go to them, even those who are healed, do not seem to be greatly benefited in the manhood and womanhood which the world chiefly needs. The faith we want is the faith that will pray, and yet send for the doctor, and be very careful to follow the doctor's orders, and, when the cure is accomplished, while thanking God for His deliverance, pay the doctor's bill promptly and in full. Doubtless there were Israelites, when the Egyptians were dead upon the seashore, who said, "It was only an east wind! How lucky that it should have come up just when we wanted to cross, and died down when we were safely over!"

The most useful man is neither he who denies the wind, or forgets to mention it, and invents a marvelous story, nor, on the other hand, he who says it was only

the wind and nothing more, but the man of insight on the deeper side of life, who exclaims in reverence, "The Lord caused the sea to go back by a strong east wind!"

Discrimination between earlier and later narratives is thus a matter of supreme importance for religious belief. Read without criticism, the Scriptures encourage the notion that God can not do anything in this world except in an extraordinary manner, that every real act of God constitutes such a spectacle as we are never likely to see. The hightening of tradition, especially in the Old Testament, has blinded the eyes of men to the God who works by east winds and thru changes in the flow of a river, and has implanted in many minds the very vicious notion that God is not in the common happenings of the world, and that the monotony of every-day life is without benefit from His presence.

That is the most terrible unbelief, in practical consequences, of which one can be guilty. How trifling is unbelief in the acts of God in the time of Moses compared with inability to discern His present commandments! How can one learn anything at all of the Man of Nazareth, who drew his every breath in the living presence of God, if his underlying thought be that God is not in our common world!

One has only to consider these practical consequences of the discovery of the hightening of Old Testament tradition to perceive that the newer knowledge of the Scripture is not merely a theory for scholars, but rather that it is a gift of God to earnest and fearless men, to teach them how God really worked in olden days, that they may thus know that He is at work today, and be privileged to join in His work with all their strength.

EAST ORANGE, N. J.

The Lost Bell

BY THEODORE ROBERTS

THE bell has dropped from the pitching buoy—
(Steer wide! Stand clear!)
The warning voice is gone from the reef,
With its sudden clangor and shaking grief—
Beware! Run clear!
Steer wide, O mariner!
Death lurks here!

Wakeful, it hung in its iron cage—
(Steer wide! Run clear!)
Clatter and clang, when the reef span wild—
Boom and bang when the tides ran mild—
Beware! Hold clear!
Have a care, mariner,
Death lurks here!

Night, and moon, and dawn, and eve,
(Sheer wide! Lie clear!)
It shook, from the tumult of black and white,
Its boom of warning and clatter of fright—
Steer out! Run clear!
Wear ship, mariner,
Death lurks here!

The hands of sea maids found the bell.
All's safe! All's clear!
Silver sea maids carried it down
From the pitching float, to their coral town—
The ship stands in. There is naught to hear.
The bell is silent—so what's to fear?
All's safe! All's clear!
Welcome, O mariner—
Death lurks near!

FREDERICTON, N. B.

Summer Baseball

BY JAMES HUGH MOFFATT

[Mr. Moffatt is Professor of English Literature in the Central High School of Philadelphia.—EDITOR.]

ANOTHER season of "summer baseball" is over. Soon the weekly papers and magazines interested in college athletics will publish "incrimating evidence" to prove that certain prominent athletes have forfeited the right to represent their college on the athletic field because they have accepted money for playing "summer baseball" and have thus become "professionals." The public will be warned to watch whether the college faculty will live up to its principles and prevent these "professionals" from playing for the college. A few idealists will worry, the players and the athletic committees will be discreetly silent, anxious parents will look on this as another instance of the wickedness of college life, but the general public will laugh at the cleverness of the college boys in making an "honest penny" by their sport.

Why should "summer baseball" be prohibited, why should college men not accept money for playing baseball during the summer vacation? Practically the only reason is that the rules of eligibility do not permit it. Most American colleges have adopted four rules of eligibility:

1. No student shall be allowed to represent the college in an athletic contest, who, either before or since entering college, shall have engaged for money in athletic competition, whether for a stake or a money prize or a share of the entrance fees or admission money, or who shall have taught or engaged in any athletic exercise or sport as a means of livelihood, or who shall at any time have received or taken part in any athletic sport or contest for any pecuniary gain or emolument whatever, direct or indirect.

2. No student shall represent the college unless he is in good standing in his class, *i. e.*, not conditioned in more than one subject.

3. No student shall represent the college until he has resided one academic year at the college.

4. No student shall represent the college for more than four years in any sport.

The underlying principle of all these rules is that no one shall represent the college unless his primary purpose in college is to get an education. A decade or more ago the large colleges thru their alumni and athletic associations were paying skilled athletes to play on their teams, for they realized that nothing advertises a college so well, nothing attracts school boys so much as success in athletics. Such professionals, however, harmed the colleges very much by their utter disregard of scholarship and discipline. The faculties compelled the associations to exclude such players. The better colleges adopted the "professional"

and "scholarship" rules of eligibility, which were effective in keeping out the strictly professional element.

Attention was then directed to the "semi-professionals," men who had come to college for an education but who were using their athletic skill as a means of paying their college expenses. Sometimes they were paid by alumni, oftener they were given good positions with large salaries and few duties. For instance, one boy, now an out-and-out professional on the Boston American team, received $100 a month for opening newspapers in a library from ten to twelve every morning; this, of course, did not interfere with his playing baseball every afternoon as an "amateur."

Gradually there arose a species of players who offered their services to the highest bidder, being always ready to leave one college if another would pay better. The faculties were not to blame, for in most cases the athletics were managed by an independent association. Probably no athlete was ever paid directly from college funds. Public criticism forced the faculties to appoint committees to supervise all athletics. Their influence led to the adoption of the recent rules that a man may not play on a college team until he has been in actual attendance at the college as a regular student for a full college year, and that no man may play on college teams for more than four seasons. These rules, with the "scholarship" rule, prevent a man from coming to college merely for athletics, which was the original purpose of the first or "professional" rule.

At present the most frequent infractions of the "professional" rule are in "summer baseball." As a matter of fact, it is broken so often that the rule is a farce. Half, if not more, of the players on college nines play "summer baseball." No college dares to protest players of another college on this charge, for it knows its own players are also guilty. There is a tacit agreement that these cases shall be overlooked. But they are not overlooked by newspapers, and college athletics suffer much from their criticism.

A rule that is tacitly broken does harm to students, because it teaches them that the crime is not to break a rule, but to be caught. If the rule prohibiting "summer baseball" is broken with impunity, why not the "scholarship" rule? The student learns deceit, learns to dodge evidence. When the writer warned a former pupil not to play "summer baseball," the pitcher replied: "Nobody will know. The money won't be paid me directly. I've not signed a single letter I've written, and there isn't a scrap of evidence against me." The welfare of student morals demands that the rule prohibiting "summer baseball" should be strictly enforced or abolished.

Eleven years of active acquaintance with school and college athletics have led the writer to the opinion that college athletes should be permitted to play "summer baseball" without being disqualified from intercollegiate contests. If a boy comes to college with a clean record—that is, an amateur record as an athlete, and if he is not paid directly or indirectly to play for the college, he should be permitted to do what he pleases during vacation, for pleasure or profit or both.

After nine months of study a student needs the rest of vacation and the recreation of sport. Those who play "summer baseball" are usually poor students, who are working their way thru college, paying their own bills. Summer hotels find it profitable to amuse their guests by baseball matches, and pay college players from $50 to $100 a month and board. This is more than the average college student can make during the summer. He may make as much by tutoring, but that is no change from his college work, and he returns in the fall without the healthful benefit of a vacation. He may make $45 a month without board as a bookkeeper, but his health and pleasure suffer. "Summer baseball" pays him well, and yet leaves most of the day for his own pleasure. He is treated as a guest at the hotel and associates with the other guests. His manners and morals are not injured by his playing, for all his associates are college men. Is he not as true a representative of his college in athletics or in anything as his classmate who gets fifty cents a day, meals at the servants' table, and *tips* for working as a bellboy or a waiter?

Why should the athlete not profit by

rude, stiff statues called "Apollos" and formless females. But we jumped back nearly a millennium with our beginnings of art when Mycenæ was uncovered; and now with the discovery of Cretan art we go back to nearly to the middle of the fourth millennium, 3500 B. C., when Crete was in constant communication with Egypt.

When Evans sets up a chronology of Minoan Periods I, II and III, each period being subdivided into early, middle and late, for all of which he has justification, we are obliged to follow him, even if in some cases his lines seem but dim. The latest of the nine periods, late Minoan III, is that in which Knossos suffered its final fall, at about the time of the bloom of Mycenæ, say 1500-1300 B. C. It is open to suspicion that Mycenæ itself gave the suffering Knossos a blow from which it never recovered. Thus ended the life of a city which was started on Knossos Hill at from 10,000 to 12,000 B. C.

The book is, unfortunately, too sparsely provided with illustrations. Besides Plate I A, which gives the vase with a procession, both entire and with the central part enlarged, there is a painted vase of steatite, once coated with gold foil, about twenty inches high, with four bands of figures in strenuous action, slim waisted like other men of the period. In the second zone from the top there is a bull-fight scene. Bulls in Crete take the place of lions as the king of beasts. From this scene we may believe that the Baphio cups found near Sparta were waifs from Crete. The cover contains in gilt the famous cup-bearer from a fresco on the walls of the great corridor, a splendid apparition. How he leans backward under the weight of the long-pointed crystal cup about two-thirds his own hight.

Who can pretend to describe in short space the splendid pottery of Knossos, which in any age would be considered beautiful? It has "fine, thin walls, like finest porcelain, with many tones. Black shades into purple, white into cream. Light and dark grounds are used indiscriminately."

Nothing shows more conclusively the high state of culture of Knossos than its drainage system and the buildings of four and five stories.

The little book before us is but a harbinger of an *opus magnum*.

RUFUS B. RICHARDSON.

The Younger Set

MR. ROBERT CHAMBERS has written a sort of perverted Sabbath school story about the younger set in New York society.* The men in this set do not differ from the revoltingly corrupt ones we met in "The Fighting Chance" last year. Fane is a society roué, described as "a chinless gentleman with gentle brown protruding eyes and the expression of a tame brontosaurus." Ruthven is a "bangled puppy" who steals another man's wife and is afterward referred to as "the thing that has crawled upon her knees to have its ears rubbed." The rest are gamblers, for the most part, or incipient forgers. But the debutantes in this younger set, Mr. Chambers claims, are as young as Eve—and quite as shameless, for all their clothes. In fact the old Adam capers astonishingly in his descriptions of these pretty virgins. Else it is the peculiarity of the young New York woman in society to appeal to the jockey instinct and to the jockey vocabulary in every man who writes about them. For they all do it. To read this book one might infer that New York and certain regions round about was a magnificent turf, a race course, set off by country places like "Silversides" and "Siowitha" clubs, and the women were the horses. Note Mr. Chambers's description of the heroine on the night of her "coming out" party. "Did you ever see such hair?—that thick, ruddy, lustrous tint? And sometimes it is like gold afire. And a skin like snow and peaches—she's sound to the core. I've had her exercised and groomed and hardened and trained from the very beginning—every inch of her minutely cared for," etc. All this to the man whom the girl afterward marries, and he replies, "Thorobred . . . to be turned out tonight. Is she bridle wise and intelligent?" One can almost hear her snort and see her prance and champ her bit. And she continues in this state

*THE YOUNGER SET. *By Robert Chambers.* New York: D. Appleton & Co. $1.50.

from the revoltingly corrupt ones we met of natural vigor and innocency to the end. This is one of the points Mr. Chambers has written the book to illustrate that,

"the younger set are better than those who bred them. And if, in time, they, too, fall short, they will not fall as far short as their parents. And in their turn, when they look around at the younger set whom they have taught in the light and wisdom of their own shortcomings, they will see fresher, sweeter, lovier young people than we see now. And it will continue so, my dear, thru the jolly generations. Life is all right, only, like art, it is very, very long, sometimes."

But it appears that the only training these youngsters are getting is physical and mental. The idea is to keep them healthy and innocent, then, when they are "bridle wise and intelligent," turn them out in the society horse-show of women for the Fanes and Ruthvens to appraise and choose and buy. People who do not understand the logic of morality and of immorality ought not to attempt to dramatize moral ideas in a story. This is Mr. Chambers's limitation in this particular story. With all the debauchery and dry-rot portrayed in "The Fighting Chance," it had a strength and moral stamina which this last book lacks, altho the author evidently means it to be peculiarly stimulating along whatever lines of social righteousness he has discovered for the younger set.

The fact that Mr. Chambers has created a situation that is largely imaginary, rather than interpreted the one that really exists, is further illustrated by the stand the hero takes to the effect that he is bound not to marry during the lifetime of his divorced wife, altho she had been divorced thru no fault of his. There are such people, of course, but they are not apt to be in New York society. A man holding such views there would be a prig, as Selwyn is in this story. It is impossible to define the morality of such people, but certainly it is not of this stern, ecclesiastical kind. They are "thoroBred" in everything but righteousness, and that is why they think so shrewdly and selfishly upon all ethical subjects. And Chambers's blunder as a literary artist consists in presenting an obsolete man, a sort of moral ichthyosaurus upon the turf of New York society. That sucking, gill-jowled man-fish he wrote about a few years ago is quite as credible a character as Selwyn in the way he has been portrayed in this story. And the question raised by reading is not whether it is right or wrong for divorced people to remarry, but whether a class of pampered society people, thorobred chiefly to all manner of indulgence, and accepting the disgraceful license in life about them as a matter of course, can produce a character like Selwyn's—not that it is a particularly admirable one, being stilted and artificial at every turn—and probably for the reason that it is more thoroly artificial than that of either Fane's or Ruthven's.

Mr. Chambers is the cleverest newspaper novelist we have, but he would be wise to portray what he knows along with the frizzy flirt society editresses, and not attempt any serious dispensations in human morality.

The Future of China and Japan

Books on China, which interpret signs and portents, must be written in a hurry and dropped hot from the press or they will soon be cold and forgotten. Despite the excellent English and apparent careful literary supervision, one feels thruout his whole reading of the books under review,* that a little more intimate knowledge of the local past would have made the authors stronger and their oracles more trustworthy. Somehow they all lack perspective. There is very little to suggest Milton's dictum of that "old experience," out of which rises the "prophetic strain." Nevertheless each is valuable because the point of view of each is distinctly different. Cotes and Weale are both veterans in British service. In the minds of both, the thing of pre-eminent importance is that minor god worshiped under the name of British Trade Interests. The Anglo-Indian journalist, especially, realizes the potentialities of India as the coadjutor of Great Britain in the future of the Far East. Both make close scrutiny of the

*Signs and Portents in the Far East. *By Everard Cotes.* New York: G. P. Putnam's Sons. $2.50.
The Truce in the East and its Aftermath. *By B. L. Putnam Weale.* New York: The Macmillan Company. $3.50.
The Future of Japan. *By W. Petrie Watson.* New York: E. P. Dutton & Co. $3.50.

Japanese as present allies and wonder what the end shall be. Not one of the three is blind to the contraditions in the Japanese character, discerning clearly the limitations of efficiency in "the new coefficient" of Great Britain in the Far East.

It is refreshing to find an Englishman, Weale, giving the other and more truthful side, so different from that one-sided and uncritical panegyric, set forth by Mr. Alfred Stead, entitled "Japan by the Japanese," which showed the gold lacquered surface of the pine wood. We gather also that it was as wholesome for these Englishmen to find themselves among a people who would take no tips, and refuse even a cigar unless an equivalent was expected and received, as it was to learn how often the Japanese had burned their fingers when they discharged their foreign employees, and tried to do modern things wholly by themselves. Happily Mr. Cotes does not forget what, for forty years past, foreign helpers did for the Japanese, while on missionary matters he is more sane and truthful than Mr. Weale. The latter impresses us as being as fanatical and narrow as some of the missionaries whom he berates.

Mr. Cotes gives a vivid picture of Hangkow and its factories, and then travels to Pekin by railway. He notices there, among other things, the intense loyalty of the Chinese people to existing institutions—a sure sign that both the new Pekin and the new China will be surprisingly like the old. A poster inviting subscriptions to a fund for paying off the foreign debt is prominent. Port Arthur he finds is being made a magnet for foreign tourists. A museum of Russian curiosities, including all the feminine frippery which the Russians brought as part of their military equipment, has been established. The political rottenness of Korea is laid open, the author having a keen appreciation of the difficulties of recreating a nation which has lost moral stamina. Americans especially should read his chapter on "India as a Lever in the Far East." His noble plea, tempered by caution, urges Anglo-Saxons to win the confidence of the Oriental by "fair dealing and sympathy"—a policy which he thinks must be "protected by an overwhelming preponderance of fighting strength." Only by sloth and folly can Great Britain lose her pre-eminence in Asia.

When, in January, 1906, we perused Mr. Weale's "Reshaping of the Far East," we wondered why two octavos were necessary for his task, especially since so much in his previous book, "Manchu and Muscovite," had been discredited. Was it purposely made to sell "like hot cakes"? The most trustworthy part of his new book (pp. 647) consists of the official documents in the appendices with an excellent map. He appears to take only the British trader's view, declaring that the Peace of Portsmouth was but a truce, to last only until 1912, when the second Anglo-Japanese alliance will expire. Manifestly, however, the recent friendly arrangements with both Japan and Russia tend to discredit both his title and thesis. Yet his preaching is most reasonable that only the growth of the New China will secure a permanent Far Eastern peace. His book is essentially one of travels and observation, for he has been over the ground. In Korea he sees "a problem and a tragedy," in Japan "a military and monopolistic power," in the whole missionary enterprise a public and permanent nuisance, and in President Roosevelt, an intermeddler, who made "untimely intervention." In a hundred other ways, he discovers what is not visible to those not wearing British Trade spectacles. A genuine pupil of such men as Sir Harry Parkes and other devotees of a diplomatic policy increasingly obsolete, he takes himself entirely too seriously.

This does not for a moment diminish the interest and readableness of a well-illustrated and well-written book. His chapter on "The United States and the New Responsibility" is the shortest of all. That on "Russia, the Unbeaten Power," is convincing. Indirectly his book is an argument on the folly and uselessness of war. The Japanese gained little by taking up arms. His "Last Look at Port Arthur" shows that it was not the Osaka shells, as official telegrams from Tokyo led us to believe, but the Russians themselves, who sunk all the Czar's ships. "Not a single ship was damaged by Japanese gunfire to such an extent that she

could not have steamed all the way home to Russia."

Mr. Watson turns from continental trade and politics to a study of the Nippon islanders as men, who tho geographically distant, are in their nature virtually the same as ourselves. Again the question arises, Why so large a work? We have here discussion, analysis and criticism in tiresome bulk. The Japanese are taken apart and put together again and their mental anatomy compared with that of Europeans. Appreciating heartily his former work, "Japan: Its Aspects and Destinies," and the "survey of present conditions" in his new volume, we could wish that his vaticinations had clearer and conciser expression, and were based on a more intimate knowledge of the nation's past than is here revealed. Entirely too subjective in attitude and overloaded with references to things Occidental, the text shows slight acquaintance with real Japanese thought or origins. The author misses the whole point in making no allowance for the tremendous influence of Aryan blood inheritances in the Japanese composite. He affirms that ancestor worship is "the essential principle of Shintoism" and the "national religion." Thus he certainly goes as far astray as did the late Lafcadio Hearn. Mr. Aston and Dr. Knox, not to speak of other writers, have demonstrated that ancestor worship was unknown in ancient Japan. The author's notions of the historical evolution of the nation are based on imperfect data. He shows no first-hand acquaintance with that philosophy which paved the way not only for what the world has witnessed during the last fifty years, but which, when studied, demonstrates that recent Japanese history is evolution and not revolution. Mr. Watson utterly ignores the constant and vast fertilization of the Japanese mind thru the Dutch, from 1600 to 1868, by whose language and science the nation's leaders of 1868 profited.

On the other hand, we have here a very able discussion of Japan and Christianity, progress in individualism, the issue of constitutionalism, modern politics, the Christ-personality, and many other questions, theological, ethical and psychological, about which the serious student must interest himself. The conclusion of the whole matter, the sum of his forecast is, that while against the exhaustion and distraction of Europe "we have the enviable freshness of Japan's outlook," yet "the strength and the potency of the world remain with Europe," concrete personality being the Occidental potency sadly lacking in communal Japan.

Shelburne Essays

THIS fourth volume of Mr. More's *Shelburne Essays** is the most interesting which he has published since his first. Something of this superiority is due, no doubt, to an unusually happy range of subjects. Hawker, Fanny Burney, Herbert, Keats, Franklin, Lamb, Whitman, Blake and Horace Walpole, if they do no more, do at least give the critic an opportunity. But in the meanwhile there has been a change at work in Mr. More's criticism, which is only now accomplished in such a manner that his second and third volumes appear as stages of a transition. Mr. More began as a philosophical critic, if he began as anything. It was the general ideas, the thought, the course of reasoning which counted most in his first book. In one sense that book undertook to expose a system rather than any particular author or set of authors. The essay on Symons, for instance, which was the most remarkable in the collection, was not so much an estimate of the poet as an expression of Mr. More's conception of life. Symons was but an occasion, a pretext.

In this fourth volume, however, the ideas are of comparatively slight importance in comparison with the execution, the manner of treatment. An outline of the leading points, a mere show of heads, would represent the value of an essay very imperfectly. Indeed, if anything, Mr. More seems rather inclined to avoid the exposition of general considerations as such. So he starts a suggestive distinction as between "essential" and "contingent" poetical genius, and drops it, not merely before he has made the most of it, but even before he has made it altogether clear. Again, he declares that "the highest form . . . of poetry must

*SHELBURNE ESSAYS. Fourth Series. *By Paul Elmer More.* New York: G. P. Putnam's Sons. $1.25.

rest on a noble convention," and still later of Blake remarks that "his method . . . is more disastrous to poetry than the most rigid convention" of the eighteenth century, touching once and again at a critical canon of first importance, one would suppose, in his mind, but one which he is apparently unwilling to develop, at least in an abstract and general way. On the contrary, his aim is rather to pose a principle plastically, as it were, in the person of a particular individual or by the aid of specific and definite detail—or, in other words, to realize a character or temperament or mood or situation and leave it to answer its own questions. In short, Mr. More is beginning to write something more than criticism in the ordinary sense. In such papers as the Lamb and the Hawker he approaches very near to literature, if he does not actually reach it. He is trying to present life, not in formulæ or definitions, nor yet with any pretension to absolute accuracy —for who knows how things really are in themselves?—but flexibly and at the same time under such an aspect that it will make an intelligible sense. His philosophy is still there; but it is no longer an equation, but a point of view, an angle of vision. In all this his likeness to Sainte-Beuve becomes more than ever conspicuous and something too, perhaps, of that "journalistic" turn which Sainte-Beuve was unable to avoid and which is the lee-shore of this sort of criticism.

The Religion of the Old Testament: Its Place Among the Religions of the Nearer East. By Karl Marti. Translated by Rev. G. A. Bienemann, M.A. Edited by Rev. W. D. Morrison, LL.D. New York: G. P. Putnam's Sons. $1.25.

Very many persons must have felt the need of a clear, brief presentation of the essential features of Hebrew religion, written by some thoro scholar who represents the consensus of opinion among critical students. Such a book should give a succinct outline of the development of Hebrew piety, lay special emphasis on those features which distinguish it from other faiths and which constitute its peculiar worth, suppress the large mass of relatively unimportant details and questions not yet determined, and bring into the clear the large and important facts which need to be kept continually before the mind in the consideration of the Old Testament. These requisites are fulfilled with notable success in the essay of Professor Marti, the editor of the *Kurzer Hand-Commentar zum Alten Testament.* The novice will scarcely appreciate the skill with which Professor Marti has selected salient facts and the features which need to be kept prominent, and avoided confusing the learner by a mass of details. In four chapters, entitled "The Nomad Religion," "The Peasant Religion," "The Religion of the Prophets" and "The Legal Religion," the leading characteristics of Old Testament belief are very skilfully portrayed. The results of the higher criticism are presupposed, and one must seek elsewhere, for example, for proof that the religion of the Mosaic age was as meager and primitive as Professor Marti describes it under the heading, "The Nomad Religion." Especially commendable is the impartial and comprehensive description of later Judaism, with full justice to the lawmakers and to such men as Malachi, with recognition of the true piety of Job and the Psalmists, yet with clear demonstration of the unmeasurably superior worth of the prophets, in whom Hebrew religion reached its highest attainment. Professor Marti does not depart from common sense in the comparison of Hebrew faith with other religions: he neither denies relationship where facts warrant it nor asserts dependence and equivalence where spiritual values differ infinitely, but succeeds in doing equal justice to Babylonian, Egyptian and Hebrew. As a clear summary of the things most worth knowing and thinking about in the religion of ancient Israel, this essay is unsurpassed by anything that has come under our notice.

Everyday Ethics. By Ella Lyman Cabot. New York: Henry Holt & Co. $1.25.

Mrs. Cabot has prepared an excellent text-book in morals, designed for boys and girls of high-school age, say from thirteen to eighteen. She has not endeavored to reduce to youthful comprehension the various philosophical theories as to the grounds of obligation, but rather to awaken a consciousness of the

real seriousness of moral issues and to inculcate the decision of everyday problems on the basis of principle. Treatises of this sort are often either commonplace or impractical, but this volume is both interesting and suited to actual moral needs. Especial attention has been paid to the matter of securing vital interest in ethical problems, and the teacher is taught how carefully to "cull and dangle before the pupils' eyes problems which he knows by experience will make their mouths water." On the principle of "increasingly solid food to interests already hungry," the way is prepared for discussion of some of the more serious and difficult questions of moral science. While Mrs. Cabot shows herself well instructed in her field, it is clear that pedagogical adaptability has been kept first in mind. With the "Teachers' Key," with the questions and references which it furnishes, he would be a dull teacher who could not awaken some interest in moral problems, and the pedagog who, with Mrs. Cabot's help, could not improve the character of youth committed to him should have his own morals looked into. While written for a textbook and with educational uses primarily in mind, this volume is so replete with well-chosen incident and illustration that others than teachers would find it useful, for example, parents—if there be such—who direct their reading with a view to sensible training of their children, and also ministers who would be pleased to get a little off the beaten track, in the direction of vitality, in the choice of their illustrations.

The Scarlet Car. By Richard Harding Davis. New York: Charles Scribner's Sons. $1.50.

It is the mighty who fall, of course, because they are the only ones far enough up to drop, but it is curious *how* some of them fall. Here is Richard Harding Davis, for example, who could make almost as blue a line of battle smoke, and create as big a war din with mere words a few years ago as Stephen Crane himself, laying the scene of his last story in a red autmobile with a set of snobs, loafers and politicians and a pretty silk lady for the characters. And the pitiful part is that there is still an automatic echo of his old adventuring spirit in the miserable honk, honk of the thing. To be sure, he portrays the life and manners of a certain rich indigent class, and does it well, but what is the use? And why should Mr. Davis, a man who knows Gallegher, make himself the literary chauffeur of such merely sleek, well-fed supernumeraries? And at a time, too, when we are beginning to recognize the very splendor and grace and social fineness which he describes as the evidences of a monstrous selfishness which unfits them for membership in the human race?

A Stumbling Block. By Justus Miles Forman. New York: Harper Bros. $1.50.

A well-constructed, admirably-written story, but not a cheerful one. A young author fails to marry the Rose Mary girl of his imagination who might have "lifted" him, whatever that may mean, and does marry in a kind of half-hearted fashion another woman who is selfish, nervous and sick, and who proves, therefore, to be a stumbling block in his career. The climax of the story is reached when the wife realizes this fact, and at about the same time she is told that she must die if she does not submit to a certain operation in ten days. She very generously refuses to have it, thereby delivering her husband from the bondage that is spoiling his genius, and more particularly from the yoke that is keeping him from Rose Mary. It is another case of the malignant romance, and some people are beginning to wish that ladies afflicted with fatal diseases would keep out of fiction, no matter how well the author handles their cases.

Roman Sculpture From Augustus to Constantine. By Mrs. Arthur Strong. 1907. New York: Charles Scribner's Sons. $3.00.

Mrs. Strong, long known as Miss Eugénie Sellars, has always treated with a light but sure touch everything to which she has put her hand. When, in 1891, she was working with Sir Charles Newton, putting on finishing touches, one felt that the highest types of scholarship met. Sir Charles soon after passed away; but his fellow laborer is still touching subjects that she never fails to

adorn. It is no flattery to say that she is foremost among the excellent women now working in the classics. From Greek she has gone over to Latin, and her edition of the art topics in Pliny in collaboration with Miss Jex-Blake, has shown her mastery of the subject. Grecians may regret this defection; but we all conspire for a common good. Mrs. Strong is, however, hardly justified in saying that it is "evidently absurd to talk of a realistic as opposed to an idealistic art." The portrait of an old man of the republican period (Plate cvi) is splendidly realistic; but Pheidias would have turned away from it with repugnance. A battered fragment of the Parthenon frieze suggests more than Trajan's column. "The Grecian gluts us with its perfectness, the one thing finished in this hasty world." Let Dryden say: "I have at length disengaged myself from the antiquities of Greece." But neither Mrs. Strong nor Stuart Jones can escape their spell, even if the former declares; "We feel that it is only a thin wall that divides the plastic representation of the *res gesta* —the Acta—of the emperor (Trajan) from the acts of Christ." But after all we must, for the most part, give unstinted praise. The book is profusely and splendidly illustrated, with Julius Cæsar as a frontispiece and 129 other plates, some containing several figures. Some heads are presented both *en face* and in profile. There are samples of the reliefs of Trajan's and Marcus Aurelius's columns. Plate 31 reproduces the splendid cameo of the Bibliothique National. The translation of Latin quotations may be gratefully accepted by many readers. Mrs. Strong has delved in Greek too long to be caught napping in facts. She gives the Temple of Aegina its proper place in the sixth century B. C., even if she does put the Temple of Nike a quarter of a century too late.

The Life of Walter Pater. By Thomas Wright. New York: G. P. Putnam's Sons. $6.50.

This is pretty nearly everything a self-respecting biography ought not to be. Mr. Wright has written biographies before; in fact, he makes a kind of industry of the writing of biography; and it is only natural to suppose that he would have improved as he went on. On the contrary, however, this is easily the worst he has done yet. It is trivial, impertinent, vulgar. Read the chapter entitled "The Mustache" for an example of bad taste that deserves to become classic. It may be true that Mr. Benson's volume on Pater in "English Men of Letters" is full of mistakes and inaccuracies, as Mr. Wright asserts at length in his preface with the design of correcting them; but even in doing Mr. Wright this justice the general reader will probably prefer to wait a little until these corrections have been taken up by a more tactful biographer or critic.

Pilgrimage. By C. E. Lawrence. New York: E. P. Dutton & Co. $1.50.

This is the story of an angel of the Army of Lost Angels who escapes from Hell, struggles for countless ages to win Heaven once more, and, as a final test, is given the pilgrimage of a man's life to make. The tale tells in a kind of sweet chant of the sorrowful adventures of this man "with the angel eyes," who dies a leper at last, but with a mind transfigured by all the joys of Heaven, and it is all so remote from what is modern or real that the character of Peruel shines with the glamour of old romance, as if the mist of centuries separated the whole conception from the things that we now know and think.

The Traitor. By Thomas Dixon, Jr. New York: Doubleday, Page & Co. $1.50.

Mr. Dixon's trilogy, of which the "Leopard's Spots" and "The Clansman" were the first and second volumes, has at last petered out in *The Traitor,* a puerile tale dealing with the breaking up of the Ku Klux Klan, and apparently written for dramatization upon the stage of the old Thalia Theater, on the Bowery. But the book is at least remarkable as a psychological phenomenon, for it is probably the first time a man has so successfully interpreted himself into the character of an historical, palpitating female. The heroine of this story acts in every instance exactly as Mr. Dixon would if he had been permitted to wear petticoats instead of trousers.

Literary Notes

....The new catalog of the books of the Macmillan Company is so extensive and well indexed as to be worth getting for use as a bibliography.

....The latest number of the series of Church Histories, known as "The Church Universal," is *The Reformation*, by the Rev. James Pounder Whitney (New York: The Macmillan Co. $1.50). The treatment of the very large subject is brief and summary, the point of view is Anglican, and the spirit non-partisan.

....Altho Poe has not so far got into the Hall of Fame, he is not without honor in his own country. The ladies of Baltimore have started a movement to erect an artistic monument to him in that city and are desirous of interesting all admirers of Poe's genius. Mrs. John C. Wrenshall is president of the Memorial Association.

....The Rev. Charles Voysey's *Testimony of the Four Gospels Concerning Jesus Christ* appears in a resissue, with the imprint of Messrs. Longmans, Green & Co. The author will be remembered as the erratic minister of the Theistic Church of London, who formerly was connected with the Church of England. His position is that the character of Christ was by no means perfect, and that His deification was a blunder.

....The latest volume of the handsomely printed and scholarly series of "French Classics for English Readers," edited by Prof. Curtis Hidden Page, contains twenty-five selected *Essays of Montaigne*. Florio's translation is used, and Adolphe Cohn introduces it with an historical sketch of Montaigne and his time, beginning, rather curiously, with his burial. (Putnams, $2.00.)

....The Messrs. Scribner import an essay by the Rev. A. Allen Brockington, M.A., on *Old Testament Miracles in the Light of the Gospel* ($1.25). Mr. Brockington holds to the view of miracles which is found in the Gospel of John, that they were essentially "signs," deeds wrought for a didactic purpose, and he examines the Old Testament miracles from this point of view. This treatment of the subject hardly meets the difficulties felt by most minds.

....Surely there ought not to be so many bad manuscripts sent in when new guides and manuals are being published all the time. Editors would be ashamed to tell how often they have decided in favor of one article because it was all ready to chuck into the copy box instead of a similar article which would require an hour or so to fix it up, but if authors knew they would pay more attention to details. We have at hand two more books of instruction for writers, *Writing for the Press*, by Robert Luce (Clipping Bureau, Boston. $1.00 cloth; 50 cents paper), and *A Practical Guide for Authors*, by W. S. Booth (Houghton, Mifflin & Co., Boston, 50 cents, cloth). Both contain much the same matter, of course, rules of spelling, punctuation, copyright law, proofreading, preparation of manuscript, etc., but the former is the more comprehensive of the two.

Pebbles

"I DREAMED I slept in an editor's bed,
When the editor was not nigh,
And I thought as I lay in that downy couch,
How easy editors lie!"

—*Ladies' Home Journal.*

AN Atchison young man is in an expensive Eastern college, taking a course in English literature. In a letter to a friend he writes as follows, to show how he is progressing: "I and my companion, methought, walked the streets like a couple of gods among a swarm of vermin, for every one we saw seemed to bear openly upon his brow the mark of the apocalyptic beast. I half expected that these miserable beings, like the people of Lystra, would recognize their betters and force us to the altar, in which case, warned by the fate of Paul and Barnabas, I do not know that my modesty would have prevailed upon me to decline. But there was no need for such churlish virtue. More blinded than the Lycannions, the people saw no divinity in our gait, and as our temporary godhead lay more in the way of observing than healing their infirmities, we were content to pass them by in scorn."—*Atchison Globe.*

CUPID'S CRAFT NOT YET IN DANGER.

At the Christian parsonage, Thursday, September 5, at 6.30 p. m., Clanyard Long, of Schuyler County, and Miss Ora Fagan, of Brown County, were united in marriage. We sincerely wish the greatest happiness and the sweetest joys attainable for these splendid young people through all the years that shall bring uncertainties and pleasures.

May our young friends thru devotion chisel their names upon the immortal tablets of each other's souls. Then no fate will ever desecrate this everlasting monument, nor will the tongue of an angry ocean gather this name into the bowels of forgetfulness. The hand of time and elements of death will only wear away the casket that encases this eternal emblem of heavenly characteristic, and in the glorious light of an eternal day will that name glitter among the gems of fadeless glory.

Earthly monuments will crumble to dust; stars will lose their position and the sun cease to shine; the moon will hide her face while the earth passes away. But that name, written in the characters of love's sweetest devotion, will be brightened by the rays shot from the quiver of omnipotent light. Paradisical flowers of purity will adorn the court of this living image, while the beams of honor and right bring to view the happy faces of those who were associated with the blessings of that name. May you so live and love that when your dust returns to its mother's bosom you may see that beacon light of truest love that has guided you over the surging billows of time grow more brilliant as it mingles its light with the glory of an immortal land.—*Rev. W. A. Haynes, in Brown County (Ill.) Republican.*

The Suppression of Research

THE Encyclical against Modernism, following, explaining and applying the late Syllabus, is the most important, the most ominous, event in the history of the Christian Church that has appeared since the declaration of the dogma of infallibility by the Vatican Council, and is likely to be even more important than that. A law like this, imposed on four hundred million souls, which absolutely forbids liberty of thought and research to the teachers and scholars of the Church, is a matter of tremendous import. The weight of it is not in the fact that it condemns certain views, but that it forbids to the teachers of the Church the avenues thru which any new truth must enter. So radical, so drastic a suppression of thought we could have hardly thought it possible to enact in this twentieth century.

Pius X's Syllabus had gathered the teachings of distinguished Catholic scholars and condemned them. That was endurable. But this encyclical goes very much further. It forbids the clergy to read the books that teach what he calls Modernism. It strangles truth at its birth. It prohibits such doctrines to be taught in any Catholic seminary in which priests are taught, or to be read by any student. It does not allow the knowledge of the higher criticism to enter the seminaries, so as to come to the knowledge of the young men fitting for the priesthood. Any professors tainted with these doctrines are to be removed. A special and assigned set of studies is to be fixt at Rome for all the seminaries in the world. Modernism, which means particularly the Higher Criticism, is absolutely excluded. The bulk of the Protestant scholars hold and teach that Moses did not write the Pentateuch; the Pope has lately promulgated the teaching that there is no reason to believe he did not, and now, in no seminary or school or pulpit, and in no book or journal, can a Catholic scholar say that he did not write it. That this decree may be enforced the bishops are told that there must be a board of censors appointed in each diocese to see to it that no teaching of Modernism sees the light within their limits. Thus the eyes, ears and mouths of the clergy and laity are closed.

Our readers will ask us two questions. One is, whether such a decree can be obeyed. It would seem that it can. The habit of obedience is deeply infixt, and has been assiduously taught. The clergy have been instructed from youth that they must think just as far as they are told to think and no further. If by any accident they have come to think and learn otherwise, they are silenced. If they go farther than pleases their superiors they are removed from their posts as teachers and sent to work in the Philippines or elsewhere, where they have no chance to teach or to study. If they resist, their means of livelihood is taken from them, and that is usually effective, for what else can a middle-aged studious priest do than to serve in his office? Has not Father Tyrrell, left penniless, now submitted, and had his faculties, his exequatur, if we might call it so, now restored to him by the Pope? Now he can eat a piece of bread. The whole machinery of the Church can be put to work to enforce the prohibitions, for not a bishop, not a Catholic journal, will dare to utter a word of doubt or criticism. Every one is obliged to approve; and when those who know are silenced, how should the great unthinking many suspect that a shocking, a fatal yoke had been put on the Church?

But we will also be asked how the scholarly men in the Church, those who

want to study and investigate, will feel when they see their noblest efforts to search for the truth, and all their liberty to speak the truth they have learnt, thus insulted and outraged? Some will resist, but not many. Père Loisy has sufficient property of his own, so he can, and will, declare that no Pope can strangle his free thought. He will dare excommunication. He is about to publish not only a new book on the Gospels, which will go further than anything he has published before, but he will very soon issue a study on the Syllabus, showing what are the sources from which the Errors condemned were drawn, many from his own writings. Others will groan in silence, or utter themselves frankly only in confidence. How they feel may be judged from portions of a letter written by a scholarly Catholic priest in full canonical standing to a Protestant friend, a copy of which has been shown us, with liberty to publish. He says:

I can thoroly understand your astonishment that priests should submit to the stringent code that now coerces us. I often wonder at it myself. But, with enlightened priests, this submission is not owing to vows and promises made in ardent and unthinking youth. We submit to a great deal in order, by remaining in good standing within the Church, to help the movement for reform and change. If only we may spread a little light, and open a few eyes to see it, we are willing to take the buffeting of ignorant despotism. And then, besides, our wonder that more priests do not revolt against disgraceful intellectual Cæsarism is considerably modified when we discover how few priests are in the smallest degree aware of the results and tendencies of modern scholarship. I have been amazed at the ignorance of priests. Theology, in its old scholastic sense, they know. But with regard to criticism proper, in the field of Scripture on Christian origins, nine-tenths of them are in a state of baptismal innocence. I doubt whether out of the twelve or fourteen thousand priests in this country you could unearth more than a hundred whose libraries contain Harnack, Holtzmann, Pfleiderer, or even Loisy. You may be sure our seminaries are taking care that this state of affairs shall continue. Let the eyes of earnest and intelligent priests once be opened, however, and there will be on this side of the water an explosion that will shake Rome's seven hills.

But as soon as our few leaders—so mournfully few!—come to the conclusion that the needed reform is more than Rome will ever allow, they will cease throwing away their lives, cease living beneath the heel of ignorant medievalism, and will step forth into the liberty of a free conscience and an unshackled mind. Some of us, I think, are wondering if that day of sorrowful duty is not close at hand.

Really, the intellectual situation is very critical within the fold of Roman Catholicism. Pius X. has brought in an era of reactionary repression which is worse than anything of the kind in the memory of living men. What will be the outcome for the Church, and for many individual children of the Church is a question which we are now asking with anguish. The *via media* between tradition and modern learning which Tyrrell and Loisy have thrown open to us is totally rejected by authority; and if we enter upon the road, our traveling must be done by night, so to speak; for a priest who would confess himself a disciple of this school would be summarily disgraced. If Loisy dies excommunicated I fear that not a few of his disciples will come to a similar end.

But there is one hopeful side to all this. I really think that these liberal Catholics, so detested at Rome, will turn out to be the forerunners of Christian reunion. They are holding out to earnest Protestants the hand of fellowship which conservative Catholicity for four centuries have refused to proffer. As their numbers grow—and they will grow—the day will be proportionately hastened when we all who are Christ's followers shall be one in that substantial unity for which He prayed.

And Pius X is a most excellent man, trying honestly to reform the Church, but is guided by the Jesuits, now that the Benedictines and Franciscans in their sad divisions have lost their influence. A good Pope, not a wise one; one who believes that, as of old, Juno may sit cross-legged before the door to forbid the birth of illegitimate truth.

The International Parliament

In the course of the next month it will be possible to report whether the present meeting of the Hague Conference has been as fruitful in results as we have hoped, or whether it has been as barren of fruit as the careless readers of the cabled reports seem to believe. We observe that Mr. Choate is by no means inclined to class himself with the doubters, but believes that much good seed has already been sown which will bear rich fruit.

Our readers know that The Independent has insisted that the Parliament of the World must grow out of these Hague Conferences; and that the first steps must be in a regular periodical meeting, and in the development of the Arbitration Court into what shall

become the final arbiter of the difficulties between nations, thus putting an end to war. But we have been audacious enough to anticipate, as something to which we should look and for which we should work, the full organization of the government of the world into a triple system, legislative, executive and judicial. We even went so far as to draw up a tentative plan for such a federal government of the nations. We are therefore pleased to see that in the September *Contemporary Review* the leading place is given to a very carefully prepared article by Prof. H. Stanley Jevons, in which he discusses "The Development of an International Parliament," and draws up a constitution, somewhat elaborated in its principles, for these three departments of ecumenical authority. It is an interesting scheme, quite worth considering.

Professor Jevons does not expect, however, that any such plan can be all at once agreed upon. It must come by slow development, in the line of present least resistance, and may take seventy or eighty years to be perfected; but that it is coming, really inevitable in some form, he believes, and he gives us a picture of its operation.

First, under the International Government at The Hague, in its new capital, he would show us a legislating Senate, the supreme sovereign power. It consists of a single branch, for its action must be approved by the Executive Government of the several nations. The great Powers appoint each two Senators and the smaller Powers one each, and such Powers as have extensive colonies will be allowed a third Senator. There would thus be about sixty-five members. The Senate elects a Prime Minister, and it meets every year, and its term is five years. The Senate will take action on transfers of territory, protectorates, commercial relations of countries, tariff wars and discriminations, and restriction of immigration.

The executive branch would, under Professor Jevons's scheme, consist not of a President, but a Cabinet of five members, namely, the Prime Minister and the heads of four departments. These are the departments of Law and Justice, of Public Peace, of Trade and of Finance. The business of the Department of Law and Justice would be to prepare the detailed regulations necessary to give effect to acts past by the Senate, to assist in preparing new legislation, to publish all laws and all rulings of the Courts of Justice, and to conduct investigations with regard to delimitation of frontiers or ascertainment of fact when a portion of a State desires to change its allegiance. The Department of Public Peace has it for its duty to preserve order among the nations and organize the forces necessary for that purpose. Coercion is sometimes necessary, as in the Balkan States or in Central America. Every principal nation should maintain an army corps of approximately 40,000 men, at the command of this Department, and smaller countries a smaller force. The Department of Trade has to do with commercial treaties and the discovery and prevention of actions contravening international statutes or practices in international trade prejudicial to nations or individuals. A bureau of international statistics would come under the care of this Department. The Department of Finance would control the revenue and expenditure of the International Government, which Professor Jevons thinks need not be over $20,000,000 annually.

The Judiciary would consist of three Courts, two Ordinary Courts and one a Court of Appeals. The former would consist of five judges each and the latter of seven. One of the Ordinary Courts would consider cases between governments, such as interpretation of treaties, disputes over delimitation of frontiers, validity of trade laws and applications for independence or transfer of territory. The other would try cases between a government and individuals of other nationalities, which would cover questions such as taxation, the applicability of trade and immigration laws, and fishing in territorial waters. The Court of Appeals would not concern itself with the matters of fact to be considered by the Ordinary Courts, but with the questions referred to it by the two other courts on matters of law. All these judges would be appointed by the Prime Minister and confirmed by the Senate. Two of the judges of the Court of Ap-

peals will be members of the Ordinary Courts, and these latter judges will serve by turns in the higher court.

We refer the reader to Professor Jevons's article to see how such an international government would work in critical cases. He thinks it likely that if the trouble which brought on the Spanish-American war had been referred to such an international court, the decision would have been the forfeiture of Cuba and Porto Rico by Spain, and their independence under American protection; but the Philippines would have been left to Spain, under guarantees for better government.

But all this is ideal, and yet the discussion is useful. It all advances the end sought. A present step looks to the creation of ideal treaties of arbitration between countries, like that between Chile and Argentina, or that between Denmark and Holland, which absolutely cover all questions that may arise. Step by step, and we hope in a shorter time than the seventy or eighty years anticipated by Professor Jevons a comprehensive and effective Parliament of the Nations will be achieved. Things move fast when once attention is called to the need; and if half a dozen great nations were to agree, say France, Germany, Russia, Great Britain, the United States and Japan, the others would be compelled to follow.

The Water Front and the Working People

THE new tunnels and bridges opening communication between Manhattan Island and Long Island on the east, and New Jersey on the west, will undoubtedly relieve the congestion of population in what may be called the middle class residence districts. Suburban homes will multiply rapidly in the next twenty years. To a much less extent these new outlets will relieve the tenement districts. Great numbers of wage earners must be at their tasks so early in the mornng and keep at them until so late in the afternoon that they will always prefer to dwell within the borough limits, even at the cost of great crowding and discomfort.

We must not assume, therefore, that the problem of improving tenement conditions will be less pressing in the future than it is now. Any suggestion of new possibilities of light and air for the great wage-earning class of New York City should be seriously examined on its merits.

Recently, the Tenements' Union has proposed to ask the city to build tall tenement houses on the piers. It is claimed that this could be done without interfering with commerce or other traffic, and that, without adding to the municipal financial burden, rents could greatly be reduced by the large addition to dwelling area thus provided. If the Suburban Homes Company can provide model dwellings and make 6 per cent. on land for which relatively high prices are paid, and if the city of Glasgow can devote valuable land to municipal tenements without incurring financial disaster, it is argued that New York City, owning the river water fronts, could engage in such an enterprise with entire safety and thereby vastly improve its sanitary and moral conditions.

So far as suitability for dwelling places for wage earners is concerned, the water front is undeniably better than any other part of Manhattan Island. In the sultriest summer weather strong currents of fresh air blow up and down the North and East rivers, and it is to these waters that thousands of the poor bring their exhausted and ailing children from the stifling interior streets. Practically, as a fact of engineering and architecture, the scheme probably presents no unusual difficulties. Ocean and river traffic can use at best only one or two stories on and above the ground for handling freight and passengers. Six to ten stories of dwellings could well enough be superimposed. On the business side the feasibility of the plan turns upon the probable character of our city government. With honest administration it is entirely possible. But if the city is to be ruled by grafters and incompetents, such an undertaking would better not be thought of.

There are, however, some negative considerations to be weighed. West street and the East River front are already so congested as to be at times near-

ly impassable. To turn into them also the tenement-house hordes of Essex, Delancey and Rivington streets would be to create pandemonium. It would probably be necessary to cover the streets over, making practically a two-story thorofare, the lower for vehicles, and that would be an expensive undertaking.

It is desirable also that a great deal of pier space should continue to be used, as now, for recreation purposes, and that this use should be enlarged rather than contracted. This is one of the most legitimate ways in which the city can make the water front available for the poor.

Esthetic considerations also cannot be ignored. Very slowly, but perceptibly, we are making headway in the gigantic task of substituting beauty for ugliness in the architecture of Greater New York. Tenement houses of the familiar type lining the water front would not be a contribution to this end, but, on the other hand, water-front tenements need not be of the familiar kind. They could easily be made a welcome substitute for the structures that now greet the eye of the incoming traveler.

All in all, it would seem to be entirely proper that the city should look into this proposition, and make, here and there, certain experimental attempts on a modest scale. The experimental demonstration, rather than theorizing about it, would satisfactorily show how far the plan is feasible and commendable.

The Oil Trust Trial

At the beginning of the trial of the Government's suit for the dissolution of the Standard Oil combination, it is shown that the company's profits during the last eight years have been $490,000,000, and that the net value of its assets has risen in the same period from $196,000,000 to $359,000,000. The gains of some of the controlled and subsidiary corporations have been enormous. The company in Indiana, which was recently convicted and so heavily fined in Judge Landis's court, has only $1,000,000 of capital stock, but its profits last year exceeded $10,500,000. Even if the unfair and unlawful methods of the Standard had not been made known to the public by numerous official investigations, as well as by the action of grand and trial juries, these figures would inevitably suggest that the company's business may have been conducted without due regard for justice.

It has recently been asserted by prominent representatives of the company that it has always sought earnestly to obey both the letter and the spirit of the law. The Government alleges, and in these proceedings undertakes to prove, that by the very formation and existence of the company—to say nothing of the methods pursued in its business operations—the law is violated. In this it may or may not be successful. We shall not attempt to predict the result of the trial or to say now that the evidence to be produced will justify a decision in favor of the prosecutor. It is already shown, however, that the company has exhibited its contempt for decisions of the highest courts of certain States. These decisions were law, and they involved judicial declarations that the company had broken other laws. To disobey them, or to evade them by financial jugglery, was to show a lack of that sensitive regard for law which, the world is assured by its officers, has always characterized the company's action.

Official statements showing what the profits have been and the central company's holdings of subsidiary companies' stock appear to have been freely and frankly submitted in response to the request or demand of the Government's counsel, but when explanation of certain parts of the record were sought, the memories of testifying officers became dim, or answers were made that to the average man must seem at least insincere. We have in mind now the testimony about the controlling share interest in the Waters-Pierce Oil Company.

If we assume that the Standard desired to conceal its ownership of those 2,747 shares, owing to the pronounced hostility of the State and laws of Texas, the curious "C. M. Pratt Investment" entry in the books, and the equally curious possession of the stock for a year or two by a convenient relative of one of the company's officers, are at once reasonably explained. But when the

average man reads that Secretary Pratt did not know why he bought the stock, or why the Standard could not buy it, and did not know that the procedure was suggested by the Anti-Trust law and court orders of Texas, he says to himself that the witness was testifying with mental reservations. In the same way he must seek to account for the strange ignorance of Treasurer Tilford as to certain interesting and important transactions concerning which the Government seeks official information. If there is nothing in this Waters-Pierce matter or in the record of the liquidating trustees to be covered up or disguised, the witnesses have chosen an unfortunate and misleading method of expressing their thoughts.

Why should a great and very wealthy corporation, intent upon doing justice and obeying both the statute and the moral law, conceal its control of such a concern as the Atlantic Refining Company of Philadelphia, whose capital is $5,000,000 and whose profits in two years have amounted to $15,300,000? This is what both the Standard and the Atlantic have done, according to the Philadelphia papers, who found clear proof of the Standard's control for the first time in a statement given to the court last week. The Atlantic has professed to be independent. It is charged with a long list of offenses, some of which came to light at the time of the revolt against Philadelphia's ring. Possibly the Standard covered up its ownership because it was ashamed of its subsidiary's conduct, forgetting that control of a company's capital stock carries with it a certain responsibility.

We have said heretofore that the Sherman act ought to be amended, because it should not make unlawful every combination in trade, whether beneficial or otherwise. But it is not for the protection of such combinations as the Standard Oil Company that it ought to be modified. For a long time we have been unable to resist the conclusion that this is a combination against which the act, or a revised version of it, should be enforced. Unless we reject a great mass of testimony furnished by numerous official investigations, court records and court decisions, the enormous profits of the combination have been obtained largely by practices that were either unjust and wicked or both unjust and unlawful. The use of such methods should be effectually discouraged. While it is true that a considerable part of the great wealth amassed by the company's leading officer has been given by him for good public purposes, much of the private gain derived from the Standard has been so used as to emphasize the arguments against swollen fortunes.

Our Domestic Enemies

In India now men, women and children are being slaughtered at the rate of two million a year. The Government is in despair. It has a vigilant army to protect the country against foreign invaders; it has put a stop to the internecine wars that used to keep the population thinned out; it has extirpated the ancient and honorable order of Thugs, whose religion was murder. But against the assassins that are now devastating the land it is powerless. They are too small, too numerous and too well protected by the sympathy of the people to be destroyed.

Scientific detectives employed by the Government have discovered that a man's foes are those of his own household, his commensals, the rats and the fleas. They have been caught with their deadly weapons upon them, little, short sticks, like the policeman's billy, with which they strike down their victims. The bomb of the anarchist misses as often as it hits, but the bacillus of the plague kills eight times out of every ten. As is common among criminals, these two enemies of our race work together at their nefarious business; the rats carry the virus from house to house, the fleas suck it from the blood of the rats and inject it into human beings. Either would be comparatively harmless without the aid of the other, for the fleas cannot travel far and the rats do not have so many chances to perform the operation of inoculation.

These two pests, carriers of The Pest, are protected by the double shield of ignorance and superstition. Even if the Hindus were convinced that the animals and insects to which they so freely ex-

tend their hospitality were midnight assassins, they would still treat them as the Arab treats the enemy who has sought shelter in his tent. In the religions of the Orient the virtues assume grotesque, distorted and unnatural forms like their idols. For thousands of years the absurdities of extreme altruism have been held up before the people of India as ideals. Before them on the street lie their living saints, giving their bodies as food to vermin as Buddha fed himself to the famished tigress. Thru his self-sacrifice to the microbes the fakir is at least hastened into the Hereafter if he does not attain to Heaven. In his first step in the path of the Yoga the aspirant toward moral perfection vows not to kill any living being.

"Kill not—for pity's sake—and lest ye slay
The meanest thing upon its upward way."

Thru their self-sacrifice to the microbes the fakir has at least been hastened into the Hereafter if he has not attained to Heaven.

We cannot disprove the view that all living things are of equal value in the eyes of their Creator. It may even be argued that man was made as food for the cultivation of microbes. But whether it is true or false this cosmic sympathy is not for us. We are human beings and must view the world as human beings. It is the destiny and duty of man to fight the microbe for his life as the microbe fights man for his life. Tho all living beings may be of one blood, tho we may have risen from the lowest ranks of animal life, either in the Darwinian or the Vedantic sense, it is nevertheless our duty to cut all our poor relations and to turn them out of our houses.

The health and progress of human beings depend chiefly upon their success in insulating themselves from other living beings and even from each other. Ablutions, anointing with oil, changes of clothing, restriction of personal contact, avoidance of dead and decaying matter—these measures for the protection of the race against its minutest and most dangerous enemies were in ancient times enforced by the authority of religion. When ecclesiastical power became too weak and negligent to uphold them, they were taken under the protection of etiquet. A new ritualism was established and enforced, covering such things as the wearing of gloves, the use of soap and water, and the manners of the table. Finally comes sanitary science, more clear-sighted and discriminating, appealing to reason instead of demanding unconditional conformity, and showing how wise in the main, as well as how futile and absurd in some of their details, were the rites which religion and fashion unconsciously devised and arbitrarily imposed.

But the doctor, in assuming control, still needs the priest and Mrs. Grundy in the enforcement of the rules of cleanliness and dietetics. There should be something of religious zeal behind the decrees of science. We should proclaim a Holy War against parasites, and enforce taboos with the rigidity of South Sea Islanders. Since we are so fond of reviving old religions, let us take up Zoroastrianism, in which the killing of a mosquito is regarded as an act of worship.

We are far from acting up to our lights. The housewife wages war against vermin, but she does not realize that they are more dangerous than trolley cars. She gets more excited at the discovery of a moth than a fly, altho the former only attacks clothing, not its contents. We have drain pipes in our walls to carry off disease, but beside them are conveniently arranged passages by which roaches can carry diseases from flat to flat, so that everybody has a fair chance to catch whatever is going. Our windows are hospitably open to the malarial mosquito and the typhoid-bearing fly. Over our clothing on the street cars crawl unmentionable insects carrying unmentionable diseases. In the fashionable hotel and restaurant the napery and porcelain are immaculate and the waiters are scrupulous; what goes on behind the screen and in the market is another story. We have got past the days when we kept the pig in the parlor, but we still keep the dog in the parlor, which is quite as bad. On the street we see the pet dog gnawing a decaying bone and nosing the foulest spot to be found, and a moment later he is cuddled in the arms of his fair and fastidious mistress and licking her cheek. We have yet to realize that it is the dogs which are not

mad that are the more dangerous. They injure more people by their kisses than their bites.

In primitive days man had to associate with the lower animals. He needed dogs and horses and he very properly made friends of them. He is now learning how to do without them, and he should, like a snob who has risen in the world, exclude them from his circle of intimates. The house is not intended as a zoölogical garden. Our cities will be truly habitable only when they contain no life but human life. Machinery may smash us, but it does not poison our blood, rot our bones and corrode our flesh. All creeping, crawling things are unclean. All our inquiline insects and animals are our enemies.

Governor Johnson

The *American Magazine* has smoked out Colonel Watterson's "dark horse," who, he said, would make a good Democratic candidate for the Presidency. He is Governor John Johnson, of Minnesota, the first Democrat to be elected Governor of that strongly Republican State. In 1904 Roosevelt carried Minnesota Republican by 161,000, and at the same election John Johnson carried it Democrat by 7,800. Two years later, when there was no Presidential election, he had a majority of 72,000. He is a vote-getter; he pleases the people. His father and mother were Swedes, and from the age of fourteen he supported the family, his father having been sent to the poor-house as a drunkard and his mother compelled to be a washerwoman, until at that age John told his mother he was able to support her and the younger children, and she should not do that work any longer. Then an editor, finally a Governor—a fine speaker, a radical lover of the people from whom he sprung, and inclined to the public ownership of public utilities. If not Bryan, then Johnson would be a fitting choice.

Danger of a Written Constitution

A somewhat startling statement in Professor Jevons's article, which we discuss elsewhere, is this:

"Human nature only permits changes which at any one time are small, but it is not averse to a succession of such changes tending ever in one direction, and it is thus that gradually wholly new institutions may be built up. Herein lies the danger of a written constitution, of a complete stereotyped scheme of government such as that of the United States, which can be altered only with great difficulty. It is an effective bar to the natural forces of progress. The expenditure of energy required to effect alterations in such a constitution is so great in comparison to the immediate advantage which is thereby gained that the task is very rarely attempted, and the tide of evolution, swirling as it were around a rocky barrier, makes troubled waters. Far better is it to welcome changes, if they come about gradually—not with haste, but with easy deliberation."

This is a matter we are beginning to think of. We published last week President James's call for a new Constitutional Convention, on the ground that our present one is already obsolete, and we print this week an article by the Chief Justice of the Supreme Court of North Carolina, which severely criticises that Constitution which we have been taught almost to worship.

Mollycoddling the Farmers

The call of a convention, to meet in Syracuse, to consider the depressed condition of the farmer, has met with a vigorous protest all over the State. The call was based on three points: Abandoned farms, which were said to number 12,000 in New York State, a continued flow of country population into city life, and a low valuation of farm lands. The facts seem to be that farm prosperity is so pronounced as to satisfy the farmers themselves, and that is saying a good deal for the crops. As for abandoned farms it is found to be very difficult really to locate these. There are some empty houses, but the land is worked as usual. Governor Hughes at Syracuse said that, notwithstanding what he had heard about abandoned farms, if they existed at all, the farmer would not admit it, at least not to him. "I was up in Lewis County the other day, and I asked how many abandoned farms there were up there. They would not admit that there was a single one." He considered that if he could not find them in that section of the State he could not find them anywhere. As to the congesting of population in the cities, it is well known by statisticians that the tide turned country-

ward at least ten years ago. As to the low valuation of farm lands, it is true that New York State farm lands have not risen as fast as those of Wisconsin, Iowa, Missouri and some other parts of the country, but there is and has been a steady rise thruout a large part of the State. There are sections, remote from the trolley, and where the farmers have not had push enough to establish telephone service, and here the price of land remains depressed. The present year has been in some ways an off year. It started in unusually cold, and every month has shown a temperature below normal until September. In spite of this farmers are coming out with a thoroly good crop in nearly all directions. No report of potato rot has appeared, and the price of dairy products has been very high. The apple crop is below the average, but the price of apples, as well as all other fruits, is astoundingly above previous records. We are glad that the farmers thruout the State are in a spirit to utter a vigorous protest against any attempt to mollycoddle them, especially from a political standpoint.

Brown University

We are glad to publish the following note from Prof. Henry T. Fowler, of Brown University:

In your issue of September 12, under the caption "Brown University's Charter," you say "Brown University wishes to rid itself of its Baptist charter of 1764." It is not easy to see on what facts you base this statement. The corporation of the university, whose action is necessary for any change of charter, has not declared itself in the matter; nor, indeed, has any other of the constituent bodies of the University, whether faculty, alumni or students.

At the last annual meeting of the Associated Alumni the subject was brought up by a resolution which contemplated an ultimate request for the corporation to act. After an earnest discussion in which the opponents of the resolution appeared to outnumber its supporters, the resolution was tabled by a decisive vote.

You further say: "Just why Brown University wishes to get rid of its sectarian charter . . . may be gathered from the fact that under the Carnegie Foundation Brown University can get no annuities for its professors. . . . " In justice to the individual alumni who have recently favored the change it should be said that some of them are known to have desired it long before the Carnegie Foundation existed. On the other hand, among the individuals opposed, there are some who feel that such action would be desirable in itself, but is impossible under present conditions, because it would lead to the inference which you have already drawn from the university's supposed wish. It may not be out of place to add that Brown University had established its system of retiring salaries for professors before Mr. Carnegie made his noble gift.

Will it seem captious criticism of your brief editorial to suggest, further, that it is hardly fair to the institution to quote the portions of the Brown charter which you have printed, with no allusion to the fact that the same ancient document also reads: "And furthermore, It is hereby Enacted and Declared that into this liberal and Catholic Institution shall never be admitted any religious Tests: But on the contrary, all the Members hereof shall forever enjoy full, free, absolute, and uninterrupted Liberty of Conscience . . . and that the Sectarian Differences of Opinions, shall not make any Part of the public and classical Instruction."

One of our most valued religious contemporaries does not like it that Governor-General James F. Smith signed a petition to the Pope that the Virgin of Antipolo be made the patron saint of the Philippine Islands. Her image, brought from Mexico more than two hundred years ago, is believed to possess miraculous powers. The image was shown to the Governor-General by the priest in charge, and they knelt before it. Well, what of it? They are Catholics, and we see no more reason why he should not sign the petition than why President Roosevelt should not speak at an international missionary meeting. That is his private privilege and no one can complain, so long as he does not use his official position to discriminate in favor of the Catholics as against Archbishop Aglipay.

We have received the program for a meeting of the friends of religious liberalism to be held this week in Boston. There are good and able men among the speakers, and yet we are not convinced that such a congress amounts to much. Those who meet have all the liberty they want. They can speak and teach as freely as they choose, and they are only protesting that they may have what they already have. We know there are one or two notable exceptions, such as Père Houtin, the French Catholic, whose books are put on the Index. It is enough to practise liberty without much talking about it.

Insurance

The Future of American Life Insurance

In his address on "The Future of American Life Insurance," before the National Convention of Insurance Commissioners, held at Richmond, Va., on September 17, Darwin P. Kingsley, president of the New York Life Insurance Company, spoke from a national rather than a local viewpoint. He set forth the fact that life insurance has become a great public question. He declared that, notwithstanding the Federal Supreme Court and its ruling, life insurance can be justly supervised only if treated as tho it were interstate commerce. He pointed out that the future of life insurance was menaced by reform. In the specific development of his theme he spoke in part as follows:

"If, therefore, we are able to forecast in any degree the future of American life insurance, it must be by a consideration of its intrinsic nature and its relation to other great forces of the time, the results which have attended its operation hitherto and the influences which will probably shape its course hereafter. If we consider the intrinsic nature of life insurance, we must conclude that its future can no more be a matter of doubt than the future of civilization itself. Is there any doubt about the future of our civilization? Will the twentieth century distinctly lead the nineteenth? . . .

"What is there in the nature of life insurance which makes it in some form necessary to an advanced and to an advancing civilization? What is the hight and depth, the length and breadth of the appeal which it makes to every properly-constituted man? Briefly, it covers two risks, risks as old as organized society, risks as universal as life, risks which involve all that is best in human affection, risks which uncovered bear heavily on the State. It assumes that life has a money value—an assumption that no intelligent man any longer questions. It transmutes this value immediately into money in case of premature death, and in so doing it accumulates a sum of money which becomes available in old age. Uncovered, the loss occasioned by premature death is serious and sometimes so grievous as to be appalling. Life insurance protects the family of the man who has accumulated but little from a fate which he can not himself think of without a shudder. The other risk, the risk of poverty in old age, is just as real as the risk of premature death. The poverty of many elderly men who have worked hard all their lives and perhaps have at some time been men of wealth is a matter of common knowledge. . . . Against both of these risks life insurance undertakes to provide. It appeals, therefore, directly to the conjugal and parental affections, and answers the question of that almost divine spirit which leads men to make any sacrifice and undergo any hardship in order to provide for the present and the future of their families, and for their own old age. . . .

"The future of life insurance is further menaced by reform thru destruction. The present peculiar conditions in the business world had their beginning in life insurance. Other lines of business are now involved. How much farther will the movement go? . . .

"The future of American life insurance is as certain as the future of American civilization. If it fails, civilization will fail. But it will not fail. It lies too close to the hearts and homes of the people. It is too firmly and too scientifically established. It must go on because conjugal and parental affection will go on. It is as truly a part of this age as cathedral building was of an earlier age. It fits into the plans of a busy world, and this is a very busy world. Life is more productive, more generous, more effective, sweeter, happier; values are more certain; securities more abundant and better than ever before. All of these things make life insurance as inevitable as organic life under the conditions which exist on this planet. American life insurance, with all its faults, has seen the opportunity and the need and has splendidly answered both. Therefore, it must go on; business demands it; good morality demands it; the individual demands it; the State demands it; civilization demands it."

Announcement is made by the directors of the Philadelphia Casualty Company of the election of Robert B. Armstrong as president of their company. Mr. Armstrong is well known in financial and insurance circles. He was for some time assistant secretary of the United States Treasury and prior to his election to his present office he had been president of the Casualty Company of America, with headquarters in New York, since 1905.

Recent statistics show that each person in the United States uses ten matches per day on the average. With a population of 84,233,069 this means a daily consumption of 842,330,690 and 307,450,701,850 per year.

Financial

THE NEW BANKING ROOMS OF THE TRUST COMPANY OF AMERICA LOOKING TOWARD WALL STREET.

The Trust Company of America

On Monday, September 16th, the Trust Company of America, formerly at 135 Broadway, opened its doors for business at its new banking house, Nos. 37-43 Wall street. Customers, dealers and others who visited the Company's new banking office found themselves in one of the most artistic banking rooms in this country. The books, securities and other paper of the Company, including over $100,000,000 of securities had previously been successfully transferred, and the officers of this financial giant have been kept busy receiving congratulations on the handsome appearance of the company's new banking offices.

The building proper is of white marble, with the upper stories of red brick, executed in the colonial style under the inspiration of Architect Francis H. Kimble. The structure fronts 60 feet on Wall street. The main banking office has a mean width of some 45 feet. The company occupies the main floor and basement and mezzanine gallery. Their equipment includes every modern appliance for protection against burglary and fire. The decorations are in white Alabama marble with mahogany trim. The banking counters are in bronze and marble. The decorations thruout are executed in the highest taste, being at once quiet, simple and dignified. The ceiling is in ivory white. The lighting is obtained from 700 studded ceiling lights. A feature of the balcony is the marble rail with supporting pillars of the same material. All department furniture is of metal and absolutely fireproof. The offices, desks, furniture and Directors' room fittings are by Davenport. The Directors' room deserves particular notice regarding its scheme of decoration which includes handsomely carved mahogany wainscoting which rises from the floor and meets in an elaborate coved ceiling. The supporting columns are of carved mahogany, making an exceedingly pleasing, unusual and especially artistic effect. The ceiling of the Board Room is 33½ feet above the floor. Mosaic flooring in elaborate design is a feature of the banking room. Handsome bronze tables for customers, together with attractive waiting and private rooms for women are other noteworthy features of the new home of the Trust Company of America. The equipment thruout is strictly modern in every particular and has called forth most favorable comment from all sides. The company constantly employs 150 or more men. It has a colonial branch at 222 Broadway and a London office.

Its resources are over $80,000,000. According to the company's last statement its capital was $2,000,000 and it has a surplus and undivided profits of $10,300,740.62. Oakleigh Thorne is President; John E. Borne, Chairman of the Executive Committee; William H. Leupp, James W. Tappin, Herman Dowd and Philip S. Babcock are Vice-Presidents; H. B. Fonda is Treasurer; Frank L. Hilton is Secretary; John N. Babcock is Trust Officer; Frank W. Black is Auditor and John G. Boston is Solicitor.

Entered at the New York Post Office as second-class mail matter.

Survey of the World

Coal for the Pacific Cruise

It is said at the White House that the battleship fleet will surely go to the Pacific, starting in the latter part of December. Several of the officers in command have been relieved, in order that younger men may have their places. Concerning the coal supply, interesting questions have arisen. About 130,000 tons must be carried from the Eastern Coast to San Francisco and various points along the route. Bids for the transportation were opened on the 24th, foreign ships having been invited to compete. Sixteen of the nineteen bids were based upon the use of foreign ships; three were from owners of American ships, whose price for transportation to San Francisco was nearly twice as high as that of their foreign competitors. It is said that the President would prefer American ships, if the additional cost should not exceed $200,000; but the excess would be much greater, and the supply of American carriers is said to be inadequate. The bid regarded with most favor calls for a payment of $785,000, which would make the cost of the coal supply about $1,200,000. Representatives of American shipping interests have made formal protest against the use of foreign ships, asserting that it would be unjust to American labor and "a betrayal of the protective policy." They also say it would be a violation of law, and this is said to be the opinion of the Department of Commerce. Our coastwise navigation laws forbid the transportation of merchandise from one American port to another American port in foreign bottoms, on penalty of forfeiture, but a recent statute permits the use of foreign ships in carrying supplies for the army and navy if the price demanded for carriage in American ships be "excessive or unreasonable." It is understood that the President looks to this statute for authority to use foreign ships in this case.

Immunity for the Alton

After a careful inquiry, Attorney-General Bonaparte decided that a promise of immunity had been given to the Chicago & Alton Railroad Company in consideration of the testimony of its officers and employees in the recent trial of the rebate case at Chicago. This was the trial at the end of which a fine of $29,240,000 was imposed upon the Standard Oil Company. Mr. Bonaparte's conclusions were made known to District-Attorney Sims in a long letter which he delivered to Judge Landis. The latter, on the 24th, informed the special grand jury called to consider the Alton's offenses that the promise of immunity must be observed. He did not, however, discharge the grand jury, but unexpectedly directed that it should consider certain charges made in a pamphlet recently published by the Standard Oil Company. In this pamphlet, of which 4,000,000 copies have been printed for distribution, James A. Moffett, president of the Indiana Standard Oil Company, is credited with asserting that thousands of other shippers have done what the Standard did in the territory to which the recent trial related, and with asking whether there was "a purpose in selecting the Standard as a victim." Judge Landis resented this suggestion of unjust discrimination, and caused Mr. Moffett to be called as a witness in order that he might give the names of these other violators of the law. The hearing is to take place this week. It is understood that immunity for the Alton includes E. H. Harriman, who

was chairman of the executive committee of the road when the rebates or unlawful rates were granted.——In San Francisco, on the 27th, indictments containing 124 counts were reported against the Southern Pacific Railroad Company and the Pacific Mail Steamship Company for violating the law in making secret low rates on matting from Japan.

The Oil Trust Suit

Additional testimony was taken last week in the Government's suit against the Standard Oil Company under the Sherman act. It is the aim of the Government's counsel, Mr. Kellogg, to show that the present company is really the old combination under another name, and he demands the books of the trustees by whom the old combination was liquidated, apparently believing that they will tend to prove this. These books have disappeared. It was suggested that he should call upon H. M. Flagler, secretary of the liquidating trustees, as a witness. Some think he is unwilling to call Mr. Flagler because the latter might gain immunity by testifying. At the beginning of the proceedings in New York, prominent officers of the company testified that they did not know that the Corsicana Company, in Texas, was controlled by the Standard. It was admitted last week, however, by H. C. Folger, Jr., a Standard director, and C. M. Payne, vice-president of the Standard's National Transit Company, that they had owned the Corsicana Company for the last eight years. Witnesses representing independent interests testified concerning the rebates of 50 per cent. granted years ago by the Pennsylvania and Vanderbilt railroads to the Standard thru the agency of the South Improvement Company, asserting that the controlling officers of these roads advised them, when they complained of this discrimination, to sell out to the Standard. The testimony of Standard officers indicated an attempt to evade the recent amendment to the Interstate Commerce law which makes oil pipe lines common carriers and requires them to publish rates. It appears that on the pipe lines which bring oil to the Atlantic seaboard there have recently been established what are called terminals at points on the State boundaries of New Jersey and Maryland. Rates from the interior to these points are published, but it is evident that producers would not desire to ship oil to these boundary stations. The lines from these stations to the seaboard are wholly within a State and therefore not subject to the national law. They are owned directly by the Standard, while the remaining parts of the lines are held by one of the subsidiary corporations. Up to the present time, no oil except that of the Standard has been carried in the pipes. There was inquiry about a pipe line extending under the Hudson River, crossing Manhattan Island under Central Park, and passing under the East River to Brooklyn. The books showed entries of large sums on account of such a line, but C. M. Payne, general manager of the Standard's pipe line service, testified that he did not know whether such a line existed. The comptroller of the company could not say who owned such a line. There was evidence that a subsidiary company had been paying rent for it to the Standard until two years ago. As the line is said to cross the Hudson from New Jersey, it may be subject to regulation under the new law.——There was published on the 23d, by the Associated Press, an interview with a representative of the Standard (name not given) to the effect that "after the Standard has freed itself from the labyrinth of litigation now involving it," there would be a reorganization, accompanied by an increase of the capital stock to $400,000,000 or $500,000,000, and that periodical statements of earnings, etc., would then be published. A few hours later Vice-President Archbold said: "The published statement to the effect that the Standard Oil Company is about to confer as to changing its name, extending its capitalization, and so forth, is unauthorized and untrue."

Senator Borah on Trial

During the trial, last week, of Senator William E. Borah, of Idaho, accused of conspiring to obtain public land by fraud, thirteen persons testified that they had taken timber claims fraudulently for the benefit of the land company whose officers are under indictment, each having received the money

required for payments to the Government, together with a bonus of $250. While examining talesmen for the jury, the district attorney disclosed the fact that among those indicted was the late ex-Governor Frank Steunenberg, who was killed by Harry Orchard, and for the murder of whom Haywood was recently tried at Boise. In the indictment the ex-Governor appears as John Doe. Twelve persons were indicted with the Senator. He is tried first at his own request, in order that a decision may be reached before the date when his credentials are to be presented at Washington. The other indicted men have submitted pleas in abatement relating to the action of the grand jury and of District-Attorney Ruick, but he forbade his attorneys to seek delay or advantage by technicalities. It is alleged that 108 claims of timber land were taken up fraudulently and transferred to the Barber Land Company, whose chief officers, James T. Barber and Samuel G. Moon, of Eau Claire, Wis., are among those indicted. More than one hundred well-known residents of Southern Idaho are involved, because they consented to take up the claims for the bonus offered. In some instances several members of a family, daughters included, were engaged in the work. The prosecutors have denounced ex-Governor Steunenberg as an "arch conspirator" in the affair, and letters connecting him with what was done have been submitted as evidence. Owing to the charges against District-Attorney Ruick, the Government has taken the trial out of his hands and entrusted it to M. G. Burch, of Detroit, and S. R. Rush, of Omaha, special assistants of the Attorney-General, who are experts in procedure relating to the land laws.

Events in San Francisco

At the trial, last week, of Tirey L. Ford, chief counsel for the street railway company of San Francisco, for bribing the supervisors, the testimony was like that upon which Louis Glass, vice-president of the Pacific States Telephone Company, was convicted (at the end of his second trial) and sentenced to be imprisoned for five years. Ex-Supervisor Lonergan said he received $4,000 for his vote in favor of an overhead trolley franchise, and ex-Supervisor Gallagher testified that Ruef paid him $85,000 to be distributed in the board in the same interest. Counsel for the defendant asserted that the purpose of Prosecutor Heney and Rudolph Spreckels was to obtain control of the municipal government in order that they might sell the property of the Spring Valley Water Company to the city. The attack of the indicted men upon the grand jury has come to nothing, the validity of the jury and of its acts having been sustained by the Supreme Court. William J. Biggy, who, as elisor, has had charge of Ruef, has been appointed Chief of Police and has reduced his predecessor, Chief Dinan, to the ranks. Dinan was a faithful supporter of ex-Mayor Schmitz. At the Republican convention, last week, District-Attorney Langdon was renominated by unanimous vote, but Mayor Taylor was rejected, receiving only 45 votes, against 104 for Daniel Ryan. The Union Labor party's convention followed a program made by Schmitz, nominating P. H. McCarthy for Mayor and Thomas O'Neill for Sheriff. O'Neill now holds that office and has been regarded by the prosecutors as a supporter of the indicted men.——There have been about fifty cases of plague in the city, more than half of them fatal.

The Japanese in Canada

By order of the Dominion Government, the steamship companies that have been bringing Japanese to Vancouver have been notified that Japanese will not be admitted unless they bear passports made out specifically for Canada. This will check the immigration of Japanese from Hawaii. A great petition praying for legislation to exclude Orientals will soon be sent to Premier Laurier from British Columbia. The Canadian Manufacturers' Association is at variance with the Labor Congress on this question. Last week it adopted a resolution opposing abrogation of the commercial treaty with Japan. The question will be prominent in Canadian politics. Mr. Borden, leader of the Conservative party, assisted by Sir Charles Tupper and others, opened the campaign at Vancouver on the 25th, and expressed the opinion that if immigration from Japan

and China should not be checked it would drive the whites out of British Columbia. The question really was, he continued, whether the British Columbia of the future should be dominated by subjects of the Mikado or by Canadians, and his party would insist that the province be ruled by men of British ancestry. Some predict that on this issue the provinces west of Lake Superior will be carried against the Liberal Government.——Japan has the same question at home, where complaint is made about the recent importation (by a contractor, with the permission of the Government) of several hundred Chinese coolies, who are employed in extending the Government railways, working for a little more than half the wages which Japanese are accustomed to receive.

Cuban Conspirators Arrested

Maso Parra, Juan Ducasse and Lara Miret, revolutionist conspirators, were arrested on the 26th by the Government's secret police. The three men call themselves generals. Parra turned against the Cubans in the recent war, and commanded a band of guerrillas in the interest of Spain. There were indications that he had received a large bribe. After the war he lived in Madrid. The Palma Government excluded him from Cuba. He returned a few months ago, coming from Santo Domingo. Ducasse is a negro. Governor Magoon has known for some time that there was a conspiracy to cause an uprising on or about the 28th, and that these men were the leaders of the movement. They had plenty of money and were at work among the negroes, who were discontented and who were told by these conspirators that a revolt against American rule would be supported by Japan. It is asserted that money was supplied to the conspirators by persons in New York, and that the Government knows who these persons are. Arrests were made when it was ascertained that the conspirators were planning the destruction of the palace in Havana by dynamite. An uprising was predicted in a long cable message sent on the 25th to a New York paper by the conspirators. To this a misleading signature was attached. The revolutionists appear to have had the support of no political party. Gen. Pino Guerra, leader in the recent uprising, denounces them. General Gomez, the Liberal leader, commends the Government for making the arrests. Thousands of messages to the same effect have been sent by Cubans to Governor Magoon. Discontent appears to be confined to the negroes of the island. On the 28th, near Mayari, in Santiago province, a band of thirty revolutionists or outlaws fired upon the rural guards. On the same day the guards, at a place near Nipe Bay, were attacked by a small party. While no serious conflict with the discontented is expected, it is thought that the events of the past week will prolong the period of American occupation.——Governor Magoon's plans for spending large sums in the construction of good roads are not approved by planters and other employers because it is thought that the work would require thousands of laborers who are needed elsewhere.——The movement for the erection of a monument to the memory of General Vara del Rey, the Spanish commander who fell while leading his forces at the battle of El Caney, in the recent war, is approved by many influential citizens. Among the subscribers to the fund are Governor Magoon and prominent officers of the American army.——On the 18th, the Dominican Congress, by a vote of 14 to 2, authorized the President of the republic to act with respect to the contract with New York bankers for a loan of $20,000,000. It is said that the bonds will be taken at 96. This loan is required for the settlement of the foreign debt, in accordance with the plan provided by the recent agreement with our Government.

The Hague Conference

No action of importance has been taken by the Peace Conference in session at The Hague during the past week. At the seventh Plenary sitting ten of the recommendations of the Commission on Maritime War were adopted. It was voted by 32 to 9 that merchantmen may be transformed into warships without restricting the place where the change may occur. The articles provide that no converted merchantman can claim the privileges of a belligerent unless it be placed under the direct authority and immediate control and responsibility of the State

whose naval flag it carries. Converted merchantmen must bear "the outward and distinctive signs" of ships of war of their nationality. The commanding officer must be in the service of the State and hold a proper commission, and the crew is to be subject to regulations of military discipline. Converted merchantmen must conform to the laws and customs of war. Finally, a belligerent must at the earliest possible date publish in the list of vessels of his war fleet the fact that a merchantman has been converted. In the debate on this question in the Commission, Great Britain opposed the conversion of merchantmen on high seas, and this she was supported by America, Italy, Japan and five other delegations. On the other hand Germany, Austria-Hungary, France, Russia and three others resisted the proposed restriction. The article that provides that a merchant vessel of a belligerent which are in the port of an enemy at the outbreak of hostilities shall be allowed to depart immediately, or after a sufficient period of grace, was adopted by the Conference. General Porter, of the American delegation, stated that America required more time for the study of this question, but he voted in favor of it subject to definite instructions from Washington. Another article which was adopted provides that the merchant vessels of an enemy which have left port before the outbreak of war and are met at sea, still in ignorance of hostilities, cannot be confiscated. They are liable only to be seized subject to the obligation to restore them after the war without indemnity, or to be requisitioned or even destroyed subject to indemnification and to the obligation to provide for the security of the persons and the preservation of the papers on board. After these vessels have touched a national or neutral port they are subject to the laws and customs of naval warfare. The Conference recommends that the Powers apply to naval warfare as far as possible the principles of the Convention of 1899 regarding land warfare. The Committee of the Third Commission on the rights and duties of neutrals in naval warfare adopted an article which prohibits belligerent warships from revictualling at neutral ports except to complete what would be their normal revictualling in time of peace. It also prohibits them from taking any more coal at neutral ports than is necessary to enable them to reach the nearest home port. "They may, however, take sufficient coal to fill up their bunkers in the proper sense of the term when they are in waters of neutral Powers who have adopted this method of computing the amount of coal to be allowed. The fact of revictualling, however, does not give the ships the right to prolong their stay beyond the legal limit, unless in accordance with the law of a neutral State coal is not supplied until twenty-four hours after a warship's arrival, in which case the time limit is extended twenty-four hours." What was regarded as the most important achievement of the present Conference, that is, making it a permanent institution with regular meetings at definite periods instead of being dependent upon the call of some monarch, has been practically nullified thru the adroitness of President Nelidoff. In order to avoid offense to Russia it was left to him, as the chief representative of Russia, to take the initiative in this matter. His resolution, however, which was adopted by the Conference, simply asked for the convocation of a Third Conference without providing for regular and automatic meetings in the future. The full intent and significance of his omission was not perceived by the Conference until the 29th, when Dr. Beldiman, the Rumanian delegate, delivered a speech in which, after dwelling on the humanitarian initiative of Emperor Nicholas and the gracious hospitality of Queen Wilhelmina, said that in view of the omission from the resolution of September 21st of the name of the person who should convoke the next Conference, it was understood that Emperor Nicholas should do so. This leaves the matter exactly as it stood before the Conference, leaving future conferences to be called by the Emperor of Russia at his own time and pleasure.

Emigration From Spain

The Spanish Government has determined to put a stop, so far as it is able, to the emigration of laborers, which, on account of the hard times and crop failures of the past two years, has increased to an alarming extent. Señor Cierva, Min-

ister of the Interior, has drafted a rigorous restriction law which will be presented to the Cortes when it assembles next month. Altho it ostensibly recognizes the right of a Spanish subject to emigrate, it absolutely prohibits the departure of all Spaniards subject to military duty, and requires the express permission of a Department of Emigration, which the law creates, for those desiring to go abroad for the purpose of colonization. Moreover, it reserves to the Government the right, "for reasons affecting the public good, public health, or unusual risks which intending emigrants may incur," entirely to prohibit "temporarily" all emigration to "certain countries or sections." It also contains another clause, aimed directly at canal emigrants, voiding all contracts in which the transportation, as in the case of the canal laborers, is to be repaid by labor. The conditions and restrictions it proposes to impose upon the steamship companies are almost prohibitive. This is directed particularly against the Isthmian Canal Commission, which has been for the last year and a half recruiting laborers from Spain on a large scale to work on the Panama Canal to replace the West Indian negro.

Peace at Casablanca

Seven of the tribes in the vicinity of Casablanca, Morocco, have gone to General Drude's headquarters and agreed to the terms of peace which he has imposed, each tribe giving two of its chief men as hostages. The terms of peace are as follows:

The tribes engage to disperse and chastise all armed bodies that may assemble in their territory with hostile intent. Every native found in the possession of arms or amunitions of war within ten miles of Casablanca shall be handed over to the Shereefian authorities, condemned to imprisonment, and fined $200. The tribes shall be held responsible for the carrying out of this stipulation. Every native detected in smuggling or using arms shall be punished.

The delegates of the tribes undertake to surrender the authors of the outrages upon Europeans of July 30, and, pending judgment, their goods shall be seized and sold irrespective of the indemnity which is to be paid, the amount of which shall be fixed by the Moroccan Government.

The Chaouias tribesmen, who are considered to be responsible for the attacks on Europeans at Casablanca and the pillage in that town, will be required to pay a special indemnity of $100,000, assessable among the tribes, which sum will be exclusively devoted to the improvement of the Port of Casablanca.

The Moroccan Government will pay France an indemnity for the damages sustained by French citizens at Casablanca, the amount to be subsequently determined upon, Spain, Germany, and other countries whose subjects have incurred damages will formulate similar claims.

Disestablishment Propaganda

The example of France and Geneva in severing the historic union between State and Church is proving contagious. In Germany the conservatives within the Protestant Church are coming to the conclusion that the present status, according to which both radicals and confessionals are found united in one and the same Church, is intolerable. This conviction has been specially voiced recently by Prof. R. Seeberg, of the University of Berlin, of which he is the leading conservative member, in a series of articles, in which he insists that so sadly and badly divided a house as is the Protestant State Church, from a confessional point of view, cannot stand, and urges the organization of two kinds of State churches, one orthodox and the other advanced, and both equally supported by the State. Dr. Stöcker, the famous ex-Court preacher of Berlin, demands that the radicals sever their connection with the State churches and organize a Church of their own, being willing to turn over to them their fair proportion of Church property. To this the advanced men object, and insist that they are honest children of the Reformation. In the meanwhile the independent churches that do exist in Germany have formed a federation. The Breslau and the Immanuel Synods, the two largest, have actually united, and the Hermannsburg, Hessian and other "free" churches have now reached an understanding. In other sections of the German Church the disestablishment idea is gaining ground. In Denmark decisive steps have already been taken looking to the change of the State Church into a free national Church. A convention was held, at which a tentative constitution for such a reorganized Church was agreed upon,

altho three distinct schools of theological thought were represented, the radical Grundvigians, the middle party, consisting of orthodox Lutherans, and the right or pietistic party, under the leadership of W. Beck. This tentative scheme is along congregational lines, and makes the Church practically independent of the State. The movement has come from within the Churches and has not been favored by the bishops. One of the latter, Bishop Rördon, has announced that the Government will seriously consider the proposed reorganization plan, but it is yet uncertain what the outcome will be. In Denmark, as in Germany, it is the State and not the Church that profits by the union, and in neither country do the State authorities show the least inclination to favor the separation project.

Japan and Korea

Marquis Ito has returned to his post as Resident-General in Korea. During his visit to Tokyo for consultation with the Government he had succeeded in preventing, or at least in postponing, the annexation of Korea, which many leaders of thought in Japan strongly favored. He states his position in the following language:

"Some people in Japan believe it is a mistake not to annex Korea, but I am convinced that annexation is merely a crude and cruel means of securing the desired friendship and assistance of Korea in order to build up the two countries, whose interests are mutual. Annexation is no part of the Emperor's plan, unless it should prove quite unavoidable. Annexation would mean the loss of self-respect by the Koreans; it would be too violent a remedy. The masses of Korea have been sufferers from corrupt misgovernment, political intrigue, and oppression of the agriculturists until they have become a menace to Japan and until all development in the country has been hindered.

"I want the missionaries of America and England to know that I am anxious to help them. We are all working for a common object, namely, the building up of civilization. But the missionaries should not mix in politics. Let them attend to their work and I will confine my energies to mine. It is certain, however, that each of us can help the other. I am convinced that thinking people the world over will approve of Japan's course. What matters the color of the skin or the religious belief if we are working together for the good of humanity?

"Japan has counted the cost of these reforms in Korea, and nothing shall prevent us from carrying them out. It is true that the Koreans themselves may prevent the accomplishment of our purpose to give them a system of government and an army of their own, but the people of Korea and the entire world must understand, once for all, that the political supremacy of Japan in Korea is to remain firmly established. We are not asking advice from any one regarding this policy. If the people of Korea refuse to accept this fair and friendly assistance they will, by their own act, write annexation into history, for as a nation divided in sentiment from Japan, Korea cannot stand."

The efforts of Japan will be directed to the reform of the judiciary, the abolishing of corruption, the protection of land and property, establishment of equitable land laws and taxation, and the encouragement of enterprises developing the natural resources of the country. It has been decided that Prince Yong, son of Lady Om, shall be recognized as heir to the throne. The Prince is eleven years old, and will probably be sent to Japan to receive his education. Lady Om, tho not the legitimate wife of the ex-Emperor, has been his favorite, and for many years her intrigues have been an important influence in Korean politics. The Japanese have evidently decided that it would be better to conciliate than oppose such a powerful court faction. The Emperor and ex-Emperor have cut off their topknots, the distinguishing mark of the Koreans and their especial pride, and have ordered their subjects to follow their example.——An explosion took place on board the Japanese battleship "Kashima" while at target practice near Kure. One of the ten-inch shells exploded while being loaded. Twenty-seven men were killed and eighteen wounded.

Foreign Notes

The suit brought by Lord Ashtown for compensation on account of the damages caused by the explosion of a bomb in his hunting lodge near Clonmel, Ireland, on the night of August 13th, has been decided in his favor and $700 and costs have been levied against the ratepayers. Judge Fitzgerald declared that the outrage was malicious, and condemned severely the police inspector who insinuated that Lord Ashtown himself was responsible for the affair. The case assumed considerable political importance, because it was the

outgrowth of the war levied by the peasants against the cattle owners, and the defense was conducted by Timothy Healy, M. P.——Major Alfred Dreyfus has retired from the army on the ground of ill health. It is supposed that this is only a pretext to cover his dissatisfaction at not being promoted to the rank which he would have held if he had not been unjustly condemned for treason and sentenced to Devil's Isle.——The National Convention of the Socialists of Germany, held at Essen, considered for the first time the question of drunkenness among the laboring classes. Herr Wurm, a former member of the Reichstag, made a speech in which he asserted that drunkenness had increased with capitalistic production and that its causes were long hours, low wages and unhealthy dwellings. He condemned John Burns, the English labor leader, for saying that workingmen took advantage of shortened hours and higher wages to indulge in dissipation. A resolution was past, with only one opposing vote, declaring the Socialists of Germany opposed to the use of alcohol in any form during working hours, and favoring the abolition of the custom common in German factories of providing beer to men at hard labor.——The experiments of Count Ferdinand Zeppelin with his large balloon airship have been so successful that the Government has appropriated $40,000 to assist him in his further work.——The strike of the dock laborers at Antwerp, which has prevailed ever since August 6th and been marked by much violence, came to an end on September 24th. The Shipowners' Federation has completely triumphed, the men returning to work unconditionally, leaving the question of wages and other complaints to be examined by a mixt commission in the future. The lockout was won thru the wholesale importation of foreign laborers, largely English, and it is understood that on account of the injury to commerce, due to the long and bitter strikes in England, France, as well as Antwerp, the large ship companies of the world have formed a combination for mutual protection which it is expected will effectually prevent such strikes in the future. It is reported that a large and competent corps of international strikebreakers will be continuously maintained, to be sent to the ports of any country in the world where danger threatens.——A Boxer outbreak is reported from the southern part of the Province of Kiang-si, China. At Kanchow an Italian priest and many converts were massacred.——The Russian Admiralty is preparing to carry out its plans for the construction of a large and efficient fleet of naval vessels. The squadrons will be homogeneous, each consisting of four battleships, eight cruisers, torpedo boats and auxiliary vessels. The battleships will be large, of the "Dreadnought" type. It has been decided to have the vessels almost exclusively built in Russia, but not necessarily by the Government. The new Admiralty Shipping Yard and Izhor Steel Armor Works will be turned over to chartered companies by which the ships will be built by contract. It is reported that Charles M. Schwab will be concerned in the management of the Izhor plant, which will be reconstructed and run on American principles. The estate of Princess Dolgoreukowa near Tchernigoff was pillaged by an armed mob, and the residence, stables and all the other buildings were burned to the ground. The *Novoe Vremya,* in an article on "The New World Power," takes the following view of the voyage of our fleet to the Pacific Ocean:

"The day when the United States fleet passes out of the Strait of Magellan and sweeps proudly into the waters of the Pacific will open a new era for the Eastern World. Official courtesies and the temporary lull in war talk do not conceal the fact that America is reaching out for the mastery of the Pacific and already is strong enough to attain it.

"She entered the race for it in the Spring of 1903, when Congress voted the Navy bill and the Panama bill, both essential to the object in view. Without any noise except the ceaseless rumble of machinery, the mighty people, passionately proud and fond of their country and commanding boundless resources, succeeded in forging a sea power already including twenty-five battleships, and having its docks crowded with many more war vessels. The American people are not lured by the glamour of mere display. Their purposes are deeper. Kindred of England, America's creed is that commerce follows the flag. Her object is incompatible with mere desire for trade in the Far East. England won the throne of the Atlantic from Spain, Holland, and France. America is about to challenge her rival for the throne of the Pacific."

THE MISSISSIPPI RIVER AT ST. LOUIS.

Down the Mississippi

BY WILLIAM A. RODENBERG

MEMBER OF CONGRESS FROM ILLINOIS

THE trip of President Roosevelt down the Mississippi River from Keokuk, Ia., to Memphis, Tenn., which has been arranged for the month of October, will direct national attention to a subject which is of absorbing interest to the people of the Middle West. The President has repeatedly emphasized his hearty sympathy with the movement that has been inaugurated to secure deep water from the Lakes to the Gulf, and it is confidently expected that as a result of this approaching visit the strongest kind of impetus will be given to the movement, and that the President, with characteristic energy and vigor, will urge upon the Congress the necessity of beginning work on this important project.

In the last Congress, while the River and Harbor Appropriation bill was under consideration, a number of us who represented districts located in the Mississippi Valley made the strongest fight that we were capable of making, to secure an additional appropriation of three million dollars to begin the construction of a navigable waterway fourteen feet in depth from Lockport, Ill., by way of the Des Plaines, Illinois and Mississippi rivers, to St. Louis, Mo. This proposed waterway, which is of such transcendent importance to the future development and disposition of the commerce of the

THE DEEP WATER ROUTE FROM CHICAGO TO THE GULF.

Mississippi Valley, has received the unqualified endorsement of the great commercial, manufacturing and agricultural interests of the State of Illinois, and has been pronounced entirely practicable by a board of competent engineers, who

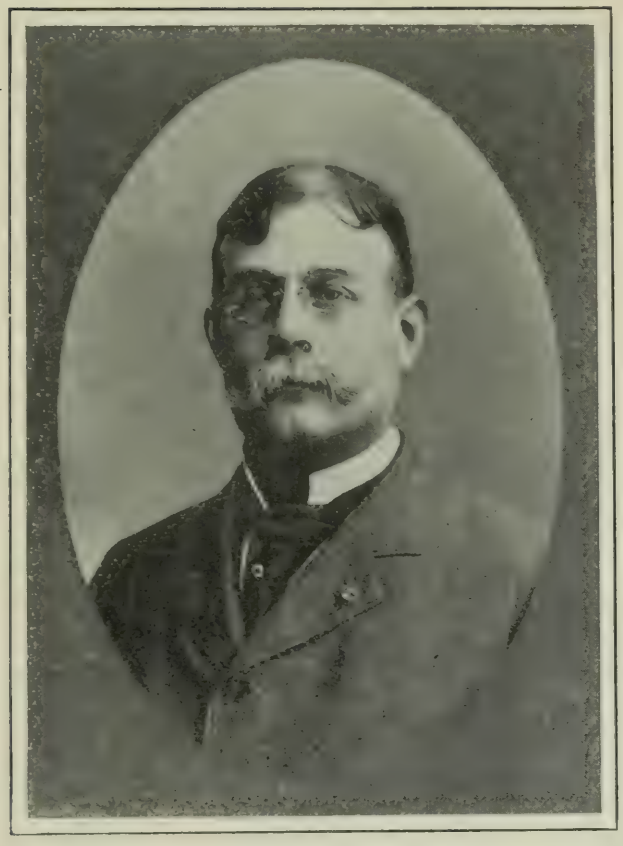
estimate the total cost at approximately $31,000,000.

The Mississippi River and its tributaries drain the most fertile and productive sections of the United States. In this basin are located twenty-two States of the Union, comprising two-fifths of the total area of the country and producing fully 75 per cent. of all our merchandise exports. The great bulk of our agricultural wealth originates in these States, to overestimate the value to the whole nation of this projected deep waterway which is destined ultimately to connect the Great Lakes with the Gulf of Mexico.



It is, of course, an admitted fact that transportation by water is the cheapest transportation in the world. It is estimated that, on an average, the cost of transportation by water is less than one-third of the cost of transportation by

THE U. S. DREDGE "HENRY FLAD."

which contain two-thirds of all the manufacturing industries of the nation, the value of whose finished products reaches the enormous total of $10,000,000,000 annually. When these facts are considered and when it is remembered that the Mississippi Valley is today the great central artery of our national activities, pulsating with industrial and commercial life, throbbing with the unmeasured wealth of the products of farm, mine and factory, then indeed is it impossible

rail. The market value of any article is based upon the cost of production added to the cost of transportation. It therefore follows that if there is a material reduction in the cost of transporting an article it will necessarily result in a material reduction in the market value of the article itself, and whenever you reduce the price of an article you benefit not only the consumer, but the producer as well, for you increase the demand for his product. To bring about these ben-

COL. CLINTON B. SEARS.

efits it is incumbent upon Congress to enact legislation which will result in the improvement of our waterways, the great natural highways of commerce, and to make them available for the purposes for which they are plainly intended. The most serious handicap today on the productive capacity of the Middle West, and one which will continue to grow worse instead of better, is the inadequacy of our transportation facilities. The unprecedented prosperity which we have enjoyed during the past decade has advanced our production far beyond the point where it can be handled with any degree of expedition by the railways of the country, and, as we continue to increase in population, there will be a corresponding increase in the volume of our traffic, and it will not be long until there will be an interruption in our prosperity due to the overtaxing of our channels of commerce and the physical inability to transport our products to the markets.

I have always believed that a continuation of our national prosperity depends upon a commercial policy that provides a market for our products. Lying at our very doors are the states of Central and South America, which presents a most inviting field for our exploitation. It is a rich and fertile field, possessing unlimited commercial possibilities, and its trade should belong to us as a matter of natural right on account of our close proximity and friendly relations. Only recently our great Secretary of State, Elihu Root, completed a tour of these states, and the beneficial effects of his visit are already beginning to manifest themselves. He has sown the seeds of amity and good will, which should, under proper cultivation, ripen into the fruit of commercial supremacy. To insure this, however, and to make effective the ultimate object of the distinguished Secretary's South American policy, we should provide facilities necessary to transport our products to the markets of our southern neighbors. The construction of this deep waterway or interior harbor, reaching from the Lakes to the Gulf, will alone supply these facilities and secure for the United States the commercial advantages in Central and South America to which our favorable location fairly entitles us.

But there is still another phase of this question that I wish to discuss briefly. I believe that the construction of this deep waterway would have a very appreciable effect on prevailing railway freight rates. It would create a large number of independent carriers on a common highway and introduce a most effective competition, which would prove highly beneficial to the shippers of the Mississippi Valley. This is the firm belief of the advocates of the deep waterway project, and, as an evidence of that belief, they have adopted as their slogan in this campaign of education the motto: "River Regulation is Rate Regulation." They believe, and rightly so, that competition of this kind will exert far greater influence and prove far more effective in controlling freight rates than any rate bill that could be passed by Congress. They believe also that it would stimulate our shipping industry and add materially to the number of craft upon American waters. There are today in the neighborhood of 3,200 American vessels on the Great Lakes. If we had a channel of sufficient depth from the Lakes to the Gulf to enable these vessels to pass thru, the ma-

jority of them could and would be employed during the time that navigation was closed in the lake region in the coastwise trade, or in the Central and South American trade.

The tremendous commercial possibilities involved in this proposed project and the resulting benefits to the American people are beyond the powers of calculation. With the single exception of the United States, every country of any consequence has long since adopted a systematic method of developing and improving its waterways. Practically every river in Germany and France and England has been deepened, and a network of canals has been built which connects the majority of them. The people of the countries of Europe realize that their continued industrial success depends in a large measure upon cheap transportation, and they are quick to improve the facilities which nature has placed at their disposal. It is high time that the United States, the most progressive and enlightened of nations, should wake from its lethargy and inaugurate a similar policy on a broader and grander scale, for in that policy lies the future prosperity of the American people. We are spending millions upon millions upon our navy and upon the national defense. Fully 40 per cent. of our national expenditures go to the army and navy, in preparation for war and its results, altho we claim to be a nation of peace. While I believe in a navy adequate to protect the dignity of the Stars and Stripes wherever they may be unfurled, and while I am prepared to give my unqualified support to the Administration's ambitious naval policy, yet I do not believe that we are justified in longer delaying the great and necessary work of internal improvements. The report of the Secretary of the Treasury for the fiscal year ending June 30, 1907, shows that our receipts for the year exceeded our expenditures approximately $87,000,000. A part of this magnificent surplus should be used,

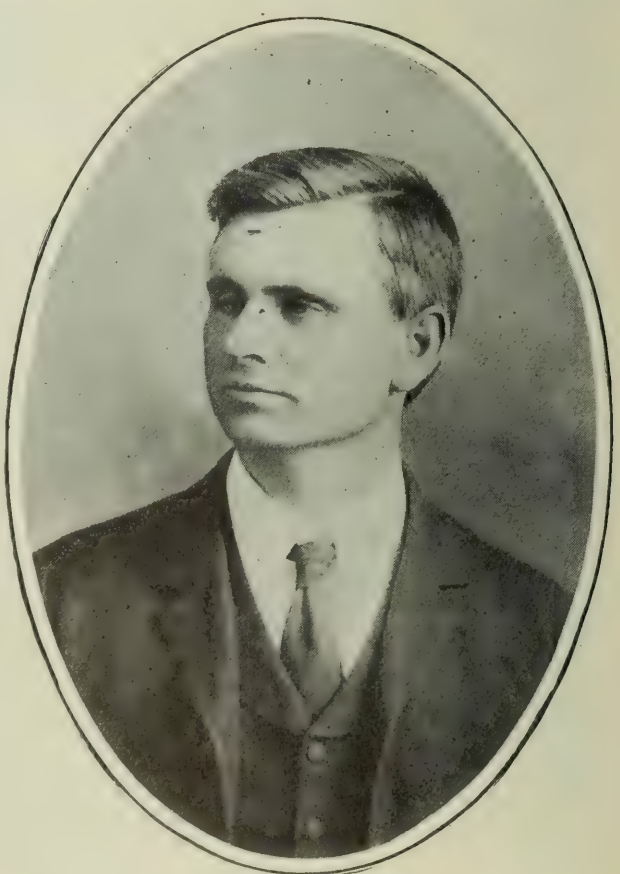
"THE BUSINESS END."
The Mississippi River Commission dredge in dry dock at Keokuk, Ia

and used at once, in the development of a project which so materially involves the welfare of a majority of the people of the United States.

I want to live to see the day when American-built ships floating the American flag will land at the wharves of the splendid and progressive cities of the Middle West, and, loaded with the products of our farms and mines and factories, will pass down the majestic Mississippi, out into the Gulf of Mexico, thru the Panama Canal, and thence across the Pacific to supply the wants of the teeming millions of the Orient. I believe in a greater and a grander America. I believe in finding new markets for the products of American brain, American genius and American muscle. I believe in extending our trade to every part of the civilized world, for in that policy I see the continued happiness and prosperity of all the American people.

WASHINGTON, D. C.

Oklahoma in Congress



BY L. J. ABBOTT

[While it is not yet quite certain that Oklahoma will be admitted under its remarkable constitution, the men selected by the people as its representatives in Congress are likely in time to be seated. It is remarkable that two of them have Indian blood, and one other has been blind from his boyhood.—EDITOR.]

THE recent election in Oklahoma marks the entrance into national politics of a young man who has probably overcome a greater physical handicap to achieve success than any national figure our republic has produced. Thomas P. Gore, altho totally blind and but thirty-seven years of age, was nominated at the primary as one of the two Democratic candidates for the United States Senate.

When just eight years of age young Gore was accidentally struck in the eye by a playmate. Three years later, at a time when he was serving as a page in the Mississippi State Senate, an arrow from a crossbow destroyed his remaining visual organ. The youth at eleven was in total darkness. Undaunted, he went on with his studies. At sixteen he entered the Walthall, Miss., Normal College. Asking no favors, he mastered every required subject, and was eventually graduated with distinction. He owes much of his success to a fellow classmate and roommate, Charles H. Pittman, now also a distinguished citizen of Oklahoma, who studied aloud at all times, so that his blind companion could thus follow the daily tasks. Two years later, in June, 1892, when the blind youth had barely attained his majority, he was graduated from the law department of the Cumberland University, Lebanon, Tenn.

Young Gore's taste for forensics and his marvelously retentive memory made him take naturally to the law. His capacity as a witty, versatile debater and eloquent advocate at once gave him political recognition. He was nominated

THOMAS P. GORE,
The brilliant young blind man, whose election to the United States Senate is assured by the large Democratic majority returned.

to the Mississippi Legislature before he had attained his majority, and thus had to decline the honor. In 1896 he sat as a delegate in the Populist National Convention. Five years later the talented young blind man moved to Lawton, Okla., at the time of the "Comanche Opening." The next year he was elected to the Territorial Senate as a Democrat. He there developed legislative capacity of a high order, and his elevation to the U. S. Senate is a natural sequence.

The campaign just closed was heated, at times acrimonious. A millionaire

ROBERT L. OWEN (ONE-EIGHTH CHEROKEE INDIAN).

Whose election to the United States Senate is assured because of the large Democratic majority in the Oklahoma Legislature.

banker and a wealthy attorney were his opponents. Gore is a poor man, and thus could not command the advertising columns of the press of the new State. His ready wit, his iron memory and his remarkable eloquence were matched against their wealth and the assistance their wealth could command. Gore stumped the State. His opponents soon found that he was amply able to defend his record. Because of his retentive memory he can call by name more men in Oklahoma than any other two politicians of the State. He distinguishes

CHARLES CARTER, OF ARDMORE, INDIAN TERRITORY.

Congressman-elect from the Fourth Oklahoma District. Mr. Carter is one-fourth Chickasaw Indian and also has some Cherokee Indian blood. He is a farmer and stockman. Democrat.

personalities by the voice more readily than most men do by sight.

So Senator Gore was successful, not because of any sympathy, but because the plain, practical people of Oklahoma were convinced that he would be of more use to them in the national Senate than any other aspirant for the office. The Senator's election is practically assured, for his party is largely in the majority in the Oklahoma Legislature.

The second elected Senator is Robert L. Owen, who is one-eighth Cherokee Indian. He was educated at Washington and Lee University, was teacher, editor, lawyer, Indian Agent to the Five Tribes, banker, and has represented the Indians as their counsel in suits against the Government which netted the Indians nearly nine million dollars. He is a man of wealth, and has been prominent as a Democratic organizer.

One of the elected Congressmen, the Hon. Charles Carter, is also of Indian blood, being one-fourth Chickasaw, and has some Cherokee blood. He is a farmer and stockman, and a Democrat.

MINCO, IND. TER.

The Alabama Mining Camp

BY A CAMP PHYSICIAN

NEGRO workmen do fully 50 per cent. of the unskilled labor in the camps. These workmen have come from the farms during the past twenty years. A few of the younger ones were raised in the camps, but Jefferson County had very few negro inhabitants thirty years ago.

The environments in the camps are by no means conducive to morality. Almost all negro State convicts are sent to the coal mines. When their sentences have been worked out many of them remain in the coal fields. They have been forced to learn how to dig coal, and many of them can earn from three to six dollars per day. Besides the ex-convicts, many of the more restless and venturesome farm laborers drift into this region. They have heard of the higher wages of this district, and are thus enticed to leave their old homes on the cotton farms. Then there are families brought here on transportation. They have the promise of work at a named price, and their transportation is advanced.

These last two classes are leaving behind them on the farms their best friends of the white people. The white men on the farms take much more interest in the morals of their laborers than do the foremen at the mines. Furthermore, they will lack the sobering influence and example of the best men of their own race; for the negro who has once succeeded in buying a farm is loth to ever leave it for the mines. The better negroes in the country are unwilling to carry their families to the mines, realizing as they do that farm life is much more moral than is the camp life.

The ex-convicts, during their imprisonment, devoted their leisure time to dice and cards. I have seen them spending Sunday in gaming under the very eyes of their guards. After leaving prison this love for gambling stays with them, so that it is but natural that gambling is much more prevalent in the camps than elsewhere.

Drinking and public drunkenness, accompanied by the use of profane language, is very common, especially on the regular monthly paydays and on Saturday afternoons and Sundays, when the workmen are idle. These offenses are overlooked. Only a few of the graver violations of law are ever carried into court.

Gambling is an offense which has to be tried before the criminal court at Birmingham. It is very seldom that an arrest is made for this offense. But gaming with cards or dice on Sunday is an offense which is carried to the local inferior court. It frequently happens that whole crowds of negroes are arrested for Sunday gaming. Some informer will notify a deputy that a Sunday game is being played at some place; the deputy will take two or three men with him and accompany the informer. The game is raided, all present being arrested, whether in the game or not. In a few days they are tried before the local inferior judge. While the participants in the game may look downcast for some days following, the officials and informer bear quite the opposite mien. Owing to a peculiar fee system, the State derives very little, if any, revenue from such fines.

The laws regulating the sale of intoxicants is as openly violated without punishment as are the laws governing other criminal conduct.

Many of the women are also addicted to the intemperate use of strong drink. Cocaine is frequently used by the more debased of each sex. Morphine has only a small number of *habitués.*

The birth rate among these negroes is low. The only families in which there are many children are those recent recruits from the country districts. Marital ties are regarded very lightly in many instances. I have seen men living with as many as three different women in as many years. When asked about a former wife, the man would say that she was in some other camp. Some marry each new wife without divorce, often

under an assumed name, while others are never married to any of the women. At many houses there are no children. There frequently was one child when the woman was quite young. The child in about half the cases died in infancy from neglect or ignorant management. The greater number of the women of this class are soon incapacitated for motherhood by disease and intemperance.

The churches wield only a limited influence. Many make no pretense toward being religious, even tho moral. The lodges seem to draw many that are uninfluenced by the church. I knew one mulatto preacher, a recent recruit from the cotton farms. He was fairly well educated, and, thru the three years that I knew him, he was always sincere in his efforts for good. Soon after coming to our mining camp he was called to be pastor of the church of his denomination. He attempted to hold the membership to as strict a mode of conduct as he had been accustomed to in his country churches. After a few months' effort he resigned. He told me that he was discouraged, and that he longed to be back in the country, where men were religious for seven days each week, instead of just one.

The schools for negro children are poor. While Birmingham and the few larger towns have creditable schools for these children, the average camp negro school is very inferior to the ones maintained for white children. The county board of education is invested with power to grant to each school whatever money it thinks equitable. The board always thinks that the white child should have a longer term and a higher-priced teacher than the negro child. Consequently the white teachers are paid about twice the amount of salary that is paid the negro teachers, and the term taught in the white schools is from six to nine months, while that of the negro schools is from three to five months.

The secret organizations are prominent factors in the life of the camps. In our camp there are four different organizations represented. Each lodge has its female adjunct or chapter. The membership in these lodges is made up of the best men and women of the race. Some white men regard these secret orders with distrust, thinking that this banding together is for offensive rather than defensive and progressive purposes.

The orders are popular for several reasons. Of course, they tend toward a racial pride, fostering the advancement of members of the race. The social features alone would be sufficient for their prosperous existence. The sick and death benefits paid are important. It means much to a member to be buried by his lodge. It is not so much that the lodge bears the funeral expenses, but more important is the fact that the burial is carried out with becoming ceremonies. The members of these orders are more certain to "turn out" at the funeral of their deceased brother than are the members of similar white organizations.

One very important factor in these lodges is the self-government. Here only has the negro his best opportunity for exercising self-government. There is no excuse for hiding the sins of a brother from fear of too harsh treatment at the hands of a jury of another race. Members of these orders are more certain to be punished for disorderly and criminal conduct by their lodges than by the State authorities. As was noted previously, many offenses against the State statutes are never carried into court; but these are invariably, if done by a lodge member, taken up within the lodge.

As the lodges are so careful of the character of their membership, only the better and more law-abiding can obtain and retain membership. This fact tends toward the uplifting morally of all that part of the race which aspires to membership in these orders.

The female departments are noted for the care with which they nurse any sick member, and for the instruction of the girls, which has for its object the prevention of further amalgamation of the races thru the young negro women.

By far the greater number of negroes who are acquiring property in this district are members of these orders.

Birmingham, Ala.

Judgment

BY THEODOSIA GARRISON

Some plod thru dusty lowlands, and some fly
On even wings beneath a constant sky;
Yet surely this is very good to know—
Little the Master recks of how we go;
Not his to mark the devious winding ways
Of that long journey thru the little days;
Not his to plan the separate road of each—
Who judges only by that goal we reach.

Nor do I think the angels smile to see
How blindly some may grope and awkwardly;
Nor do I think their high approval springs
For those who know the glorious gift of wings.
Only I think that, all exultant, one
Glad watcher from the ramparts of the sun,
May cry: "Rejoice! Another valiant soul
Unaided and alone hath reached the goal!"

New York City.

Lessons From the French Colonial System

BY PAUL GUIEYSSE

Deputy and Ex-Minister of the Colonies

[The author of this article can speak with the highest authority on the subject which is here treated. For many years he has been one of the ablest members of the Radical party of the Chamber of Deputies, and he presided over the Colonial Department with the most marked ability for many months a few years ago. A highly educated engineer and professor at the celebrated Paris Polytechnic School, he is the author of a number of scientific books. It will be interesting to Americans to know that Mme. Guieysse resided when a child for a long period in New York, when her father was exiled from France after the coup d'état, which established the Second Empire. Secretary Taft's departure to attend the opening of the Philippine Legislature makes this article particularly timely.—Editor.]

I HAVE been asked to present in condensed form the lessons taught by the French colonial system, for, as the United States is becoming a great colonial Power, it is only natural that Americans should like to know what errors have been committed by the nations which have preceded them in this same field, in order that they may avoid committing these same errors. If I have consented to contribute something to the enquiry on this question now going on in the grand republic of the New World, I am not actuated by the sentiment which too often leads us Frenchmen to criticise ourselves. I am influenced by both a strong feeling of friendship for the United States and a desire to do some good to my own country, in this effort to bring before the public the following facts. Consequently, I will especially bring out in this study what I judge defective in the colonial methods of France. But this would give a very inexact idea of the real character of our colonial system if

I did not at the same time begin by calling attention to what has been, on the whole, our very creditable work in this field of activity. It should be borne in mind that the Third Republic has given back to France a vast empire beyond the seas that is quite as magnificent as that which the ancient *régime* lost to us. In less than a quarter of a century we have secured in different ways Tunis, the Kongo State, Guiana, the Ivory Coast, Dahomey, the Soudan, Madagascar, Tonkin, Cambodia, Anam, Laos, etc., and the development of the new acquisitions has everywhere, except perhaps in the case of the Kongo, followed close upon their occupation, with results of a most creditable character. Thus, the foreign trade of Tunis, which was only 20,000,000 francs in 1876, had more than quintupled by 1900, and the mines since discovered in that country give ground to hope for a still more brilliant economic future. Between 1888 and 1905 the trade with Indo-China has tripled, and over 700 miles of railway have been laid. The commerce of French West Africa has risen from 79,700,000 francs in 1896 to 153,000,000 in 1905, and some 300 miles of new railways have been opened. This colony, in fact, compares advantageously in every respect with its English and German neighbors, as is admitted by our rivals themselves. Further on in this article I will have something to say in this connection concerning Madagascar, and I dismiss this aspect of the question by adding that the total trade of the French colonies increased 87 per cent. between 1896 and 1905, rising from 469,600,000 francs to 873,900,000 francs.

PAUL GUIEYSSE.

France has a right to be proud of her colonial labors in the moral as well as in the material sphere. The best way to judge of this is to observe the manner in which the European nations treat the natives in their colonies, and how they conciliate the exercise of the rights of conquest with respect for the rights of the aborigines. Tho there have been some individual acts of cruelty in our colonial administration, which made all the deeper impression on account of their rarity, and tho we are guilty of a few more general faults in some of our possessions, especially in Madagascar, the colonial policy of France, in so far as it has to do with the native population, is, all things considered, the mildest and most humanitarian of any nation. Our subjects or our *protégés* are so well aware of this that they fear nothing so much as the danger of changing our rule for that of some other country. Thus it has often been proposed to give a better form to our possessions in India by ceding, for instance, Chandernagore to England in exchange for an increase of territory around Pondicherry. But the natives, who would thus become British subjects, have always energetically objected to this course, declaring that they preferred to remain French. Yet India is one of the colonies where the English system of colonization has produced the most remarkable practical results, and at the same time, one of those where our own system has been the most thoroly vitiated in its application. Yet the Hindus who have lived under our rule recognize the extreme liberalism of our methods. It may be honestly said, therefore, that during the past twenty-

five years France has written a fine page in its colonial history, so that the criticisms which I am now going to make—and in what human enterprise are there not shortcomings?—are of about the same importance as would be some typographical errors on the real page of the colonial history just referred to; errors sometimes too glaring not to mar the beauty of the page, but, on the whole, too insignificant to modify the real character of the work.

The radical fault in our colonial system, and from which all the others spring, consists in excess of centralization. While it is true that the Minister of Colonies at Paris ought to govern everywhere thruout our over-seas possessions, it is also just as true that he ought to administer nowhere, but leave all administrative matters to the care of the governor and the local assemblies in each colony. The great benefit which would be derived from this reform would be found in the fact that the representative of the central authority would then have the leisure and the conditions of mind which would permit him to study and decide questions of a thoroly general interest and to decide them at the most opportune moment; he would then be able to give careful attention to that all-important matter of the selection of the higher functionaries who are to go out to the colonies in an official position; and he would also be in a position to furnish information concerning the colonies to capitalists and workers at home, who would know when and where in these new lands to turn their surplus savings and their surplus energies.

But this is not the rôle of the French Minister of Colonies today. In his hands lies the final decision concerning the vast majority of colonial matters, even in their most minute details. It is toward Paris that converges all the administrative life of the colonial possessions of France. It is at the capital of the mother country that is finally drawn up each year the budget of the expenditures of each of our colonies; there that is made the most insignificant modification in the tax list; there that is settled with contractors the cost of this or that public improvement in the most distant colonies; and so on almost indefinitely.

This habit of keeping the colonies in leading-strings springs from two causes, one psychological and the other historical. In the first place, it results from our centralizing customs which each *régime* has inherited from its predecessors. It is one of the peculiar political traits of our race, and was seen in its full force under the first Napoleon. The present Republic has a tendency to pay more respect to the rights of local government, but cannot entirely shake off the evil.

Another cause why the colonies are so trammeled is to be found in the fact that the mother country has long been in the habit of paying a large part of the running expenses of the colonies. This burden was accepted on the very just ground that a recently conquered colony would find with difficulty in its own resources the means of meeting the immediate and large demands necessary for starting on its new and more complex existence. But France, instead of paying once for all the cost of certain initial public works or the annual interest on loans made for this purpose, undertook to meet a certain portion of the ordinary expenses of the colonies. This was a vicious method in itself, since it got the colonies in the bad habit of counting on the mother country to come to their aid for their everyday wants, without backing them up in important undertakings of a permanent value. But the greatest evil of the system has been that it has led the central Government to mix itself up in the administrative affairs of the colonies; for, naturally, the Minister of Colonies felt that he should see how were being employed the state moneys, and now this habit has become fixed and this centralized control has survived the financial help which at first justified it; tho, since 1900, there has been a marked falling off in the subventions accorded by the mother country to her colonies. Thus, the figures which stood in that year at 7,225,000 francs, are now but 2,808,000 francs, and today the French colonies are almost taking care of themselves, as regards their ordinary civil expenses; and yet they enjoy no more initiative of their own, no more autonomy, no more free disposal of their own resources than before; in fact, the con-

trary is the case. The list of matters that one must come to Paris to arrange is longer than ever. For instance, until 1903, city loans in the colonies could be authorized by the governors, but now the sanction of the mother country is necessary. Thus France resembles a fond parent who thinks her daughters old enough to earn their living, but who continues to judge them incapable of managing their own affairs.

The inconveniences of this organization are many, the most evident, but not the most grave, being the loss of much valuable time. Even if each person concerned in an affair makes as much haste as possible, it is always necessary to add to the normal time required for the transaction of a matter the time consumed by delays due to the distances between France and her colonies, which in some cases are very great. If some important document has been forgotten, there may be a lapse of several weeks and sometimes of several months before it can be procured. But in a new country more than elsewhere does the old proverb hold good: Time is money.

But this is not the only evil. This multiplicity of affairs, almost always important in themselves, but, relatively, of secondary importance, divides the attention of the Minister of Colonies; and the mass of communications which reaches him from all quarters of the globe almost wholly absorbs the activities of his lieutenants in Paris. A prompt decision is urgently demanded. The mere fact that it must come from the central Government occasions a long delay in itself, and the Minister feels that he must not increase it. So, obliged to determine everything, he has no time to himself, no leisure to elaborate and carry thru plans of general and timely interest to the colonial possessions; all his hours are filled up with the expediting of current business. He cannot grasp the whole colonial situation, because his view is obstructed by this mass of fragmentary demands, all apparently, at first blush, of equal importance. He cannot clearly perceive the vital needs of each colony, and precious time is spent in winnowing out from the heap the needs which are common to all. As we say in French, the trees hide the forest.

This centralization has still another evil effect—it brings with it too much uniformity, and, tho this may seem a contradiction, considerable incoherence in the manner in which the different colonies are administered. It is difficult for a statesman, who often has never left France, to get a sufficiently distinct idea of the conditions suitable to each of our possessions, so as to be in a situation to adapt his decisions, which must often enter into the smallest details, to the case in point. He is, by the very nature of things, forced to simplify the matter and to act as if what is good for one colony is good for all—a manner of proceeding which is found to be bad by a simple inventory of our over-seas empire, made

A KONGO WOMAN.

up as it is of elements so very different from one another.

Again, this affluence of official business forces the overwhelmed Minister to take up, not the most important or the most analogous matters for his decision, but those which cannot wait; so he can follow no general plan in the conduct of the business of his office.

The protectorate form of colony has this one great advantage—it combats to a certain degree this centralization tyranny. As the dynasty reigning at the moment of the acquisition of the colony is preserved, the representative on the spot of the protecting power is allowed great latitude and is responsible to the home Government. This system has been tried by us in Tunis, and with ex-

SAVORGAN DE BRAZZA,

Born an Italian, naturalized a Frenchman, who won French Kongo for France. He died two or three years ago.

cellent results, better even than those obtained in Algeria, if we bear in mind the extent of territory and the length of our occupation; for, while we have been in Algeria since the time of Louis Philippe, we have exercised the protectorate in Tunis only since 1882.

But this bane of centralization is not limited, unfortunately, to matters of administration and finance; it produces still worse results in the field of economics. The French colonies enjoy no commercial autonomy. The generally held idea on this matter in France has thus been expressed by the leader of the French protectionist party, M. Jules Méline: "It is necessary that the colonies throw open more and more their markets to France" —which goes without saying—"and the only practical way of bringing this about is to prescribe for them the French tariff of 1892," which is more open to question. And yet this is just what we have done. This high protective *régime* has been extended almost without modification to most of our colonies, the exceptions being a few articles where a change has been made by the mother country without consulting the other interested party. A special tariff has been accorded only to West French Africa, with the result that it has become the most prosperous of our colonies. The protective policy inaugurated in 1892 seems, at first blush, however, to have accomplished what its advocates expected of it. Thus, French exports to the colonies, which in 1892 were 84,500,000 francs, in a total of 234,200,000 francs, rose in 1905 to 225,800,000 francs, in a total of 489,000,000 francs — an increase of 141,300,000 francs in thirteen years. But the same statistics which show this very notable increase which French trade has found in the colonies, due perhaps to the tariff of 1892, also reveal a certain sluggishness in the increase of the riches of these same colonies, as well as an unfortunate absence of any reciprocity in their economic relations with the mother country. In 1905 the exports of the French colonies totaled 384,800,000 francs, or 104,200,000 francs less than imports. Their exports to France were only 152,200,000 francs, an increase of but 51,400,000 francs over 1892, and a falling off of 73,600,000 francs on the importations coming from France in 1905.

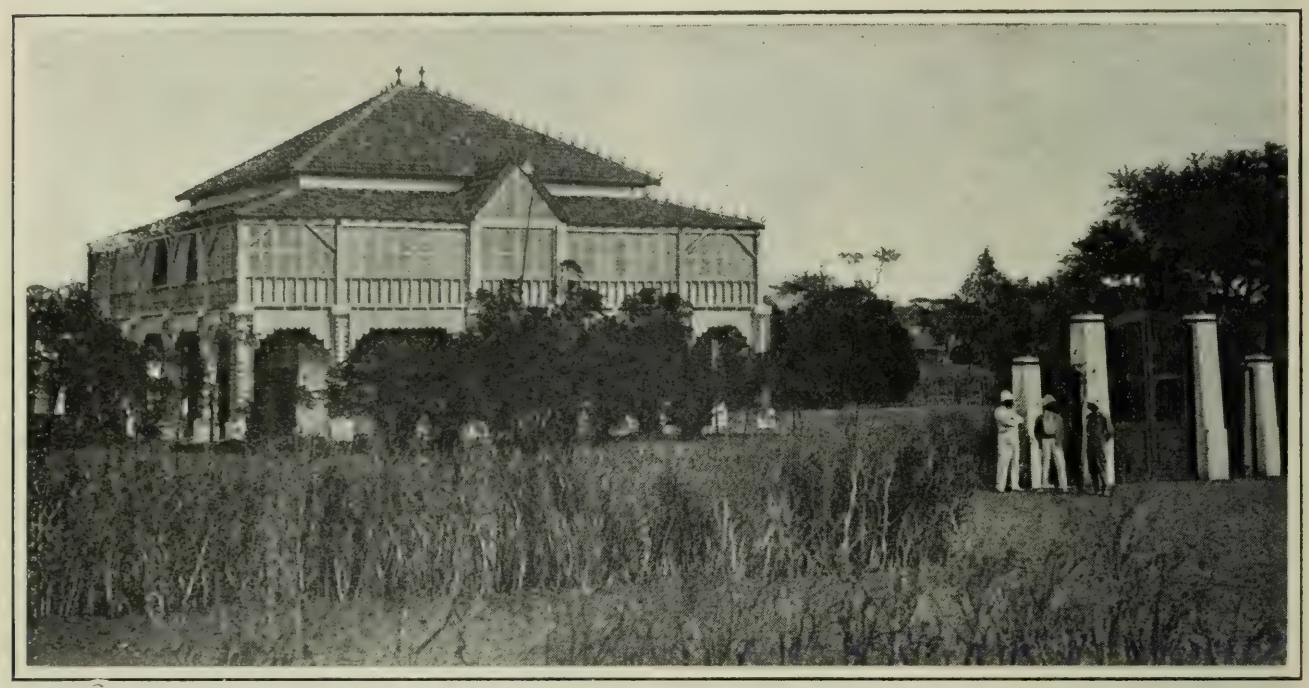
Protection as it works in our colonies is not foreign to this low export figure, for, forced on countries from without, protection checks their capacity to produce. When a nation surrounds itself with a customs barrier, the cost of living is increased in that nation; and the French colonies have not escaped this inevitable consequence of our present protectionist *régime,* which it is within bounds to say costs the consumer at least 10 per cent. Under normal conditions protection carries with it certain compensating advantages; customs receipts add a goodly sum to the State Treasury, manufacturers profit by the artificial increase in prices, and wages should be higher. But the French colonies enjoy none of these advantages, because the customs *régime* which effects them is arranged in the interest of the mother country, quite regardless of their own interests. They are not only prevented from being their own manufacturers, but are forced to get their goods from France and from France alone. Duties established for this purpose bring into the colonial treasury a smaller return in proportion as they perform well the economic object for which they were created; for these duties are not paid by French importations, which come in free, nor by the possible foreign importations, which are not allowed to come in be-

cause of these duties. So the result is that the colonial treasury not only does not get anything from this quarter, but has in addition to pay the salaries of the customs officers who prevent the smuggling in of the foreign goods thus shut out. Nor is this the end of the burden of the colonists. In order to make up for the deficiency in the colonial receipts occasioned thereby, the colonial taxpayers are required to support heavier and heavier imposts.

In none of our colonies do the vices of this system stand out so clearly as in Madagascar, where protection has been applied with as much sagacity as vigor. The hesitation and groping about which have aggravated the evil in some of the colonies have been here reduced to a minimum. The adaptation of the means employed to attain the proposed end has been almost mathematical in its precision. The interests of the colony have been narrowly subordinated to those of the mother country, but only so far as was necessary to adapt the special situation to the exigencies of the system, so that the end has been secured with a minimum of harm. This end was, of course, the establishment in the colony of a commercial monopoly for the benefit of France; so the tariff of 1892 was introduced in Madagascar in February, 1897, and the immediate desires of French commerce were satisfied. The result has been that in 1905 foreign importations into Madagascar were less than 11 per cent. of the total, while the exportations of the island have risen from 17½ millions in 1896 to 54 millions; the part of France therein being 42,200,000 francs, instead of 6½ millions, or an increase from 37 per cent. to 76 per cent. But the total exports are 8,300,000 francs below the total imports, and the exportation to France is 11,400,000 francs under the importation from France. But the result from the Madagascar side is that the colony is in a very critical economic condition. The system could be efficacious only by becoming excessive, and so had to raise most exorbitantly the price of the most necessary things. Thus, textile fabrics, an enormous quantity of which is used in the island, had put on them, in order to protect French spinners, an ad valorem duty of 40 per cent. In his report to the Minister of Colonies, made in April, 1905, General Galliéni, the then Governor-General of Madagascar, says:

"The forcing of Madagascar to buy her indispensable textile fabrics in France costs the island annually more than 2,700,000 francs than would be the case if she could buy these same goods from foreign manufacturers."

This means that it costs each inhabitant of Madagascar one franc per head and three francs and sixty centimes, or about seventy cents American money, in the case of each taxpayer! The whole protective system costs Madagascar four millions of francs per year. Nor is this all. This prohibition of the entrance into Madagascar of foreign merchandise has, of course, cut down the returns from customs duties. They fell off one million francs in 1903 and an additional 750,000 francs in 1904. To prevent a deficit in the colonial budget a tax had to be put on alcohol, opium and tobacco, and an increase had to be made in direct taxation, all of which produced a very serious financial crisis in the island, the number of failures rising from twenty in 1900 to thirty-six in 1902 and to sixty-five in 1903.



The French tariff of 1892 is all the more prejudicial to the economic expansion of our colonies because it does not accord reciprocity, which is, however,

HAZONME, PRIME MINISTER OF KING TOFA OF DAHOMEY.

the essence of all customs union and especially of a colonial pact. The colonial staples, such as coffee, cacao, vanilla, pepper, etc., coming from our possessions pay one-half of the duty required of foreign products of the same sort. But even this reduction is far short of what it should be; in fact, all these products should be put on the free list, as I have often urged in Parliament. The disproportion between the figures of the general tariff, as applied in the colonies, and the advantage of this semi-tax, which we vouchsafe our colonists when they bring their goods to our ports, are evident. I have calculated that, up to the year 1900, this unfair *régime* had cost the inhabitants of our over-seas possessions, thru the increase in prices, at least twenty millions of francs, while the semi-tax on their products brought them only 3,300,000 francs. Thus the customs policy of France has as its immediate result the increase of the importation of French merchandise into the colonies and the decrease of the exportation of these colonies. Now there is in the end, and especially in the case of colonies, a correlation between imports and exports, the latter affecting the capacity to buy on the part of the consumer, so that the final consequence of our system is the limiting the possibilities of French trade in our colonies by the means taken to prevent them from doing business with any other nation but France.

If our colonies were left greater liberty in this matter of trade with the mother country, the arrangement which would be effected would be more considerate of the interests of both parties and would prove more advantageous in the long run to France herself, while the colonies would become richer, and, tho not forced to buy from us, would nevertheless continue to do a fair amount of business with us. There is no question of this final assertion. Listen to Jules Ferry on this point. In a celebrated speech of his delivered on July 28th, 1885, he said:

THE FRENCH GOVERNOR'S OFFICIAL RESIDENCE IN SENEGAL.

"It has been remarked that the colonial tie between the mother country which produces and the colonies which she has founded is the cause that economic predominance accompanies and follows political predominance."

In fact, examples to prove this abound in the economic history of modern peoples. In a word, to secure this result, it is not at all necessary that the mother country force its colonies into a too narrow colonial union, in the arrangement of which these colonies have not been consulted and which kills all spontaneous action on their part.

There is still another French colonial error, which, however, is less baneful

than this excess of centralized administration and this narrow economic legislation, largely because it affects but two of our possessions, and these relatively small ones. I refer to the transportation of convicts to Guiana and New Caledonia, which again illustrates this same tendency not to respect sufficiently the interests of our possessions, but to sacrifice them too readily to considerations which are exclusively French. Now experience has shown that penal colonization is an Utopia, and that nothing is to be expected from penal labor in the upbuilding of a new country. The presence of convicts in a colony simply turns away from its shores both capital and emigrants. Fortunately we have already stopped sending convicts to New Caledonia and are now forcing this infliction only on Guiana. As far as I know, the United States has never had the thought of sending her evildoers to any of her colonies, but if she should ever turn her attention in that direction an examination of our colonial history will show that it is a most decisive mistake.

As a rule, France has well understood her duties and her interests in the way she has treated the natives of her colonies. In the examination of this side of the colonial problem a radical distinction should be made between colonies suitable to receive emigrants and those proper for agricultural enterprises. In the first category France has but three colonies—Algeria, Tunis and New Caledonia. In these colonies France has not failed in her duties toward the natives, while the main effort of the administrative side of the colonial depart-

PACK CAMELS ON THE ALGERIAN SAHARA.

ment has been to aid emigration. The second category—the farming colonies—are more interesting to the United States, for your Philippines belong to this category. Such colonies are not

useful to countries where there is poverty and which need to be relieved by emigration. But they are precious to rich nations like the United States and France, which have capital to put out and new markets to find for their manufactures. New countries, where the native population has not yet got beyond the first stages of civilization and which produce colonial staples used generally thruout the world, should be thrown open to the capital of the mother country, which will fructify there. Such a colony is the Kongo, with its rubber, where the native negroes are of such inestimable value to our traders. For this reason alone, without considering the moral side of the question, which, however, is still more important, all the vices which we there introduce, every abuse of any kind which excites the animosity of the blacks against us, are as impolitic as reprehensible. As Talleyrand has well said: "It is worse than a crime; it is a blunder." But still the race question is only an accessory one in such colonies. The principal occupation of the Government at home should be to aid the outflow thither of European and especially French capital.

But when the race that the colonizing power finds in possession of the country has behind it a long period of evolution, and has worked out a civilization of its own, then the conquering nation should consider as an essential aim the learning the tastes of this race, and should strive to develop its needs, so as to become the tradesman to whom it turns for the satisfying of these needs. If it be a farming colony where the natives are in a position to cultivate their own soil and leading a life developed sufficiently for them to become good customers, then the mother country should send to that colony not emigrants, not capital, but its products, its manufactures. Our colony of Indo-China is of this sort; so is Madagascar.

What we have done and what we should not have done in this island of Madagascar interests the United States, for, I think, there is a similarity between the social state and the degree of civilization of the Hovas of Madagascar and the Tagals of the Philippines. And the history of our relations with this island shows the importance of not making a mistake concerning the real character of a colony. General Galiéni, who was unquestionably an able administrator, is one of those men of our time who best give an idea of what must have been those Roman emperors, who were as clever in the art of governing as in leading armies to war; and yet he committed very grave faults in his administration of Madagascar, all of which sprang from the initial one, which he tried frankly to repair, but when it was too late to do so. He at first thought that Madagascar was a colony for emigrants, that what concerned the natives was accessory, and that the great thing for him to do was to prepare the country to receive colonists; so he bent all his energies in that direction. He needed workmen for public improvements, and as he could get them in no other way he forced the natives to furnish the Government free of charge fifty days' labor per year. Nobody could escape this labor without a payment of forty-five francs or by signing a contract to work for a colonist from one to five years, and if an attempt was made to break this contract the native was severely punished. But this forced work for the Government without pay was so distasteful to the Malagasy that they were ready to do almost anything to escape it. So they were willing to accept the most absurd wages from the planters; and to put a stop to this abuse the authorities had to fix the minimum that an employer could offer, making it eight cents a day in the country districts and twelve in the chief towns. But this was not the only burden laid on the natives. They had to pay a personal tax also, which ranged from ten to twenty francs, according to the provinces, and which produced nearly one-half of the moneys received by the colonial treasury. This tax was too heavy during the years when this forced work system was preparing the country for an emigration which the nature of things made impossible. This fact General Galiéni recognized in his final report, before he resigned the Governor-Generalship, in 1905: He admits that the Malagasy are sufficiently civilized to make good artisans and workmen, leaving to Europeans only the positions of

managers and foremen; and as regards agricultural colonization, the obstacles in the way are still greater. On this point the General says:

"In the healthiest parts of Madagascar there are no unoccupied lands extensive enough for the establishment of grand colonization enterprises, and the major part of the fertile lands are already held by the natives. The character of the cultivation which would have to be carried on and the impossibility of successful competition with the natives would suffice to wreck any attempt at successful European immigration into the island."

Here, then, is a typical market colony, where the mother country should look only for buyers of her manufactures.

As gold has now been discovered in Madagascar the colony will doubtless absorb European and especially French capital. But the real and lasting advantage which France can obtain from this island will spring from the development among the natives of a body of buyers of our manufactures. Consequently, the native question is not accessory in this colony, but is, on the contrary, an essential one. Hence, forcing on our new subjects this distasteful "*prestation*" was contrary to common sense, and General Galiéni repealed the obnoxious measure in 1900, and so prevented the total ruin of the country. His successor, M. Augayneur, enlightened by this experience, has now applied to Madagascar the right system, and if he can modify the customs *régime*, which I have just described, which is harder on the native than this forced labor system, Madagascar will have a most brilliant future.

A TUNISIAN WOMAN.

I may close my remarks by repeating that the colonial work of France, which is splendid in its totality, would have been incomparable if we had given our colonies administrative and financial autonomy, if we had not forced most of them to submit to a leonine tariff, if we had not tarnished two of them with convict emigration, and if we had always recognized the true character of our possessions and consequently treated the na-

tive question as it should have been treated. I shall be glad if a friendly nation like the United States profits by our experiences and escapes the mistakes and dangers from which our colonial policy has suffered. We have much to learn from America, but here is a field where she can learn from us.

CHAMBER OF DEPUTIES, PARIS.

The Will of the Lord

BY GEORGE MEASON WHITTIER

At a recent meeting General S. is reported to have said that "War had been ordained in the providence of God; there would always be wars; as long as man is man, he will fight for what he loves."

SPRAWLING, huge and hairy, on the blood-smeared reeking stones,
Onkh, the Paleolithic man, was gnawing a foeman's bones,
Snarling thus to the strangers—his mind in a righteous maze:
"Ouff ! Ye Smoothers of Axes! I bide by the good old ways.
What! not eat my captives? Kill them and let them lie?
And waste the good meat I fought for! Ye weakling fools! Not I.
Besides, did not great Ingu, the Doer-of-Deeds-in-the-Air,
Show me their trail in the forest and guide my feet to the lair?
He made me fiercer than they were; he sharpened my flint for the kill;
And if I flay them and eat them, am I not doing his will?
Ouff! Ye would scorn high Ingu? What folly is this ye speak!
As long as the belly knows hunger, the strong man will eat the weak."
And loud snarled Onkh at his feasting on the blood-red, reeking stones,
Lusty and huge and hairy, gnawing a foeman's bones.

"Ho-ho!" laughed Dorm the Viking. "Heard ever a man the like?
Live in peace with my neighbors!—The eagle forbear to strike?
I thread the fiords no more with my sea-wolves fierce and bold?
Nor see the red raid blossom on cottage and byre and fold?
No more smell the burning roof-tree? Not hear the women wail
As we launch thru the hissing breakers and home in the teeth of the gale?
Ye would banish the joy of sword-play, the wine of a warrior's delight:
Are ye wiser than Odin All-Father who gave us desire to fight?
He sends the gleaming Valkyrs and chooses the souls of the brave
To dwell in high Valhalla, where comes no peace-loving slave;
But only warriors quaff the mead and eat the flesh of the boar,
And taste the bliss of battle forever and ever more.
Ho-ho!" laughed Dorm the Viking. "As long as ever he can
A man must drain the Bloody Cup. Thus Odin hath made a man."

Gone are these tear-stained ages of ceaseless, merciless strife;
Slow wakes the world from the night of blood to the dawn of love and life.
But still some sodden sleeper from the promised morning turns;
Some fiend-bewildered, foolish heart for the ghastly vision yearns.
And lips which beg for His mercy by martyr-pangs that He bore,
Yet plead the will of the Prince of Peace for the hell that men call War.
O Thou divine Compassion, whose mercies never cease—
Spirit, however men name Thee, of Goodness and Love and Peace—
Thru slow uncounted eons Thy tender, unwearied art
Has loosed the ape from Thy creature's form and the tiger from his heart.
'Tis only Thine infinite Patience can bear while men thus blaspheme;
'Tis only Thy measureless Tenderness can pardon that bloody dream.
May the Pity that led us from beasthood and set our face to the light
Still bide till the love of our brother-man shall teach us Thy will aright!

NEW YORK CITY.

Graft and the Church in Canada

BY W. R. GIVENS

[The article entitled "The Canada of Today," published in THE INDEPENDENT of May 30th, stirred up a veritable hornet's nest in the Dominion. As Mr. Givens was called all kinds of a prevaricator (to use no shorter or uglier term), we feel he should now have the last word in these columns on the subject.—EDITOR.]

IN a recent article on "The Canada of Today" the present writer enumerated what he honestly conceived to be the defects and shortcomings of that country, such as the lack of opportunity for young men, the persistence in office of old men, a mistaken fiscal policy which seeks after markets three thousand miles away rather than at very hand, a narrow and blindly partisan press, a military and government set that lords it over the *hoi polloi,* a deference to England and things that are English even to the sacrifice of Canadian rights and Canadian progress, a foolish tho unvoiced antagonism to the United States, and a lack of what may be termed a real Canadian spirit. The excellent financial system of the country, the fine educational advantages, the observance of the law and its administration without fear or favor, and the fact that the people are "sober, industrious, honest, moral and God-fearing," were touched upon—not that it was thought to be necessary, but rather to impress the truth that under sane and progressive conditions, with far-sighted statesmanship asserting itself, such a people should grow surely and fast, and not do little more than stand still as they have in the Eastern sections of Canada.

The article, as was perhaps not unnatural to expect—for the truth, when unpalatable, is seldom or never welcome—was roundly criticised in the Dominion and out of it. Even the New York *Sun,* which usually is well-informed on matters which it undertakes to discuss, while agreeing with that phase of the subject dealing with the Canadian fiscal policy, rather sharply attacked the reference to the lack of progress in Canada, or, rather, as my original article expressly declared, the lack of progress in Eastern Canada, for it was distinctly stated that in the newer West there was growth, and that there lay the hope of Canada. It will scarcely be denied that without increased population material development and growth must of necessity be slow. If, therefore, it can be proved that Eastern Canada has done little more than stand still in the past twenty years the remainder of the problem as it were proves itself. Therefore, to the figures: First, then, the figures for all Canada, as taken from the latest census returns (unfortunately only up to 1901) of the Dominion—returns, by the way, published in both French and English, tho Canada, we are gravely told, is essentially and altogether a British colony. The figures are:

Year.	Population.	Increase.	Per Cent. Increase.
1871	3,689,257	.....	....
1881	4,324,810	635,553	17.22
1891	4,833,239	508,429	11.78
1901	5,371,315	583,076	11.13

In other words, Canada in these years has grown only at the rate of about 50,000 a year, while her growth, as the per cent. figures show, has been smaller each succeeding decade—and this in a time of unexampled prosperity, and with transportation facilities very much improved and great new sections of country opened up.

Striking as these figures are, they are less striking than those setting out the growth (and the lack of it) by provinces. These figures are:

Eastern Provinces.	Years. 1901.	1891.	1881.
Quebec	1,648,898	1,488,535	1,359,027
Ontario	2,182,947	2,114,321	1,926,922
Nova Scotia	459,574	450,396	440,572
New Brunswick.	331,120	321,263	321,233
Prince Edward Island	103,259	109,078	108,891
	4,725,798	4,483,593	4,156,645

That is to say, in twenty years the population of the Eastern Provinces, all told, has increased 569,153, or at the rate of,

let us say, 28,450 a year. Of this increase 326,948 occurred between 1881 and 1891, while in the more recent years, from 1891 to 1901, the growth was only 242,205, or at the rate of about 24,200 a year. Indeed, the banner province of the Dominion, Ontario, in the last ten years covered by the census, shows only a growth of 68,626, New Brunswick in the same time less than 10,000, Nova Scotia barely 9,000, while Prince Edward Island has actually gone behind. If the New York *Sun,* the Toronto *Globe,* the Toronto *News,* the *Canadian Magazine* or any other publication can get satisfaction out of such "growth" then one and all must be easily satisfied. Personally, the writer holds that the showing is a pitiful and distressing one. It is to be doubted if any other country except Ireland—and that for a wholly different reason—shows so poorly in point of stagnant population.

Fortunately in the West—the growing, hopeful, expanding, new West—the showing is more encouraging. The figures of that section, and they speak for themselves, are as follows:

	Years.		
Western Provinces.	1901.	1891.	1881.
British Columbia	178,657	98,173	49,459
Manitoba	255,211	152,506	62,260
The Territories	158,940	66,799	25,515
Unorganized territories	52,709	32,168	30,931
	645,517	359,646	168,165

Since then a further census, under a newer provincial distribution, has been taken of a part of the West, showing an encouraging growth, as follows:

	Years.	
Provinces.	1906.	1901.
Manitoba	365,688	255,211
Saskatchewan	257,763	91,279
Alberta	185,412	73,022
	808,863	419,512

Unfortunately there are no later figures of the East than the 1901 figures already presented, but perhaps it is just as well that this is so, for it is not improbable they would make no better, if as good, a showing, for the reason that in recent years the newer West has drawn largely from the East, and especially from Ontario, which for that reason may be in a sorrier condition in point of growth than in 1901.

Now there must be some reason for this lack of development in the East. There is—or rather there are—several of them. They were set out in "The Canada of Today" and are summarized in the opening paragraph of this article. The pity of it is that so many people in Canada see the facts, but refuse to admit them.

Concerning only one of these reasons is it here and now purposed to touch further, namely, the persistence of old men in office in Canada—or rather in Eastern Canada, and especially at Ottawa, where the Dominion Government holds sway. Recent resolutions adopted by several church bodies in Canada may explain why the old men are so tenacious of office. They apparently are in the game for what there is in it—at least, so the churchmen say. In any event it is rather clear that certain Canadians themselves are not quite in accord with the Canadian newspapers and periodicals which assert that Canada is perfect. And, singularly enough, the churchmen condemn where the present writer was inclined to praise—that is, on the issue of honesty and morality and decency in the ordinary walks of life. Indeed, were these Church declarations not so positive and vigorous, the writer, quite frankly and in all sincerity, would be sorely tempted to join issue with them and to say that such wholesale condemnation as is being passed by them upon their own people—and that it is wholesale will presently appear—is not warranted by the facts or the conditions, and that the mistake has been made of confounding a phase with an all-prevailing condition—of mistaking a symptom for a disease.

In this instance the strictures upon the Canadians shall come from out their own mouths, as lately it has come. The Presbyterian Church, the Anglican Church, the Methodist Church, these in the last few weeks, at their respective conferences in Canada, have declared strongly and unequivocally against the corruption—political, social, moral and commercial—in Canada.

At a meeting of the General Assembly of the Presbyterian Church, held in Montreal recently, G. M. Macdonnell, K. C., a leading Kingston lawyer, declared in effect that "the national curse

of Canada today is graft, not intemperance," and that "the people of Canada were no longer an honest race." At the Anglican Synod in Toronto the following resolution was adopted:

"That it is the conviction of this Synod that a great purification of politics, financial, social and business methods in this country is imperatively demanded today, and that the Church, her bishops, clergy and laymen should take a leading part in the immediate improvement of the present deplorable state of affairs."

In support of this view the Hon. S. H. Blake, one of the foremost Canadians, regretted that "the present ideal of a successful life was so low," adding that "in politics, particularly, any means that secure a desired end are regarded as justifiable." "Mothers," he went on to say, "have to shoulder much blame for our laxity of morals. They neglect the training of their children to attend social functions and amusement, and the family people go to the bad."

Again, at the Anglican Synod, Ottawa Diocese, Mr. G. C. Smith "supported the view expressed before the Presbyterian General Assembly that graft and not intemperance is the curse of Canada."

Bishop Worrell, in his pastoral charge to the Anglican Synod of Nova Scotia, under the heading "Political Life," said:

"It is universally agreed that the state of politics in Canada is far from clean. There are, undoubtedly, in all ranks, men of high ideals, ability in affairs and purity of life, but there is also a parasitic condition steadily growing, which, if not eradicated, may render barren and unfruitful the promising life of our fair Dominion. When the brown-tail moth showed itself in our orchards the Government led a determined crusade against it, and those interested joined in the fray. If the graft pest is to be checked there must be a similar movement."

The Montreal *Star* in a leading editorial on the subject has the following for its opening paragraph:

"Wherever Church bodies have assembled this spring and summer they have been moved to make strong declarations against the rising tide of corruption which is threatening to overwhelm our politics. The significance of this must be apparent to every man capable of putting two and two together. These churchmen are not party politicians. In fact, party politicians are the last people who would want to emphasize the appalling spread of 'graft' in the public business of this country. But these protesting Church representatives—clergy and laymen—are the religious leaders of the bodies for which they speak and the sections from which they come; and they find with alarming unanimity that the greatest bar to religious progress at this time is the predominant sin of political 'graft.'"

The Toronto *Mail and Empire,* in its turn, declares in an editorial that

"The next election will not be run on any tariff issue, but simply on the question whether graft and theft shall prosper or whether we shall be ruled by common honesty."

Elsewhere it says that frauds in harbor improvements pervade the entire Atlantic Coast; that purchases made for the Government are subject to rakeoffs, under which favorites acquire unearned fortunes; that a portion of the press has been hypnotized by grants of lands and annual subsidies; that the experts in corruption have perfected an election machine, and a portion of the ill-gotten gains is expended in purchasing votes or paying scoundrels to perpetrate frauds at the polls.

And so it runs thruout. The writer has been at some pains to quote freely from these Canadian sources that it might not be said that here again a "Canadian apostate" is attacking his home land. These words are the words of Canadians living in their own land—loyal Canadians looking only for the good of their country and the people who live in it. Their arraignment is a severe one.

Even tho denying that this sweeping attack upon Canadian honor is warranted —asserting, indeed, that in no part of Canada is there a political body one-half so notorious or corrupt as the Tammany of New York or the old Philadelphia ring—it nevertheless is not a difficult matter to determine what has occasioned on the part of the Church, this newly awakened interest in the general Canadian moral tone, as contradistinguished from the moral tone in the immediate home circle of the separate churches. The plant has been in the growing for some years, tho it is hard to give specific date to its commencement. Going back, however, only to the time of the Grand Trunk Pacific proposal some years ago, one is able to find altogether too many reasons for graft allegations and suspicion. In respect to the Grand Trunk Pacific, now finally under way and undoubtedly calculated to work great material good to Canada, it is scarcely necessary to recall the shock to Cana-

dians generally when announcement was made that the then Minister of Railways, Mr. Blair, had resigned from the Canadian Cabinet for reasons that he himself never fully developed, tho it was openly stated in more than one quarter that he was not pleased with the way things relating to the Grand Trunk Pacific were being conducted over his head—Minister of Railways tho he was—and without his knowledge, by an "inner ring" in the Cabinet. The talk of graft then, tho not loud, was deep.

Another case in point is the forced resignation of Lord Dundonald as Commander-in-Chief of the Canadian forces because he had the hardihood to declare that the Canadian militia was being prostituted by the party and spoils system and that appointments went by favor rather than by merit. It may be that Lord Dundonald, in his official position, had no right to say these things, but it is typical of the then Canadian contented frame of mind that it never seemed to occur to the majority of the Canadians that they might better apply themselves to the task of learning whether or no Lord Dundonald's charges were true, rather than whether he should have made them or had the right to make them. The real issue was beclouded. Dundonald was forced out—and Canada continued to go her way blindly.

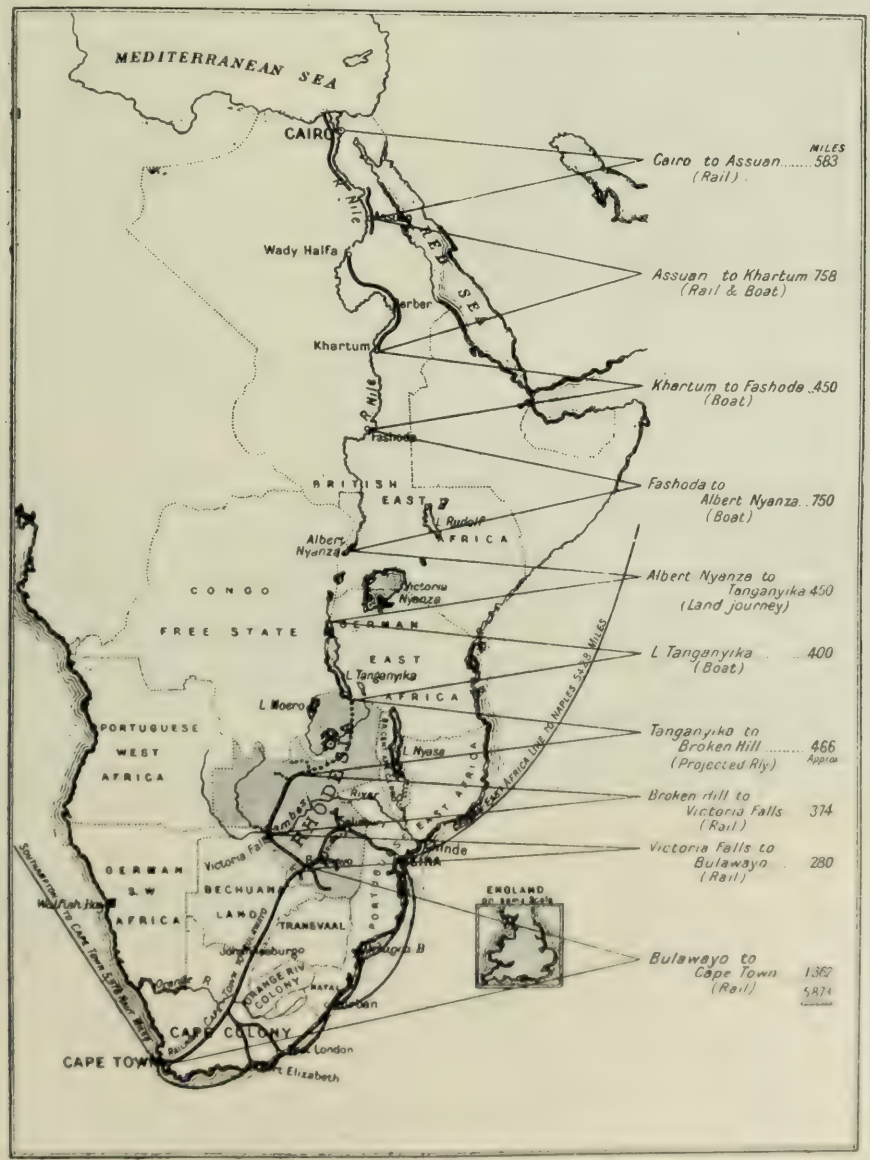
Only a few months ago in the Dominion Parliament at Ottawa, G. W. Fowler, a member of Parliament, actually defied the Government to say anything of a deal in which he is alleged to have figured, declaring in effect that if any action was taken against him he would expose "the wine, woman and graft scandals"—these are his words—that were the talk of Ottawa. Under the circumstances it was to be expected that self-respecting men in Parliament, in very self-defense, would force an investigation, that the curse should not fall alike upon the just and the unjust. But, shocking to say, nothing was done and the "wine, women and graft" scandals go unrevealed. And this in these enlightened times and in a "progressive" country! But progressing where?

And so the story might go on—election frauds, bogus ballot boxes, debauched electors, school book scandals, nepotism, charges of gross personal immorality against Cabinet Ministers, insurance grafts, personal and political corruption. But enough has been said to give an indication of some of the deplorable conditions in this particular direction.

It remains to be seen now what, if anything, will come of this crusade inaugurated by the Church. Personally, the writer feels that the charges made are altogether too sweeping, too general. There is corruption in all political bodies and there is a doubtful moral tone in only too many sections of one country and another. But that the Canadian case from the standpoint of corruption and immorality is so deplorable as the Church bodies paint is much to be doubted. It would rather seem that the churchmen have mistaken mere incidents for an ever-present, ever-prevalent condition. Be this as it may, it is to be hoped that the matter will not end, as so many Canadian Church agitations end, in talk. There is plenty of room for reform and for admirable public service.

It will be well when an awakened Canadian public conscience shall assert itself—not fiftfully, but permanently and effectually. Perhaps when that awakening shall come—and a campaign of publicity will certainly not retard it—there may come a further awakening to the larger and clearer view of the manifest destiny of Canada—a Canada for Canadians who shall work for their own land and not for an Across-the-Sea Empire that will never come.

New York City.



THE CAPE-TO-CAIRO RAILWAY

BY M. E. HUTCHINSON

[The author of this article belongs to an old English noble family which has resided in France for two generations, and he is known in Paris as Sir Matty Hutchinson. He has spent several years in South Africa and was for eight years the editor-in-chief of the *Revue Sud-Africaine*, the French organ of South African mining interests.—EDITOR.]

IT was, I think, Mr. W. T. Stead, the well-known British publicist, who once jestingly observed that but for Mr. Cecil Rhodes the so-called Cape-to-Cairo Railway would have got itself built by sections and no one would ever have discovered that it was a Cape-to-Cairo line at all until the last gap had been bridged and thru trains were actually running.

Many a true word is spoken in jest, and maybe Mr. Stead was much nearer

FROM CAIRO TO THE CAPE.

the truth than even he supposed when he gave utterance to the statement in question. Certain is it that there was no thought of Cairo in the minds of the

BUILDING VICTORIA FALLS BRIDGE ACROSS ZAMBESI GORGE.

projectors of the first link of the great line—a small stretch between Cape Town and Wellington, something under sixty miles long—which was forged as far back as 1859, when the lamented statesman whose name was destined to be indissolubly associated with the scheme was a boy of five or six. Equally certain also is it that the Great Central African telegraph scheme conceived in 1879 by Mr. (now Sir) James Sivewright had but the remotest connection with Cairo; and I am inclined to the belief that the project conceived by Sir Charles Metcalfe, now Consulting Engineer in Africa of the Rhodesia Railways, Limited, and a moving spirit in the Cape-Cairo scheme, of building thru Bechuanaland "the Central African trunk line," as he dubbed it, did not at first picture far-away Cairo as its objective.

It was apparently not until the year 1889 that the phrase "Cape to Cairo" was first originated in a magazine article from the pen of Sir Charles Metcalfe, and quite three or four years elapsed before the phrase began to catch the popular fancy. In 1893 the *Times,* in the course of an editorial article, spoke of "the Zambesi" as "the acknowledged goal" of Mr. Rhodes's South African railway policy—a statement which would seem to indicate that even at that time Cairo as the objective of the great line running thru Africa from south to north was not seriously entertained. To Cecil Rhodes is generally awarded whatever merit attaches to the origin of the scheme, but there is very little doubt that the idea of linking up the two extremes of the Dark Continent was first suggested to the mind of the deceased statesman by Sir Charles Metcalfe's aforesaid "Central African trunk line."

But for Mr. Rhodes, however, and the marvelous enthusiasm and energy he

GENERAL VIEW OF THE VICTORIA FALLS BRIDGE.

displayed, the idea of the railway might never have reached the development stage. Perhaps sentiment was at the

bottom of his enthusiasm, altho Sir Charles Metcalfe once solemnly declared that Mr. Rhodes regarded the scheme purely as a business proposition; a fact, if fact it be, which is in some degree borne out in a letter written by Mr. Rhodes himself, wherein he speaks of the "commercial aspect" of the railway and asserts that its "object is to cut Africa thru the center . . . and pick up trade all along the route." "The junctions to the east and west coasts," he goes on to say, "which will occur in the future, will be outlets for the traffic obtained along the route of the line as it passes thru Africa."

It would take too long to tell within the space at my command how the southern end of the great trunk line has been constructed to its present terminus at Rhodesia Broken Hill—some 2,000 miles due north from Cape Town—in South Central Africa. Suffice it that the popular fancy having once been fired, the railway scheme, thanks to Mr. Rhodes's wonderful persistency, rapidly developed, and the money was found for constructing the Rhodesian sections of the line. The section from Vryburg to Mafeking, in Bechuanaland, was opened in 1894, and before the end of that year the line was being extended in a north-

CAPE TOWN RAILWAY STATION.

erly direction to Gaberones, Palapye and, eventually, to Bulawayo. The extension to Bulawayo was completed three years later and was made the occasion of considerable rejoicing, delegates from all parts of the sub-continent being present, altho the hero of the hour—Mr. Rhodes was not, thru indisposition, in evidence.

The eminent explorer, the late Sir Henry Morton Stanley, was among the guests, and referred to the completion of the line as the "conclusion of an audacious enterprise," altho in an article on the subject he incidentally observes that the country is admirably adapted for railway laying, the scenery of the Bechuanaland portion of the line being not surpassed by that "between the immediate neighborhood of the Missouri River and the Rocky Mountains," while the prairies of Nebraska and Colorado and Kansas, as he knew them in their inhabited state, are declared to be inferior in appearance to these "richly ochreous" plains. The 4th of November, 1897, was a red-letter day in the history of the Cape-to-Cairo Railway; and the fact that so much of it had been accomplished not unnaturally inspired Mr. Rhodes to push on with the extension of the line to Lake Tanganyika via the world-famous Victoria Falls on the River Zambesi. He visited England in 1899 for the purpose of interesting the British Government in his scheme and inducing them to help him to find the wherewithal for its realization. In this, however, he was unsuccessful; and the money had to be found elsewhere: various Rhodesian mining concerns and the British South Africa Company either subscribing or guaranteeing the amount required. He also paid a visit to Berlin, and the upshot of a call on Kaiser Wilhelm was a concession to take his line along the eastern shore of Lake Tanganyika, in German East Africa—a concession to carry it, if need be, thru Belgian territory, on the western side of the great lake, having previously been secured by him. Meanwhile, the survey of the line to the River Zambesi and beyond was

THE VICTORIA FALLS ON THE RIVER ZAMBESI, NEAR THE GREAT BRIDGE.

ANOTHER VIEW OF THE VICTORIA FALLS, SHOWING RAINBOW AND SPRAY EFFECT FROM LIVINGSTONE ISLAND.

well in hand; but the work of construction, when it was at length begun, was delayed somewhat on account of the Boer War. Between Bulawayo and Zambesi the line passes thru the coal district, known as Wankie's, one of Rhodesia's most valuable commercial assets. The work was prosecuted vigorously, and the line to the Victoria Falls was opened for traffic on the 20th of June, 1904.

For more than one reason it is to be deplored that Mr. Rhodes did not live to see the completion of this stage of his great work and of the subsequent inauguration of the remarkable bridge which spans one of the fantastic gorges near the Victorian Falls on the Zambesi. "Build the bridge," he told his engineers, "so that the spray of the falls shall touch the faces of those who cross them by the railway," an injunction which was religiously adhered to.

The bridge in question is at once the most wonderful engineering feature of this part of the line and the highest of its kind in Africa. It was built to the design of Mr. G. A. Hobson, M. Inst. C. E., of the firm of Sir Douglas Fox and Partners, consulting engineers in London to the Rhodesia Railways, Limited. It is 420 feet high and 650 feet long, the central span—"a graceful parabolic arch"—being 500 feet in width. The steel work for the bridge was made in England, and so carefully was everything put together that it is on record that when the two ends of the structure (which were built from both sides of the bank at the same time) met in the center they were less than an eighth of an inch out. It took exactly nineteen weeks to complete the bridge, the building of which, by the by, was not effected without considerable opposition, many worthy folk opining that a structure of the kind would irretrievably ruin the grandeur of the surrounding landscape. It is worth recalling that Mr. Rhodes's brother, the late Colonel Frank Rhodes,

made no secret of his objection to the bridge, the site for which, he declares, was chosen "in a hurry and without that careful consideration which should be given when dealing with one of the grandest things in the world."

The building of the bridge was not, however, allowed to interfere with the laying of the railway track on the other side of the gorge, and construction work went merrily on—sometimes at the rate of a mile a day—many tons of material for the line being slung across by means of a Blondin transporter. In a remarkably short time Kalomo was reached and the Kafue River—about half-way between the Falls and Rhodesia Broken Hill — was successfully bridged, the bridge being the longest of its kind in Africa.

Thus Rhodesia has the distinction of possessing the highest and the longest bridges in the Dark Continent. Its length runs to nearly 1,500 feet, and it consists of thirteen spans of 100 feet each, standing on concrete pillars in sixteen feet of water. It is interesting to recall that the first thru train from the south past over the bridge en route to the rich zinc and copper district known as Rhodesia Broken Hill, and 2,000 miles from Cape Town, on the 24th of June of last year. Here, for the moment, the southern section of the Cape-to-Cairo Railway ends; and it is now a moot point whether it will eventually be carried northwards via the southern extremity of Lake Tanganyika and so on thru German East Africa, or thru northwestern Rhodesia to Katanga in Belgian territory, there to link up with the important line known as the Benguella Railway, which is now in course of construction from Lobito Bay, in Portuguese West Africa—a line some 900 miles in length, running due east into the Kongo Free State.

The stretch of territory between Rhodesia Broken Hill and Katanga is not very considerable, and the construction of a railway in that region would present no very serious engineering difficulty. Already the country has been surveyed, and there is not much doubt that the line will eventually be extended in that direction. If this is accomplished it will mean that Messrs. Pauling, the builders of the Cape-to-Cairo line, will in due course join hands and metals on the extreme north of Barotseland with Messrs. J. Norton Griffiths & Co., the constructors of the Lobito Bay-Katanga railway. Mr. J. Norton Griffiths has said that the scheme was quite practicable and that considerable progress had already been made with the line from Lobito Bay, which would in due course be a very important feeder indeed to the Cape-to-Cairo Railway.

So far as I have been able to ascertain the question of continuing the line from Rhodesia Broken Hill to the southern end of Lake Tanganyika is still in abeyance, the promoters of the scheme apparently being still undecided in the matter. So little sympathy for the line has hitherto been shown in Germany that I should not be surprised to hear that it had been decided to drop the idea of continuing it thru German East Africa in favor of the water route presented by Lake Tanganyika, the line being resumed at a northerly point of that great waterway and going onward thru the British Colony of Uganda to Cairo —via Fashoda and Khartûm—and perhaps linking up with the existent important feeder known as the Uganda Railway, which runs from Mombasa, in British East Africa, on the coast, to Port Florence at the northeast corner of Lake Victoria Nyanza. It may be that the future will see two great lines running northwards from Rhodesia Broken Hill—one via Katanga, in the Kongo Free State, and Lake Chad to Tunis or Algiers; the other either thru German East Africa or thru Lake Tanganyika to Khartûm and Cairo, with perhaps another important branch line running from Fashoda in a northeasterly direction from Addis Abeba, the capital of Abyssinia, to Djibouti, at the entrance of the Red Sea. Sooner or later, I suppose, the northern section of the great railway which now ends at Khartûm will be continued to Fashoda, tho it is well not to reckon on any support to the Cape-to-Cairo scheme as such being forthcoming from the powers that be in Egypt and the Sudan, who have never from Lord Cromer downward, shown anything like enthusiasm in the late Mr. Rhodes's pet project. Lord Cromer,

indeed, once declared that a railway of the kind would be altogether out of proportion to its utility. But who knows? Perhaps his successor in Egypt, Sir Eldon Gorst, will look less coldly on a scheme which the late Cecil Rhodes once emphatically predicted would prove "a payable undertaking." Of course an immense fillip has been given to the scheme by the publication of the terms of the will of the late Mr. Alfred Beit, so long the personal friend of Mr. Rhodes, who, it will be remembered, left a very large sum of money—$7,500,000—for the furtherance of the scheme "known as the Cape-to-Cairo Railway and the Cape-to-Cairo telegraph system, including telephones." Quite recently the writer asked Mr. Otto Beit whether the "railway trustees," under the will of his late brother, had come to any decision respecting the allocation of the large sum. Mr. Beit intimated, however, that no decision had yet been arrived at, and that consequently he was not at the moment in a position to make any statement for publication.

A day or two ago Sir Lewis Mitchell, one of the directors of the British South African Company and the chosen biographer of the late Cecil Rhodes, was interviewed on the subject of the Cape-to-Cairo Railway. Incidentally he declared that it lay entirely with Mr. Alfred Beit's trustees, who were left a million and a half pounds for the purposes of the railway, to decide how the line should be continued. Over eight million pounds sterling had already been expended on this enterprise.

VIEW ON LAKE TANGANYIKA.

"Under Sir Charles Metcalfe's personal superintendence," Sir Lewis Mitchell continued, "the work never slackened, and in June of this year the first engine ran into Broken Hill. Negotiations are now in progress for the construction of another section to a mine called Bwana M'Kubwa, and it is

known that a further extension to Kansanshi is under consideration, which would bring the line to the extreme northwest of the Chartered Company's territories. The money market is at present in too bad a condition for the raising of funds for the continuance of the Rhodesian railways, which have come to the end of their capital. Great interest is manifested in the plans which will be adopted by Mr. Beit's trustees. I do not know exactly whether Mr. Beit's money will be sufficient for the completion of the railway, but it will certainly be sufficient to build a good deal. As for the Egyptian end, from Cairo or Alexandria southward to Assuan, a distance of 590 miles, the line is constructed, and another 560 miles, between Wady Halfa and Khartûm, while a further extension of 410 miles to Usambara is, I believe, projected. In the aggregate the line from the north, completed or contemplated, is thus about 1,600 miles, and from the south rather more than 2,000 miles. Add to this the long Tanganyika waterway and you will see that the great enterprise is far advanced. Altho it is impossible to say exactly when the great undertaking will be complete—probably in another five years—the Cape-to-Cairo Railway will not be abandoned. There may be delay, and it is only a question of time and money. Great enterprises are only worked by degrees, and before very long we shall known that "Rhodes's dream" has become reality.

PARIS, FRANCE.

The Trained Nurse

BY REBECCA HARDING DAVIS

MAY I say a word in THE INDEPENDENT about the trained nurse?

Of course I know that the mere mention of this most characteristic product of our most characteristic age will bring out a chorus of praise and gratitude from almost every American home. It ought to do it. There is now hardly a dwelling in any respectable community in this country into which the skill and knowledge of these women have not been summoned to save the health and sometimes the life of its inmates.

I certainly do not mean to question the importance and value of the trained nurse as a working member of the community. The rapidity with which she and her work found a place among us shows that the true value was promptly set on both by the public.

Before the Civil War there was not in this country a single white-capped, white-gowned young woman hovering over the bed of the sick man with her thermometer and hypodermic syringe. But I must say in passing that he was not abandoned, as is now supposed, to the mercies of Sairey Gamp and her gin bottle. Every village had its matron, neither drunk nor imbecile, but wise, from long practice, in symptoms and in remedies, and skilled in the handling of the sick. Dickens's libel did this class of nurses gross injustice. Let me speak a word of truth about them.

The college-bred woman of today is too apt to presume that the women of yesterday were altogether ignorant and useless. But, in fact, they had—even before Vassar and Smith were dreamed of—some excuse for being; especially as nurses. You must remember that since the world began the care of children and of the sick and wounded has been in the hands of woman. She, not being idiotic, must have brought some knowledge and skill out of so many ages of practice. I hope that some day a story teller with as much genius as Dickens and more fairness will paint the real Wise Woman as she actually existed in this country before the Civil War. I remember the old mulattoes in Southern neighborhoods, in their gay turbans and huge, white aprons, and the Quaker mid-

wives of Pennsylvania towns, gray robed and placid, who went from house to house, busy with their miraculous errand of bringing live babies into the world. Great was the awe with which we children regarded them. Something of the same awe and wonder befogs my brain now as I think of them. How patient and wise they were! What mysterious knowledge they accumulated year after year! There was no inherited weakness of mind or body in any of their patients for generations — tuberculosis, dipsomania, scrofula or insanity, which was not known to them and to the old village doctor. They worked with him year in and year out, with these possible dangers in sight, over patients who had been known and dear to them since the hour of their birth.

Very likely these old women would be quite useless and bewildered today if they should be called on to give a hypodermic injection or be suddenly placed beside an operating table, the field of action in which the modern trained nurse proves herself to be so alert and skilful.

But we must remember that these old nurses ministered to a generation of women who knew nothing of hypodermics or operating tables; women who, after giving ten or a dozen children to the world, past placidly down the slope of calm old age into the deeper calm beyond.

The modern nurse has to deal with the nerve-tortured anemic woman of today, who usually finds the gift of one child to the world too heavy a drain upon her vitality, and for the rest of her years fights death with the help which surgeons and nurses and all their skill and tools can give her.

To each age come its necessary agents.

Before the advent of the modern type of trained nurse, long before the Civil War, the Roman Catholic Church had established hospitals in almost all of the large cities in this country, usually under the management of the Sisters of Charity and of St. Joseph. Others founded by Germans were in charge of Lutheran sisterhoods. These hospitals are still in the care of the same religious orders of women, and there are no nurses in the country now more skilful or up-to-date in their methods than they.

In 1829 the Friends, always prompt to turn their religion into active charity, founded a training school for nurses in Philadelphia. It still exists, carrying on its work at the same house, at Eleventh and Cherry streets, in the same thoro and benignant fashion. It was established by the physicians foremost in the day in obstetrical work and the treatment of children's diseases, and now is kept within these lines of practice.

The medical and surgical training of these nurses, which extends thru a couple of years, is gratuitous, and the nurses are clothed and supported during that time without charge. For another year they are expected to give their help free of charge to patients in the hospital. After that they are absolved from any obligation of service to the institution.

These different classes of women, up to the date of the Civil War, were the vanguard of the hosts of uniformed, educated nurses who now have taken possession of the whole country. I suppose that there is not today an American town of any importance from sea to sea that does not boast its training school for nurses and its hospital. All denominations have joined in the effort to prepare women for this womanly and high work. And because it is womanly—because it is the kind of work for which the peculiarly feminine intelligence of the American girl especially fits her—(as well as her sympathy, her manual skill and delicacy of touch), she has succeeded in it, as she has not done in most of her commercial or (may I say?) political efforts.

This business is one which does not require a costly outfit. Good health and character, a public school education and three or four years' training, qualify a nurse for independent practice. The work is better paid than any other open to women without capital. A nurse approved by a medical college receives for the care of an ordinary case her boarding, laundry work and from $25 weekly up.

No words which I can use will do justice to the blessings which these good women, if they choose, are able to bring

into our homes by the exercise of their skill, sympathy and authority. How many families today—looking back at some season of loss and grief in their lives—remember the wise, gentle woman who was their help as devout Catholics do some saint beloved of man and God!

There can be no doubt whatever that the percentage of deaths in this country has been materially lowered during the last twenty years by the advent of the trained nurse.

But there is another side to the question. Precisely because the craft of this skilled attendant can so easily and cheaply be learned, because it pays extremely well, and because no high qualifications in mind or manners are exacted from the candidates, many women have gone into the business who are not fitted for it and never will be. The work of the trained nurse more than any other requires unerring tact and good breeding. She comes, an absolute stranger, into your family at the very moment when you are already unnerved and miserable from sudden anxiety and danger. All your private affairs, your habits, your little economies are suddenly stripped before this outsider, who sometimes has a prying eye and wagging tongue. When the danger of the patient increases, all the fears and agony of your soul are bared before her. The constant presence of any stranger would add to the misery of the time, even if she were not lacking in good feeling and good breeding. I have seen some of these women come into a sick-room drenched in rank perfume, bring into it their clatter of silly gossip, and deafen the ear of the dying with their squabbles with the servants. Many of them take cocaine and other drugs to help them bear the strain and fatigue of nursing. I do not deny that in the great majority of cases the trained nurse has been a benignant messenger of comfort. But it is also true that in many households she has added a new horror to sickness and to death.

Another fact must be counted in summing up the value of this modern help to living—her cost. The payment of $25 per week is a heavy drain upon a household of moderate means, especially when the illness is long and it is the bread-winner who is disabled from work. Now, the great majority of Americans have but moderate means.

What is the remedy for this condition of affairs?

There is one, but I doubt whether the average American woman will approve of it.

It is that every American girl shall be thoroly trained in the care of the sick room, the handling and feeding of a patient, the administration of medicine and the management of infants, just as she is set now inexorably down to learn French and music. I do not mean that she should take the full training of the official nurse, but that her instruction should be thoro as far as it goes, and fit her to assist the physician in the care of ordinary illnesses in her home, while the nurse should only be called in for more serious cases.

We are a little extravagant, perhaps, in our ideas of the education necessary for our daughters.

I have before me three or four of the catalogs of the large colleges for women, each setting forth its intellectual menu for the little girl who is leaving her father's roof to be fitted for her work in life. They stand ready to train her in every language, from the Sanskrit and ancient Frisian to today's *argot* in Paris; in all the arts, in psychology, in ancient and modern methods of politics, of government and of the uplifting of humanity. But there are not ten minutes of these school years given to teaching the future wife and mother how to spread a plaster for a sick child or to give it a bath in bed.

There is no joke which will answer me. Seriously, how often in any woman's life does she need Sanskrit or a familiarity with analytic geometry? How often is she called on to treat a burn or the mumps?

PHILADELPHIA, PA.

Literature

To Him That Hath

THE rich and insufferably prosperous may as well look to themselves. They are no longer in the fashion. It is not simply that the savage, awakened mind of bone and brawn is against them, it is that we have all lost that sycophant fancy which made them admirable. Even in fiction, where they have ever posed as the gilded and adorable figures of romance, they have become contemptible. True, Mr. Chambers and others portray them in novels of fashionable life, but soon this ornamental adjective will be changed to one with an obnoxious meaning. And already such stories are written, greatly at the expense of the men and women who figure in them. There is not anywhere today a novelist who is frankly friendly to them, or who would dare to be.

Meanwhile here is a story* which dramatizes what is happening in that under-world of sorrows and imaginable privations and persecutions upon which this upper fashionable insensate world battens and fattens. The situation is melodramatic, of course, because in the very nature of things it is a melancholy world, specter-haunted with famine and crime. Also it is written by one of those young men so common in our day, who have the burning heart and the revolutionary sense of things. Mr. Scott is a hero worshiper of martyred manhood among the poor and unfortunate, a writer who compels admiration and attention by his friendliness to the friendless and by the sanity of his conclusions concerning some sociological problems, rather than by literary ability.

The story is dedicated "To those whom the world has made ugly and whose ugliness the world cannot forgive." And the leading characters in it are victims of this ugliness and of the world's spite, showing that the whole of respectable society, so called, is organized to defeat any effort made by a reformed criminal to live honestly. The hero is an ex-convict who has served his term for a theft that he did not commit, but to which he confessed in order to save the good work and good name of a dead friend who actually had been guilty of the crime. Jean Valjean himself accomplished nó greater sacrifice than does this David Aldrich in Mr. Scott's story; but Valjean's immeasurable advantage consisted in the fact that he had Hugo to interpret his sacrifice. These new young men who are writing fiction merely with a burning heart and a revolutionary sense of things, and who set the world on fire with the righteousness of their course, are too lacking in imagination to be artists yet. They exaggerate, but they have not delevoped the higher finer power to idealize. But all in good time. Their descendants will be the greatest poets, the greatest artists and the greatest scripture writers the world has ever known. Then there will be monuments raised to these young men like Scott who have not great genius, who are merely the primitive folk of the new order, but whose great instincts for human brotherhood shall hereafter forefather great geniuses.

There is no impossible sacrifice in *To Him That Hath.* One who has counted among his friends some of these heroes hidden in prison cells knows, with certain knowledge, the fantastic honor, the unspeakable tenderness, the superb generosity of these men of shattered lives and broken hearts. We do not mean a sophisticated, broken heart, like that of the author of "The Ballad of Reading Gaol," whose horrible fate it was, because he had posed so long, to be unable to forget to pose even in his cell of pain, but the everyday criminal, with no poison of pseudo-Greek estheticism in his veins; to whom, in his simplicity, it is only natural that he should suffer for others. He is no Superman, feeding upon thousands of lesser lives. "I could not betray my friend, altho he was not good," is the inevitable response of the

*TO HIM THAT HATH. *By Leroy Scott.* New York: Doubleday, Page & Co. $1.50.

convict who has kept, by some miracle of God, a childlike heart thru an evil life. David Aldrich was not a man of evil life; his conviction was a deliberate choice; but many a man who is not, like him, an "accidental criminal," has sacrificed himself, according to a divine instinct, rather than a reasoned purpose. And that is the sort of nature broken upon the wheel of too mechanical a justice!

A bad man is often more generous and self-sacrificing than a righteous one. There may be some dim idea of reparation in his sacrificial act; but it is sweeter to think of it as a bit of the divinity of human nature shining thru all sorts of conditions, even the most adverse. The convict has loosed so many bonds of conventionality he can even, sometimes, afford to be lavishly good in unexpected ways. Mr. Scott's psychology of a certain type of convict is sound.

Evolution and Animal Life

THE last five years have witnessed such strides in the study of organic evolution that the classics of Darwin and Wallace can no longer be relied upon to give us an idea of the present status of the subject. Only the more recent books contain accounts of the epoch-making work of de Vries and Mendel. Even the most recent one—that of Jordan and Kellogg*—lacks any reference to the extraordinary results obtained by MacDougal with plants and Tower (see THE INDEPENDENT, August 15th, p. 398) with animals, of experimentally modifying the germ plasm. Otherwise it is well up to date.

The title, *Evolution and Animal Life*, very correctly indicates the contents of the book. It is more than a discussion of evolution. It is an introduction to zoölogy as well. For this reason it may be intelligently read by the veriest layman in zoölogy. The fault of this virtue is that, to those who are acquainted with elementary zoölogy, certain of the discussions are rather discursive; while others (*e. g.*, that of embryology) seem to the reviewer to be quite aside from the primary purpose of the book, as stated in the preface: "To give a lucid elementary account, in limited space, of the processes of evolution." Many of the numerous and excellent illustrations, also, seem somewhat unnecessary. Others, such as the photographs illustrating Burbank's work, are very welcome.

The one here reproduced is, like the general make-up of the book, a combination of good and bad. Some might wish to know which of the parents the smaller plum in the figure is. Or are both so nearly alike that one illustration will do for both? This lack of care in the legends is characteristic of the illustrations.

A laxness of expression is also apparent in the text. Objection might be raised to the use of the term "mutation" (p. 1, line 11) in any other than its technical sense, when treating of evolution. On page 6, "cosmic phenomena" are contrasted with biologic. Are not animals a part of cosmos? Few need to be told that the majority of the animals born fail to reach maturity, "because for one reason or another they cannot do so" (p. 61). Many of the sentences are so loosely constructed that it is difficult to connect the clause with the words they modify. This apparently petty criticism of the English has as its excuse the well-known fact that both the authors are, when they try, masters of literary style. One cannot escape the conviction that this book was hurriedly, even somewhat carelessly, "reeled off" out of the abundant knowledge of the busy authors.

Mistakes of fact are rather few. The whole subject is so debatable that differences of opinion must, of course, be allowed, but these have been largely forestalled by an extremely fair presentation of the debatable points. However, de Vries is not the only one (p. 115) who has observed actual cases of species making by mutation. Few Mendelians would agree that the Mendelian laws are as limited in their application as the authors believe (p. 187). In fact, the bulk of the important Mendelian investigations are, at present, concerned with the authors' second category, which they state is non-Mendelian. In it all the young "agree in presenting a new character differing from the parental characters *a* and *b*." Bateson's work on sweet peas

*EVOLUTION AND ANIMAL LIFE. *By D. S. Jordan and V. L. Kellogg.* Appleton & Co. $2.50.

might be given as one of many examples. Without going into the details of these experiments the results are as follows: If certain strains of white sweet peas be crossed, all the offspring will be colored, altho if the matings had been made within either of the strains the offspring would have been white. The explanation seems to be that two factors are necessary for color. Each of the original strains possesses one of these factors, but not the other, hence only white flowers are produced from pure bred stock; but when the two strains are crossed, the two factors are brought together and color results. Now, each of these factors, individually, acts in Mendelian fashion (see THE INDEPENDENT, *loc. cit.*)

In conclusion, this book is to be recommended to those who wish to learn the present-day views concerning evolution, but who lack the training in elementary zoölogy necessary for the intelligent reading of more technical works. It differs decidedly from the books that appeared in the early days of Darwinism in that it is neither speculative nor polemic, but gives a comprehensive survey of the immense amount of hard work that has been done since then in evolution.

BLOWING AND DRAWING THERMOMETER TUBES.
From Duncan's "Chemistry of Commerce."
Copyright, 1907, by Harper & Brothers.

The Romance and Finance of Steel

DR. BERGLUND intimates in the preface of his monograph on the United States Steel Corporation[1] that he had interviews with officials of the Corporation and of other steel companies. These interviews obviously must have been in New York and not at the plants; and in view of the painstaking work that has gone into the book, it is to be regretted that before he began to marshal his material and to write, Dr. Berglund did not spend a couple of hours at the Edgar Thompson mill at Braddock or at the magnificent continuous rail mill that Mayor Johnson, of Cleveland, installed at Lorrain, for it would have given him a much surer touch when he is dealing with the practical side of the iron and steel industry, or when he is tracing the influence that

[1] THE UNITED STATES STEEL CORPORATION. A Study of the Growth and Influence of Combination in the Iron and Steel Industry. *By Abraham Berglund, Ph.D.* New York: The Columbia Press (Macmillan). Pp. 178. $1.50.

the Steel Corporation has had in determining prices for the output of American steel plants generally. There is often a vagueness of statement when he is writing of the plants and of labor at the furnaces. Frequently when he is describing the equipment he puts the cart before the horse by writing of "mills and furnaces"; and he makes a quite inexcusable break when, at pages 141 and 143, he states that rails are made out of billets. A statement like this is more than a mere slip of the pen; for it renders of less value the particular argument that Dr. Berglund is making on these pages as to the attitude of the Steel Corporation toward the price of crude and unfinished material and also of the finished product.

Dr. Berglund is on much surer ground when he is dealing with conditions in the iron and steel industry which led to the organization of the Steel Corporation in 1901; and when he is tracing with much detail, and with admirable clearness, the developments which have marked the history of the trust in the first six years of its existence. Practically every movement which the trust has made in these six years is narrated by Dr. Berglund—the conversion of part of its preferred stock into bonds in the early months of 1902; its scheme for profit-sharing with its superintendents, its clerical force, and its work people, adopted in December, 1902; the beginning of the mammoth plant at Gary, Ind., in 1906; and the acquisition of the immense body of ore belonging to the Great Northern Railway from Mr. J. J. Hill in October last. There have been other monographs on the Steel Corporation, and it has been the subject of many magazine articles; but Dr. Berglund's study of its organization, its development, and its policies—notwithstanding the faults that have been noted—is as yet certainly the most complete; for it brings the story of the Corporation down as late as March, 1907. Most people who have any acquaintance with the iron and steel industry will agree with Dr. Berglund's contention that the Corporation has pursued a fairly conservative policy as regards prices during the great prosperity of the last three or four years; that it has been a steadying influence, and has done much to prevent excessive inflation of prices, and a consequent collapse of the boom. Even men who have been in sharp antagonism to the trust—as for instance the nail and wire manufacturers in Canada—concede that the trust has had this influence in the industrial world both of the United States and of the Dominion of Canada.

The Romance of Steel[2] covers part of the ground traversed by Dr. Berglund when Mr. Casson describes the organization of the Steel Corporation; but the book is written from a different point of view and in quite a different style. It is a racy and glowing account of industrial success, intended for popular reading. The Bessemer and open-hearth processes of steel manufacture were English inventions; but excepting a machine for doing away with the terribly laborious labor of clearing pigs out of the casting house, practically all the labor-saving inventions and appliances now in service in the iron and steel industry originated in the United States; and it is these inventions and appliances, and the modern Lake ore-carriers, with the equipment for unloading these great bulk freighters, that constitute America's great contribution to the economy of the iron and steel industry.

Mr. Casson's story has the merit of being remarkably inclusive, on the historic and physical sides, as well as in its personal aspects. It begins with the establishment of the first American furnace at Lynn, Mass., in 1642; and comes down to the organization of the Steel Trust in 1901, and to the installation of the great plant of the Lackawanna Company—one of the largest of the independent concerns—at Buffalo, which was got to work about 1904. The era of great profits begins with Mr. Carnegie and his associates in the later seventies of last century; and when Mr. Casson deals with this stage of the industry, and with the money that was made when the Carnegie plants were acquired by the United States Steel Corporation, his figures are bewildering, almost staggering, in their immensity. One naturally begins to ask by whom ultimately these colossal profits were paid. Mr. Casson does not concern

[2] THE ROMANCE OF STEEL. The Story of a Thousand Millionaires. *By Herbert N. Casson.* New York: A. S. Barnes & Co. Pp. lxiv, 376. $5.00.

himself with this question. He leaves his readers to conjecture how the enormous toll was spread over the masses of the American people—for in the long run it was borne by them; and he also leaves his readers to determine for themselves the point at which in such enormous money-making processes as he describes another word should be substituted for profit.

One of the significant features of the book is Mr. Casson's description of the change that was made in steel plant labor after the Homestead strike in 1902. Prior to that time the union officials and the captains of industry were in pretty close association, especially when the tariff was revised. Then union officials and iron and steel magnates traveled together in private cars to Washington to see that no inroad was made on the tariff wall. The association has been less close since Homestead; and the unions today have lost the hold they had on the industry when it was at a smaller stage, and labor-saving machinery was still undeveloped. Even more significant is Mr. Casson's statement of the low prices at which pig iron, rails and billets have been sold; and his casual reference to the fact that for fifteen years past protective duties have not been indispensable to these departments of the industry.

BURBANK'S PLUMS.

The larger plum is the direct seedling of the smaller, produced by crossing the *trifoliata* (Japan) plum and the little *maritima* (Atlantic Coast) plum. From Jordan & Kellogg's "Evolution and Animal Life."

The social changes which have come over Pittsburg in the last ten years, as described by Mr. Casson, are not exhilarating reading. They leave one with the impression that the never-ending smoke and gloom are by no means the only drawback to life in that city—they leave one wondering what is to be the fate of a social life built up on colossal fortunes made with such suddenness. If Mr. Casson's pictures of life in Pittsburg can be accepted as true, there must be much artificiality in social conditions among this newly-arrived aristocracy of the steel world. He describes how some of this aristocracy squander their wealth; how much of the money is going into vulgar and wanton display. Perhaps the worst use of this wealth, from a civic and social point of view, was when one of the new-made millionaires for a while acquired the control of four of Pittsburg's newspapers. Undoubtedly the development of the iron and steel industry is America's greatest material achievement. It put the United States alongside Great Britain as an industrial nation; but there are aspects of this achievement, and phases of life growing out of it, described in the two monographs which few thoughtful Americans can care to point to with any feelings of national pride.

Queen of the Blue-Stockings

STUPID as usually is the reading of other people's letters, there is probably no better way of obtaining an intimate acquaintance with the small ways of the past. Domestic economy, fashions, manners, the price of food, clothing and amusement, even the very tricks of speech — everything which becomes so odiously dull and commonplace as a matter of daily routine, revives and dins the ear with irresistible insistency. Literary perspective, atmosphere, romance, are dispelled in a twinkling; and "the dark backward and abysm of time" is again flooded with the merciless glare of contemporaneity. To these remarks the letters of Elizabeth Montagu are no exception.* And they labor under the further disadvantage of dealing with one of the dreariest periods of English history, from the literary and social point of view, as well as with one of the most uninteresting subjects which that period has to offer—the British aristocracy, and particularly the Montagu clique (the "cues," as Horace Walpole irreverently calls them), whose affairs of one sort and another

*ELIZABETH MONTAGU, THE QUEEN OF THE BLUE-STOCKINGS. Her Correspondence from 1720-1761. *By her Great Great Niece, Emily J. Climenson.* 2 vols. New York: E. P. Dutton & Co. $8.00.

furnish the staple of remark. We learn that Lady Sunderland, "*née* Judith Tichburne, third wife of Charles, Earl of Sunderland, remarried Right Hon. Sir Robert Sutton"; and incidentally that a blue velvet mantle cost £5, and an ermine muff, one guinea, together with some slight information concerning the condition of the "bathing tubs" at the Duke of Portland's, which were apparently leaky with disuse, and the modest practice of wearing "bathing cloaths" even in the privacy of one's own bedroom. While to the humor and delicacy of this society there is abundant and eloquent evidence. "I shall move as slowly as a fat corpse in a hearse," writes the sprightly Mrs. Montagu, nicknamed Fidget, in announcing her contemplated return to London after a convalescence. And again, "Madame 'Gran' (ville) desires her duty" and is sorry Mrs. Montagu was not in town, for "there was a charming execution yesterday—two smugglers and a Jew—and a fine view from her windows." Rather better fun in one sense, if not of much greater consequence, are such accounts as that of Lady Bath's assembly, "from which, at hazard of life and limb, I broke away a little after one on Tuesday last. Her ladyship had happily gathered together eight hundred Christian souls, many of which had like to have perished by famine and other accidents," etc.

Occasionally, to be sure, the correspondence resounds faintly with echoes from the greater world without, the Pretender's descent upon Scotland or Frederick's defeat at Kolin; and now and then occurs a name of some importance, Burke or Dr. Johnson. But even these sounds reach us shrill and distorted by the medium of their transmission. To the Montagus, the Jacobites at Preston Pans are "5,000 Highland ruffians not worth £5,000, if they, their wives, children, servants, goods and chattels, were to be sold in the open market"; and it is this beggarly rabble that has the impudence to trouble the serenity of the Georges and the complacency of "a nation worth twice 500 millions of property!" Such is the matter of these two volumes—such the reflection of an extinct smugdom which gradually forms before the eyes of one who has the patience to read them with a singular mingling of curiosity, amusement and irritation.

A Colleague of Gladstone

THERE can be but few American students of English politics in the nineteenth century who can claim acquaintance with Sidney Herbert, who died in 1861, soon after he had gone to the Upper House as Lord Herbert of Lea. Herbert represented one of the county divisions of Wiltshire in the House of Commons for twenty-eight years before he became a peer. He was Secretary at War—as distinct from Secretary for War—during the English and French invasion of the Crimea; and some distinction accrued to him as an army reformer. His achievements as a statesman are not memorable. They are practically forgotten; but Herbert is a man whose achievement is to be measured by his influence rather than by any Parliamentary enactment or reform which is associated with his name; and it is only necessary to read the correspondence of which these volumes* mainly consist to realize that his influence was great and far extended.

Herbert began Parliamentary life as a Tory. In 1846, however, he threw in his lot with Peel and the cause of free trade; and as long as the Peelite party survived as a separate group in the House of Commons, a survival that lasted until about 1857, Herbert was one of the prominent members of the group; and as such was in close association with Gladstone and Sir James Graham. After he had broken away from the Tory party over the corn laws, Sidney Herbert became a convinced Liberal. While he and Gladstone were closely associated in the House of Commons, Herbert was much more a Liberal —much more in sympathy with all for which Liberalism stood between the Reform Act of 1832 and the second Reform Act in 1867—than Gladstone. Gladstone, in the years between 1846 and 1860, except on the question of free trade, had no sympathy with the other political aims of Bright and Cobden. These aims were as antipathetic to the future leader of the Liberal party as they were to the most Tory of Tories in the House of Com-

*SIDNEY HERBERT—LORD HERBERT OF LEA. A Memoir. *By Lord Stanmore.* With Portraits and Illustrations. Two volumes, pp. xii, 460; vi, 479. New York: E. P. Dutton & Co. $7.50.

mons; and one of the most important facts brought out in the correspondence between Gladstone and Aberdeen, Graham and Herbert is that it was little else than an accident that prevented Gladstone from going completely over to the Tories, when Lord Derby formed his Administration in 1856.

Gladstone at that time stood aloof from the two great political parties. The Peelite party in the House of Commons had been reduced to three—Gladstone, Herbert and Graham; and Gladstone had so little sympathy with Liberalism in the days when Palmerston was the Liberal leader that he held that its only usefulness was to serve as an opposition, and help to keep the Tory party in order; and in particular to prevent the Tory party from disturbing the free trade settlement of 1846. "The Liberal party," Gladstone wrote to Herbert, on October 24th, 1856, "should never occupy the Treasury benches excepting under a powerful government like that of Earl Grey, or at any rate a tolerably active one like that of Lord Melbourne."

Much of the correspondence that Lord Stanmore has included in these volumes has, thru lapse of time, lost its more vivid interest. At least a third of the first volume is occupied with correspondence arising out of the Crimean War. But even this may be serviceable by reason of the fact that it brings out in full what an amount of downright, uncomfortable worry a war entails on the government that has blundered into it. In the public discussions that preceded the Peace Conference at The Hague this year, it was often affirmed that statesmen in all countries are nowadays opposed to war except under the most desperate circumstances, when transcendent interests are at stake. With correspondence such as that of Sidney Herbert during the Crimean War before us it is easy to believe that these recent statements are true. Not a single British statesman gained any credit from the Crimean War —for the way in which it was begun, the way in which it was conducted, or the way in which it was settled; while Cabinet rank and Cabinet responsibility during the years when the war was in progress obviously brought with them worry which must have told hardly on men of conscience or of any sense of loyalty to Cabinet responsibilities. It is good that the world should know what war means for the men who are of the administrations responsible for a war; and except for the Aberdeen memoirs, there are among English political biographies no books which are more valuable from this point of view than the biography of Sidney Herbert.

The Chemistry of Commerce. A Simple Interpretation of Some New Chemistry in its Relation to Modern Industry. By Robert Kennedy Duncan, New York: Harper and Brothers. $2.00.

This is one of the most useful of books. Good popularizers of science are rare. The men who know do not usually want to write about it and the men who want to write about it do not usually know. Especially is this true in the field of industrial technology where the element of industrial secrecy enters in, and it is trebly difficult to be up to date, accurate and comprehensible. Yet this is the branch of science in which the average man would naturally feel most interested, for it is full of the "marvels," "revolutions" and "startling discoveries" in which he delights, and it explains to him the manifold new appliances with which he daily comes into contact. Professor Duncan has the chair of Industrial Chemistry in the University of Kansas, so he knows his subject, and he comes of a literary family, so he can write. His book on "The New Knowledge" was the best popular exposition of recent discoveries in radio-activity and the theories they have led to. In the present volume, dealing with more practical matters, he is more free from the temptation, to which he is not altogether immune, of indulging in fanciful speculation. It is a book for the open shelves of the public reading-room, and one that the manufacturer and business man will profit by perusing, for it contains information on a great variety of topics impossible to get elsewhere in such convenient form. Here are to be found answers to such questions as the following, which every intelligent person has asked within the last few years, and often found difficulty in getting answered: What are these new bright yellow globes and long green tubes that we see

used for lighting on the street? What is the practical benefit of the new law freeing "denatured" alcohol from the revenue tax? What are the Welsbach mantles made of? Are the diamonds and rubies they make nowadays real or imitation? How can they manufacture flower perfumes and fruit flavors by the pound out of coal tar? What is this "opsonic index" that the doctors are always talking about? What will be the effect on agriculture if atmospheric nitrogen can be used as a fertilizer? Is artificial silk going to put the worm out of its job? In the last chapter Professor Duncan explains the new and promising plan of industrial fellowship that he has introduced into the State University of Kansas.

DR. HARVEY W. WILEY,
Author of "Foods and Their Adulterations." P. Blakiston's Son & Co.

Foods and Their Adulterations. Origin manufacture and composition of food products, description of common adulterations, food standards, and national food laws and regulations. By Harvey W. Wiley. Philadelphia: P. Blackinton's Son & Co. $4.00.

This is the most authoritative and comprehensive book that has appeared on this important subject, and there is no other man in America who is better fitted to handle it from both the scientific and the legislative sides than the author. The national food law past by the last Congress was very largely due to Dr. Wiley's preparatory work of many years, during which he has occupied the position of Chief of the Chemical Division of the Department of Agriculture, laying the foundations of Government control by scientific researches into the composition of foods and chemical tests for adulteration and impurities, which have been carried on under his direction, in spite of the most powerful opposition of interested industries. A unique and valuable feature of this work is the 100 pages devoted to the Food and Drugs and Meat Inspection Act and the decisions of the Department of Agriculture on the difficult questions of labeling and standards. There are eleven excellent colored plates, mostly of cuts of beef, and sixty-eight illustrations in black and white. The book is intended more for the general public than the chemist, because it does not go into the technical details of analytic processes except in so far as to explain the meaning of the terms used in food reports. It is a book not merely for the library, but also for the kitchen, because a housewife would in a short time save the value of the book by following its advice in the purchase of supplies, very much to the benefit of the health of the family under her control. How meats are cut and their relative value; which have the greater nourishment, a breakfast food at two cents or one at fifteen cents a pound; what adulterations are to be looked for in canned jellies and jams and how to interpret their labels; the baking-powder question and comparative digestibility of different kinds of bread, are all questions worth study by the careful housewife, and here she can find more reliable information than from either advertisements or the "scare" articles of the magazines. There is a second volume by the same author on *Beverages and Their Adulterations.*

The Collected Works of Henrik Ibsen. Vol. V, Emperor and Galilean. Vol. IX, Rosmersholm, The Lady from the Sea. Vol. X, Hedda Gabler, The Master Builder. New York: Charles Scribner's Sons. $1.00 each.

This new copyright edition is indispensable to the student or reader of Ibsen for two reasons; it is the only complete and authoritative translation in English, and the series of introductions which William Archer has contributed forms the best exposition and analysis of the dramas that we have in the language. Ibsen's death has removed the seal from many sources of information about the circumstances under which they were written and what they mean,

or, rather, what the author meant by them. For example, we now know where Ibsen got his women. He has been praised for his marvelous insight into feminine nature and condemned for his dense ignorance and misinterpretation of it, but both admirers and critics have wondered how such a recluse could find out so much or think he knew so much about the opposite sex. The secret was revealed when among his papers were found sheaves upon sheaves of letters from women which he had preserved for study. As Dr. Elias says:

"All these ladies demanded something of him—some cure for their agonies of soul, or for the incomprehension of which they suffered; some solution of the riddle of their nature. Almost everyone of them regarded herself as a problem to which Ibsen could not but have the time and interest to apply himself."

In one case, that of Fräulein Barbach of Vienna, who was the model for Hilda in *The Master Builder,* the most fascinating of Ibsen's heroines, we find him cutting off the correspondence with the following curt note when he had got all the material he needed:

"Please for the present, do not write to me again. I will soon send you my new play. Receive it in friendship but in silence."

The Brasses of England. By Herbert W. Macklin. Pp. xx, 336. New York: E. P. Dutton & Co. $2.50.

The Bells of England. By J. J. Raven. Pp. xv, 338. New York: E. P. Dutton & Co. $3.00.

Dr. Raven and the Rev. H. W. Macklin are both clergymen of the Church of England, who in the quiet of their pleasant country parishes have devoted themselves with enthusiasm to ecclesiastical hobbies. With Dr. Raven it is the church bells that have fascinated his attention, and he has spent years in investigating the history of all the ancient bells of central and southern England of which he could obtain any information. The Rev. H. W. Macklin is apparently a man of quieter tastes. The old brasses, with their silent commemoration of churchman, aristocrat, lawyer and merchant have been his chief joy; and any American who is contemplating a leisurely tour in England will be amply repaid for a quiet study of his book. The visitor who stops his motor car at the doors of some quaint old church and engages the services of the decrepit old man or woman who acts as verger should be careful to ask whether there are any brasses. These old monuments were laid down most frequently in the aisles and pavements; and tho, as Mr. Macklin tells us, they are not truly brasses, but are made of a very much harder alloy which will outlast the stone in which they are set, much treading has frequently worn smooth the lines of face and costume, and many a careful vicar now has the brasses in his church protected with boards or matting. Mr. Macklin furnishes a list of the brasses to be found in the counties to which he gives most attention; but the numerous and interesting brasses of Lancashire and Yorkshire and of the other northern counties are not included, and his book thus falls short of being a complete account of the brasses of England. The hobby which has occupied Dr. Raven's attention is not so easy of access for the ordinary visitor to an English country church. Not many visitors, whether English or American, care to climb into the bell towers; and if they did would find it difficult to read or copy the inscriptions on the bells, or indeed in many cases to distinguish between a modern bell and one of ancient date. The legends and superstitions attaching to bells, the power of the bell in exorcising demons and evil spirits, and insuring a safe passage to the departing soul, in stilling tempests or failing that in foretelling them—all these associations of the past must add to the interest and pleasure awakened by the sound of the chimes of the village church, and Dr. Raven's book puts a new and deeper meaning into a thousand familiar quotations and allusions, and makes understandable numerous rites and customs that may previously have been past over without a thought of their significance.

St. Jude's. By Ian Maclaren. With an Introduction by Ralph Connor. Philadelphia: The Sunday School Times Co. $1.25.

St. Jude's is a large parish in Glasgow to whose pulpit John Carmichael is transferred from Drumtochty. The parish-

ioners are every whit as canny, dour and disagreeably theological as the simpler folk of the Grampian Hills, but somehow they are not quite so interesting in the thick and heavy Glasgow atmosphere. Or is it that the hand, which now is quiet, lost something of its cunning in the later heavy-burdened years? Possibly it is only that if one is really to enjoy a theological Scot he should not hear too much about him.

Literary Notes

....Among the new books announced by B. W. Dodge & Co., New York, are *Feminine Finance* by Frances Crouch, *The Light* by Mrs. Harold E. Gorst, *The First Secretary* by Demetra and Kenneth Brown, and *Scars on Southern Seas* by George Bronson Howard.

....Moffatt, Yard & Co.'s fall list contains several items of especial interest. Among them Elizabeth Luther Cary's *Art of William Blake,* Edwin Björkman's *Ibsen as He Should Be Read,* Dan Beard's *Animal Book,* Gustav Kobbé's *The Pianolist* and a large number of artistic gift books.

....Many of our readers have written to inquire where they may obtain Kipling's latest poem, *The Sons of Martha,* which was discussed in our editorials of May 23d and August 29th, 1907. The poem was published April 28th in the Sunday magazines of the following papers: *The Boston Post, The Pittsburgh Post, The Washington Star, The New York Tribune, The St. Louis Republic, The Philadelphia Press, The Minneapolis Journal, The Chicago Record-Herald, The Rocky Mountain News* and *Denver Times,* from which perhaps some copies may be obtained even at this late date.

....One of the best books we have seen on Sunday School management and teaching is *The Modern Sunday School in Principle and Practice,* by Mr. Henry Frederick Cope, general secretary of the Religious Education Society (Fleming H. Revell Co. $1.00). Mr. Cope has the faculty of getting at the heart of a problem, fixing upon the counsel which is most likely to be needed, and expressing his ideas in terse and effective English.

Pebbles

COBWEBS.

HE—That was splendid old wine the Gormans gave us for dinner last night.

She—Oh! James, do you think the cobwebs on the bottles were really genuine.—*Brooklyn Life.*

COCKTAIL CALCULUS.

TO THE EDITOR OF THE EVENING SUN—*Sir:* If a spilled Manhattan cocktail leaves an ineradicable stain on a new spring gown and the amount of damage is measured by a $5 award to the occupant of the gown, what must be the consequences to a human being's interior linings of several such spilled in rapid succession down the throat?

"You are charged," said the court, reading the formal complaint, "with having wilfully, feloniously, and with malice aforethought appropriated to your own use and behoof a certain article—to wit: a vehicle—said vehicle having been wrongfully and feloniously abstracted by you from the premises of one John Doe on or about the 14th day of August, Anno Domini 1907, contrary to the statute in such cases made and provided, and against the peace and dignity of the people of the State of Illinois. What say you? Are you guilty or not guilty?"

"I'm not guilty, jedge," protested the prisoner. "All I done was to steal a buggy."—*Chicago Record-Herald.*

THE REFORM MAYOR OF WICHITA, KANSAS.

"THAT ex-drayman, Mayor Graham, Wichita's pin-headed sovereign, who is boasting many of the characteristics of a rajah-landamem, yet was elected by a congress of feather-headed women, seems bent on something which his humble subjects, as yet, have failed to catch on to, or to satisfactorily figure out. Notwithstanding his Royal Weakness condescended to announce to the commission advocates and conferees, the other night, that in the course of human events he might consent to enlighten his supporters, as yet nothing is doing. Some of the conferees seemed to be depressed by the impression that two years was a long time to wait for the fruit of the millennium rule promised. Meanwhile curbstone imbibing of whisky and alleyway guzzling of beer are on the frightful increase, while the members of the official staff of this 'cock of the walk' are but a lot of left-over rudderles derelicts, drifting hopelessly about in a fathomless and unknown sea of uncertainty."—*The Wichita Eagle.*

ON page 344, August 8 number, under heading "Pebbles," is a "Swear" story from the *Chicago News.* In 1864 I was in Dublin, Ireland, with my father. It was a regular wet, muddy Irish day and numerous small boys with brooms were keeping the crossings clean and begging for pennies as a reward. We were crossing with some friends a very muddy part of Sackville street. The ladies of the party crossed first and the small boy with the broom, a typically ragged, shock-haired, bright-eyed little fellow, getting no response to his salute and entreaty, turned round as the ladies passed by and swore profusely. My father seized him by the arm and shook him, saying "How dare you swear before the ladies!" Quick as a flash came the reply: "Sure, yer honor, how the divil should I know the ladies wanted to swear first?" My father remembered that answer to his dying day and was never tired of telling the story—forty-three years after it crops up again with many others. I have kept a diary for over forty years and it comes in handy sometimes. —*Walter E. Koch, M. A.*

Peace in Asia

It has been the constant charge against the successive Liberal Ministries of Great Britain that they represented a "Little England" policy; that they were so concerned with domestic problems that they failed to maintain the honor and develop the power of Great Britain abroad. And yet it was a Gladstone Ministry that secured the possession of Egypt; and now it is another Liberal Ministry which has delivered the Empire from its long isolation, and made it not only the strongest, but also the best protected and supported of all European nations.

First came the remarkable and courageous treaty with Japan. This served to protect the British possessions in India against the possibility of attack by Russia. Were Russia to come down thru Afghanistan, where the British navy would be of no use, then Japan would make war with Russia, and compel her to deflect her armies to protect her Eastern coasts. This was universally recognized as magnificent strategy, and pacified the nervous Russophobe terror. But with this splendid stroke of policy came another, the fresh understanding with France, coming just at the time when France had discovered that she had little to hope from weakened and distracted Russia. Now the old and foolish ill-will between the two Powers that looked askance at each other across the Straits of Dover was removed, and France, detached in spirit from Russia, became the best of friends with Britain. This again was a magnificent achievement.

And now we have the treaty with Russia, and a most remarkable one it is, and creditable to both parties. There is in it no suggestion of "Little England." The only serious difficulty with Russia, the fear of aggression in Central Asia, is quite removed, and, if they will, the dogs of war can lie down in quiet, and the nations may cease to enlarge their armaments.

Between the British possessions in Southern Asia and the Russian possessions in Northern Asia lies China in the east, and to the west lie Tibet, Afghanistan and Persia. The latter three countries have for many years been jealously watched by both Russia and Great Britain, each anxious that the other shall not get the advantage of possession or influence. By a tacit understanding Northern Afghanistan has been allowed to be claimed as under the influence of Russia, while Great Britain claimed an even greater influence in the southern portion. In Tibet, a new convention has given Great Britain special mercantile and other privileges, but not any protectorate. In Persia, where British influence was supreme fifty years ago, the Russian influence has increased so far that Great Britain had almost retired, diplomatically, while still forbidding Russia to enter a port in the Indian Ocean.

The new treaty solves every question. The whole of Afghanistan—and this is what most concerns Britain—both the north and south, Herat and Cabul, is given over to the acknowledged influence and protectorate of Great Britain. Russia will have no diplomatic agency in the country. All diplomatic questions will be dealt with thru the British Office. Afghanistan henceforth is all of it a recognized dependency of Britain, or, better, of India. This practically closes the road by which Russia might move down and threaten India. Connected with this is the settlement of the status of Tibet. Both Powers agree that it be recognized as a portion of the Chinese Empire, which is not to be annexed or otherwise affected, while the late convention following the British conquest of Lhassa remains intact. So far the advantage lies

wholly with Great Britain, for Russia definitely withdraws all ambition of conquest.

The case is different with Persia. There Russia has been advancing and Britain withdrawing, and this fact is recognized. The whole of northern Persia, including the capital, Teheran, and the old capital Ispahan, is left to the superior Russian influence. Great Britain will allow Russia to build railroads or make any other commercial arrangements and will herself withdraw. She recognizes this as the proper sphere of Russian influence. She reserves as her own not the rest of Persia south of the line of Russia's influence, but only the southeastern portion where Persia borders on her own dependencies. Nothing is said about the seacoast, and nothing of that portion of Persia which touches on the southern valley of the Tigris and Euphrates in Asiatic Turkey. Already British influence is strong in Baghdad, and on the coast, where Lord Curzon held his much exploited durbars. On the Persian Gulf Bussora, in Turkey, and Mohammera, in Persia, will remain as they are, and Russia is still excluded from her ambition. But there was another Power to be considered, Germany. It is Germany that claims especial influence in Turkey, and it is German influence that is planning the railroad down the Tigris to Bagdad and the Gulf. We may conceive that it was only because Germany's claims were not affected in this partition of influence in Persia, that Germany gave her consent to the treaty between Great Britain and Russia.

We may then conclude that both Powers have gained their special points. It has been a fair division in Asia, as between the two. Each must yield that each might gain. It works for peace. If there is any great Power that suffers it is Japan, for now this perfect understanding makes far less important the treaty with Japan, for India's protection is otherwise secured. Just now Canada flings in a bone of contention and Great Britain may be compelled to ask of Japan what she will be slow to grant, and there may be less willingness on Great Britain's part to maintain the spirit of the friendly agreement. We have to look with more and more anxiety toward the East, as the feeling against the yellow races rises in the West, and the military power of Japan and China is rapidly growing. But that opens a problem which we may leave to the coming decades.

The Municipal Budget

THE ignorance of New York City taxpayers of the ways in which their money is disposed of by their municipal government, and their indifference to the whole matter of municipal finance, is amazing; and yet, like taxpayers in general, they are continually complaining of "robbery" and "confiscation."

It sounds incredible, but it is perfectly true, that the annual budget of the largest American city, the largest city but one in the world, is not itemized in the public reports. To the eye of the taxpayer, appropriations are lumped, and he has no means of knowing to what purposes his contribution is apportioned. Whatever itemizing is done is for the benefit of other interested parties than those who pay the bills, and is presumably recorded only in diminutive memorandum books, for which it would be necessary to search the vest pockets of politicians and contractors.

The public has a right to assume that such business methods have not been adopted for any honest purpose, and a right, therefore, to hold each and every member of the Board of Estimate and Apportionment personally responsible for its program. It is well, furthermore, that from time to time the public should be reminded who these gentlemen are. We therefore take pleasure in printing their names as follows: Mayor, George B. McClellan; Comptroller, Herman A. Metz; the President of the Board of Aldermen, Patrick F. McGowan; and the Presidents of the Boroughs, namely: John F. Ahearn, of Manhattan; Bird S. Coler, of Brooklyn; L. F. Haffen, of the Bronx; Joseph Bermel, of Queens, and George Cromwell, of Richmond.

For fourteen years the budget and the debt of this city have been growing at an astounding rate. Counting in the new bond issue of $40,000,000, the net funded debt of New York City is now $499,065,526, or considerably more than half of the public debt of the United States.

Some of this money has been expended in creating great and important public improvements, which the city has no reason to regret; but if all the facts could be disclosed we should undoubtedly discover that we ought to have as many improvements again to show for the outlay.

Whenever the Board of Estimate and Apportionment has undertaken to reduce expenditures, its habit has been to make the "horizontal cut," a method that is never employed in private or in public finance except for vicious purposes. When economy is necessary, some expenditures can always be more wisely reduced than others. The "horizontal cut" is a confession that, to the eye of the administration, the really important part of the expenditure is the graft that sticks to the hands of department officials, district leaders and contractors, who must all be treated "on the level" when it comes to "pinching" them for a part of their "boodle."

A year ago the Board of Estimate and Apportionment and the Board of Aldermen adopted a resolution that whenever possible the budget should contain "a specific item for each class of expenditure to be made thereunder, in order that, thru said budget, adequate control may be had over the administrative and other cost of the various city and other departments." This resolution has not yet been observed, and at least, in view of the disclosures of the methods sanctioned by Mr. Ahearn, one important group of taxpayers, the Allied Real Estate Interests, has been moved to put some questions to Comptroller Metz. The executive committee of this organization "wants to know," among other things, whether the budget of 1908 will be itemized in accordance with the resolution of 1906, what date has been set for final action upon it, and what day taxpayers may appear before the Board and be heard. It wants to know, also, whether the horizontal cut has been abandoned, and how far salary increases are due to an increase in the salaries of present officials and how far to the necessity of taking on new employees.

Questions of this kind should have been asked long ago, and taxpayers generally should have organized, as the real estate interests are organized now, to secure a businesslike administration of the municipal finances. It is their own fault that they have been bled and robbed, and it is in their power to put a stop to "confiscation" whenever they think it worth while. Until they bestir themselves we have little sympathy with or for them, but unfortunately, their indifference injures not only themselves, but the entire public as well.

It is, however, occasion for hope and congratulation that a first step has been taken. The letter to Comptroller Metz is unique in American city finance. Such questions as it asks ought to be asked also in Chicago, in New Orleans, in Louisville, in Los Angeles, in San Francisco. The American taxpayer must be brought to see that budget voting day is quite as important a date on his calendar as election day is.

Druggists and Drug Victims

It was confidently hoped that the passage of the National Pure Food law, with the requirement that every remedy that entered into interstate commerce should have printed on the label any narcotic or stimulant ingredients likely to lead to the formation of drug habits, would limit the opportunities for the ready procurement of such drugs to a great extent. This hope has not been disappointed. Cocaine fiends cannot obtain their favorite drug under the harmless name of a catarrh cure any more, and innocent persons are not likely to be drawn unwittingly into the formation of the habit, since the possibility of it is indicated by the printed label, and at the first indication of the establishment of the craving, and before a real habit has been formed, a stop can be put to the use of such dangerous remedies. Needless to say this and other laws do not, however, absolutely prevent the obtaining of such drugs by those who want them, even in States where they should not be sold without a prescription. Drug *habitués* will give almost any price for the drug they crave, and dishonest druggists are easily led into providing them with it, if not openly, at least under such circumstances as will obscure the transaction if it should be brought before the authorities.

Recently our attention has been called to some abuses of this kind, even in smaller towns. In cities the number of druggists makes it easier to evade the law from one standpoint, tho the much better surveillance by the authorities makes dishonest practices in this matter much more liable to be followed by prosecution. It is the character of the druggist, however, much more than the legal regulations in the matter, that count for reform. Drug *habitués* learn to imitate the mode of writing prescriptions for their favorite remedy, and do not hesitate to employ this subterfuge in order to obtain the drug. In a large city where they are not known this enables them to secure their supplies by applying successively at many different drug stores without exciting suspicion. In small villages and country towns, however, this excuse does not hold, and druggists not only know the doctors of the neighborhood and their methods of prescription writing, but soon get to know their customers, and it is only by their connivance that large quantities of a habit-forming drug can be obtained. We are informed that in one of the small towns of Western Pennsylvania as high as 10 per cent. of the population have become the slaves of cocaine, because of the criminal connivance of one or more druggists in this matter.

Almost needless to say such an encouragement of a health-destroying practice by a professional man—for it must not be forgotten that the apothecary is no mere shopkeeper, but a member of a profession that is intended to enable people to preserve and to recover their health—deserves the severest punishment. It is a deliberate prostitution of a precious knowledge of remedies meant to control and assuage pain and stimulate the exhausted, simply for the purpose of making money, without any care for the evils that may ensue. Such prostitution, like all other forms of abusing what is meant for the good of the community to one's selfish personal uses, is very hard to reach by legal regulation, but it can be reached by an enlightened public sentiment in the matter. When it is known that a particular druggist is careless in the matter of providing drugs for drug *habitués* then honest people should avoid him. If his own professional standards will not help him to avoid such evils, then he must be made to feel that the community standard of morality will work against his business interests and hurt him more seriously than his unprofessional conduct will help him. It may seem a very indirect way of combating so serious an evil, but it can be made very effective, and small towns can teach a lesson in this matter that will react upon larger centers of population.

Unfortunately, as the temperance movement has gained in strength, the tendency to take stimulants and narcotics in other forms than those of spirituous and malt liquors has increased. Even where prohibition prevails by law, it is the druggists who are responsible for such violations, of the spirit of the law at least, as in some places make it ridiculous. The drug-store on nearly every corner of certain of the Maine towns replaces the saloon to a noteworthy degree. It is evident that the standard of professional conduct of the druggist has become lower since the old-fashioned apothecary degenerated into the shopkeeper, who handles fancy and toilet articles and has a prescription department as only one, and not by any means the most important, feature of his business. The druggists themselves must be made to feel that this degeneration will work harm to them, and the community must bring them to a realization of the fact that professional honor is expected to exist among them far above what would be looked for from the shopkeeper, if the confidence that the public has had in them is to be maintained. Here, as elsewhere, a higher standard of honor is required than is usual at the present day; but the public has greater right to demand it since the law confers on them many privileges.

The Equalizing of Ability

One of the most important claims that Bacon makes for his new method, his *Novum Organum,* is that it "goes far to level men's wits, and leaves but little to individual excellence." This statement was picked upon by his critics as one of

Bacon's fatuities, and his friends have rarely attempted to defend it, yet the course of time has shown it to be a true prophecy. This leveling of men's wits is one of the most striking characteristics of our modern civilization which is the result, not, it is true, of the Baconian method alone, but of the intellectual movement of which it was a part.

We are no longer dependent upon the accidental birth of a succession of men of exceptional ability for the preservation or even the progress of our civilization. Great men are as much in demand as ever, they have more scope open to their talents than ever, but they are not indispensable, as they used to be. We need them, but we have learned how to get along without them. We probably have as many great men now as there ever were upon the earth at any one time, but they are not so conspicuous. They stand head and shoulders above their fellows yet, but they do not tower as giant-like. The work that once they alone could do is now being done by the ordinary men around them armed with levers and pulleys. Diomed might defy the whole host of Ilion and the gods besides, but to the machine gun he would be merely an easy target. There are many men who can make machine guns and any man can fire one.

Once the progress of science depended upon a lucky accident happening to a genius. If Archimedes had not spilled his bath water, if Galileo had listened to the sermon instead of watching the lamp, if Galvani had not liked frogs' legs, the world would have waited long for a knowledge of specific gravity, simple harmonic motion and galvanism. Nowadays a scientific discovery is required of every candidate for the doctor's degree as part of his regular work. It has not been found possible under this requirement to restrict the degree to men of unusual mental ability. Any young man who knows how to go about it can get his new truth if he works hard enough and long enough. It is no more a matter of luck and little more a matter of skill than hunting in a European game preserve. The head of a laboratory promises the editor of a scientific journal two hundred pages of original research next year with the same confidence in his ability to deliver the goods as a steel maker filling an order for rails. Under this *régime*, the method of the siege instead of the assault, science in all its branches is advancing with almost incredible rapidity. Its acceleration increases as the square of the time. New continents are being discovered almost simultaneously by half a dozen men, none of whom are in the class of Columbus. They all know now how to make an egg stand on end.

In the fine arts we find much the same state of things. The pupils can do now what only the masters could do once. The miles of painted canvas, the tons of sculptured bronze and marble, the mountains of books, are all of an unprecedentedly high level of workmanship. What they lack in comparison with the conspicuous achievements of previous ages is originality and distinction; originality because they are not the product of individual genius, distinction because there are so many others just about as good. In this office is a shelf ten feet long filled with novels published within the last month or two. Shut your eyes, put out your hand and take one, any one, there is not much difference between them, hire Wells's time-machine, carry it back a hundred years, and let it come into competition with the then popular novels, "Evelina," "Vathek," "Zeluco," "The Mysteries of Udolpho," "The Monk," "Caleb Williams" and "Leonora." Would it not have drawn from these famous books some of their readers? Would it not have founded a school and would not the sophomore class in literature now be laboring over it?

In regard to sculpture and painting we do not have to depend on a hypothetical question. The little experiment has been tried too many times, as the storerooms of our art museums prove. When an artist gets hard up because he cannot produce work good enough to sell in the modern market he may turn his talents to the manufacture of cinque centos, selling his paintings, duly smoked, thru the medium of an Italian monastery, or, if he is a sculptor, staining his statues, *secundum artem*, with tobacco juice and burying them in the sands of Asia Minor. When they are

discovered are they valued according to their artistic merit? Not in the least. If it is an antique it is priceless; if it is a modern it is worthless. And to determine which it is the expert does not rely altogether upon his esthetic sense. He ignominiously calls in a chemist to analyze the pigment or the mineralogist to see if the stone came from Pentellic or Parian quarries.

A well-trained musician of no special talent can compose music in any style except the Chinese. If, instead of a dozen light operas a year, we produced only one, any one of them, in a generation, it would be thought a marvel of cleverness. Wit and humor are supposed to be natural gifts, peculiarly spontaneous and inimitable, yet there are in New York City a dozen men who sit down at their desks and turn out twenty-five or fifty jokes as regularly as a mason lays bricks. Their profession is more or less accidental; they might have been equally successful as insurance agents, but if one of their daily half columns were intercalated into "Jo Miller's Jests," Artemas Ward's lectures or a Greek anthology, it would shine by contrast.

If the university is merely a log it takes a Mark Hopkins on one end of it to make it amount to anything, but, given a well-equipped library and laboratory and a good text-book, and any normal school graduate can, and does, turn out scholars. When the head of a great commercial establishment dies any one of half a dozen of his subordinates can take his place, and, at least, keep the machine going, or can even organize a new business in another field. A Zulu kingdom lasts as long as its founder; the Persian Empire expanded and contracted with the ability of the monarch; the Commonwealth fell when Cromwell died. Our commonwealth endures whether there is a great or little man in the Presidential chair, and our empire expands willy-nilly. We dethrone our heroes promptly whenever their idiosyncrasies become annoying to us, because we do not have to endure them as our forefathers did. We know we can get somebody almost as good. What we are aiming at is a social system with interchangeable individuals, like our machinery with uniform parts, replaceable instantly when one of them breaks. Equality of natural ability is impracticable and undesirable. Equality of acquired ability we are attaining, and it is proving to be more important than the other. Thru our system of education we are approaching a true intellectual democracy in science, art and politics.

October in the Orchard

APPLES at four dollars a barrel on the trees; five to six dollars a barrel in the market, and one dollar a dozen for extra selects on the fruit stands! In what country are we? Is this the same apple land where Spitzenbergs used to bring one dollar a barrel and common fruit fifty cents? Is this the land of doughnuts and cider and apples as free as the butternuts we cracked, as we sat around the beechwood fire in the great open fireplace? It may be true that all other land products are going up in values, but the apple, when well grown and properly marketed, probably pays best of all; with the small fruits close after. Strawberries that used to bring five to seven cents a quart are now twenty to twenty-five for extra selects, even in the flush of the season. Raspberries have gone up from an average of ten cents a box to double that figure; and even the currant, "everybody's fruit," has a vigorous market at twelve cents a pound.

Why do not the farmers plant more orchards? Apple trees of the best size for planting are purchasable at a quite nominal figure of from eight to fifteen cents a tree. The cost of transportation and setting will not raise the cost of one hundred prime trees, staked and mulched, above twenty-five dollars per hundred. Yet in our Eastern States we see very few new orchards, except in a few localities; and old orchards are dying out. The outlook is not much better in Ohio and Illinois. There is less apple enthusiasm in Michigan than fifty years ago. The heaviest market supply comes from Missouri, Arkansas, Colorado and the Pacific Northwest. The orchards of New England are rather scattered trees, bordering farms, but these return splendid profits. The market demand is increasing, not only for American con-

sumers, but for Europe and even Asia—shipped across the Pacific. China is becoming a large purchaser.

The reason, therefore, for the small increase in Eastern orchards does not lie in lack of demand for the fruit, or in the cost of production. The real cause is that the old style of farmers is still largely in preponderance, in this part of the country—a class of men that looks on the orchard a good deal as it looks on a flower garden—well enough to have, but not indispensable. Orcharding is placed in the rear of all other items of cultivation; it is not looked on as regular business. Apples must always wait on potatoes and potatoes must wait on corn. The trees are neglected and the fruit is neglected. The fact remains that there is not another crop on the farm that can so illy endure heedlessness or neglect. An apple tree is considered as able to take care of itself, whereas there is not another tree that is less able to give us large returns without abundant care.

The modern apple tree is something also quite different from that which our fathers knew. The old tree was a seedling—that is, grown from seed, brought from Connecticut; and when the tree was grafted the scion was inserted six or eight feet above the ground. The modern apple tree is grafted in the roots, by nurserymen, and the tough seedling wood does not appear above ground. It so happens that some of our very best varieties are slightly tender in the wood, and this if exposed gets either sunburned in summer or winter-blistered. Such varieties must be dispensed with, or grafted on the old style. Nor is the soil any longer so full as formerly of apple-tree food. While an apple tree of 1800 often had a diameter of two feet, the modern tree seldom reaches over one-half that. The difficulties are not such as to make a good orchard impossible, but they require special attention, with brains and proper education. Not one farmer in fifty can or will grow a good apple orchard. He sets the trees, and at some point neglects them, and they go either to suckers or are browsed by the cattle.

Then we have the farther difficulty that the apple for market has to run the gauntlet of fungus and insect enemies. The grower must know what varieties are least subject to such foes and what varieties are surest to be spoiled. He must comprehend spraying, and be resolute to apply his arsenites and Bordeaux. He must understand the fine art of mulching a tree, and he must know that an apple tree needs feeding as much as a cow. Nor can he be ignorant of trimming and soiling. Above all, no man can succeed as an orchardist unless he can bring himself and his assistants to delicate handling of the fruit. It must be so picked and so shipped as to keep in perfection until the purchaser can use it. It is no stretch of statement to say that not one-tenth of our apples are properly handled, and not one-half decently picked or marketed. An apple should never be tossed or dropped into a basket nor poured onto the ground or into a barrel. Every apple should be handled as carefully as an egg. Farmers of the specialist sort are being developed, but it seems not to be half fast enough. The apple is subject to every adverse condition, and the supply is very rarely adequate. As a poor man's comfort the apple no longer exists. Today in the large markets it is as far out of his reach as the orange, and farther than the banana. It is rapidly becoming one of the luxuries of the rich.

The increase of suburbanism should create an immediate and rapid multiplication of orchards—that is, of small-home orchards. A country home of ten acres should give at least one acre to the apple and pear, not only for the superb beauty of the flowers, but for the sanitary value of the fruits, and to lower the annual outgoes as well as increase the income. It is bad enough in the city to be without an abundance of fruit; in the country it is intolerable. Ten or a dozen varieties should always be found. A good list of apples for a self-supporting country home, ripening in succession from July until the next June or July, would be Yellow Transparent, Red Astrachan, Sherwood's Favorite, Primate, Gravenstein, Wealthy and Shiawassie Beauty. These varieties will carry the family into early winter. Then there should be a good supply of Spitzenberg, McIntosh, Northern Spy, Gold-

en Pippin, Jonathan, Baldwin and Rhode Island Greening. Many of these are old-fashioned, but not yet to be dispensed with. This list could be doubled, and then redoubled, and an apple lover will always have a few favorites which he can graft in. Only the Jonathan among those named is seriously subject to insects, while this variety, with the Golden Pippin, prefers sandy soil. Most of our apples prefer clay.

How long will it take our agricultural colleges to teach the people the key of apple culture? Our common schools should be doing this very thing. The children should leave them prepared to take up everyday life. They should face always homeward, and instruct the young in home arts. Our hillsides should be covered with orchards, well selected, well cared for and yielding abounding crops. Apples should not go beyond three dollars a barrel for prime fruit. Inferior fruit should never be seen in the market. If meat is to be a luxury, fruit should not be an impossibility on the table of the laborer. The lesson of the market is, Plant more apples; take better care of the trees—and you will be well compensated, if not made wealthy.

Missionary Policy

THE oldest of our American foreign missionary societies will hold its ninety-seventh meeting in Cleveland next week. A commission sent out to report on mission policy in the East will then make its report. With no knowledge as to what that report will be, we would consider one single but important question of policy.

We take India for an example. There has been an extraordinarily rapid increase in the number of Christians during the last fifty years. The census tells us that each decade increases the number by about 75 per cent. But there is a notable difference in the sections or classes affected by this increase, that increase being enormous in some sections or classes, and quite small in others. As examples of the rapid increase, in the Telugu country, about Madras, the number of Christians rose from 19,132 in 1871 to 222,150 in 1901. In Chota Nagpur the increase in twenty years was from 40,000 to 120,000. Such cases can be multiplied in other districts.

But these are all village districts, and of the lower castes and aborigines. When we come to the cities and to the higher castes we find no such growth. And yet it is in these centers that the chief labor and money have been spent for from fifty to even two hundred years. In Madras the census of 1901 showed 25,000 Christians, in Bombay about 15,000, in Calcutta 8,000, in Delhi 2,000, in Cawnpore, 1,800. There is a startling contrast between the immense number of converts among the lower castes and aboriginal tribes living in the country, such as the Santals of Bengal, the Kasias of Assam, the Shanars of Tinnevelly and the Karens of Burma, who have been pressing into the kingdom and taking it by storm; and the paucity of converts in the cities and higher ranks of Indian society. And yet it is to the latter that the main energies of the Church have been directed, while missions among the aborigines and lower castes have often been poorly manned and badly equipped.

The Anglican Bishop of Madras gathers these facts and more, and makes these contrasts, and then raises the question of mission policy. Is it best to put the main labor where it will produce the most fruit, or where it will produce the least? He inclines to the policy which would push in the line of least resistance. He would greatly increase the effort to convert humbler and lower castes, and he points to the example of our Lord, whose work was among the despised Galileans and the poor, and Paul, who left the proud Jews of Jerusalem to preach the Gospel to the Gentiles.

That the Bishop of Madras is right we believe. And we believe that a vigorous pursuit of the policy he defends would result in the creation, in a very few decades, of a Christian population of not less than ten million souls—very likely tens of millions. It is true that these low-caste Christians will be of the most ignorant class, despised by the higher castes, but they are depressed races, rather than of a physically or intellectually inferior stock. Culture and education are precisely what Christianity will give them.

Even now the youth of these classes are crowding the Brahmins in the civil service examinations. It is true that their reasons for coming in troops for baptism are not all of the highest. The very fact that they are outcasts makes them desirous to better their condition by belonging to the Christian caste; but that is a legitimate if not a religious reason. It is also true that they are without influence in the public life of India; but they will be when they secure culture and large numbers. And we may add that it is likely that their progress and growth will have a decided influence on the more favored classes, who have been backward about accepting Christianity, but who may yet be shoved into it by the pressure from below. At any rate, our Lord's instruction to his disciples to leave those who would not hear and preach to those who would listen has its bearing at the present time.

And yet there is something to be said on the other side. If Hinduism as a professed faith has not yet been rejected by the population of the cities, Hinduism itself has been vastly modified in the faith of all educated Hindus. They are no more followers of the faith of their fathers than the Catholics of Paris are of the faith into which they were baptized. Their Hinduism in its various Somajes has been immensely modified by Christianity. And this has been accomplished by the schools and colleges established by the missionaries who labored in the cities. Theirs has not been a work that shows in converts, and is therefore often undervalued. Indeed, the American Board fifty years ago greatly depressed its mission work in India by closing its higher schools and bidding its missionaries go to evangelizing.

Perhaps the work of general and miscellaneous enlightenment has so far progressed, and the Government has undertaken so much in higher education, tho far less than is needed in the lower, that little if any enlargement is needed in the city centers. But very much more labor should be directed to the depressed classes, to those who most need hope and uplift, to the common people, such as heard Jesus gladly.

A Third Term

Whether we call it a third term or a second elected term, a third term it would be in the mind of the people were Mr. Roosevelt made the next Republican candidate for the Presidency. One cannot but notice a feeling of trepidation and suspicion on the part of the friends of other candidates, a suspicion that Mr. Roosevelt secretly wishes to be unwillingly forced to accept the nomination, and a fear that he may be nominated. We are very slow to consider such a possibility. Mr. Roosevelt has in the plainest way said that he will not be a candidate, and he has distinctly declared that Mr. Taft, as the exponent of his views and policies, is his choice and desire for the succession. It is not easy to see how he can, under these conditions, honorably accept the nomination. To force him is impossible if he does not give a qualified assent. To our mind it would lower his dignity and honor to allow himself, vowing he would ne'er consent, to consent at last. That is the way it would look to plain people. Mr. Roosevelt is yet a young man, not fifty years old. There is plenty of time for him to have the honor of being re-elected, as Mr. Cleveland was, after four or eight or twelve or sixteen years have intervened, and no higher honor could the country give him. He is not the kind of a man to go stale and drop out of sight.

The Transfer of Battleships

There has been no withdrawal of the original authoritative assertion that the transfer of the battleship fleet to the Pacific was to be merely a practice cruise, but apparently inspired statements have recently been published to the effect that the transfer was ordered because of the irritating attitude of Japan toward our Government. As we said some weeks ago, we have not thought that our Government had merely a practice cruise in mind. A prominent New York paper now asserts that "the navy is going to the Pacific for war with Japan," and that "war is inevitable, once the operation of transferring our ships to Pacific waters has been acomplished." It is such talk that invites and sometimes in-

directly causes war. We also see conservative journals publishing long essays about the probable action of the contending naval forces in a war between this country and Japan, accompanied by maps that would be quite timely and instructive if war had already been declared. All this incendiary matter is suggested by the extensive preparations now being made for the movement from one ocean to the other, and by the dispatches from Washington which say that the movement was planned for the admonition of Japan. It is an unfortunate situation. There is no cause for war. The people of neither country desire war. But this movement of the great fleet will be regarded as a kind of challenge. Possibly in some way it will provoke war, altho our naval forces, we think, may easily avoid giving offense. It is the duty of the American press to refrain from the publication of matter suggesting war in the Pacific. This is no time for Japanese-American war maps.

The Oil Trust's Pipe "Terminals"

When Congress decided that the Standard Oil Company's pipe lines must be common carriers, must publish their rates, and accept for transportation the oil of independent producers, we did not expect any revolutionary change in pipe line traffic. Even to some who had found the Standard's methods quite reprehensible, there was a suggestion of injustice in this legislation, for the pipe lines were private property and had been constructed for the exclusive use of those who made them. We did not foresee, however, that the use of them by other shippers of oil would be prevented by the devices which have been brought to light by last week's testimony. It appears that on the three trunk lines new "terminals" were hastily made at points in the wilderness and on the State lines of New Jersey and Maryland. Rates for shipment to those terminals were duly made known, but, of course, no independent producer would care to have his oil carried to points where there were no refineries or facilities for further transportation by water. From those boundary points to tide water the pipe lines were owned by a separate Standard corporation. Being wholly within one State, these were not subject to the new law for interstate traffic, and rates for them were not made known. It is not surprising that no independent oil has yet been carried in the pipes on either side of the improvised "terminals." The average man will say that here is a studied attempt to evade the law or defeat its purpose by trick and device. Quite recently the public was assured by Vice-President Archbold that the Standard Oil Company's officers "believe in the law and have endeavored in every way possible to adhere not only to its letter, but its spirit."

What a young man can still do in this country, if he has power and push, is seen not only in the case of Theodore Roosevelt, who at the unusually early age of forty was elected Governor of the Empire State, and at forty-two became President of the United States. There are many illustrations of rapid ascent to distinction, tho few as sensational as that of President Roosevelt. In another field we have an illustration in the history of the architect George L. Heins, who died last week. At the age of thirty-nine he was made State Architect by Governor Roosevelt, and has designed all New York State buildings since erected. He designed the Cathedral of St. John the Divine, in this city; the Cathedral of St. Paul the Apostle, the buildings of the New York Zoölogical Gardens and many other important public edifices. He was only forty-seven years old at his death. There is still room in the upper story for young men of genius.

Vice-President Fairbanks may be consoled for his rejection as lay delegate to the General Conference of the Methodist Episcopal Church by the reflection that so good and great a person as Miss Frances E. Willard was similarly treated, tho for a different reason. But this leaves the world still in doubt however, as to which the Methodist Church regards as the greater crime of the two—serving cocktails or being a woman.

Financial

The Bankers' Association

A VERY interesting and successful annual convention (the thirty-third) was held last week in Atlantic City, N. J., by the American Bankers' Association. At a preliminary meeting of the trust company section, the address of welcome was made by Uzal H. McCarter, president of the Fidelity Trust Company, of Newark. Charles Emory Smith, formerly Postmaster-General, spoke at length upon trust financial companies and trust combinations in trade, showing how they differ in spirit, ethics and functions. Frederick Phillips, secretary of the Lincoln Trust Company, of New York, pointed out the value of publicity, saying that the great increase of deposits and widely extended use of trust company facilities in the last few years had been due in no small measure to the new activity in financial advertising. Philip S. Babcock, vice-president of the Trust Company of America, was elected president of this section. At the meeting of the savings bank section, an instructive address upon independent auditing for savings banks was made by Edward T. Perine, general manager of the Audit Company of New York, who presented a program for examinations that would involve the most searching methods of answering for the absolute soundness of a banking business. Part of this, probably suggested by the large experience of Mr. Perine's company, was an admirable series of questions to be answered annually in writing by a bank's officers and employees.

On the 25th the convention was called to order by the president, G. S. Whitson, vice-president of the National City Bank of New York, who spoke in his annual address of the perils of extravagance and of too great expansion of credit, saying that restraint was now needed for safety. Moritz Leiffmann, of Dusseldorf, a delegate from Germany, argued for the establishment here of a central bank, giving due weight to the obstacles, but insisting that these could be overcome. Governor Swanson, of Virginia, whose subject was the South, remarked that by legislation the negro had been practically eliminated from Southern politics. "We will treat him kindly," said he, "but with the help of God we will hold him where he is, for his own good and our own salvation." On the second day, A. Barton Hepburn, president of the Chase National Bank, of New York, submitted the report of the Currency Commission appointed last year, explaining it and reviewing the commission's work. The recommendations, relating to issues of credit currency, are that a bank having a surplus equal to 20 per cent. of its capital shall be authorized to issue 40 per cent. of its bond-secured circulation, subject to an annual tax of $2\frac{1}{2}$ per cent., and a further amount equal to $12\frac{1}{2}$ per cent. of its capital, subject to a tax of 5 per cent.; that a guarantee fund of 5 per cent. shall be a safeguard against failures; that numerous redemption agencies shall be provided, and that there shall be such reserves against credit notes as are now required for the protection of deposits. This plan was opposed by two bankers from the Northwest and ably defended by Congressman Charles N. Fowler. After a spirited debate the report was approved and the commission continued by almost unanimous vote. Further efforts to secure the desired legislation will be made at the approaching session of Congress. After an interesting contest, Lewis E. Pierson, president of the Irving National Exchange Bank, of New York, was elected chairman of the Executive Council, and Frederick E. Farnsworth, of Michigan, was made secretary, in place of James R. Branch, who had served for twelve years.

....National and State banks and trust companies declare quarterly dividends, but savings banks make a rule of declaring dividends only in January and July. The American Savings Bank of

Insurance

The Sale of the Provident Life

ACCOUNTS were current last week of negotiations looking toward the sale of the control of the Provident Savings Life Assurance Society to a syndicate of Philadelphia capitalists. The company is now and has been since January last under the control of E. R. Thomas, O. F. Thomas and F. Augustus Heinze. The Provident Life is a stock company which was incorporated February 25th, 1875, and began business on August 10th of the same year. The concern has a nominal capital of $100,000 invested in securities deposited with the superintendent of the insurance department at Albany, N. Y., in trust for the policyholders. It had more than $100,000,000 of outstanding insurance in January last according to its statement published in THE INDEPENDENT on January 31st, 1907. Prior to the insurance investigation the Provident Life was under the control of Edward W. Scott, who was then president. One result of the investigation was the passing of the control of the company into the hands of Timothy L. Woodruff, then one of the directors of the company. With his assumption of control Mr. Woodruff assumed the presidency, which he still retains. The Thomas-Heinze party succeeded Mr. Woodruff in control, according to announcements made last January, paying, it is understood, something like $500 a share for its stock holdings. The intention then was to increase the working capital, bring the surplus up to at least $25,000,000 and to do other things to establish the going concern on a sounder basis. The depression in the securities market, however, followed closely upon the heels of the new and present control, and when other enterprises were entered upon, including activity in the control of a string of banking institutions, copper and ice properties, the Provident Life seemingly became a side issue. A definite statement regarding the sale of the Provident Life has not been obtainable, but the diffusion of the Thomas-Heinze party's business interests must have been considerable, and it is easily possible that relief from some of the burdens of control has been sought after in the reported sale negotiations in connection with the Provident Savings Life Assurance Society.

THE mortality because of Alpine accidents has been particularly heavy during the past summer. In point of fact the number of victims during the summer of 1907 has been the greatest ever recorded. Eighty persons were killed and twenty-two suffered injuries in ninety accidents this year. The highest previous record was last year, when there were seventy-six fatalities in seventy-one accidents. Of the eighty persons killed this season thirty-eight were guides, thirty-one were persons spending vacation periods in the Alps, the remaining eleven were flower gatherers, etc. Seventy-five per cent. of the fatalities arose because of falls over precipices. Avalanches, snow-storms and lightning caused the others.

THE genial editor of *Whittlings* writes as follows in his July issue, viz.:

We are informed by our fashion editor that cotton hose with watchman's clocks will be popular this season with underwriters; also that fire escapes will be worn, open in the back. He also mentions some fetching peek-a-boo creations in wire-glass. Asbestos straw hats are noted for the use of red-headed field-men, and in some sections it is considered *au fait* to decorate them with the feathers of the blue goose.

(*Continued from page* 837.)

this city, of which Edward V. Loew is president and William M. Hazelton, treasurer, has declared a quarterly dividend at the rate of 4 per cent. per annum for the quarter ending September 30th. This bank has a surplus of $49,162. The amount due depositors is $2,396,914, and the total assets are $2,447,243.

Survey of the World

Mr. Roosevelt's Address at Canton

The President left Washington on the 29th ult. for the West, and arrived at Canton, O., on the following morning. On that day the mausoleum erected to the memory of the late President McKinley was dedicated. In a brief address, Justice William R. Day, of the Supreme Court, gave the history of this monument, for the construction of which $578,000 was received in contributions from the people of the United States and many other countries. Miss Helen McKinley, the only sister of the late President, unveiled the bronze statue which stands in front of the great tomb. The pedestal which supports this statue bears the following inscription:

"William McKinley, President of the United States; a statesman singularly gifted to unite the discordant forces of the Government and mould the diverse purposes of men toward progressive and salutary action; a magistrate whose poise of judgment was tested and vindicated in a succession of national emergencies; good citizen, brave soldier, wise executive, helper and leader of men, exemplar to his people of the virtues that build and conserve the State, society, and the home."

President Roosevelt, in his long address, spoke of the origin of this inscription. The words are those with which, in 1901, President Wheeler, of the University of California, conferred upon President McKinley the degree of LL.D. A copy of them, procured by Secretary John Hay, was forwarded to Mr. McKinley by the Secretary, with a letter in which he said:

"President Wheeler sent me the enclosed at my request. You will have the words in more permanent shape. They seem to me remarkably well chosen, and stately and dignified enough to serve—long hence, please God—as your epitaph."

This letter, Mr. Roosevelt remarked, seemed now "filled with a strange and unconscious prescience." He continued:

"It would be hard to imagine an epitaph which a good citizen would be more anxious to deserve or one which would more happily describe the qualities of that great and good citizen whose life we here commemorate. He possessed to a very extraordinary degree the gift of uniting discordant forces and securing from them a harmonious action which told for good government. From purposes not merely diverse, but bitterly conflicting, he was able to secure healthful action for the good of the State. In both poise and judgment he rose level to the several emergencies he had to meet as leader of the nation, and like all men with the root of true greatness in them he grew to steadily larger stature under the stress of heavy responsibilities. He was a good citizen and a brave soldier, a Chief Executive whose wisdom entitled him to the trust which he received throughout the nation. He was not only a leader of men, but pre-eminently a helper of men; for one of his most marked traits was the intensely human quality of his wide and deep sympathy. Finally, he not merely preached, he was, that most valuable of all citizens in a democracy like ours, a man who in the highest place served as an unconscious example to his people of the virtues that build and conserve alike our public life, and the foundation of all public life, the intimate life of the home."

"Arrogance toward the weak and envious hatred of those well off," said the President, "were equally abhorrent to his just and gentle soul." This should be the attitude of all our people today. "It would be a cruel disaster to this country to permit ourselves to adopt an attitude of hatred and envy toward success worthily won, toward wealth honestly acquired":

"From the standpoint of our material prosperity there is only one other thing as important as the discouragement of a spirit of envy and hostility toward honest business men, toward honest men of means; this is the discouragement of dishonest business men, the war upon the chicanery and wrongdoing which are peculiarly repulsive, peculiarly noxious, when exhibited by men who have no excuse of want, of poverty, of ignorance, for their crimes. Men of means, and above all men of great wealth, can exist in safety under the peaceful protection of the State only in orderly societies, where liberty manifests itself through and under the law. It is these men who, more than any others, should, in the interests of the class to which they belong, in the interests of their children and their children's children, seek in every way, but especially in the conduct of their lives, to insist upon and to build up respect for the law. It may not be true from the standpoint of some particular individual of this class, but in the long run it is pre-eminently true from the standpoint of the class as a whole, no less than of the country as a whole, that it is a veritable calamity to achieve a temporary triumph by violation or evasion of the law; and we are the best friends of the man of property, we show ourselves the stanchest upholders of the rights of property, when we set our faces like flint against those offenders who do wrong in order to acquire great wealth or who use this wealth as a help to wrongdoing."

Wrongdoers of Great Wealth

Mr. Roosevelt had started on a long journey, and he was to make the greater part of it in a steamboat on the Mississippi. From Canton he went to Keokuk, Ia., where he was met by the Governors of ten States. At Rand Park, in that city, he spoke to an audience of 10,000. His first subject was "the relation of the national Government to the huge and wealthy corporations, controlled for the most part by a few very rich men, which are engaged in interstate business." We were trying, he said, so to shape things that so far as possible each man should have a fair chance in life; trying to prevent not only any oppression of the weak but also the acquisition or use of vast fortunes by tortuous and dishonest methods. Our Government was one of that orderly liberty which comes by and thru the honest enforcement of and obedience to the law:

"At intervals during the last few months the appeal has been made to me not to enforce the law against certain wrongdoers of great wealth, because to do so would interfere with the business prosperity of the country. Under the effects of that kind of fright which when sufficiently acute we call panic, this appeal has been made to me even by men who ordinarily behave as decent citizens. One newspaper which has itself strongly advanced this view gave prominence to the statement of a certain man of great wealth to the effect that the so-called financial weakness 'was due entirely to the admitted intention of President Roosevelt to punish the large moneyed interests which had transgressed the law.'

"I do not admit that this has been the main cause of any business troubles we have had; but it is possible that it has been a contributory cause. If so, friends, as far as I am concerned it must be accepted as a disagreeable but unavoidable feature in a course of policy which, as long as I am President, will not be changed. In any great movement for righteousness, where the forces of evil are strongly intrenched, it is unfortunately inevitable that some unoffending people should suffer in company with the real offenders. This is not our fault. It is the fault of those to whose deceptive action these innocent people owe their false position. A year or two ago certain representatives of labor called upon me, and in the course of a very pleasant conversation told me that they regarded me as 'the friend of labor.' I answered that I certainly was, and that I would do everything in my power for the laboring man, except anything that was wrong. I have the same answer to make to the business man. I will do everything I can do to help business conditions, except anything that is wrong. And it would be not merely wrong but infamous to fail to do all that can be done to secure the punishment of those wrongdoers whose deeds are peculiarly reprehensible because they are not committed under the stress of want.

"Whenever a serious effort is made to cut out what is evil in our political life, whether the effort takes the shape of warring against the gross and sordid forms of evil in some municipality, or whether it takes the shape of trying to secure the honest enforcement of the law as against very powerful and wealthy people, there are sure to be certain individuals who demand that the movement stop, because it may hurt business. In each case the answer must be that we earnestly hope and believe that there will be no permanent damage to business from the movement, but that if righteousness conflicts with the fancied needs of business, then the latter must go to the wall."

"According to our power," he continued, "crimes of fraud and cunning shall be prosecuted as relentlessly as crimes of brutality and physical violence." Taking up the subject of transportation by water, he said that the great river highways given to us by nature should be fully utilized. They were national assets, like the great seacoast harbors. He then spoke of farm life and the education which farmers need. Farm life should be made attractive. "Nothing is more important to this country than the perpetuation of

our system of medium-sized farms worked by their owners." The Federal Government should co-operate with State Governments in so changing and improving our school system that it would meet the farmers' special needs. Turning to the land laws, he remarked that they should be modified in their application to the States of the high plains and the mountains, where a tract of 160 acres is not enough for the use of a family. The fencing of pasture land there should be permitted under restrictions which would safeguard the rights of actual settlers. He desired to serve the interests of the small ranchmen in providing for use of the range. The people of the States in question should cause their representatives in Congress to seek earnestly such changes in the laws as would secure the greatest permanent well-being of the actual settlers and actual home-makers. The negroes of Keokuk gave Mr. Roosevelt a gold-headed cane, saying they had confidence in his purpose to treat their race with fairness.

Control of Corporations

Embarking at Keokuk on the steamboat "Mississippi," the President went down the river to St. Louis, where he landed on the morning of the 2d. His clothes were drenched in a heavy rain as he made his way to the hall where he was to speak. At the beginning of his address he pointed out again the need of improving and utilizing the great natural waterways, making special reference to the Mississippi River. Speaking of the Panama Canal, he said that in the month of August, altho that month is in the rainy season, more than 1,200,000 cubic yards were excavated. This exceeded the quantity in any previous month. At this rate, the actual digging could be finished within five or six years. We must steadily, he said, build up and maintain a great fighting navy. With the navy at its present size, the bulk of the battle fleet should be kept together, but it ought from time to time to be transferred from one coast to the other:

"In a couple of months our fleet of great armored ships starts for the Pacific. California, Oregon and Washington have a coast line which is our coast line just as emphatically as the coast line of New York and Maine. of Louisiana and Texas. Our fleet is going to its own home waters in the Pacific and after a stay there it will return to its own home waters in the Atlantic. The best place for a naval officer to learn his duties is at sea, by performing them, and only by actually putting through a voyage of this nature, a voyage longer than any ever before undertaken by as large a fleet of any nation, can we find out just exactly what is necessary for us to know as to our naval needs, and practice our officers and enlisted men in the highest duties of their profession."

He discussed at much length the question of the national supervision and control of corporations. If the theory of the Marshall school as to interpretation of the Constitution should prevail, "an immense field of national power, now unused, will be developed, which will be adequate for dealing with many, if not all, of the economic problems which vex us; and we shall be saved from the ominous threat of a constant oscillation between economic tyranny and economic chaos." The negation of this theory would mean that the nation of ninety millions of people would be left helpless to control the huge corporations which now domineer in our industrial life, and that these corporations would have "the authority of the courts to work their desires unchecked." He believes that the nation has the whole governmental power over interstate commerce and the widest discretion in dealing with that subject. If difficulties arising from our dual form of government should prove insuperable, he would resort to the power of amendment. "Let us first," said he, "try to meet them by an exercise of all the powers of the national Government which, in the Marshall spirit of broad interpretation, can be found in the Constitution as it is. They are of vast extent." The grant to the nation of exclusive control over interstate commerce would be worthless if it were not held to confer complete control of the interstate railroads:

"The railroads themselves have been exceedingly shortsighted in the rancorous bitterness which they have shown against the resumption by the nation of this long-neglected power. Great capitalists, who pride themselves upon their extreme conservatism, often believe they are acting in the interests of property when following a course so shortsighted as to be really an assault upon property. They have shown extreme unwisdom in their violent opposition to the assumption of complete con

trol over the railroads by the Federal Government. The American people will not tolerate the happy-go-lucky system of no control over the great interstate railroads, with the insolent and manifold abuses which have so generally accompanied it. The control must exist somewhere, and unless it is by thorogoing and radical law placed upon the statute books of the nation it will be exercised in ever-increasing measure by the several States."

The interstate railroads ought to be completely subject to national authority. Only in that way could control by a single sovereign, representing the whole people, be secured:

"Personally, I firmly believe that there should be national legislation to control all industrial corporations doing an interstate business, including the control of the output of their securities, but as to these the necessity for Federal control is less urgent and immediate than is the case with the railroads.

"Many of the abuses connected with these corporations will probably tend to disappear now that the Government—the public—is gradually getting the upper hand as regards putting a stop to the rebates and special privileges which some of these corporations have enjoyed at the hands of the common carriers. But ultimately it will be found that the complete remedy for these abuses lies in direct and affirmative action by the National Government. That there is constitutional power for the national regulation of these corporations I have myself no question.

"Two or three generations ago there was just as much hostility to national control of banks as there is now to national control of railroads or of industrial corporations doing an interstate business. That hostility now seems to us ludicrous in its lack of warrant; in like manner, gentlemen, our descendants will regard with wonder the present opposition to giving the National Government adequate power to control those great corporations, which it alone can fully, and yet wisely, safely and justly control."

He was not, he said, pleading for an extension of Constitutional power, but for an application of existing Constitutional power to present conditions. His plea was not to bring about centralization, but for a recognition by the Government of centralization which has already taken place in the world of commerce and industry.

Business Not Hurt by Justice

At Cairo, the President found a text for a part of his address in Dickens' memorable description of forlorn "Eden." Pointing to the fertility and wealth of the region which that author had had in mind, and saying that it had become a breeding ground of heroes and statesmen of the highest rank, he commended a careful reading of "Martin Chuzzlewit" to the pessimists of today. Taking up the subject of international relations, he undertook to show what this country's attitude toward other nations should be. This led him again to the navy, which, he said, "is not yet large enough for our needs."

"We have an enormous coast line, and our coast line is on two great oceans. To repel hostile attacks the fortifications, and not the navy, must be used; but the best way to parry is to hit—no fight can ever be won except by hitting—and we can only hit by means of the navy. It is utterly impossible to improvise even a makeshift navy under the conditions of modern warfare. Since the days of Napoleon no war between two great powers has lasted as long as it would take to build a battleship, let alone a fleet of battleships; and it takes just as long to train the crew of a battleship as it does to build it; and as regards the most important thing of all, the training of the officers, it takes much longer. The navy must be built and all its training given in time of peace. When once war has broken out it is too late to do anything."

We were beginning this year a course which he hoped would be steadily followed, namely, of keeping the battleship fleet alternately in the Pacific and in the Atlantic. He judged from their comments on the movement of the fleet that some excellent people in his own section of the country needed to be reminded that the Pacific Coast was "exactly as much a part of this nation as the Atlantic Coast." His remarks at Cairo about corporations were in the main a repetition of those made before. When national control of railroads should be exercised as now in the case of national banks, there would be, he said, "no falling off of business prosperity":

"On the contrary, the chances for the average man to do better will be increased. Undoubtedly there will be much less opportunity than at present for a very few individuals not of the most scrupulous type to amass great fortunes by speculating in and manipulating securities which are issued without any kind of control or supervision. But there will be plenty of room left for ample legitimate reward for business genius, while the chances for the man who is not a business genius, but who is a good, thrifty, hard-working citizen, will be better. I do not believe that our efforts will have anything but a beneficial effect upon the permanent prosperity of the country; and, as a matter of fact, even as regards any temporary effect, I think that any trouble is due fundamentally not to

the fact that the national authorities have discovered and corrected certain abuses, but to the fact that those abuses were there to be discovered. I think that the excellent people who have complained of our policy as hurting business have shown much the same spirit as the child who regards the dentist and not the ulcerated tooth as the real source of his woe.

"I am as certain as I can be of anything that the course we are pursuing will ultimately help business; for the corrupt man of business is as great a foe to this country as the corrupt politician. Both stand on the same evil eminence of infamy. Against both it is necessary to war; and if unfortunately, in either type of warfare, a few innocent people are hurt, the responsibility lies not with us, but with those who have misled them to their hurt."

Secretary Taft in Japan

Secretary Taft was received in Japan with distinguished honors. On the day following his arrival at Tokyo, a newspaper there published a dispatch from London asserting "on high authority" that the approaching movement of our battleship fleet to the Pacific had been ordered because our Government was "weary of the hectoring attitude of Japanese officialdom." This appears to have been taken from a dispatch sent from New York, where statements to the same effect had just been published. Japanese reporters carried the disquieting assertion to Mr. Taft, who at once prepared a speech, which he delivered at a banquet that evening. Japan had taken, he said, a stand in the first rank of nations, and Americans were proud of her. She had always had the cordial sympathy and effective aid of the United States. The names of Perry, Harris, Bingham, Grant and Roosevelt were inseparable from her attainment of her present position as a World Power:

"Now for the moment there is only a little cloud over our friendship of fifty years, but the greatest earthquake of the century could not shake our amity. I do not intend to consider details. I cannot trespass upon the jurisdiction of the Department of State and discuss events in San Francisco, but I can say that there is nothing in them that is incapable of honorable and full adjustment by ordinary diplomacy.

"The word war is not allowable in diplomatic correspondence, but those who are not diplomats can talk war. I do not hold that war is entirely unjustifiable when international grievances cannot otherwise be redressed. But war is hell, and only a great cause which cannot be settled by diplomacy justifies it.

"A war between America and Japan would be a crime against civilization. Neither people desires it, and both Governments will strain every nerve to prevent it. Neither would gain anything from war. Japan is looking for a great commercial conquest. Why wish for war which would stop all she has undertaken for the rejuvenation of her ancient neighbor, to whom she is sending the greatest statesmen in the world. I am confident that Prince Ito and the Japanese Government in their Korean policy are making for justice and civilization. Why stop or delay the reform in Korea?

"Why should the United States desire war, to change in one year to a military nation, to have its resources wasted upon a vast equipment and to uselessly enter upon a warlike career? During the last decade the United States has made the greatest material progress. To-day it is struggling against the abuses arising from this progress and is seeking to retain its benefits for the people.

"The United States is engaged in establishing order and prosperity in the Philippines and in educating the Filipinos in order that they may be capable of self-government. The task is a difficult one. Some persons suggest the sale of the islands to Japan or some other nation. This is absurd. Japan does not want them, and the United States could not sell them without the grossest violation of its obligations to the people of the Philippines.

"Under the circumstances nothing is more infamous than the suggestion of war. The war talk is due entirely to newspapers, which seek to increase their sale, and which for political reasons attack the Government. It is difficult to characterize in moderate language such attempts to create ill will between the two peoples. Be assured that America's good will toward Japan is as warm as ever."

All reports from Japan agree in saying that this address was regarded as an utterance of the highest importance and has restored in that country the warmth of the old friendship for the United States. Secretary Taft was invited to a private conference with the Emperor. At several entertainments in the following days, the warmest good will was shown by representatives of the court, the army, the navy and the nobility, the number of these attending being exceptionally large. On the night of the 4th the Secretary sailed from Kobe for Manila.

The Hague Conference

On the proposal to prepare a list of questions not affecting national honor, security and vital interests, therefore to be made subjects of obligatory arbitration, an animated debate was held by the First Commission, in which eighteen delegates made speeches. The opposition was held by Baron Marschall von Bieberstein, who said that Germany would not sub

scribe to any subject, however trivial and unlitigious, on which she would bind herself to arbitrate with every Power in the universe. Germany had already made special treaties with twenty Powers. In reply, Joseph H. Choate, of the American delegation, asked why a treaty of obligatory obligation concluded with twenty Powers should not be extended to forty-four, and said:

"Indeed, while the Baron admires obligatory arbitration without reserve in its abstract form, he does not want it on earth, but prefers it in Heaven. He even dreams about obligatory arbitration, but immediately after waking up he turns toward the wall in order not to see it."

Mr. Choate also defended the American Senate against the oft-repeated charges that it failed to ratify the agreements entered into by the Executive. When the matter was put to vote it was approved by thirty votes to six. Baron von Bieberstein believes that the measure will be defeated when it comes before the Plenary Session. The votes in the negative were by Germany, Austria-Hungary, Greece, Turkey, China and Rumania. Four Powers abstained from voting—Japan, Luxembourg, Montenegro and Switzerland—and there were four absentees—Argentina, Guatemala, Nicaragua and Venezuela. In the Commission on Maritime War the Russian amendment allowing belligerent warships all the time necessary to complete coaling in a neutral port was carried by a vote of 11 to 8 against the views of the British delegates, who wish the time to be limited to twenty-four hours. In drafting the form of the final report of the work of the Convention to be signed by all the delegates it was proposed to begin it by a reference to the action of the Emperor of Russia in convoking the Conference and of the Queen of The Netherlands in extending to it the hospitality of The Hague. James Brown Scott, of the American delegation, asked whether it was necessary to suppress any reference to President Roosevelt's action in initiating the movement resulting in the present Conference. He was supported by Louis Renault, of the French delegation, and it was decided unanimously to include the name of President Roosevelt. ——A general treaty of arbitration between Italy and Mexico is being drawn up by the representatives of these countries at The Hague. The treaty, however, will provide for the appointment of special arbiters in the case of differences arising between the two countries instead of having recourse to The Hague Tribunal. Mexico is dissatisfied with the verdicts given by The Hague Tribunal to the Pious Funds.

The Anglo-Russian Agreement

In St. Petersburg on August 31st there was signed by the British Ambassador, Sir Arthur Nicholson, and the Russian Minister of Foreign Affairs, Alexander Iswolsky, a convention between Great Britain and Russia in regard to their interests in Central Asia. The action is significant of the great change in diplomatic affairs thru the events of the last three years, and the convention will probably prove to be of great importance, for, if carried out with sincerity by both parties, it will put a stop to the struggle over Central Asia which has engaged the attention of these two powers for a large part of the last half century. Russia has been again checked in her efforts to obtain an ice-free seaport, for she is definitely shut out from the Persian Gulf, altho the predominant British interests in the Gulf are not explicitly recognized in the convention. It will be remembered that Russia had been energetically pushing forward a railroad to the head of the Persian Gulf, and some of the cruisers which were destroyed by the Japanese in Korean waters had just previous to the war been stationed in the Gulf. India is now completely fended by buffer states which Russia for the first time explicitly agrees not to invade. On the other hand, Russia has obtained an acknowledgment by Great Britain of the importance of her commercial interests in Northern Persia, and Great Britain has practically sacrificed all that was supposed to have been gained by Colonel Younghusband's invasion of Tibet during the former Conservative administration. France rejoices over the agreement between the two countries, which are now practically allied to her. Germany finds herself again shut out from a concert of the Powers, and her commercial advance into Persia will probably be checked. Another important result of the agreement is that the Japanese alliance is no longer

so necessary to Great Britain, because she is freed from the danger of invasion of India by Russia, against which the Japanese had promised to assist her. On account of the importance of this treaty, the full text of which has just been received in this country, we give below a complete summary.

Persia

The accompanying map will show the territorial division of Persia into three zones; in the northern Russia is recognized to have a special interest as Great Britain has in the southern, and between the two there is the neutral strip to prevent conflicts. The wording is as follows:

Considering that each of them has, for geographical and economic reasons, a special interest in the maintenance of peace and order in certain provinces of Persia adjoining, or in the neighborhood of, the Russian frontier on the one hand, and the frontiers of Afghanistan and Baluchistan on the other hand; and being desirous of avoiding all cause of conflict between their respective interests in the above mentioned Provinces of Persia, Great Britain engages not to seek for herself, and not to support in favor of British subjects, or in favor of the subjects of third Powers, any concession of a political or commercial nature—such as concessions for railways, banks, telegraphs, roads, transport, insurance, etc.—beyond a line starting from Kasr-i-Shirin, passing thru Ispahan, Yezd, Kakhk, and ending at a point on the Persian frontier at the intersection of the Russian and Afghan frontiers, and not to oppose, directly or indirectly, demands for similar concessions in this region which are supported by the Russian Government. It is understood that the above-mentioned places are included in the region in which Great Britain engages not to seek the concessions referred to.

An identical engagement is made on the part of Russia in regard to the territory beyond a line going from the Afghan frontier by way of Gazik, Birjand, Kerman, and ending at Bunder Abbas. The two Powers mutually agree not to oppose without previous arrangement with each other the grant of any concession whatever to their subjects in the regions of Persia situated between these two lines. The rest of the convention deals with the

MAP OF PERSIA,
Showing the Russian and British spheres of influence according to the new Convention

internal financial interests of Persia and provides for the maintenance of present arrangements as to the sources of revenue and its disposition. To avoid criticism on account of the conspicuous omission of any statement in regard to the British interests in the Persian Gulf, Sir Edward Grey has made public the following letter of explanation directed to the British Ambassador at St. Petersburg:

The arrangement respecting Persia is limited to the regions of that country touching the respective frontiers of Great Britain and Russia in Asia, and the Persian Gulf is not part of those regions, and is only partly in Persian territory. It has not therefore been considered appropriate to introduce into the Convention a positive declaration respecting special interests possessed by Great Britain in the Gulf, the result of British action in those waters for more than a hundred years.

His Majesty's Government have reason to believe that this question will not give rise to difficulties between the two Governments should developments arise which make further discussion affecting British interests in the Gulf necessary. For the Russian Government have in the course of the negotiations leading up to the conclusion of this arrangement explicitly stated that they do not deny the special interests of Great Britain in the Persian Gulf —a statement of which His Majesty's Government have formally taken note.

In order to make it quite clear that the present arrangement is not intended to affect the position in the Gulf, and does not imply any change of policy respecting it on the part of Great Britain, His Majesty's Government think it desirable to draw attention to previous declarations of British policy, and to reaffirm generally previous statements as to British interests in the Persian Gulf and the importance of maintaining them.

His Majesty's Government will continue to direct all their efforts to the preservation of the *status quo* in the Gulf and the maintenance of British trade; in doing so, they have no desire to exclude the legitimate trade of any other Power.

The "previous declarations of British policy," to which he draws attention and reaffirms, are especially the remarks made by Lord Landsdowne, then at the head of the Foreign Office, in the House of Lords, in May, 1903:

"I say it without hesitation, we should regard the establishment of a naval base or of a fortified port in the Persian Gulf by any other Power as a very grave menace to British interests, and we should certainly resist it with all the means at our disposal."

If Russia has the same understanding of the extent and significance of these claims as Great Britain they may be regarded as sufficiently provided for.

Afghanistan and Tibet

In regard to Afghanistan the most important provision of the convention is expressed in the following language:

His Britannic Majesty's Government declare that they have no intention of changing the political status of Afghanistan. His Britannic Majesty's Government further engage to exercise their influence in Afghanistan only in a pacific sense, and they will not themselves take, nor encourage Afghanistan to take, any measures threatening Russia.

The Russian Government, on their part, declare that they recognize Afghanistan as outside the sphere of Russian influence, and they engage that all their political relations with Afghanistan shall be conducted through the intermediary of His Britannic Majesty's Government; they further engage not to send any agents into Afghanistan.

Since Russia can only negotiate with Afghanistan thru the representatives of Great Britain this virtually establishes the same condition of affairs as prevails in Korea under the present Japanese administration. Great Britain engages neither to annex nor to occupy any portion of Afghanistan, and not to interfere in the internal administration of that country so long as the Amir fulfills the engagements contracted by him in the treaty of Kabul, signed on the 21st of March, 1905. Both Powers agree to respect the territorial integrity of Tibet and to abstain from all interference in its internal administration. They recognize the suzerainty of China, and engage to enter into negotiations with Tibet only thru the intermediary of the Chinese Government, except in regard to the direct relations between the British commercial agents and the Tibetan authorities, provided for in the recent conventions between Great Britain and Tibet and China. Buddhist subjects of Great Britain or Russia will be freely permitted to enter into direct relations on strictly religious affairs with the Dalai Lama and other representatives of Buddhism in Tibet. The Russian and British Government engage not to send any representatives to Lhasa or to seek any concessions for railways, roads, telegraphs, mines and other rights in Tibet. The two Governments agree that no part of the revenues of Tibet shall be pledged or assigned to them or their subjects. Great Britain engages to withdraw her forces from the Chumbi Valley as soon as Tibet has paid three annual instalments of the indemnity of 25,000,000 rupees.

Electing United States Senators

BY FREDERICK W. MULKEY

[Frederick W. Mulkey, of Oregon, is the youngest United States Senator. It is no small honor to be elected by primaries to the United States Senate, even for a short term, the moment one has passed the youth limit. Senator Mulkey was born in Oregon, and is one of the most prominent lawyers in the State. He has had many public offices urged on him but never before accepted, preferring to devote his time to his profession. He has always been an ardent supporter of the reform in the election of United States Senator, which he upholds in the following paper.—EDITOR.]

THE subject of the mode of electing United States Senators has always been a favorite topic of discussion. In the convention that framed the Constitution, the debate upon this subject was protracted and animated. The deliberations of that body resulted in a compromise that was made possible only by the bi-cameral form of the National Legislature. The compromise agreed to was a middle ground between what was then called a National Government on the one hand and a Confederate Government—or, as some of that time called it, a Federal Government—on the other. These terms, National, Confederate and Federal, were all loosely used, as also was the term Consolidated Government. The result of the compromise was a Federal Government, properly so called.

Accuracy and clearness of definition for the discussion in hand demands that these terms be better defined. What the framers meant by a National Government was a Centralized Government, as distinguished from a Dual; by a Confederate Government, a Dual Government; by a Consolidated Government, one in which all governmental power is vested in a single head or board, as distinguished from a government of co-ordinate powers. But the term consolidated was also used to convey the idea that the government was to be a centralized one.

Since the establishment of the Constitution, the discussion of the subject has been continued with a growing tendency of opinion for the abrogation of the present method and a widespread feeling that Senators should be elected by the people directly. The explosion of the idea that the government is of the Confederate form has given rise to the contention that the compromise principle is no longer useful. The failure of the legislatures of a number of States, at times, to elect a Senator, and the bi-cameral system in State legislatures, both branches derived directly from the people, checked by the application of other principles, carry the conviction that the conservatism of one branch over the other is not due to the mode of election, and this the more so when it is explained that each State will still have its equal representation in the Senate.

Those who advocate the present method generally take the position that the indirect method is an essential of political science incorporated into the system for the purpose of obtaining a higher order of legislation; that for such a purpose one branch of the Legislature should represent the people directly, the other indirectly. With this phase of the question I do not concern myself, save only to remark that each of the four leading constitutional governments of the world observe the principle contended for, but a different indirect mode obtains in each.

Formerly those who advocated the present method used to state that the Senate by its equality of representation and mode of election represented the States in their sovereign capacity. And since the fall of the Confederate idea we are still told, in the language of the advocates of the method at the time of the adoption of the Constitution, that the Senate represents the people in their corporate or political capacity, or the people in their collective capacity; but nowhere are we enlightened as to the meaning of these terms or why they are used interchangeably. It seems just to

remark that the necessity for an indirect election is not dependent upon the present method. Other indirect methods seem to be as efficient.

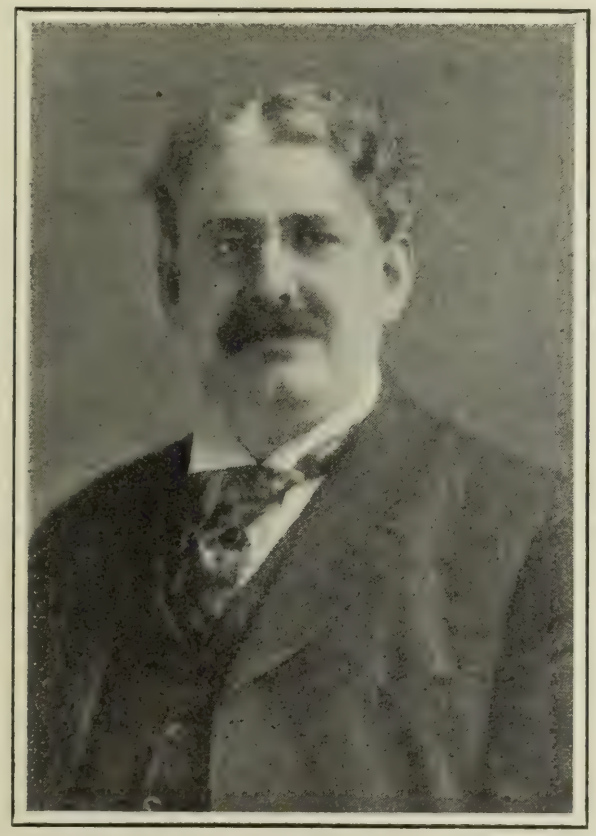
But to return to the question: Does the present method stand for a Constitutional principle? The controversy between a Confederate and a Centralized Government was not the only contention of the Convention. Those who feared what they called a Consolidated Government (a Centralized Government) saw in the Senate, thru its mode of election, a means of making the General Government dependent upon the State governments, or, to put it in the language of one of their number contending for such a mode:

"Mr. Butler apprehended that the taking of so many powers out of the hands of the States, as was proposed, tended to destroy all that balance and security of interests among the States which it was necessary to preserve."

Up to this point I have substituted Centralized Government for National Government and Dual for Confederate and Federal Governments. It is now necessary to define these new terms, and, in doing so, I shall follow substantially the definitions of Professor Burgess. A Centralized Government is one in which, while there may be a Local Government, its powers and its existence are dependent upon the will of the General Government. The Local Government has no constitutional autonomy. This is what the Nationalists stood for in the Constitutional Convention, and its opponents called it both a National and a Consolidated Government.

In contradistinction to the Centralized Government is a Dual Government. In this form both the Local and the General Governments have constitutional autonomy. To put the distinction in another way, in the Centralized Government the Local is dependent for its creation and existence on the General Government, and is more properly an administrative board. In the Dual, the Local is independent of the General for its existence and has a scope for legislation. The terms Federal and Confederate both contemplate a Dual Government; their difference lies in the nature of the means for their alteration. In the Confederate, one or more States can withdraw and thus curtail the operations of the General Government to that extent. That is to say, a Confederate Government is a compact between sovereign States. In the Federal Government the Constitution is not a compact. If created by the deliberations of delegates from States that were formerly sovereign, these States being consolidated by the ratification of their (the delegates') acts, a new sovereignty results, or, to again borrow a thought from the profound work of Professor Burgess, in a Confederate Government the several Local Governments and the several sovereigns are co-extensive. In the Federal Government the single resulting sovereignty and the General Government are co-extensive.

In the Federal the power of amendment or means of ascertaining the sovereign will with reference to alteration should be and is placed in the General Government. In the Confederate the ascertainment is placed in the Local Government.



Before connecting this with the subject in hand, I propose to consider, define, dispose of or retain the question: Does the Senate represent the people in their political or corporate capacity or the people in their collective capacity? Omitting a consideration of the question: Does the Senate represent the States in their sovereign capacity as having no place in the Federal system?

I should say that the term people, in their political or coporate capacity or not interchangeable or synonymous with the people in their collective capacity. Both are to be distinguished from the term people in their individual capacity. To represent a people in their individual capacity is to represent them according to the principle of number of inhabitants districted in territory convenient for election purposes. As the number of inhabitants changes within the election district the representation increases or diminishes.

But with representation in the political or corporate capacity the representation remains fixed and determined, the district is retained, but is not for election purposes primarily. There may be an influx of people or there may be a decrease of people, but the representation remains fixed and unchanged. So also

with the people in their collective capacity. To this extent representation in a political or corporate capacity and in a collective capacity are identical terms. The difference lies in the method of choice of the representation. In the collective capacity, the mode of election is immaterial; it may be by the people direct, thru the medium of a board of electors or by a branch of a Local Government. The group to whom the representation is accorded may or may not be co-extensive with the Local Government.

A change in the present method of electing United States Senators to an election by the people of the several States directly would not invade the principle; the people would continue to be represented in their collective capacity.

HONORABLE FREDERICK W. MULKEY,
U. S. Senator from Oregon.

To represent the people in their political or corporate capacity presupposes the existence of the people in an organized entity formed for political purposes. To represent them in this organized political capacity is to limit the representation of the people to the same territorial limits as that of the Local Government and to accord to a governmental agency the right of selection. In their collective capacity the people may or may not have a local organization of government; in their corporate capacity they must have such a Local Government. The Local Government must be co-extensive with the people in their collective capacity, and, as I have said, such Local Government must have accorded to it the right to elect, for to be represented requires as an original right the opportunity to choose. The value of each in a political science sense may be summed up in the following manner: The collective capacity idea, when used in one branch of a Legislature—the other branch representing the people in their individual capacity—is calculated to leaven a mere expression of popular will by an expression of the opinion that has grown up by virtue of local intercourse and environment. This idea may or may not contain the additional principle of an indirect election.

The corporate political capacity idea retains all the features of the collective capacity, secures the principle of an indirect election and is a more faithful interpreter of the group consciousness, because in its segregations it always follows the territorial lines of the Local Government and enables the effect of local statutory law to uniformly act upon the collective opinion as a separate and consistent system, free from the conflicting enactments that perhaps might ensue if the collective unit were to overlap local statutory systems.

In a government like our own, while the jurisdictions of the Local and the General Governments are practically free from encroachment upon each other and have a distinct field of operation, still the concurrent powers of the Congress of the General Government are such that the Local Government may act upon some given subject until the General Government shall exclusively take to itself the jurisdiction of that subject by legislation. In such a case, I should say that the policy of the General Government should be to evolve a scheme

only after consideration of the several Local Governmental policies that resulted in the Local statutory enactments; and a system placing a recognition of this principle in its structure could only do so by representing the people in their political corporate capacity. That is to say, by an election of one branch of the General Legislature by an agency of the Local Governments, preferably by the Legislature of the State. In no way could a direct election by the people in their collective capacity harmonize this changing body of concurrent law. Yet justice requires the admission that those who contemplate election by the people in no way propose to contravene State lines in the selection of Senators, and I wish to be understood by the reference to the possibility of an overlap under the collective system as dealing with the general principle and the possible future agitation in that direction.

Taking the Government of the United States as the best example of a Federal Government, I should say that the constitutional arrangement is such that there is no possibility for the encroachment of the General Government upon the Local Government in the exercise of governmental powers. The Constitution defines the powers of the General Government and confers all other governmental power upon the Local, or, as the writers say, the General Government is one of express grant and the Local one that must be restricted by some prohibition in the Constitution, expressed or implied; both possess autonomy, given by the Constitution itself; each has its sphere and neither can destroy or encroach upon the other.

Hence I should say that it is wholly unnecessary to have the States represented in the General Government by an election of Senators by the Legislatures, or otherwise to prevent an encroachment of the General Government upon that of the State in the exercise of its governmental powers. But to use a phrase of Alexander Hamilton: "A government has a right of self-preservation," and, in making a reference to the fact that the General Government cannot encroach upon the State Government, it will be noticed that the limitation was confined to the exercise of the governmental power, meaning by the term governmental power an act legislative in nature.

We now approach the vital constitutional principle, which the present mode of election does and should secure in a Federal form of government. The Constitution provides for amendment, and, in a partly Federal and partly Confederate manner, organizes the amending system. The Federal idea, however, dominates in the arrangement, it being optional with the General Government whether the final submission be to State Legislatures or to conventions of the people of the States, the Confederate feature being a right vested in State Legislatures, if sufficient in number, to demand a Constitutional Convention. The exercise of these functions of amendment on the part of the General Government is not an act legislative in its nature, however, but is an act calculated to invoke directly the sovereign power to activity. The General Government could by its power to amend strike down the State Governments, and the State Governments could in no way protect themselves against this. The Dual system could be annihilated and the Federal Government converted into a Centralized one. The General Government could propose a change and submit the same to the people of the States in their collective capacity, thru the medium of conventions created or called by itself. All this is sound and essential to a government of the Federal form, and the Confederate feature of the amending power should be eradicated. That is to say, to place beyond question that we are a Federal Government, the calling of a Constitutional Convention should be vested in the General Government and the submission be to the people in their collective capacity. But this, as I have said, would be an exercise of sovereign, as distinguished from legislative, power.

Now, the Dual form in our system has the sanction of the sovereignty; it has the right of self-preservation. Neither the General nor the State Government is sovereign; nor does the sum total of both possess sovereignty, but in a Federal form the General Government should possess the right exclusively to address the sovereign and ascertain its will. The

State Government has no right to preserve itself against an act of the sovereign, but it should, by representation in one branch of the Legislature of the General Government, check and preserve itself against the tendency to ascertain the sovereign will; this is so because, when the existing order of government was established, the sovereign retired satisfied with the arrangement, and the presumption obtains that the acquiescence continues. Remove the representation of the State in the Senate, and the only opportunity for self-preservation left the States rests upon the exploded theory of Confederatism as organized in the amending clause of the Constitution and as contained in what is said to be the only irrepealable clause in the Constitution, to wit: That no State shall be deprived of its equal vote in the Senate without its consent, and this, of course, is Confederatism again in its most pronounced type.

If this reasoning be correct it must be concluded that the election of Senators by the Legislature does represent a vital constitutional principle in a Federal form of government. In fact, the Senate, thru its mode of election, is the chief bulwark of the Federal form. Personally I am of the opinion that the United States is in need of a more efficient government. To obtain such a government I deem it necessary to depart from the Federal form. For this reason I favor the election of United States Senators by the direct vote of the people in their collective capacity. The form of government that I would hope for in case of a change would be the Centralized one. The accepted theory of sovereignty would remain unchanged and would be greatly strengthened. The sovereignty would be in the people and co-extensive with the General Government. The Government would still be co-ordinate. As I have stated, the election of Senators by the people is a step away from the Dual form, because it breaks down the safeguards of that form of government.

At the time of the adoption of the Constitution of the United States the American people were not completely nationalized. The problems of one State were not identical with those of another. Hence difference in policy was necessary. There was a sufficient development of juristic accord to establish a Federal Government in preference to a Confederate Government, but antagonistic views of a lurking Confederacy demanded that the General Government be one of enumerated powers and that the Local Government be independent of the General.

The American people are becoming rapidly nationalized, if they are not fully so now. On every hand it is demanded that this subject and that subject be placed under national control. This piecemeal policy would be ill advised. The ultimate result must be that the General Government be one of plenary legislative power with designated restrictions rather than one of enumerated legislative powers, and that the governments of the commonwealth be those of enumerated legislative powers and limited to such subjects as those upon which there does not exist a complete juristic accord thruout the nation, with due consideration of the termination of the State legislative jurisdiction when sufficient jural consciousness prevails.

The views of Mr. Secretary Root are, in my opinion, those of an observing statesman; with a keen and accurate mind he grasps the indications, growth, effect and benefit of the complete nationality of this country, but I cannot agree with him, if I understand him correctly, that the balance of co-ordinate government be distributed, and that the remedy lies in the enlargement of the powers of the Executive only. I should say that the ultimate form desirable would be that in which legislative power is concentrated in the General Government, giving to the Executive an independent and supplemental, as well as the delegated ordinance, power, calculated to insure sufficient energy for administrative purposes, and the one that enumerates the powers of the commonwealth and confines their activities to certain enumerated and administrative measures, preferably the police power. In other words, what Professor Burgess would call a government concentrated in its legislative power and federalized in its administrative power.

WASHINGTON, D. C.

His Excellency King Edward

BY SYDNEY BROOKS

WALTER BAGEHOT used to say that an English Sovereign had three constitutional rights —the right to be consulted, the right to encourage and the right to warn. He added, shrewdly enough, that a ruler of great sense and sagacity would need no others. King Edward, who is pre-eminently a ruler of sense and sagacity, is the living proof that Bagehot did not exaggerate. And indeed, when you come to think of it, a monarch who is entitled to full knowledge and full discussion of all public transactions; who may criticise and so alter or modify his Cabinet's decisions; who may suggest amendments, raise doubts, propose alternatives and thus help to clarify the Ministerial mind; who is permanent, while his advisers are fugitive, an onlooker, while they are combatants, able to take a broad and leisurely survey, while they are blinded by a thousand bewildering details—is clearly a monarch with the amplest opportunities for influencing national policy.

In the six years that he has reigned King Edward has made the fullest and ablest use of these opportunities. More than once he has interfered decisively in domestic politics. If Ireland has made since 1900, as unquestionably she has made, large strides toward internal pacification, if England is at last within measurable distance of possessing an army suited to her needs, it is to King Edward more than to any other man that the nation's thanks are due. Among the strict Constitutionalists, indeed, you will even hear some secret mutterings over the extent and pertinacity of the King's activities. But it is in the sphere of foreign affairs that King Edward has made his influence most immediately felt. Here he has not only turned to account the normal privileges of a British Sovereign, but has created new ones. He has constituted himself, in the name of his people and with their enthusiastic applause, a sort of traveling Ambassador on behalf of international amity. He has assumed the task of approaching the peoples and rulers and statesmen of Europe and of negotiating with them as a quasi-unofficial but wholly representative spokesman of the nation.

This is altogether a new development of the royal prerogatives. I do not mean to imply that Queen Victoria abstained from interfering in the conduct of foreign policy. On the contrary, her wishes and opinions were at all times a great and sometimes a determining factor in the calculations of Downing Street. We shall probably have to wait for at least another generation before any adequate estimate can be formed of the scope of Queen Victoria's statesmanship. But even as it is we know that during the crisis of the Schleswig-Holstein tangle she protested, and protested successfully, against English intervention on behalf of the Danes—this, too, in the face of a united Cabinet and an almost united nation. We know that before that episode was settled she had thrice fought and thrice beaten Palmerston in his own Cabinet on a question of war or peace. We know how sharply she rebuked that off-handed Minister for taking decisions of great importance in foreign affairs without consulting her; how she insisted on seeing, studying, and at times altering, every dispatch of any significance that was sent out by the Foreign Office; and how she made it a rule to have all important conversations with foreign Ambassadors reported to her.

We know, again, how she commanded that the British Ambassador in Paris should remain passive and neutral during the *coup d'état,* and how she caused Palmerston's dismissal for his too hasty condonation of that lightning stroke of policy. We know that more than once she flatly refused to approve the Queen's Speech and altered it to her liking. We know that thru her insistence the Royal Proclamation that closed the Indian

Mutiny and laid down the lines of future policy was rewritten and amended to square with her suggestions. We know, too, that these suggestions were an immense improvement on the original draft, and showed the Queen a better statesman than her Ministers. We know how she modified and toned down the dispatch demanding the release of Slidell and Mason, and that it was her modifications, as Seward admitted, that preserved the peace between England and the United States. We know that a letter from her to the old German Emperor was largely instrumental in preventing a second war between Germany and France in 1875. We know that in the three conspicuous cases where she failed to convert her Ministers—the retention of Kandahar, the relief of Gordon and the retrocession of the Transvaal—posterity has already pronounced judgment in her favor. We know, in short, that thru long practice and intuitive clear-headedness she became almost a Permanent Secretary of State, entering zealously into all political questions, free with praise and blame, encouragement and opposition, as much the counsellor of her Ministers as they were her advisers.

I recall all this for the purpose of showing that it is rather the direction than the fact of King Edward's activities in foreign affairs which is really new. The British people were not aware at the time, and even now do not altogether realize, the extent and effectiveness of Queen Victoria's political influence. In the nature of things it was an influence that operated almost exclusively in the Council Chamber. Hidden from the popular eye, its very reality came to be half doubted, and its resurrection by King Edward, on an ampler scale and amid far more circumstances of publicity, struck opinion with all the effect of novelty. It is scarcely too much to say that his Majesty has forced Great Britain and has forced Europe to rediscover the British Monarchy as an active instrument of diplomacy. Her sex, her health, her naturally home-keeping temperament, alike disinclined Queen Victoria for those pilgrimages of peace in which her son has achieved his greatest triumphs. A million eyes see King Edward's handiwork where not a hundred suspected Queen Victoria's activity. He labors in the open, beneath the gaze of special correspondents, paying rounds of royal visits from one European court to another, attending fêtes, banquets, reviews and race meetings, where all may see him, fraternizing as freely with the peoples as with the rulers and statesmen of the countries he enters. This is to add to the ordinary constitutional functions of advice, suggestion and criticism another more striking and more human function in the discharge of which the British Monarchy may hereafter be seen to be fulfilling its most beneficent mission. It is to invest the occupant of the throne with a roving commission for the safeguarding of British interests and the promotion of international good-will—a commission in which the first element of success is personality.

For an undertaking of this delicate character King Edward is peculiarly equipped, both by personality and position. As a constitutional and not an autocratic monarch he enjoys in these missions of pacification a privileged liberty such as a ruler like the Kaiser or the Czar cannot and dare not experience. It is a liberty which enables the King to step outside the humdrum diplomatic circle and to negotiate, as it were, with the peoples whom he visits and not merely with their officials. He is not directly responsible. He may speak for England but he cannot by himself commit her to anything. A range is permitted him that monarchs with more despotic powers are obliged to deny themselves. And the characteristics of King Edward's mind and temperament enable him to extract from the advantages of his position their last ounce of profit. He is an excellent judge of men and affairs. He learns and assimilates with extraordinary quickness—I have heard men who know both debate whether the King's mind or Lord Rosebery's is the swifter to take a point. He has no prejudices, unless it be the prejudice of a decided temperament and a pertinent intelligence against dulness and flaccidity. His mastery of all the arts of social ingratiation and his unfailing bonhomie and air of being at home and of enjoying himself wherever he goes make him supreme at staving off friction.

bringing men together and putting them at their ease. Too naturally dignified to be always thinking of his dignity, too modern in instinct and feeling to call in the aid of ceremony when ceremony is out of place, he has the happy knack of reaching the popular heart by the infallible process of always doing and saying the right thing at the right time.

These are great gifts. And for the purposes of unofficial diplomacy they are enormously reinforced by His Majesty's genius for silence. It is in that quality more, I think, than in any other that King Edward shows his superiority as a national Ambassador over the German Emperor. The German Emperor's knowledge of what to do and say remains uncorrected by his knowledge of what not to do and say. In King Edward both sorts of knowledge unite in a rare and admirable balance. Tho a man of strong emotions and vivid perceptions, with a native strain of impulsiveness, he keeps himself admirably in hand. With these aptitudes His Majesty has contrived in the past six years to make himself the most commanding figure in world-politics and to play a part, often the leading part, in a diplomatic revolution as complete and far-reaching as any in history. In all that time not a word can be quoted nor an act pointed to that showed haste, immaturity, or that did not in the end make for practical appeasement. To this statement King Edward's relations with the Kaiser may have provided one or two exceptions. Otherwise his instinct for diplomacy has been invariably guided, not only by an absolute discretion but by the good humor which ranges all his natural prepossessions on the side of the friendliest possible intercourse with his brother sovereigns. And even in the German Emperor's case the estrangement has been smoothed over. Uncle and nephew renewed at Wilhelmshöhe in August and will confirm in London next November something like their old intimacy.

To weigh the tangible fruits of King Edward's endeavors it is enough to compare Great Britain's position today with what it was in 1901. Six years ago England and France were still pursuing their secular quarrel with a bitterness that on both sides of the Channel had come to be accepted as the normal basis of their relations. The furious excitements of Fashoda, the Dreyfus case and the Boer War had generated an atmosphere thick with all the elements of disturbance. From Cairo to Bangkok the two Powers scowled at each other with an insensate suspiciousness. The contrast between what was and what is hardly needs elaborating. It is patent to the least informed and most careless observer; and the British nation rightly gives to King Edward the credit for initiating and forwarding a movement which has restored peace and sanity to Anglo-French relations, which has added immeasurably to the security of British interests, and which furnished during the Russo-Japanese War an overwhelming demonstration of its potency in the cause of peace. But for the *entente* which enabled the seconds to the combatants in the Far Eastern war to regulate their policy in accordance with common sense and a mutual confidence, the scope of that titanic struggle might, perhaps must, have been disastrously widened; and the decisive step that averted any such catastrophe is to be dated from King Edward's first visit to Paris after his accession and from the action of his engaging personality upon the emotions of a singularly responsive populace.

The success which King Edward first achieved at Paris he has since repeated at Vienna and Lisbon, at Rome and Madrid. If there is at last a definite approximation between Austro-Russian and Anglo-Italian policy in Macedonia and the Balkans; if the many bonds which link Great Britain and Portugal and to which the Portuguese possession of Delagoa Bay lends a more than sentimental moment, have been recemented and strengthened; if Spain has forgotten and forgiven British sympathy with America during the war of 1898 and has welcomed with a unique warmth an English Princess as the consort of the Spanish King; if the cloud that hung over Anglo-Italian relations for some years after the disaster of Adowa has been dissipated; if an English Princess shares the new-born throne of Norway; if there is now a league of good-will, based on a common objective and buttressed by the right sort of sentiment, between England, France, Italy and Spain in the protection of their Med-

iterranean interests—it is to King Edward that the diplomacy which led to these achievements and which preserves them must first of all be credited. I say nothing of America except to note that every opportunity that has presented itself for showing his genuine liking for the country and its people and his admiration for its Chief Executive has been seized upon by the British Sovereign with unforced and unfailing felicity. If the Anglo-Japanese Alliance was not directly his work, his ever-ready perception of the attentions and compliments that gratify an allied people and their Sovereign have sensibly helped to broaden and confirm it. Nor does that by any means exhaust the mandate which His Majesty has imposed upon himself. Anglo-German relations for a decade, Anglo-Russian relations for two generations, have been penetrated with a seemingly incurable suspiciousness. There are many tokens that in both cases the dawn of rationality is near at hand. By furthering its advent King Edward will have put the coping stone on a series of pacific achievements unparalleled in the history of the British Monarchy.

It remains to add—and it is a fact of curious significance—that the British nation has followed King Edward's activities in foreign affairs with whole-hearted approval and gratitude. That is partly because they are all in the direction of peace and partly because, knowing his countrymen as McKinley knew Americans, the King has been enabled not only to expound and interpret the unspoken wishes of the people but to guide and give effect to them. The nation has applauded without reservation his assumption of a role that vests the ancient prerogatives of the Crown with a new utility, and that empowers the Sovereign to heal many international sores, to form new international friendships, and to redouble the guarantees of peace by strengthening the links of interest and sentiment that unite Great Britain to other Powers. The national appreciation of these invaluable services is made clear in one most pregnant fact. England at this moment is passing thru a stage of acute transition. She is taking vast strides toward the tangible restoration of democracy. She is one of the newest countries in the world. Old institutions, old systems, hallowed privileges, the instinctive thoughts of men on the problems of politics and society, are all being attacked, inquired into, recanvassed or transformed. But amid this great agitation of the public mind the Monarchy remains untouched and was never at any moment more secure in the affections and reasoned convictions of the people. It is thirty-five years since republicanism raised its head for a brief and futile moment in Great Britain. It was never more hopelessly a lost, indeed a dead and buried cause, than it is today. A phenomenon so striking is susceptible, I am well aware, of many explanations. But among them the conduct, the personality and the reconciling labors of King Edward must be given a foremost place. They have been a triumph not only for the Monarch but for Monarchy itself.

LONDON, ENGLAND.

Day's at the Morn!

BY M. ELIZABETH FARSON

TURN toward the dawn, O motile earth;
Turn sunward, thou, this Autumn morn;
Forget the dying, westering glow,—
The Orient calls—across the corn!
Awake from dreams, O drowsy one;
Thy mist-dimmed eyes unclose! Adorn
Thy form afresh with fragrant dews;
The Sunrise calls! A new day's born.

Put off thy veil of violet haze;
Prepare thy brow for Morrow's wreath.
The yesterdays have come and gone;
Place empty pasts thy feet beneath.
Ancient the night makes days that were;
Those days, thou never more shalt see
But,—courage—lay aside thy fears;
What "Shall be," now, awaiteth thee!

CHICAGO, ILL.

The State and the Game

BY DWIGHT W. HUNTINGTON

THERE are two systems of handling game which have reached their highest development on opposite sides of the Atlantic Ocean: (1) The English system of game preserving, which has well-defined rules for requiring the control of all game enemies, the protection of the game against losses by climate and the keeping of sufficient birds each year for restocking, and (2) the American system, which may be termed a system of laws, since it relies entirely upon legal enactments to save the game from extinction.

Both of these systems are intended to preserve the game: to be entirely successful they should make the wild food birds abundant and cheap in the markets and, incidentally, they should provide good shooting. From an economic point of view the food question is of more importance than the sport and should first be considered by the State.

The English system depends upon gamekeepers, employed by individuals and syndicates (which correspond to our game clubs) to properly look after the birds. The American system depends entirely upon police officers, usually termed game wardens or game protectors, employed by the State to look after the lawbreakers. In England there are about 12,000 gamekeepers, who live on the preserves. In America there are about the same number of game police officers, who usually reside in cities and towns and go forth to seek the evildoers. In England the game birds are abundant and are increasing. In America they are nowhere plentiful and are even threatened with extinction.

The advantages of the English system are almost, if not entirely, unknown in America, and comparatively few of our sportsmen are familiar with the simple rules of game preserving which have made the game preserves highly beneficial to the English people.

The grouse, pheasants, partridges and wild fowl are cheaper in the English markets than beef and poultry, and both the market-gunner and the millionaire have much better shooting in England than they have in America. The English market-gunner may even use a punt gun.* In the United States the use of large guns is everywhere prohibited and laws forbidding the sale and transport of game have driven the market-gunner and the game dealers out of business. The general public knows not the taste of game.

A long open season and large bags of game are, of course, desirable from the sportsman's point of view as well as from that of the market-gunners, game dealers, innkeepers and all persons who like to eat game. In England the shooting season is much longer than it is in America: good shooting of some sort is to be had for six months in the year. In America, however, the shooting season only lasts a few weeks in some States and a few months in others, and the shooting is often prohibited for a term of five or ten years when the grouse or partridges (quails) appear to be in danger of immediate extinction, as shown by game laws in forty-three States. Such prohibitory laws are unknown and never necessary in England, altho the bag there is unlimited and sportsmen and market-gunners may shoot a hundred or a thousand birds in a day when fortune smiles. In America there are few places where the birds are sufficiently plentiful for any one to make a big bag, and in most of the States the laws forbid the taking of more than a small number of birds in a day. In several States the bag limit is only five birds and the tendency of our legislation everywhere is to smaller and smaller bags as the birds diminish.

A surprising number of laws is necessary in America to prevent the extermi-

*The punt—or swivel—gun is a gun of large caliber which is mounted in a boat. Over a hundred fowl are often killed with it in at a single discharge.

nation of the game. In the year 1900 we had more game laws than any other country in the world, and since 1900 more than 800 new laws and amendments have been enacted. It is evident that it is no easier to make game birds abundant than it is to make people good by legislation. Notwithstanding all the laws our ornithologists continue to warn us that the range of our game birds is contracting every year and that many species will soon become extinct. There is an abundance of evidence to support their opinion.

The wild turkey, which was once sufficiently plentiful to sell for six cents in the markets, has entirely disappeared from all of the New England States and from many others, and has become a rare bird everywhere. The grouse of our Eastern States, which was so abundant in Massachusetts that "servants stipulated with their employers not to have the heath hen brought to the table oftener than a few times in a week," no longer exists anywhere save on Martha's Vineyard, and the number there remaining is less than 100 and is growing smaller. These birds are protected at all times, the penalty for killing one being $100. In their last report the Massachusetts Commissioners of Fisheries and Game say that their "personal observations indicate that forest fires and cats have destroyed more of these birds than have the hunters," but, true to the American system of handling game, they have placed the birds in charge of a policeman, whose duty it is to look after the "hunters." The birds will, no doubt, become extinct in a year or two at most. Under the English system a gamekeeper employed to look after the heath grouse would save them from cats and forest fires and from foxes, hawks, snakes and all other game enemies. A good gamekeeper would easily rear 5,000 or more of these birds from the remnant now on Martha's Vineyard in two or three years, and would be prepared to furnish live birds and eggs to many preserves and to the State for propagation or introduction to the open fields, where they have long been extinct.

The common prairie hen, a most delicious fowl, which a few years ago came to our Eastern markets in twenty-ton consignments, and which sold in the Western cities for five and ten cents, is already extinct in many States, and is rapidly diminishing in others. The State Game and Fish Warden of Michigan, writing of this bird, says:

"There are four coveys reported from different parts of the State and the *deputies* have been carefully guarding these birds in hopes that they will again return in numbers to Michigan."

Vain hope. Here again a gamekeeper is needed. Vermin works night and day. The deputies are, no doubt, only looking for lawbreakers, and the chances of these getting the birds are excellent.

The splendid sharp-tailed grouse is extinct in Illinois and other States, and is reported to be rapidly diminishing in North Dakota, Utah, Oregon and elsewhere. A recent bulletin issued by the United States Department of Agriculture informs us that the wood duck, the most beautiful wild fowl in the world, and the splendid woodcock are vanishing, and in another bulletin issued by the same department we are told that even bob-white, our most common game bird, formerly abundant on every farm and cheap in every market, "is decreasing in much, if not all, of its range."

The rapid diminution of our game birds is not confined to the Eastern States. The Game Warden of Oregon says in an official report:

"The sport of fishing and hunting will soon become a thing of the past unless more stringent laws are enacted. The limit of one day's hunt should be five birds only. The use of the dog should be prohibited for three years."

The State Fish and Game Commissioner of Utah says: "It can hardly be denied that our wild game animals and birds are becoming more rare each year." The State Board of Commissioners of California say:

"It is not reasonable to expect that in the more densely settled counties game can show an increase. Civilization and wild game cannot increase in an equal ratio; in fact, the converse is true; the greater the increase in population, in that same ratio will there be shown a decrease of wild game."

This statement applies only to the legal system of handling game. Under the preserve system the game is made most abundant in thickly settled regions, and, in fact, it is claimed that the birds are safer in such places and, of course, increase more rapidly.

There can be no doubt that the game birds are increasing in England in places where population is increasing. Many Americans now go every year to the British Isles to shoot and spend thousands of dollars which should be kept at home. England has supplied thousands of eggs and birds to at least one of our State game officers to restock his depleted coveys.

In answer to a general inquiry which I made concerning the increase or decrease of the game thruout the country, several game officers have written me or sent me their official reports, claiming that the birds were holding their own or were even increasing in a few localities. They all, however, regard this favorable condition as due to legal restrictions, prohibiting the sale of game, shortening the season, limiting the bag, requiring a license fee from the shooters and an array of legal "don'ts" which have made it hardly worth while to own a gun or to keep pointers or setters. The State Warden of Kansas, for example, venturing in his report to predict that within five years the supply of game will be ample for all legitimate purposes, attributes this happy future:

"To the enforcement of *the law, which prohibits the sale and limits the number that can be lawfully killed in one day by each hunter during the thirty-day open season in which game can be taken.*"

None of our State officers promise or predict that game will ever again be sold in our markets. They all seem to be unaware of the fact, paradoxical as the statement seems, that it is far easier to make the game abundant in the markets than it is to save it from extinction. Capital is always ready for a profitable industry but is often slow to exploit a sentiment however worthy. The game preserves can never be generally successful so long as they are surrounded with such a wonderful array of legal enactments and are deprived of the ordinary medium of exchange. Any pursuit, agricultural or mercantile, any science, art or even religion under such conditions would surely suffer. When the oyster business was carried on upon open grounds, managed and regulated by the State or town, the oyster was in danger of extinction. On private beds the oysters are now well looked after and have become plentiful and profitable. The Massachusetts commissioner's say that the regulations of the shell-fisheries made by the Selectmen or the Mayor and Aldermen

"are usually but distinct attempts at checking the demand, *i. e.*, prohibiting of digging for certain periods, limit upon the number to be legally dug by any one person, etc."

How similar these regulations are to game laws. Continuing the commissioners say:

"It would be quite as logical for a town or city to prohibit by laws the use or digging of potatoes *or any other* FOOD CROP when the supply was short rather than to *increase* the supply."

We suggest to the game officers of Massachusetts that the game birds are a *food crop* of more value, if properly looked after, than the shellfish. They should advise legislation permitting the sale of the wild food birds from the preserve just as trout reared on trout preserves are now sold in Massachusetts There is always a benefit to the State in the overflow from the preserves.

The game officers in all of the States are entitled to praise for their efforts to save the game from extinction. The limited force of wardens and protectors at their command is entirely too small to properly police the ground, and it appears from the reports that much game is shot every year illegally, and always will be. Bag limit laws, short season laws and others which appeal to the conscience will never be observed in the woods. When the birds whir up into the air such laws are forgotten, if they were ever known. The Maine commissioners well say that "the territory to be guarded is so extensive that our whole State militia could not effectually patrol or guard it." In thirty States the number of game wardens is only 5,773, and the area of the territory to be guarded by them is 1,763,080 square miles. The average warden is therefore required to police about 300 square miles. A gamekeeper seldom has more than a few hundred acres to look after without assistance.

Altho our laws are all framed to regulate and restrict the shooting, shooting, legal as well as illegal, is not the principal cause of the continued diminution of the game. The birds would increase rapidly, as they do in England, notwithstanding hundreds

of thousands are shot every year, were it not for the two well-known natural checks to their increase, vermin and climate. These checks are well understood by the gamekeepers, as we have suggested, but they are unknown to our police officers. Pennsylvania, within the past year, has made some efforts to poison vermin.

One pair of bob-whites and their progeny, if entirely unchecked, would produce over 6,000,000 bob-whites in eight years, provided the coveys contained only twelve birds each and they are often much larger. The birds often rear two coveys in a year and a covey sometimes has twenty-five birds. The life of a bob-white in captivity was nine years. The destruction by vermin every year and by climate some years, on unpreserved grounds, is almost beyond belief. The chief warden of Nebraska, in a recent letter, says:

"Quail are not so plentiful as they were owing to the severe winter of 1905, when *they were practically exterminated.*"

I have observed similar catastrophes in Ohio and elsewhere and severe winters often very nearly exterminate the quails in New England and in many of the Northern States. There are no such disasters on the game preserves where simple but effective methods of combating the losses due to climate are understood and applied.

The losses caused by vermin are even greater than those due to climate since they occur every year. The many enemies included in the term vermin are busy every day in the year. They are especially active during the nesting season when they feed their young on game. The destruction at this season is wholesale since the loss of a parent bird means the loss of a covey. Foxes and hawks are the more familiar enemies but crows destroy thousands of eggs and young birds; and owls, minks, weasels, wolves bob-cats, skunks, snakes, moles and other furry and feathered vermin destroy more game during the year than is taken by the guns in the short open season. In addition to the wild vermin, roving dogs and house cats also take more than the guns. Our laws, therefore, seem to favor vermin, since vermin and cats have a long open season and kill more than half the game. The amount thus consumed would supply all of our markets.

Gamekeepers are familiar with the habits of all these enemies, wild and tame, and control them with traps, guns and poison, so that the losses on the preserve are reduced to a minimum. It would be impossible for the game wardens to prevent the losses due to climate and vermin since, as we have observed, they cannot even handle the larger game enemies—the illegal shooters—on the large areas intrusted to their care.

In the Eastern States the game officers have often tried to restock the vacant fields with birds purchased in other States and with pheasants from preserves or reared in State hatcheries. Attempts made by the States to rear game in hatcheries have not been, and, in the writer's opinion, will not be, successful. In 1906 New Jersey purchased and liberated 3,700 quail, paying $9 per dozen for them, and Pennsylvania purchased and liberated 7,440 quail, less a few birds lost in transit. Illinois and some other States also have purchased birds, including the imported pheasants. The quail came from Southern States, which have this year prohibited the export of both live and dead birds, and it will no longer be possible for the State officers to purchase live quail anywhere. The chief game protector of Pennsylvania says in his last report: "I feel perfectly safe in saying that were it not for this importation of quail *there would not be one single covey in the State today.*" But what of the future when these birds are shot off, as they soon will be, if not killed by climate or destroyed by vermin?

There are in the United States many so-called game preserves. These, however, for the most part are merely posted farms without gamekeepers. A fact that I wish to emphasize is that we have the preserves, but not the preserving; the birds on the posted farms often suffer from climate and always suffer from vermin, and the owners of the preserves, of course, complain of the scarcity of game. There are, besides, a few well-managed preserves where competent gamekeepers are employed, and these, without exception, have game in abundance.

A preserve in New Jersey, and one on

Long Island, which I recently visited, annually rear thousands of pheasants. On the partridge or quail preserves in North Carolina skilful gamekeepers have made the bob-whites tremendously abundant. I have never seen these birds so plentiful as they are on the preserves in Guilford County, and it has been my good fortune to shoot over many virgin fields in the Mississippi Valley, which soon thereafter sent tons of game to the markets. These preserves are miles in extent and could easily send thousands of quail to the markets. On some of the preserves the birds are almost too plentiful, and there is always danger of epidemics when game birds are over-abundant. It seems absurd that these birds cannot be sold even for propagation.

It cannot be denied that there is a pronounced but ill-advised prejudice against the preserve in America. This prejudice, however, is not nearly so strong as it was some years ago, and it is gratifying to observe that it has almost, if not entirely, disappeared in places where the preserves are successfully conducted. The reason for this is that the preserves pay all of the farmer's taxes, furnish an agreeable employment to a number of persons, and bring considerable money into the neighborhood. The preserves have already supplied trout, birds and deer to the State game officers in several States to be turned down in unpreserved fields; and in the future the State must either conduct its own game parks or rely upon the private preserves for its game for restocking.

Many attempts have been made by game commissioners and by individuals to domesticate our native wild food birds and rear them in captivity. These experiments have nowhere been successful. Imported pheasants are successfully reared on the private preserves in captivity, but they are not as desirable as our own game birds for the table or for the gun. Since, however, our game birds can be made tremendously abundant in a wild state on protected grounds these experiments are of little or no importance. Wild birds are never subject to the diseases which kill the tame ones. They have, besides, the true game flavor and are far better both as food and as objects of pursuit than tame birds are. The States should abandon the "hatchery" idea for game birds, and rear them in open fields in the care of gamekeepers who understand the business. They may be reared by contract with the farmers or gamekeepers, as game birds often are on the preserves in England. They can be reared on the same ground with the ordinary farm products —corn, wheat, vegetables, etc.—and thrive best on the farms. They do not injure the crops, but are a benefit to the farmer, since they destroy weed seeds and injurious insects.

It is evident that the private game preserves should be encouraged by the State game officers and by all those who desire to save the birds from extinction. Paradoxical as it may seem, the birds always become abundant when properly looked after by those interested in shooting them. The laws should everywhere be amended so as to permit those willing to make game abundant to shoot it, while the weather is fine, during a long open season, without limit to the bag, and to sell it under the direction of the State officers to licensed game dealers, who in turn will sell it cheaply to those who like to eat game. Since this paper was written Vermont has past a law permitting the sale of game from the preserves. I predict that game will soon be abundant in the Vermont markets, and other States will no doubt pass similar laws.

YONKERS, N. Y.

The Awakening of Bolivia

BY L. S. ROWE, LL.D.

[Professor Rowe has charge of the department of Political Science in the University of Pennsylvania. He was Delegate of the United States to the Pan-American Conference. We follow this article with a different view of the same country by "Father Endeavor" Clark. —EDITOR.]

OF all the countries of South America Bolivia is the least known. Its isolation has been so complete that the average American hardly knows of its existence. The war with Chile of 1879 deprived Bolivia of its coast provinces, and this almost fatal blow has hidden the country from the eyes of the world for more than a quarter of a century. The disastrous effects of the Chilean war weakened Bolivia to such an extent that it looked for a time as if she would become the South American Poland—coveted by her neighbors, constantly threatened by encroachments from Brazil, Peru and Chile, and too weak to offer effective resistance to the designs of these countries. The extreme danger of the situation had the desired effect in rousing both the Government and the people from their long lethargy. With the inauguration of General José Manuel Pando, in 1898, the new spirit of progress began to make itself felt.

The first and most important problem was to remedy the discouraging isolation in which the country had been placed. After a long series of preparatory studies the Government declared itself prepared to grant a franchise for the construction of the most important railway lines. The granting of this franchise to an American syndicate marks an epoch not only in our relations with Bolivia but with the whole of South America. The lines now in process of construction will give to Bolivia an outlet to the Atlantic, connecting as they will with the northern Argentine lines. The investment of American capital in these railway lines will pave the way for larger investments in mining enterprises, for which Bolivia offers so rich a field. The establishment of American commercial influence in the heart of South America is an important step in the development of closer personal relations upon which the future of our position in this section of the world so largely depends.

The most important expression of the new spirit dominating Bolivian policy is the attention that is now being given to education. Until recent years the country was almost without any system of instruction. Practically the entire Indian population, which comprises about 90 per cent. of the total, is illiterate. But a small percentage of the white population has gotten beyond the elements of reading and writing. General Pando first saw the necessity of placing the problem in the foreground of public attention. Neither the municipalities which have charge of the primary schools, nor the Congress which must attend to secondary and higher instruction, were accustomed to making large appropriations for schools, and it became necessary to undertake a campaign for the purpose of overcoming the indifference of both the local and central legislative authorities.

It has been a long uphill campaign, the results of which are but beginning to be felt. The present administration of General Montes is making public education the cornerstone of its policy. Under the guidance of the Minister of Public Education, Dr. Juan M. Saracho, new schools are being organized in every portion of the republic. There still remains, however, a vast amount of work to be done. The country is now suffering from the long-continued neglect of the Indian. For centuries nothing has been done to improve his condition, either physical or moral, and now that Bolivia is undertaking large public works she finds herself without the necessary labor force. The Indians have never acquired habits of regular work. The Government does not hesitate to drive them in large gangs to forced labor on the railroad, but it is impossible to keep them at work for any considerable time.

The authorities are but beginning to realize that the Indian is capable of education. They have begun with a rather ineffectual system of peripatetic schools, but it is likely that these will in time give way to a more serious effort to elevate this large section of the population. That the Indians are capable of improvement there is little doubt. Every landowner who has taken any interest in their welfare testifies to the readiness with which they learn new agricultural processes. Railroad contractors are no less emphatic in their testimony as to the readiness with which the Indian adapts himself to the requirements of the work; the only serious difficulty being to keep him at it for any considerable length of time.

The educational awakening in Bolivia gives to the United States an opportunity for service, the performance of which will do honor to our disinterestedness of purpose and will strengthen our moral influence thruout South America. Most of the Latin-American countries have suffered severely from the attempt to imitate educational systems far too advanced for their needs. The French curriculum and educational organization have been used without reference to the fact that the environmental conditions of these countries require a totally different system. To make matters worse, the French system as introduced is not that of today, but the antiquated plan which prevailed prior to the recent reorganization. The result has been that even the relatively small percentage who attend the schools receive a training which fails to prepare them for the conditions which they have to meet in after life.

It is an interesting and most gratifying fact that thruout South America the most healthful tendencies in education are directly traceable to American influence. MacKenzie College in Brazil, founded and managed under American auspices, has become a center of educational influence national in scope; the leading normal schools of the Argentine have been organized by American teachers. Even in Chile, so long refractory to American influence, the desire to profit by American experience is making itself felt. In Bolivia the desire of the Government to introduce American methods affords an exceptional opportunity to place at her disposal the best that we possess. It is almost a virgin field, which will give to our educators an opportunity to repeat the splendid results achieved in Cuba, Porto Rico and the Philippines.

If Pan-Americanism has any real meaning it must lead us to co-operate with our neighbors, not only in repelling aggression, but in assisting them wherever our experience can be of value. The service will be reciprocal, for there is much in the Latin-American civilization by which we can profit. We have entered upon "the era of good feeling" with South America. It remains to be seen whether we can make it fruitful of the best results.

La Paz, Bolivia, August, 1907.

The Switzerland of South America

BY FRANCIS E. CLARK, D.D., L.LD.

BOLIVIA, like Montenegro and Switzerland, must be entered thru foreign territory, for since the last war with Chile she has had no outlet to the sea. But over her own territory Bolivia shares the advantages of Montenegro and Switzerland in being a mountainous country, difficult of access by enemies, and capable of rearing and sustaining a sturdy race of progressive, liberty-loving people.

Infinitely behind Switzerland in education, stable civil government, refinement and cleanliness of the people, it is yet like Switzerland in present-day prosperity, while its resources are infinitely beyond Switzerland's, if only they were developed. Bolivia is a Switzerland

with loftier Alps, larger lakes and far more extensive table lands—a Switzerland with silver, copper and tin in unlimited quantities; a Switzerland that can produce rubber, coca and quinine, as can no other land where these riches are fully developed; a Switzerland where every product of the temperate or tropical zone will flourish.

Such a country is worth visiting, for it is sure to take a leading place among the South American republics, unless conquered and annexed by some of her stronger neighbors.

The approach to Bolivia is most unpromising. The only two ports by which she reaches the sea today are Mollendo and Antofogasta; the one in Peru, the other in Chile, and each vies with the other for the unhappy distinction of being the worst port in the known world. They are merely open roadsteads in the unindented western coast of South America, and the swell of the Pacific is so heavy that often, for days at a time, no passengers can be landed or freight handled. We landed at Mollendo in Peru.

Even on a calm day the swell seems frightful to a landsman, as he steps off the ship's ladder, or is lowered in a bucket by a derrick from the ship's deck into a small boat. This is tossed about like a cockleshell; now we are thrown up to heaven on the crest of the wave, now dropped down toward the nadir in its hollow; the swarthy Peruvian oarsmen strain at the oars, they avoid the jagged rocks between the boat and the pier by a hair's breadth, and, at last, land us safely at the steps, which are submerged more than half the time, and where we have to watch our chance to jump out of the boat when it rises to just the right hight, neither too far above or too far below the slippery landing place.

And this is the chief port of entrance and exit for a nation larger in area than France or Germany with Great Britain added to either one.

The further approach to Bolivia is just as difficult as the entrance. A single-track railway starts from Mollendo, and after running a dozen miles along the shore it strikes boldly in among the mountains, and climbs and climbs and climbs 5,000, 10,000, almost 15,000, feet before it can find a pass by which the Andes can be crossed into the great republic of Bolivia, the third largest in all South America. At last, after climbing two gigantic ranges of mountains in the course of 300 miles, we come to Lake Titicaca.

It would seem as tho nature intended to put every barrier of land and water between Bolivia and the outside world. To be sure, a great lake is not of itself a barrier, but a link between states and nations, but when we remember that every timber and steel plate and bolt and piece of machinery to construct the boats that sail this lake must be brought from Europe or America and toilsomely transported over some of the highest mountains in the world, we see that a great lake, half the size of Lake Ontario, lying in the way of traffic, is at first a most serious barrier.

Let us take this journey from Mollendo on the sea into the heart of Bolivia. After being tossed ashore in a big rowboat, over the tremendous swells, we are glad to find that there is a train about to start up the mountains. There is nothing to detain us in the hot, dusty, stuffy Peruvian town of Mollendo, and we board the train that daily winds its way among the peaks of the Andes to Arequipa, a sort of half-way station to Bolivia, where all the trains tie up for the night.

Our train consists of two passenger cars and a baggage car, built on the American plan. The second-class car has no windows, but is all open at the sides, except for flopping curtains, that may be drawn down in case of rain or snow, which are very common on the higher passes. The one first-class coach looks as tho it had done duty forty years ago on a second-class American railroad. It is shabby and dirty, and when it rains it leaks at every pore, so that the passengers have to put up their umbrellas to keep from being soaked. The engines, however, seem new and of a good pattern, and were recently built by the Rogers Company of Wilmington, Del.

For the first hundred miles or so there is no danger of a drenching, for it never rains on this arid coast, as the sterile, parched mountains, thru which we wend

our way, declare. Their very barrenness is impressive, it is so absolute and uncompromising. Not a bit of sage brush or greasewood even. Now and then a prickly cactus shows its head and builds itself up like the pipes of an organ, but, for many, many miles, even this plant of the desert cannot grow. Soon the engine begins to puff and labor, and we feel that we are rising in the world.

In less than twenty miles we mount more than 3,000 feet, and the ascent is but just begun. Yawning gullies are on one side, towering peaks on the other. There are no tunnels on this line, or at least only one in 300 miles, but the road winds around the head of all the ravines that cut into the mountain sides, and skirts the edge of the Andes, often hanging to the narrowest shelf of rock, while a thousand feet below is—destruction.

But it is not all bitter barrenness. Way down in that cleft of the mountains, so far down that the eye can just perceive it, is a ribbon of green; and, if we could get there, we should find a narrow valley clothed with the heaviest alfalfa, where grapes and figs and oranges and pomegranates grow, all of which are brought for sale to the stations above by slatternly Peruvian women and unspeakably dirty Peruvian boys.

At a hight of about 7,500 feet a wonderful scene bursts upon the eye. The valley of the Chile River widens into a broad expanse, green with Indian corn, wheat, barley, potatoes and alfalfa, and well up in this valley is the city of Arequipa, with its imposing cathedral, its many churches and public buildings, and above all its Harvard Observatory, while ragged, rugged Chachani and symmetrical Misti dominate the city, as Table Mountain dominates Cape Town. Both of these magnificent mountains are nearly 20,000 feet high, and Misti is as regular in its conical beauty as Fujiyama, which it very much resembles, tho it is fully 6,000 feet higher.

But we will not stop at Arequipa, for we have not yet nearly reached the border of Bolivia. The next morning our train pushes on again, around other fathomless ravines, skirting other sky-piercing mountains, always upon the edge of a tremendous precipice, except where the road crosses a high plateau, between two ranges of the Andes. One curious feature of the plains of the lower Andes is the traveling sand hills. The prevailing color of the mountains is a rich reddish brown, but these sand hills, apparently blowing up from the sea, are composed of fine, white, drifting sand. As the wind drives the sand up the hillock it falls down on the other side, forming a well-defined crescent, with the two horns pointing away from the prevailing direction of the wind. These traveling sand hills, which are sometimes twenty feet high, and contain thousands of tons of sand, move along with a steady march in one direction, at the rate of several inches a day. No obstacle can stop them. When they come to a railway track all the linemen cannot stay their progress and either the hills must be shoveled off by many hours or days of work, or the track must be taken up and laid on the other side, for the moving sand is more resistless than an army with banners.

Up, up, ever up, the railway climbs At last, after some twenty hours of steady ascent from Mollendo, the highest pass, 14,666 feet above the sea, is reached. We are nearly at the hight of the top of Mont Blanc, but the snow line in these tropics, 15 degrees from the equator, is 2,000 feet higher. On all sides are these magnificent snow mountains, some of the highest in the world. At a hight of about 10,000 feet even the cactus gets discouraged and only some tussocky grass, made possible by the rains which are frequent here, and a kind of resinous moss, much used for fuel, are found. But on this poor herbage great flocks of sheep, llamas and alpacas thrive, and occasionally a yellow vicuña scampers away as the train approaches.

The eye gets satiated with mountains after two days of such travel. It can take in no more Alpine wonders. We thread a precipitous mountain side without a shudder, and calmly look down into an abysmal ravine on either side without any emotion.

As we approach Bolivia the railway descends some 2,000 feet until it comes to Lake Titicaca, some 12,500 feet above the sea, a lake which is divided about evenly between Peru and Bolivia. In many respects this is the most wonderful lake in

the world, as it is certainly the highest in altitude of any of the great lakes. Think of Lake Geneva, increased in size fourteen times, until it is as large as all the Swiss lakes together, raised nearly two miles and a half in the air, and surrounded by peaks three times the hight of the Roches de Naye or the Dent du Midi, and one has some conception of this enormous reservoir among the Andes.

This great lake, tho it receives the waters of twenty rivers, has but one outlet, the sluggish Desaguardo River, thru which part of its waters flow into Lake Poopo, another very large body of water, that lies at a somewhat lower level. But where do the waters go then? No one can tell, for Poopo has apparently no outlet. Probably an underground river carries off the surplus waters of both lakes into the Pacific, 300 miles away, for it is said that a certain kind of small fish found in Lake Titicaca and Lake Poopo are also found in the ocean opposite these highland seas, and nowhere else.

Two or three fairly comfortable steamers of considerable size ply the waters of Titicaca, and the journey from one end to the other, tho only 120 miles in length, takes a night and half a day. The natives navigate a curious craft called a *balsa*, a small sail-boat made of coarse rushes that grow abundantly on the shores of the lake. These reed boats will withstand the heavy seas which frequently roll against the shores of Titicaca, but after a few weeks become water-logged, and have to be hauled up for repairs—*i. e.*, to be dried in the sun, thus regaining their buoyancy.

We crossed the lake for the first time on the "Coya," a steamer built in England and transported in small sections to these almost inaccessible fastnesses of the Andes, and here put together, to sail the cold waters of this mountain lake. In Peruvian revolutions the "Coya" has witnessed exciting scenes, and contains many a bullet hole to show where the contending factions have fought for her possession, and many a blood stain, it is said, where one side or the other has bit the dust, or rather the dirt, on her deck. There is plenty of dirt to bite, surely, in any part of the boat, and the galley and the cook are probably the two dirtiest objects, animate and inanimate, to be found in Peru or Bolivia. The "Inca" is a larger, cleaner, newer boat, which also plies these waters. May it always be the fortune of my readers to find her waiting for them when they essay to cross Titicaca.

Most attractive are the shores of Titicaca on a bright summer's day. In the middle of the lake we pass the famous Titicaca Island, where the great god of the Incas, the first emperor, had his traditional birth, and where are the remains of an enormous and most interesting temple. The shores on either side are well cultivated in many places, and terraces reaching far up on the hillside attest the industry and skill of the ancient Incas. From this enormous plain, surrounding Titicaca, came the great conquering race of Bolivia, which, seven hundred years ago, swept north over the table lands of Peru and Ecuador, carrying all before them, until they were the acknowledged rulers of South America, building their cities, their palaces and their temples, whose ruins are still the wonder of the world.

On a bright day in the rainy season the shores of Titicaca are peculiarly attractive. The fresh vegetation of livid green contrasts with belts of red soil, giving a rich and varied hue to the nearer hills, while the great mountains, Illimani and Sorato, always snow-clad, rising 22,000 feet above the sea, and 10,000 feet above the lake, seem to guard the ancient possessions of the Incas with their impenetrable ribs of rock and ice.

On the Bolivian side of the lake we take the railway again for a ride of 60 miles across a gradually descending plain to La Paz, the seat of government of this mountain republic. Past miserable little mud villages the train crawls; past flocks of sheep and llamas guarded by dirty shepherds, drenched by frequent rains; past plowed fields turned up with the same kind of a rude, crooked stick which the Incas used half a chiliad ago, until the most surprising sight of all our journey breaks upon our view. Nothing is to be seen for miles and miles but this vast level plain, some 10,000 square miles in extent, with the great mountains of Bolivia beyond, twenty of which rise to an elevation of nearly, if not quite, 20,000 feet.

Suddenly we come to the edge of what seems to be a deep, wide crater, but is really a great hollow in the plateau, made by the erosion of water, and there, looking down into this vast hole in the earth, 1,200 feet below, we see the city of La Paz, with its red-tiled roofs, its great churches, public buildings, plazas and market places. Nothing in all my travels has ever struck me with more amazement, so sudden and unexpected is the sight of the great, ragged valley, in which nestles a city of 70,000 people, wholly hidden from view until one peers over the edge of the sheltering cliff.

A modern American trolley car takes one down the side of the crater, by many zigzags, into the city, which is the real, tho not the nominal, capital of Bolivia, the latest republic of South America to feel the throb of modern life, but one that is waking up with marvelous rapidity, one that has resources unequaled by any country of its size in the world; a country that, with a good government and an untrammeled, enlightened religious life, doubtless has a future commensurate with the hights of its mountains, the depths of its valleys, and the extent of its vast plateaus.

BOSTON, MASS.

The Principles of Liberal Catholicism

BY SPECTATOR CATHOLICUS

[The author of this article is a Catholic priest in good canonical standing. It was written shortly before Pius X's late Syllabus and Encyclical. He would doubtless cease to be in good standing if his name were given.—EDITOR.]

WHOEVER even superficially examines the present condition of the Roman Catholic Church must be struck with the disquiet and dissension which lie beneath the external uniformity of that venerable communion. The liberal and the conservative parties within the Church are drifting ever further apart, their respective policies are settling into increasingly hostile statements, their spirit and attitude are every day becoming more difficult to unite and reconcile. Catholic biblical scholars are grouped in two schools, the critical and the traditional, and are attacking one another constantly and bitterly; Catholic philosophers are in a state of war, the Immanentists on the one side, the strict Thomists on the other; Catholic theologians are drawn up in array, those of the speculative facing those of the historical method, and already the passage of compliments between them recalls the days of old, when Jesuit and Dominican artillery shook the world on the question of grace and God's foreknowledge, or when the brown followers of Duns Scotus and the white legions of Thomas Aquinas fought their battle of five centuries on the Immaculate Conception. Finally, a great number of Catholics who are not biblical, philosophical or theological experts, are calling for reform in many grave practical matters respecting the Church's doctrine, government and discipline.

It is true, the mere existence of parties within the Church is of no special consequence, for there have always been parties. But the divisions which now exist are so serious and the questions at issue so fundamental, that in literal truth they have brought Catholic Christianity face to face with a crisis which even in her history of nineteen centuries has no parallel. The dispute is no longer whether this or that theological school shall prevail, or whether one papal policy should be preferred to another. Today the question is of changes and adaptations which will radically alter the corporate spirit and the historic tradition of Roman Catholicism. That the case is thus critical is perfectly plain to every one acquainted with the situation. The *Civiltà Cattolica*, a Vatican organ conducted by

the Jesuits, devoted the greater part of its space in an issue of last winter to raising a cry of alarm against the tide of liberalism which is rising in every civilized country and threatening to sweep away, even to the foundations, many of the traditional forms of Catholic thought. The *Etudes*, a French Jesuit review, follows suit, maintaining that the modern views of biblical criticism and dogmatic interpretation advocated by many Catholics are un-Catholic, dangerous and destructive. A host of writers are charging Loisy, Lagrange, Hummelauer, Tyrrell, LeRoy and Blondel with the most serious dogmatic transgressions. And as for the inferior class of pamphleteers—men like Meignan, Delassus, Fontaine and that valiant foe of *Le Nouveau Catholicisme*, Bishop Turinaz of Nancy, they are forever warning the world that the new spirit abroad is nothing less than the precursor to an unexampled apostasy.

At the very beginning it is necessary that we liberal Catholics should set ourselves right in the face of an objection which is frequently brought against us, and which, if it were not answered, would condemn us without a hearing. We are accused of wanton radicalism, of an unwholesome spirit of innovation, of a perverse sympathy with the unorthodox, and of gratuitously deserting Catholic authorities to follow after Kant, Holtzmann, Döllinger and others of their kind. This charge is very unjust. For while doubtless there are some liberal Catholics who manifest instability of mind, hastiness of judgment and insufficiency of education, they are no more representative of the liberal school as a whole than the grotesque tirades of Meignan and Delassus are representative of the temper and scholarship of the conservatives. There are weak men everywhere, and no movement or institution that ever existed could stand for one minute if it were to be judged by its incompetent adherents. By far the great majority of liberal Catholics have been led to their conclusions by study, observation and reflection. If they adopt critical views of the Bible it is not because they have read some German rationalist, but because they have gone over the evidence in the case, and found that if they were to be true to their own intelligence they must abandon many opinions which they once held and once even hoped to defend. If they come to a new conception of Church authority it is not because they have been carried away by Döllinger or Martineau, but because they have studied with absolute intellectual fairness the history of the Church and the history of dogma. If they feel impatient at great ecclesiastical abuses it is not because they are rationalists, but because they put clearly and definitely before their minds what many conservatives are thinking furtively, and hardly dare to acknowledge even to themselves. If they call for reform, they are not acting upon a whim, but are following in the footsteps of some of the most illustrious Catholics of modern times — Montalembert, D u p a n l o u p, Strossmeyer, Manning, Ehrhard, Kraus and Schell. No, we are not animated by the wish to destroy, but by the zeal to promote pure, spiritual Catholicity. We see the Church declining almost everywhere. The countries which she still holds are not greatly to her credit; the nations which she has lost lead the civilization of the world. We see Rome distrusted even by the fairest men outside the Church, and its yoke borne with discontent and irritation by thousands within the Church itself. In the face of all this the liberal Catholic says: "Let us conscientiously examine if this deplorable situation be not largely due to some fault of our own. If we find such a fault, let us neither deny nor palliate it, but for the love of souls and the Kingdom of Christ, reform it, no matter how deep the knife may cut. If we discover selfishness, ambition, despotism or intolerance as the root of the evil, let us confess them and destroy them, so that Gospel religion—spiritual, Christlike Catholicity—as meek and merciful, as full of love, truthfulness and humility as the Lord Himself, may shine in its immortal beauty upon the eyes of modern men who are sick of doubt, weary of negation and longing for God."

This, then, is the fundamental position of liberal Catholicism, that the Church should uncover and correct existing abuses, deficiencies and scandals. The liberal Catholic cultivates the state of

mind which will recognize an abuse when it sees one, and he avoids that self-sophistication which imagines that our first duty in the presence of blunders of government or theology is to conceal or excuse them, even if they be those connected with Galileo, the Inquisition or Alexander VI.

Some of these abuses, the liberal Catholic thinks, are of the gravest possible kind. While they exist the Catholic Church can no more win back her losses in the modern world than a man by stretching can reach the stars. Perhaps the most deadly of these abuses is despotism, the despotism of an Italian oligarchy who are every day showing their contempt for the freedom and self-respect of other peoples. The American people, priests and hierarchy have been repeatedly insulted by the governing board of Italian Curialists who allow into their councils no international representation. Bishops and archbishops have been appointed to important sees here who were not even mentioned in the nominating lists sent over to Rome, and we have seen the highest ecclesiastical dignities bestowed as prizes for intrigue. Bitter will be the fruit of these outrages among a people to whom government without representation is always and everywhere synonymous with intolerable tyranny. By similar tactics Rome first alienated and then lost the world; and surely as run the laws of fate, she will lose America, too, if she does not change.

In the second place, the liberal Catholic believes that a Christian religion ought to give its sympathy and blessing to every sound form of government and every advance of civilization. He thinks it a scandal and a shame that a Christian theology should contain any teaching which conflicts with those principles of liberty on which every free modern State is established. Yet Roman theology—I use the word Roman as totally distinct from Catholic—Roman theology maintains rigorously that Christian doctrine absolutely demands union of Church and State, and it condemns outright and without a dissenting voice separation of Church and State as an impious abuse. Those Catholics who ventured to think otherwise on this subject were condemned by the Syllabus of Pius IX. We American Catholics ourselves were warned in Leo XIII's *"Longinqua Oceani"* against imagining that the government of our republic is perfect, since it falls short in this important respect. The same teaching was enforced recently in Pius X's encyclical to the French Catholics; and at this very hour we are beholding with shame and dismay one of the most apostolic prelates of the Church, Bishop Bonomelli of Cremona, censured by Rome for putting forth the opinion in his Lenten pastoral that Church and State should be separate and independent in the modern world. This Roman teaching is essentially hostile to the Constitution of this country, and we Catholics of America who are heartily loyal to our Constitution are thereby disloyal, and must be disloyal, to this monstrous pretension of the men and the theology that profess to guide us to eternal salvation. The liberal Catholic claims that Christ the Lord never gave any semblance of sanction to such a pretension; he holds that no number of Popes or Italian Curialists can ever make it aught else than a relic of medieval theocracy in which the Roman Pontiff was sovereign of the world; and he calls for the open and official repudiation of it as a secular encroachment upon the Gospel, and as an offense and a stumbling-block to the men who are to be converted and sanctified today.

With equal insistence the liberal Catholic protests against the official theological teaching on freedom of conscience. That teaching is that religous toleration by the State is wrong in principle and cannot be sanctioned by Catholicity. Once again the Syllabus of Pius IX condemns all who hold to the contrary; and once again the Catholic who believes in religious toleration, not as an expediency, but as a principle, must be disloyal to the theology which is called authoritative and official. The liberal Catholic is convinced that religious toleration is, in principle, the chief foundation and the most sacred possession of modern civilization, and he looks upon the Roman denial of it as a hideous remnant of the days when the Inquisition, armed with a Roman commission, deluged Europe with blood. Protestant

churches, it is true, have as bloody a record as Catholicism in the matter of persecution; but they have totally disavowed the right of torturing the heretic or of denying him civil privileges. Roman theology and canon law have not disavowed it, as could be proved by a thousand citations, and the liberal Catholic thinks it high time that it should be sorrowfully and penitently disavowed.

These two teachings as to Church and State and freedom of conscience are not Catholic or Gospel, but Roman and theocratic doctrine. They are not thrust forward, but are slurred over in a manner which must pain every straightforward conscience. To the credit of our American character be it said, that it is not unknown in our seminaries that when these monstrous tenets are proclaimed from the professor's chair, a roomful of American boys have given audible expression to their indignation and contempt. Hundreds of priests, speaking confidentially of the Syllabus, are not slow in uttering their anger against that document of insane reactionism—the Magna Charta of the Italian Curia. But the liberal Catholic wishes to go further than the expression of private resentment. He maintains that the modern world will never lay aside its too well-grounded suspicion of Catholicity, until Catholicity, publicly and heartily, repudiates the errors and brutalities of Rome.

It is clear from all that has been said that what we advocate involves a great change in the ordinary conceptions of Church authority. The liberal Catholic believes in taking the utterances of our Roman governors, not as the oracles of Deity, but as the words of exceedingly fallible and limited men. No other view is tenable to a man that knows history. We have seen a Roman congregation deciding with papal sanction in 1633 that the earth does not travel around the sun and that it is heresy to hold that it does. We have seen the Roman Curia refusing for a hundred and fifty years to allow the vernacular Bible to be read in Italy. We have seen masses ordered and the breviary imposed, to commemorate miracles which are preposterous frauds. We have seen Pope Innocent VIII in his "*Summis desiderantes*" of 1484 teaching that miscarriages, bad crops and diseases of cattle were caused by witches, and the same Pope appointing a Dominican monster as chief inquisitor to destroy these covenanters with Satan, the result of whose apostolic crusade was the slaughter of thousands of old women. From instances like these, the liberal Catholic concludes that the decisions of Rome are to be rationally criticised and its authority submitted to the fullest examination which we can give.

In fact, the liberal Catholic goes further than this. He distinguishes sharply between Romanism and Catholicity, or, to use the phrase of the historian Franz Xaver Kraus, between political and spiritual Catholicity. Political or secular Catholicity is really not Catholicity at all. Its authority is not the Gospel, but the Italian Curia. It means theocracy, clericalism, temporal power, worldly aggrandizement, barbaric ceremonial, and the whole earth paying tribute in gold and jewels to a swarm of ecclesiastical courtiers. Spiritual Catholicity means poverty, unworldly aims, unpolitical theology, ununiformed Christianity, a government that is fatherly and without intrigue, a Church that abhors coercion, forbids superstition, and strives only to extend on earth the Kingdom of its Founder, Jesus Christ.

I have space for only a few words on two other reforms which are dear to the liberal Catholic—intellectual freedom and sane, evangelical devotion. Intellectual freedom is not allowed us by the Italian Curia. The Congregation of the Index has stood in the way of nearly every advance of modern intelligence. The rules of the Index, even as revised by Leo XIII, would, if observed, reduce the Catholic student to intellectual decay. The Index-list of prohibited books contains so many names of our best scholars that it is rapidly becoming our roll of honor. So well, indeed, has this Congregation done its work that one may find in more than one-half of our seminaries and universities brilliant men who dare not publish the results of their studies, but sorrowfully choose unproductive silence rather than risk the crushing blow of Roman condemnation. The consequence is that Catholic scholarship is now in its iron age. We hold a shameful position

in research and criticism; we are despised by the leaders of thought. It is true, we are making some feeble efforts to write a truthful history of dogma; we are struggling to keep in sight of the rear-guard of biblical criticism; and one or two weak voices are timidly announcing a few of the conclusions of the comparative study of religions. But as for great creative work, this is impossible while the Index continues to paralyze the nerve of scholarship. The Roman authorities have dictated our philosophy and forbidden us to think in any but scholastic forms. Leo XIII made Thomas Aquinas a mandatory authority; and if any reader cares to peruse a very death sentence on human intellect, let him read the "*Gravissime Nos*," Leo's letter to the Jesuits, commanding them *forever* to hold to the rigid letter of Aquinas. Under Pius X the darkness has deepened. The present Pope is a man of great simplicity and personal holiness; but he is absolutely unacquainted with critical learning, and he yields, with a readiness which is causing dismay among Catholic scholars, to the obscurantism of the Roman Congregations, the members of which today are worthy descendants of the men who forbade people to believe that the earth goes round the sun, and who put Lord Bacon and the Italian translation of "Paradise Lost" upon the Index.

This disastrous policy, the liberal Catholic believes, is worthy only of Mohammedanism. He calls for freedom and encouragement for our scholars, and for the striking off of the chains which bind the intelligence of the educated Catholic. It is true, this freedom would lead to results which to many seem grave. But these results are bound to come. Modern scientific study has made imperative certain changes in theological interpretation which are alarming at first sight, but which, once they are adequately understood, leave us more sure than ever of the essential things in the Gospel of the Son of God. It is better to be prepared for this inevitable shock by our own scholars, rather than to drive these scholars from the Church, and to learn the truth from our enemies, from whom we cannot safely receive it.

As to devotions, one word. The liberal Catholic is of opinion that into the language and spirit of many popular, but officially sanctioned devotions, outrageous superstitions have made their way. Language is addresed to creatures which should be spoken only to God; preposterous miracles, repulsive revelations, and meaningless prodigality of indulgences, threaten the existence of pure, interior, evangelical prayer. For this the liberal Catholic, mindful of the incomparable riches of spiritual Catholicity, calls for immediate and drastic reform. The Church possesses in abundance heavenly food for human souls. Let us not bury it beneath a wilderness of husks!

These are some of the positions of the liberal Catholic. Only in adopting them, we think, can the Church win the world about us, or even retain her own adherents who know what education means. We are facing a crisis in which the Church will perish if she clings to Index and Inquisition, to medieval theocracy, to despotism and hostility to the light. But we are fain to believe that this will not be her policy, but that she will disengage herself from the vain contrivances of usurping men and the accumulated vagaries of past ages, and appear before the world as its true spiritual teacher, the daughter of the Holy Spirit and the bride of Christ.

Confessions of a Co-Ed.

[We should think a college boy was as much of a "co-ed." as a college girl, but they don't call him such in the State universities.—EDITOR.]

"WELL, how does it feel to be a senior?" These are the words with which I am greeted on all sides as I now return for my last year to my Alma Mater, this great co-educational university of the Middle West. In truth I do feel different as a senior from what I did as a freshman, and it is all because of the many things which my three years' experience here has taught me. You must know to begin with that I am one of the "co-eds" and must necessarily look at things from the girl's standpoint. But what have I learned since my first journey to this small town three years ago when the upper classmen tried to sell me a campus ticket and invited me to call on Prexy?

I came here ignorant and enthusiastic and these qualities are the essence of the greenness we see in our verdant freshmen. I knew little what to expect and I selected my teachers and settled the first questions which had ever confronted me, with all the assurance of ignorance, and it has taken me three years to realize the significance of my decisions. I refer in the first place to the fraternity problem. I knew that if I did not join a sorority and live in the sorority house, I should have to find rooms somewhere in the town for we have no dormitories. But one bit of advice I brought with me and I now see its wisdom, "Do not join a sorority your first year for you can not judge at once where you would like to belong."

The freshman girl who comes here, and is the "swellest thing," or who has a "faculty pull," or "loads of money," finds herself in the thick of the "rushing." All the sororities desire her as a member. Some meet her at the train, others fill her room with flowers; she is dined and banqueted; she is taken for drives and canoe trips. She is surrounded by groups of girls who vie with each other to make the best impression in her eyes so that when the bidding begins a few days later she will be ready to put on their colors. Her head is in a whirl of excitement and she feels that she is a more important being than she had even suspected, for all the people she has met have gone out of their way to make it pleasant for her. All this, however, can not last, and within two or three days after she has made her appearance in the town, the great judgment is pronounced as to whether or not she will make good fraternity material. If she is not found to be of the right stuff, she is dropped at once, and of the many girls who have lavished little courtesies upon her, only a very few continue to be friendly.

On the other hand she may be wanted by several sororities and these all jealously watch one another, each hoping to forestall the others and receive a favorite answer to its bid. After a few days' acquaintance—she is asked to make the most vital decision in her college course—the most vital because it will determine more than all else her status in the student community—and like so many of life's decisions it must be made blindly. She is asked to decide which girls she likes best and wishes to make her bosom friends; into which group she wishes to merge her individuality for the sake of gaining the social prestige which it can offer her. She must answer after a three days' acquaintance, which girls represent those principles of life with which she wishes to identify herself for four years, and in short whom she will choose to be her guide and master, for the matter resolves itself into this in the end. To be sure she does not think of the question

so seriously and it is not till later that she realizes its importance.

If she joins, she will be ruled by the traditions of her club; she loses the right to express herself as an individual, for her every action reflects upon the organization. She will be restricted in the making of friends, especially men friends, to those who are socially approved of by her sorority, for the socity in which she will move count it more important that she shall go with a man of this or that fraternity than that she shall entertain men whom they personally sanction. She judges of the girls as well as she can and makes her choice; and lucky is she who finds that her friends in Sunday clothes are really at heart the ones whom she would select if she knew them as they later are in their everyday life. She joins with a band in sisterly allegiance, and is henceforth judged as the sorority is judged—that is, she is raised to its elevation or lowered to its level.

There is a graduation in sororities from the one which is called "the best" to the one which is known as "not much." Now if our young freshman gets into the one, her mistakes are excused because she belongs to a swell sorority, just as they would be in her home town because she is Judge A.'s daughter, but if she be one of the finest of girls and enters a club which has not the recognized standing, people merely say: "I didn't suppose from her appearance that she is their kind." A sorority stands for social life, and its rating by the popular mind is made on that basis. That is to say, the "best" sorority is the one which represents the largest money backing and is formed of girls who make the best appearance in dress and are the most attractive on the ballroom floor. Such a one fills its ranks with girls who are able to attract the butterfly men of college. Some sororities stand more for scholarship, emphasizing less the social qualities, and these are considered in the common phrase as not quite so good. Some, again, are made up of thoroly all-round girls, who are ever equal to the occasion, and can fit into any place, whether it be the ballroom or the schoolroom, the parlor or the kitchen.

Now the freshman, untutored like Bassanio before the caskets, chooses one of the sororities or spurns them all and remains an independent being, henceforth rated according to her abilities and not according to her sorority. It is the independent who alone can drink deep the democratic spirit of college life. She is free to be herself. She knows that the friends who gather about her are seeking her and not her social position; on the other hand, she is free to repel any advances of friendship which she does not choose to accept. Now her sorority friend is more restricted. Her group may be cultivating the acquaintance of a certain fraternity, and the girl may feel in duty bound to accept attentions from men who are personally distasteful to her and of whom she does not approve.

In making friends among the girls the independent is not limited, as is the sorority girl, because, in the first place, she has more time to herself. But there is another more potent reason. In spite of all efforts to efface it, a faint line exists between the independents and sororities. It is apt to turn the head of a freshman to be taken into a fraternity, and the independents who look on, jealously wishing that they might have been selected for the privileged class, are very ready to scoff at what they think her snobbishness and aloofness. As time goes on she realizes her position and wishes to make friends outside of her own little circle; but then it is that the independents hold back, because they feel that had they been considered her equal they would have been bidden to her sorority, and they fear that their friends will accuse them of indelicacy in trying to work their way in. If, however, an independent will but throw aside her foolish reserve she will find that she may make her stanchest friends among the girls of any sorority. And as no bar exists between her and the other independents she is able freely to choose her friends among them. She is not restricted like the sorority girl by inter-fraternity jealousies or by the reserve of the independents.

With the independent there is time for lessons, for athletics and for college organizations in which she takes great in-

terest since her whole soul is not wrapped up in fraternity matters. Yes, she is free but in her freedom is more bound than the sorority girl can ever be. And for this reason. Her reputation depends entirely upon her own conduct, and any little indiscretion on her part may mar a blameless reputation. In order that you may understand what I say, let me explain once more that this is the Middle West where boys and girls are allowed freer intercourse than in any other part of the country. It is not in the least unconventional for a party of young people to go off on a picnic unchaperoned. Mothers in all good faith, allow their daughters to go driving or canoeing alone with a man. I doubt not that the moral standard is as high here as elsewhere; but there is this great difference. Whereas in the East this standard is maintained by the parents and chaperons, here it is maintained by the young people themselves, and especially by the girls.

In this particular student community there are five men to every girl, and consequently a girl receives more attentions than she would in the average town where men are a scarcity. Now the reputation of the independent girl depends entirely upon her own conduct. This is not wholly the case with a sorority girl, for membership in a sorority gives her the backing of a home. Just as in your town the daughters of your prominent citizens are privileged to do what would bring censure upon the head of a poor clerk, so here a girl is shielded by her sorority's name.

The sorority gives the girl this sort of chaperonage which the independent never has and by lacking which is thrown upon her own responsibility. Girls realize this at once; and tho mothers may send their daughters away to the university as inexperienced high school graduates, they find them returning in the course of a few months as women capable and self-reliant.

The good sense of our girls is attested by the respect which they receive from the men. The fellows in a body may laugh at the co-eds yet they rarely fail to open or close a door for them. When in a crowd a smarty may start the yell ridiculing the girls and this may be taken up by the rest, but the individual always shows due courtesy to any girl he may meet. The girls have themselves to thank for the respect which is shown them; and they soon learn that they receive only such regard as they are able to command.

The newcomer learns this truth from the atmosphere she breathes; and I believe that as a result you will find more dignity on the part of the young woman here than you will find in other communities. The girls are placed upon their metal and the test discovers them to be of good gold. Most girls have some friend or relative who mourns that they should come to a co-educational school, but few or none suffer by their experience.

The influence of this college upon its students was once aptly stated in these words, "If I could claim nothing else for this university I could say it transforms our students; for it tends to make the average youth less boorish and the average girl less sentimental." Where men are to be had in abundance a girl loses much of her sentimentality and becomes less ready to bestow her affections on every creature known as a man. She learns to judge calmly of their worth; and I do not hesitate to say she becomes more fastidious in her taste. She learns at least to deport herself with dignity and proper reserve; and whatever the sensational newspaper may say to the contrary, those who live in the community with the "co-eds" testify to their dignity and discretion.

I do not wish to give the impression that all our life here is the answering of life-and-death problems. Our questions do not seem so serious to us while we are living our answers day by day, and it is only where we stand off and view them from a distance that we realize their momentousness. We are not grave women at the ages of nineteen or twenty-two. We have our jolly times like all natural girls. We know how to study in earnest, and how to play just as earnestly.

On Friday evenings we flock to the 2-cent library where all the popular books may be had. With a copy of *The Saturday Evening Post*, *The Home Journal* and a thrilling novel under our arms we hie us home to a spread. Locked in our rooms far from the thoughts of men we

indulge ourselves in fun and fudge, or we sit before a grate fire and roast marshmallows. Every week we have our informal gatherings in the women's club rooms at the gymnasium where we go for a few hours' recreation. The practice we thus get in meeting people with ease is of untold value, and this is an accomplishment which every girl has an opportunity of acquiring. Few fail to profit by it; for, as is often said, the girls as they are graduated from the university are much superior to the girls as they enter; they are, to be sure, four years older, but they are more than four years better rounded; and it is the hours of fun that are in large measure responsible for this change.

So, as I now enter upon my last college year, I feel different from what I did as a freshman; for I have come more and more to realize the significance of the problems which the newcomer must blindly face; and I appreciate more fully a girl's responsibility in walking the strait and narrow way; and, finally, I have had some of that broadening influence which comes from associating in play-hours with people from all over the world. This is what three years of college life has meant to me.

The King of Kings

BY SALVATORE CORTESI

TO those who have followed events in Abyssinia the alarming news about the health of the Emperor comes as a shock and arouses grave fears for the future of the country.

Menelik has assumed gradually in Western eyes the position of the high priest of civilization, and has a reputation for wisdom and astuteness quite stupendous, and which would—if he really possessed them—mark him as the true son of his great ancestor, King Solomon. But altho this picture is somewhat highly colored, the Negus has been clever enough to understand that he could not resist the invasion of civilization, and that it was only by pitting the different European countries, thru their representatives, one against the other, that he could hope to keep his kingdom intact. He has had a strong hand over all the rebellious and fierce Ras of his country, but when the scepter falls from his grasp what but anarchy can follow? It is safe to say that there is not a Ras or subject in his whole empire who desires a better state of things than that which now exists; indeed even in Ethiopia they speak with regret of "the good old days!"

The aspirants to the throne are so many that it may roughly be said that they comprise all the chief Ras, while there are others, such as a natural son of the Negus, a youth of about twenty, whose candidature is highly favored by Menelik himself, and a son of Menelik's daughter, Jasu, who, however, is only ten years old. Predictions as to the ultimate outcome are useless, the only sure thing being that anarchy and ferocious bloodshed will follow the Emperor's death, and who will survive the struggle is in the lap of the gods.

There was one man, Ras Makonnen, who Europeans hoped might succeed Menelik, since he was even more enlightened than his master, and was diplomatic and intelligent in a high degree, for he had traveled in Europe. But he died last year, probably thereby setting back the future of Abyssinia for an indefinite period.

Ras Oliè's candidature is warmly supported by Empress Taitù, his sister, the latter being vehemently anti-European to the point of not even attempting to conceal her hatred of the foreigners and their ways. Then there is Ras Michel, husband of Menelik's daughter, who, if he finds his own chances *nil,* will fight for his son's to the last gasp, and so on and so on, each Ras having good and sufficient reason why all the others at least should not sit on the throne of the King of Kings.

With Menelik will disappear one of the most picturesque figures of Africa,

both sartorially and politically. He is six feet tall in his bare feet and muscular in proportion. His skin is ebony black, and his gleaming white teeth, as yet untouched by the dentist, show continually in a broad and good-natured smile, turning to a fearful grimace when angered, accentuated by his deeply pock-marked face. On festal occasions he wears a long coat of many colors, covered with gold lace; full, white, baggy trousers, somewhat too short, and patent leather shoes, the costume usually completed by red cotton gloves. On his head, above an ample white wrapping, reposes an immense Panama hat, cocked rakishly on one side, while over him is carried a red silk umbrella with gold fringe. It is truly a magnificent sight! His guards and soldiers, when in full dress, wear a uniform designed for them by a Russian artist, called to Abyssinia for the purpose. It consists in a short, dark-colored tunic, with one line of buttons only, corded with red for the soldiers and with gold for the officers. The trousers are so very short that most of the leg remains bare, as do also the feet, Menelik having rebelled at the idea of shoes for his "quick steppers," who, in fact, are renowned for their extraordinary swiftness in marching. From their belts hang cartridge cases, while they carry, besides a rifle, a sword and short dagger. The officers have also a revolver. The cap, if so it may be called, is the most curious feature of this most interesting costume. The ordinary soldiers' cap not seeming appropriate, a plume of feathers was substituted, those of the officers being ostrich, held to the head by a species of round comb. And thus the Ethiopian army, with black faces glistening under gay feathers, proceeds to battle with the proud consciousness of being the most gorgeous troops in Africa. *A propos* of these uniforms and the state of nature to which the men are accustomed comes the following story. One day a soldier asked leave for twenty-four hours of Colonel Leontieff, at that time general factotum in Abyssinia, which was granted. After the time was up the man presented himself in barracks stark naked. "Where is your uniform?" sternly demanded the Colonel; "how dare you come before me like that!" "Why," said the culprit, "you gave me leave of absence, and I went in mufti!"

These troops, no matter what their adornments, are fierce and courageous in war, bad opponents among the African hills, as Italy and even England have found, but for all that the only European implements of warfare among them are their rifles and their admirable discipline. Lately their chief fighting has been in keeping rebellious tribes in subjection, and raiding when they need food or when they fancy a few other things.

Altogether the Abyssinian forces number about 210,000 men, the standing army being 70,000. When Menelik ascended the throne they were many less; in fact, two-thirds of the actual Ethiopian Empire is composed of districts conquered, under the Emperor, by methods which we should certainly call barbaric —raiding, burning, taking prisoners to be mutilated and later turned into slaves, profiting by the superiority which their rifles gave to subdue those whose arms were only lances. Thousands of Gallas, who tried to resist, were killed yearly and their children and wives made slaves, their possessions taken and their villages razed. The civilization of Menelik is confined to automobiles and kodaks; the heart of the savage is still there.

In times of peace Menelik tried to improve the condition of his subjects and went about it in the truly paternal manner of experimenting on himself first. He began with champagne a few years ago, a half dozen bottles being presented to him by some passing foreigner. He, together with two other "investigators," drank steadily, until, incapacitated, they were carried to their couches. The next morning they all three woke with very "swelled heads," and then and there decided that champagne would not be good for the Abyssinian health, so spirits of all kinds—except supernatural ones—were forbidden. The Negus then turned his attention to tobacco which had been introduced to the country by the few Europeans in Adis Abeba. One day, with great solemnity, the people of the capital were called together to see their ruler smoke for them, what proved to be his first and last pipe. He had borrowed the pipe and some very strong tobacco—it must have been Italian—and began. He

persisted until the pipe fell from his nerveless hand, and he fled from the presence of his wonderstruck, and, it must be confessed, amused subjects, whom he had assembled for the trial. Since then even the odor of the weed recalls those moments of terrible suffering, and the prohibition for Abyssinians to smoke was at once issued, but called forth such storms of rebellion and wrath that it was hurriedly withdrawn. An absolute ruler cannot do everything, there is a point where even a "paternal" sovereign must pause.

His Queen, Taitù, is only less notable than her husband. Tall, and of overflowing proportions, with thick hair, kept black by a process which is a secret between her and her hairdresser in Paris, she exercises a predominating influence over her husband, which is against all progress and civilization. Her heartiest desire is to return to the times and customs of her youth, when the Emperor daily raided his neighbor if in need of amusement or slaves, and when there was no talk of morality, railways or foreigners. She heartily detests anything that spells progress and has rejected all the wiles of Westerners except in regard to the before mentioned hairdresser, and a milliner who provides her with silk stockings and hats. Otherwise she is still and always will be a thoro "savage." The costume for festal occasions is as gorgeous as that of Menelik, being composed of silks, fine linen and jewels, but husband and wife are seldom seen side by side as she never leaves the palace garden on foot. As I hinted before her great passion is silk stockings—openwork for choice, thru which her black flesh gleams with a peculiar effect—and Paris hats! She does not stick entirely to the latest mode as her taste runs to quantity rather than quality, so that the immense masses of ribbons, artificial flowers and feathers which she perches on her woolly hair makes her quaint in the extreme.

Taitù's history has been a stormy one. She began life as an obscure Princess, and had five husbands before marrying Menelik, who has since required absolute faithfulness from her, altho he takes considerable license himself. While disliking foreigners and working against them, Taitù has not been able to eliminate them and their influence from the Court, so she has lately been hedging by "taking up Germany," and it is supposed that this accounts for Menelik's failure to ratify the famous Anglo-Franco-Italian Convention. Her most intimate friend is an Abyssinian woman married to a German of Palestine, who have lately taken up their abode at Adis Abeba. Following them came a group of Germans, who have begun to colonize some concessions made them, and so the little inner circle, which has the Queen for center, is enlarging. But with all this the moment the Emperor dies and there is an anti-foreign movement the "savage" will very likely gain the upper hand, and Taitù will turn upon her friends, the Germans, with the same impartiality as upon the French, English and Italians. Anarchy is before Abyssinia and it must work out its own salvation.

No mere white man could begin to remember all the titles which Menelik claims. The Lion of Judah, the King of Kings of Ethiopia, the Negus Neghesti, the Lieutenant of God, are a few of them, while he claims descent from the Queen of Sheba and King Solomon. According to Abyssinian tradition the beautiful Queen of Sheba went to King Solomon's Court, disguised as a man, and was so impressed by the King's penetrating her disguise that she married him. Her son she called Menelik, and there has never been another until today, altho Menelik II comes down, he says, in direct succession thru his grandmother on his father's side. However, should Menelik pass away the line of Solomon would not die out, as every other Abyssinian claims the same descent, being particularly insistent on the Queen of Sheba's part in the ancestry. So far is the idea of this ancestry carried with Menelik that people contend that the dream of having inherited Solomon's wisdom is what has made him peculiarly open to Western ideas; he wants to prove himself a worthy descendent of the founder of his Dynasty.

ROME, ITALY.

Literature

The Helpmate*

ALONG with extraordinary success in literary world May Sinclair has produced the effect of great personal dignity by her serene, unhurried silences. At a time when the rabbit-like fecundity of the average popular writer of fiction comes so near being disgusting, she has waited three years before figuring again as the heroine novelist of the season. And that she is starring once more in this rôle no one may doubt who reads her new book.

At first we are inclined to regret that she has chosen a theme often vulgarized already in fiction by interpretations as sensuous as they have been intimate and irreverent. But in Miss Sinclair's work we are at once reminded of a certain high quality in her genius, its sublime unconsciousness of any fashion that has gone before, of her power to renew the face of things, and, above all, of a kind of original integrity which standardizes her ideas and preserves them against the light challenge of the passing day. Thus this story becomes a revelation along the very lines of life and even of art, over which so many other writers have cast the blur of their more or less indecorous imaginations.

Her purpose, for this is undoubtedly a story with a purpose, is to prove the essential purity of a man, supposed to be corrupt, and also to rate accurately the spiritual parsimony of a woman admired for her piety. The dramatic interest depends upon the damaging effect this woman has upon this man in the marital relation. And she has succeeded so well in her undertaking that the professionally good are sure to be shocked and offended by her reasoning, to say nothing of her convictions.

The story opens with Mrs. Majendie, a bride of three days, in a state of epileptic virtue because she has just discovered that Mr. Majendie "sinned" seven years before. Then follows the malicious spiritual process by which the young wife, whose moral vanity has been outraged, practically divorces herself from her husband. From that time forth she indulges in that martyrdom which some women enjoy by doing their duty to husbands whom they have deliberately made distasteful to themselves thru a morbid kind of soul-stretching away from what is physical and natural. She becomes a spiritual voluptuary with a "sublime infidelity to earth." We have all seen the type, pale, pure house-fraus with dying eyes and a capacity for expressing a kind of scorpion piety with their tongues. Mrs. Majendie differs only in the vigor of her physical constitution and her fastidious refinements. And the patience, the diffidence, the whimsical humor with which the young husband bears her persecutions is inimitable. Each time she passes further from him into some remoter region of her virtuous trance, he attempts to woo her and win her afresh. "If," he observes upon one of these occasions, "there are to be many more of these remarkable transformations of Anne, I shall have all the excitement of polygamy without its drawbacks!" But, as the years pass and Mrs. Majendie recedes more and more into the circle of her own friends, with their rarefied intelligences and pallid spiritualities, it goes without saying that Mr. Majendie grew desperate and relapses. The reason why is one of the finest bits of interpretation in the story, and it is the part most apt to offend the professionally good, not because the author condones the sin, but because she places the emphasis where it belongs, upon the provocation. For, after all, the professionally good are merely the brute critics of life who accept no version of the truth that does not coincide with the tyrannies of their own convictions. While she deals with intimacies often attempted and never justified in the usual sensational story, she has preserved all the tender secrets of love with a delicacy and a chastity

*THE HELPMATE. By May Sinclair. New York: Henry Holt & Co. $1.50

that is beyond praise. *The Helpmate* is one of the most truthful novels written in many a day and therein lies its dignity and worth. And the wonder of it is not the art and ease with which the author manages a difficult situation, nor even the literary excellence of her style, but it is her noble patience with the pathos of humanity, her amazing comprehension of the human heart and her willingness to tell all the piteous truth without degrading it.

Philippine History

VOLUMES 39, 41 and 42 of Blair and Robertson's documentary history* are principally occupied with papers and translations bearing on the ecclesiastical controversies that resounded in the Philippines in the closing years of the seventeenth and early years of the eighteenth centuries, and with translations from various friar-chronicles, or "histories," so-called. In considerable degree, the "ethnological appendices" which occupy nearly all of volumes 40 and 43 partake of the same character, being drawn from the old friar-chronicles. However, they comprise for the most part passages or chapters which have served as standards for reference as to Filipino character, traits and customs, and hence they have a special value in a series of this sort. Fathers Colín, Combés, San Antonio and Zúñiga were primarily compilers, and their evidence as to primitive Filipino customs must also be gauged by the fact that they wrote one or more centuries after the conquest; in this light, the discriminating reader will assign chief value to such observations of Colín, Combés and Zúñiga as are evidently based upon their own extended experiences. Considerable material dealing especially with the Moros is presented. In volume 39 the narrative of the English traveler, William Dampier, is concluded, it containing points of interest for historian and ethnologist in his accounts of experiences in Mindanao and in the Batan Islands at the extreme north of the Philippine Archipelago. A useful piece of editorial compilation is the little appendix on Moro pirate raids in the seventeenth century (volume 41). Among the illustrations perhaps the one of most interest is a reproduction of the map of Magendanao (Mindanao) by Fakynolano, elder brother of the Sultan (about 1700), from the original in the British Museum. One meets the Moro problem as it appeared in the nineteenth century, too, in the Jesuit letters (1880-1887) reproduced in the volume 43 appendix, and, of especial interest to American readers, the story of the first official relations of the United States with Sulu, in extracts from Lieutenant Wilkes's "Narrative of the Wilkes Expedition and His Treaty with the Sultan (1842)."

The controversies between civil and ecclesiastical authorities and between the ordinary jurisdiction and the regulars (involving also disputes and jealous rivalries among the religious orders themselves) centering about the persons of Archbishop Pardo and Archbishop Camacho are well presented in volumes 39 and 42 respectively. Praise should also be given the editing in volume 41 of the Recollect history (Father Assis, supplemented by Father Concepción), likewise intrinsically valuable for its fund of miscellaneous information. Much less is this true of the passages from Friar Diaz in volume 42.

One turns with relief from the ecclesiastical matters which so monopolize the pages of Philippine history as thus far presented to documents like the "Extracto Historial" of Alvarez de Abreu (volumes 44 and 45) and a private letter of 1730 from a Spanish official in the Philippines (volume 44). The latter gives an insight into the cliques in Spain, Mexico and the Philippines, and their intrigues for office, commercial advantages and other favors. The "Extracto Historial" sheds great light on the details of the galleon-trade, and gives incidentally data on Philippine revenues, the Spaniards in the Islands, and the total failure to develop Philippine resources proper up to 1720.

Half of volume 45 is given to an appendix on "Education in the Philippine

*THE PHILIPPINE ISLANDS, 1493-1898. *Edited by Emma Helen Blair and James A. Robertson.* Vol. 39, 1683-1690; Vol. 40, 1690-1691; Vol. 41, 1691-1700; Vol. 42, 1670-1700; Vol. 43, 1670-1700; Vol. 44, 1700-1736; Vol. 45, 1736; Vol. 46, 1721-1739; Vol. 47, 1728-1759; Vol. 48, 1751-1765; Vol. 49, 1762-1765; Vol. 50, 1764-1800. Cleveland: The Arthur H. Clark Co.

Islands," which is concluded in volume 46 (1907). Much valuable material has here been brought together, more than appears on this subject in any other single place. Moreover, the apparatus of notes, bibliographical and other, constitutes an exceedingly commendable piece of editorial work.

Volume 47 has much useful matter, especially Governor Valdés Tamón's "Survey" (1739), for military and ecclesiastical matters; a Jesuit letter of 1749, on Moro relations; Auditor Enriquez's letter of 1746 and Nicholas Norton's proposals (1759) for fostering Philippine development and trade, for their politico-economic bearings. Many data bearing on economic and fiscal matters in the Philippines during the eighteenth century are also brought out in the annotations.

Auditor Viana's Memorial of 1765, never before published (perhaps because Viana was *persona non grata* to the friars), taking up nearly one-half of volume 48, is a keen criticism of Spanish commercial and administrative policy. The other documents in this volume bear mostly on politico-religious matters, including a royal decree of 1751 regarding usurpations and abuse in connection with the friar estates near Manila, which document was published in *La Democracia* of Manila in 1901.

Volume 49 is devoted entirely to the capture of Manila by the English in 1762, their occupation, and Anda's successful resistance to the extension of their conquest beyond the capital. The edition, as also of volume 50, which covers the last third of the eighteenth century mainly with translations of published works, has been very well done.

Volumes 46-50, issued during the present year, bring the chronological record down to 1800, leaving only five more volumes of this long series to present documents and data upon the nineteenth century in the Philippines (the most important of all for American readers). Moreover, out of the remaining five volumes must be taken the space to be occupied by the promised topical index of the whole series, and also the space to be devoted to special bibliographical data on the whole period of Philippine history.

Three New Shaw Plays

THE latest is the most interesting volume* of Brentano's new edition of Shaw, because none of the three plays in it has appeared in print before and only one of them has been played often enough in this country for many people to see it. This is the little skit, "How He Lied to Her Husband," Shaw's parody of his own play "Candida," a parody in which the people act more sensibly and naturally than they did in the original. *Major Barbara* has not yet crossed the Atlantic and *John Bull's Other Island* ran only a few nights when it was put on the stage in New York City two years ago. Our people were not vitally interested in the Irish question, and the play was little more than a witty debate in costume. Any one equipped with a good pictorial imagination will get as much out of it by reading as by seeing it. It may even be claimed that the reader of Shaw's plays has the advantage, for he gets his prefaces, which are almost as long and quite as clever as the plays themselves. *Major Barbara* is a dramatization of the conflict between the old ideal of salvation by evangelism and the new ideal of salvation by high wages; Barbara, who has gone into the Salvation Army, standing for the former and her father, Undershaft, a millionaire manufacturer of cannon and gunpowder, taking the other side of the argument. Since an increasing number of philanthropists are taking the Shaw side in this question, it will be worth while to quote the passage in which Undershaft expounds his anti-poverty theory, as he contrasts his model workingman's cottages with the Salvation Army barracks:

Undershaft. In your Salvation shelter I saw poverty, misery, cold and hunger. You gave them bread and treacle and dreams of heaven. I give them from thirty shillings a week to twelve thousand a year. They find their own dreams; but I look after the drainage.

Barbara. And their souls?

Undershaft. I save their souls just as I saved yours.

Barbara (revolted). You saved my soul! What do you mean?

Undershaft. I fed you and clothed you and housed you. I took care that you should have money enough to live handsomely—more than

*JOHN BULL'S OTHER ISLAND AND MAJOR BARBARA. By Bernard Shaw. New York: Brentano's. $1.50.

enough; so that you could be wasteful, careless, generous. That saved your soul from the seven deadly sins.

Barbara (*bewildered*). The seven deadly sins!

Undershaft. Yes, the deadly seven. (*Counting on his fingers*). Food, clothing, firing, rent, taxes, respectability and children. Nothing can lift those seven millstones from Man's neck but money; and the spirit cannot soar until the millstones are lifted. I lifted them from your spirit. I enabled Barbara to become Major Barbara; and I saved her from the crime of poverty.

Cusins. Do you call poverty a crime?

Undershaft. The worst of crimes. All the other crimes are virtues beside it; all the other dishonors are chivalry itself by comparison. Poverty blights whole cities; spreads horrible pestilence; strikes dead the very souls of all who come within sight, sound or smell of it. What you call crime is nothing; a murder here and a theft there, a blow now and a curse then; what do they matter? they are only the accidents and illnesses of life; there are not fifty genuine professional criminals in London. But there are millions of poor people, abject people, dirty people, ill fed, ill clothed people. They poison us morally and physically; they kill the happiness of society; they force us to do away with our own liberties and to organize unnatural cruelties for fear they should rise against us and drag us down into their abyss. Only fools fear crime; we all fear poverty. Pah! (*turning on Barbara*) you talk of your half-starved ruffian in West Ham; you accuse me of dragging his soul back to perdition. Well, bring him to me here; and I will drag his soul back again to salvation for you. Not by words and dreams; but by thirty-eight shillings a week, a sound house in a handsome street, and a permanent job. In three weeks he will have a fancy waistcoat; in three months a tall hat and a chapel sitting; before the end of the year he will shake hands with a duchess at a Primrose League meeting, and join the Conservative Party.

Barbara. And will he be the better for that?

Undershaft. You know he will. Don't be a hypocrite, Barbara. He will be better fed, better housed, better clothed, better behaved; and his children will be pounds heavier and bigger.

The Trimmed Lamp, and Other Stories of the Four Million. By O. Henry. New York: McClure, Phillips & Co. $1.00.

Mr. Sidney Porter, better known as O. Henry, has a quality of humor all his own. Freshness, a playful exaggeration, an unexpectedness in turn of thought and turn of phrase, are its main characteristics. In his earlier tales he employed his humor in depicting the characters and recounting the doings of a motley collection of street fakirs, cowboys, "greasers" and grafters. His province was an extensive one, with irregular boundaries running in and out all the way from Omaha to Caracas. By right of discovery this was his own province, to have and to hold. But in his more recent tales he indicates that he has abandoned it to others. The great city is now his realm, and his tales have to do with clerks and salesmen and shop girls, with politicians and bartenders, with artists and writers, with tramps and wastrels. It is with the same humor that he still graces his stories; but there has crept into his work some other qualities which give it a worth and charm that it did not have before. A sympathy with suffering, an indignation against wrong, an insight into the complex springs of conduct, are revealed in all this later work. He is keenly observant of the varied life of the metropolis, and he depicts it delightfully and with understanding. None of his episodes happens in real life just as he relates it; to his realism he adds just that touch of exaggeration which enables him to make a happy or a striking situation. Do forlorn blond girls who "look swell in black" ever employ the device of Miss Conway in the story of "The Count and the Wedding Guest"? Or do matter-of-fact and crusty old German artists ever court pneumonia by painting ivy leaves in the midst of a sleet storm in order to heal the fancies of sick girls, as in the story of "The Last Leaf"? We doubt it; but we feel anyway that they ought to do these things, and that his other characters ought to do all the impossible things related of them, and so we are more than satisfied. We are all the richer for Maida and her purple dress, for the two adventurers of "The Lost Blend," for the Cossack of Fire Engine Company 99, for the city man of "A Midsummer Knight's Dream" and for Dan and Nancy of *The Trimmed Lamp*.

The British City. The Beginnings of Democracy. By Frederic C. Howe, Ph. D, Pp. xvii, 370. New York: Charles Scribner's Sons. $1.50.

The British City is not intended as a handbook for the man who wishes to study municipal government as it exists in England. Mr. Howe used his eyes and ears to good effect while he was in

England; but he went there to look for arguments rather than for exact knowledge. Arguments he found in plenty to support the remedies he recommends for municipal misgovernment, and he is quite content to acknowledge that he does not "pretend to know how this area of one hundred and eighteen square miles, called London, is governed." The acknowledgment might be extended to much else in English local government besides the government of London. Parish and district councils, the old school boards, and the modern education authorities, and boards of guardians for the relief of the poor, are all subjects concerning which Mr. Howe frequently betrays ignorance and misconceptions; as he does also concerning the municipal and Parliamentary franchises and the relation of the central government to the local authorities. Nevertheless, in spite of these numerous mistakes and misconceptions, Mr. Howe has formed some very sound and well-grounded opinions as to the working of British institutions. He lays his finger instantly on the cause of the greater part of urban and rural poverty, overcrowding and misery. In the British land system he sees the menace to democracy in England; and in the town council the great democratic force which alone can bring to bear an organized opposition to the mighty power of the privileged landowners. Mr. Howe's socialism is not of the destructive or anarchic variety. He does not wish to sweep away the present condition of things without discrimination; but he does see that, without some change in the English land system, in spite of her enormous wealth, Great Britain must soon be classed among the decadent nations. A country where the land is in the hands of a few immensely wealthy men, who can use its broad acres as playthings, while the sturdy peasantry is slowly driven from the soil and herded into closely-built tenements; a land where almost half the population is submerged below the poverty line—the line which divides those who have enough to eat from those in a chronic condition of starvation, however enormous its wealth—cannot be considered as really prosperous; and Mr. Howe's plea for real democracy as against the rule of privileged aristocrats is not only timely for Great Britain, but is also an appeal against the growing division of this country into a rich and privileged class and a proletariat.

Charles James Fox. A Commentary on His Life and Character. By Walter Savage Landor. Edited by Stephen Wheeler. Pp. xxv, 255. New York: G. P. Putnam's Sons. $2.75.

Had Walter Savage Landor's *Commentary on the Life and Character of Charles James Fox* been published as originally intended in 1812, nothing but Murray's intimate relations with Canning and other Tory statesmen of that period could have saved both author and publisher from trial at the Old Bailey for criminal libel. Murray accepted the book from Landor, and sent it to the printer without reading it. But when the page proofs began to appear, and Murray sent them to Southey for perusal, Southey became alarmed at the certain trouble that Landor's free expression of his opinions on men and policies would entail for Murray; and the upshot of much correspondence between Murray, Southey and Landor was that Landor suppressed the book, and Murray and his friends, Southey and Gifford, editor of the Tory *Quarterly Review,* congratulated themselves that Murray had got out of a very tight place. Landor did not take the suppression of the book with a good grace. He threatened to raise a loan of five thousand pounds and set up as a publisher, so that he could issue without the aid or obstruction of the middlemen of literature pamphlets which would set the public mind more erect and throw the political factions into the dust. Nothing came of this angry threat, and the only copy of Landor's "Commentary on Trotter's Life of Fox" that survived was the one that Southey had read with so much uneasiness and alarm, and that ultimately found its way into the library of the Earl of Crewe. Landor's commentary on Fox and his equally outspoken comment on many of the statesmen of both political parties who were Fox's contemporaries and who had survived him would undoubtedly have created a stir had it been published in 1812. Duelling had then not completely gone out of fashion in Eng-

land; and assuredly Landor would have had opportunities in this line of distinction—opportunities could not have failed to come his way in numbers and with promptness—for the book is full of rasping criticism and bold attack, which could not have gone unheeded even if the Government had not prosecuted Landor for criminal libel—a weapon always to hand with English Governments in the dark days of the ascendancy of Bourbon Toryism which lay between the beginning of the French Revolution and the peace after Waterloo. Published today after it has lain forgotten for nearly a century, it adds nothing to what is already known concerning Pitt, Fox, Dundas, Canning and Grey and the other politicians whom Landor assails. Its present day claim is upon students of literature rather than of politics; because while it shows the strength of Landor's political convictions and his distrust of the leaders of both the Tories and the Whigs—a distrust that was not unfounded—it is the vigorous unconventional prose in which Landor's political and literary convictions are expressed that give the volume any permanent value that attaches to it. It has distinctly a value from this point of view—a value that is much enhanced by the painstaking work which the editor, Mr. Stephen Wheeler, has bestowed on the introduction—which details the remarkable history of the book—and also on the notes.

Religious Liberty in South America. By John Lee, D. D. New York: Eaton & Mains. Price $1.25.

The Rev. Dr. Lee has given his book on religious liberty in South America rather too comprehensive a title, inasmuch as it deals directly only with Peru, Ecuador and Bolivia; and even with regard to these three republics, discusses only one or two features of religious liberty. Still we would not quarrel with the reverend author on this score, so worthy a contribution has he made to the literature of human freedom. The three republics just mentioned made it, until recently, a high misdemeanor to exercise publicly any form of worship save that of the Roman Catholic Church; and had, furthermore, upon their statute books laws which invalidated all marriages not solemnized according to the decrees of the Council of Trent. The effort of Protestant missionaries to have this iniquitous legislation abolished is the story here told us by Dr. Lee. And to our American ears a significant and startling story it is. The American hierarchy were silent almost to a man, when their co-operation was asked; the Catholic press of this country indulged in its favorite sport of mud-flinging, when it became aware of this movement for civilization; and the Roman Curia delivered one of its Delphic utterances when it was at length shamed into speaking. Not one of these three agencies of Catholic action, it is hardly necessary to say, lifted a finger in aid of an enterprise which would result in removing from the Catholic Church itself a stigma of shame. Success came to the agitation merely because we are living in the twentieth century. Dr. Lee, we repeat, has done a good service in publishing this book; and if it were read by American Catholics as well as by Protestants, the world would be the better for it. It is to be regretted that the author has once or twice slipped into an expression which is unnecessarily bitter, and, perhaps, even unjust. Neither would the volume have suffered, if an occasional bit of padding had been left out.

Travaux de l'Institut de Sociologie. Prins: De l'Esprit du Gouvernement Democratique; Fromont: Une Expérience Industrielle de Reduction de la Journée de Travail; Petrucci: Les Origines Naturelles de la Proprieté; Waxweiler: Esquisse d'une Sociologie; Solvay: Note sur des formules d'introduction à l'Energétique physio- et psycho-sociologique. Brussels: Misch & Thron.

In 1902, M. Ernest Solvay established in Brussels an institute for sociological research under a director and scientific collaborators. The institute is installed in a splendid building of its own and equipped with a special library on statistics, anthropology, technology and history. Under certain conditions it is open to all persons who desire to undertake personal research, and absolute scientific independence is guaranteed to those engaged by the director. Among the "Etudes Sociales" issued by the institute, perhaps the most interesting to

Americans will be the volume on the "Spirit of Democratic Government" by M. Prins. The author is sadly at odds with modern democracy. He rejects the doctrines of popular sovereignty, finds the operations of democracies unenlightened and often futile, and pronounces popular government a failure. He has more criticism for the tyranny of majorities than Rousseau had for the tyranny of one. It is the old story; it has been told many times before; and some wise men will doubtless discover it again. Instead of great national democracies ruled by parties and representing arbitrary divisions of the population, M. Prins would have fuller representation of local diversities, economic interests, intellectual persons, historic unities and racial groups. In short, his work sounds like an echo from the speeches of the eighteenth century in defense of the provincial liberties of France. If our ideal be the perpetuation of provincialisms, class interests, social diversity and rural peculiarities, then M. Prins's doctrines are sound, wise and timely. It is, after all, the old question of enlightenment against mere numbers; we ought to be ruled by the enlightened; democracy is vulgar and offends our academic susceptibilities. It may be so, but some of us think that the nineteenth century, with its criminal law reform, its educational achievements, its advance in the position of woman, its abolition of slavery and the slave trade, its freedom of the press and its religious liberty, will compare favorably with the enlightened despotism or enlightened oligarchy. Who are the enlightened and who are to choose them? More important than this discussion of democratic abstractions is M. Fromont's volume dealing with his actual experience in the reduction of hours of labor in certain chemical works of which he has been director for twelve years. The result of his careful investigation is as follows: In eight hours' work (seven hours and one-half effective) the same workers, with the same ovens, the same tools and the same primary materials have produced as much as formerly in twelve hours (ten hours effective labor). In addition to the economic result there has been a decided improvement in the morale and living standard of the employees. The volume is all the more convincing because it comes from the pen of a practical man of business. The founder of the institute, M. Solvay, in a brief study, has sought to demonstrate the close relations which link sociological with biological phenomena. It is a contribution to the labors of that new and almost unrecognized group of scholars who are persistently seeking quantitative measurements for social phenomena, but it may be questioned whether the time has yet come for any very valuable generalizations. As a statement of the problem of psycho-sociological measurements and a timely emphasis on the mathematics of sociology, M. Solvay's work is to be commended. It will help to keep alive the memory of Quételet until he shall come into his own—not in our day, but sometime when men are capable of deeper analysis and the materials for analysis are subtler and more accurate than now.

The Life and Letters of Charles Russell Lowell. By Edward W. Emerson. New York: Houghton, Mifflin & Co. $2.00.

To the personal worth of few men, if any, who fell in the Civil War, have been paid so many gracious tributes as to that of General Lowell. He was one of the three nephews of the poet Lowell who were killed in that war. Born in 1835, he graduated at Harvard only five or six years before the contest began. He chose a business life, and was successively a clerk, an apprentice in a gun factory, a superintendent in a rolling mill; then, after a two-year interval of travel induced by a breakdown in health, the treasurer of a Western railroad company, and finally the manager of a Maryland iron works. Immediately on hearing of the attack on the Massachusetts troops in Baltimore he enlisted, serving for a time as a scout and afterward as a captain in the Third United States Cavalry. For gallantry at Williamsburg and Slatersville, in McClellan's Peninsular campaign, he was breveted major, and was placed on the commanding general's staff. He was at South Mountain and Antietam, and was chosen by McClellan to carry to the President the

thirty-nine Confederate standards captured in the Maryland campaign. In the winter of 1862-63 he organized the Second Massachusetts Cavalry. He was for a considerable time in charge of the campaign against Mosby, and was later with Sheridan in the Shenandoah Valley as a brigade commander. He was killed at Cedar Creek (October 19, 1864) while forming his men for one of the final charges. His commission as brigadier-general of volunteers was signed on the day he was killed, and the further honor of a promotion to be chief of cavalry under Sheridan was to have been given him. Perhaps the most adequate tribute to his qualities is that made by his immediate commander, Gen. Wesley Merritt:

"A more gallant soldier never buckled saber. His coolness and judgment in the field were unequalled. An educated and accomplished gentleman, his modest, amiable yet independent demeanor endeared him to all his superiors in rank. His inflexible justice, temperate yet unflinching conduct of discipline, made him respected and loved by his subordinates."

A year before his death General Lowell married Josephine Shaw, whose long and noble career in philanthropy and social reform is quite as memorable as that of her husband in the field. She survived her husband forty-two years.

Christian Theology in Outline. By William Adams Brown. New York: Charles Scribner's Sons. $2.50.

Considerable interest naturally attaches to a text-book of doctrinal theology by the Professor of Dogmatics in the Union Theological Seminary of New York, because of that institution's reputation for freedom from ecclesiastical control and the advanced theological position of many of its teachers. Those who turn to Professor Brown's treatise expecting to light upon flagrant heresy will be disappointed. It is evidently the author's strenuous desire to be orthodox and to retain as far as possible the classical terms in the expression of religious truth. He writes for those who find themselves restless under prevailing creeds and confessions. In full sympathy with their difficulties and the movements which have occasioned their restiveness he seeks to read into the old phrases the religious convictions of the present, and so to modify and interpret the usual statements of doctrine as to make them tolerable for those to whom newer light has broken forth. His book is thus an attempt to mediate between the old and the new, and to show how the new may be welcomed without violent break with the past. The endeavor is a pious one, and is pursued with diligence and in a kindly spirit of Christian conciliation. It may be questioned, however, whether Professor Brown is altogether justified in retaining the orthodox terminology for his modern doctrine: for example, whether "God's Threefold Manifestation," as described in this text-book, is the historic doctrine of the Trinity; whether the supernatural which "receives its true meaning in the personal," "the false antithesis between nature and the supernatural" being removed, will be accepted by supernaturalists; whether a miracle which "has to do with those higher beginnings in which man is conscious of receiving new knowledge and life from God" will be accounted really a miracle. In doctrine as well as in practice it is somewhat difficult to "serve two masters." Yet a blessing is pronounced upon peacemakers, and whether Dr. Brown is entitled to the latter text or the former will be decided differently by different individuals, according as they judge his mediating endeavor successful or otherwise.

Social Silhouettes. By G. W. E. Russell. New York: E. P. Dutton & Co. $3.00.

There is an interest for the American readers in these slight and friendly studies of contemporary English life. Attempting no serious analysis, and written with no thought beyond England, they exhibit, unintentionally, the differences between these kindred peoples. To Mr. Russell the English schoolboy appears, curiously, as he does to that very different observer, Mr. A. C. Benson, and is quite unlike the American boarding-school product. The "plutocrat" and the "invalid" are the same uninteresting abnormalities in one country as in another. The pleasantest of all the series is the appreciative and withal quietly humorous group on the clergy of the Es-

tablished Church, which brings to mind the athletic and healthful teaching that came to us from England thirty years ago in Thomas Hughes's little volume, "The Manliness of Christ."

Literary Notes

....A most complete series of reproductions of Rembrandt's Paintings, Etchings, and Studies will be found in a special double number issued by The International Studio, edited by Emil Michel. The plates consist of photogravure and colored illustrations. John Lane Company announces this volume for September publication.

....Lothrop, Lee & Shepard Co., Boston, have a good list of juvenile books, including the continuations of several popular series such as *The Great Year,* by A. T. Dudley; *Four Boys in the Land of Cotton,* by E. T. Tomlinson; *Defending His Flag,* by E. Stratemeyer; *Helen Grant, Senior, by* Amanda M. Douglas; *Five Little Peppers in the Little Little Brown House,* by Margaret Sidney; *Ruth Erskines's Son,* by Pansy; and *Boyhood Days on the Farm,* by C. C. Munn.

....Thomas Whittaker, Inc., has just brought out for the American trade a very interesting and valuable series of Biographical Sketches by well known authors, entitled *The Leaders of the Church,* 1800-1900. The following volumes are now ready: *Bishop Westcott,* by Joseph Clayton; *Dean Church,* by D. C. Lathbury; *F. D. Maurice,* by C. F. C. Masterman; *Dr. Liddon, by* G. W. E. Russell; *Bishop Wilberforce,* by Reginald. G. Wilberforce; *Dr. Pusey,* by G. W. E. Russell.

....For unemotional and meditative people, especially those who are a little troubled by religious uncertainty, the sermons of the late Frederic E. Dewhurst in *The Investment of Truth* (The University of Chicago Press) are of the best sort. Dr. Dewhurst was a man of unusual gifts, among which were religious insight and the faculty of clear speech. He was not a noisy prophet, but he could make a chosen text ring with truth from which one could not escape. We would like to think that much American preaching is of this quality.

....Thomas Nelson & Sons have issued an extremely attractive edition of the American Revised Version of the Bible, in minion, 12mo, and in a black-faced type cast for the purpose, which makes it very plain to read. The thin, but opaque, India paper allows the volume to be very compact. The marginal references are of the best selection, and the pronunciation of the proper names is fully indicated. There are appended a dozen biblical maps and a list of places with letters and figures showing where to find them on the maps. This American Revised Version is the best in existence, and the only one that should be bought for American readers, and a more convenient style than the present, with its limp cover and red gilt edges, can hardly be imagined for ordinary eyes

Pebbles

If you are not quite certain as to whether or not you are a fool, the chances are against you.—*Atchison Globe.*

THE AUTHOR'S PRIMER.

What is a book?

A collection of printed pages with the author's name at the top of each one.

How may an author be recognized?

By the famous books he intends to write.

What class of authors is greatly in the majority?

Those that are unable to sell their creations.

What is a stylist?

A writer who keeps up with the latest styles in writing.

To attain success in writing, what is necessary?

A sufficient number of friends to purchase the book.

What is a poet?

A person who wears net ties and is unable to sell the verse he writes.

What is a verse-writer?

A person who sells poetry.

What is a short story?

A story with a startling title.

Why is plot construction necessary in writing stories?

It isn't; but the editors are foolish enough to think it is.

What is a juvenile story?

A story in which the juveniles display the judgment of mature people.

Are there any unsold stories?

Oh, yes; the best stories are always unsold.

In writing a story what should the author bear in mind?

The size of the check he will accept for it.

Why do editors return stories?

Because return postage is enclosed.

State another reason.

It does not mean that the story is without merit, but that it is merely unsuited for their present needs, or they may be overstocked with material.

How may a writer give his stories to the world?

By purchasing a magazine in which to pub lish them.

What is an article?

A statement of facts that will excite a controversy.

What is a critic?

A man who says your book would be good if you had written it better.

What is a dramatic critic?

A critic who can roast a play without going to see it.

What is a genius?

A person who sits down and dashes off a story without having to think about it.

What is the necessary qualification of a genius?

A position in the business world which will support him while dashing off stories.

What is the crying need in the literary world?

A publisher who will accept stories that cannot be disposed of elsewhere.—*Life.*

Undemocratic Criminal Law

If there is one thing rather than another which a democratic people should scrupulously maintain it is "equality before the law." Yet if there is one thing rather than another in which democracy has thus far been a failure, it is precisely this obligation. Neither American citizens, nor those of any other land, are now, or ever have been, equal before the law.

And the inequality is of the most unfortunate description that could possibly exist; it is the inequality of the rich and the poor. It is worth while to call to mind some of its details at the present moment, because there is obviously a growing disposition in this country to think disparagingly of the judicial branch of our State and Federal governments. We cannot long ignore the persistent attacks of the so-called populistic element upon what is regarded as judicial nullification of the will of the people as expressed in statute law. The nation that has lost its respect for the judiciary is standing in slippery places. But the judiciary that would be respected must both deal justly and love mercy.

No one can read the history of crime and punishment in Great Britain from the days of Henry II until now without getting hot with indignation over the ruthless fashion in which the machinery of justice has been used by the land-owning and other property-holding classes to make "the lower orders" know and keep their place. No other one thing is so characteristic of English criminal law as its immense respect for property and its low estimate of human life. At this present moment the more reputable London newspapers are conducting a vigorous crusade against the police magistrates, who are daily guilty of such monstrosities as letting off a brute with a fine of 10s. 6d. for knocking his wife down in the street when she refused to give him money for drink, and sending a boy to jail for sixty days for damaging growing potatoes and stealing two footballs.

The ruthlessness of the Tory judges in America was a much larger factor in precipitating the revolutionary uprising of the colonists than historians have generally recognized. Indeed, the first acts of open opposition to British authority were the breaking up of courts in various places by effectively organized mobs. After the Revolution, the remorselessness with which the courts enforced imprisonment for debt against veterans of the Continental Army who had lost all their possessions thru prolonged absence from their farms, and payment for their loyal service in worthless Continental money, was the chief cause of such uprisings as Shay's Rebellion.

Undoubtedly we have made progress toward the fair treatment of rich and poor alike when accused of criminal misconduct. But in two or three highly important matters we are still placing the poor at great disadvantage, and giving the rich an unrighteous immunity.

For one thing, we have permitted the growth of a most complicated and costly legal procedure, with endless appeals, against which Mr. Justice Brewer and other sober-minded jurists have been raising the voice of warning. The net product of this wretched system is, not to put too fine a point on it, that a miserable "dago" charged with murder may go to the electric chair at comparatively low rates of transportation, while a degenerate millionaire can make the county and his relatives spend two or three fortunes before he gets a final decision upon his fate.

Quite as iniquitous and as mischievous, in our judgment, is our custom of attaching to criminal acts the alternative penalties of fine *or* imprisonment.

The practical effect of granting this discretion to the court is to let off the well to do—particularly the officer of a corporation—with a money penalty, which he does not greatly feel, and which does not tar him with disgrace, while the poor man stands an exceedingly good chance of going to jail. The plan is defended on the ground that the poor man cannot pay the fine, and therefore must of necessity be otherwise punished. This defense has never been anything but ridiculous, the obviously proper scheme being to give the court adequate discretion as to the amount of the fine where fine is the penalty. To the day laborer a fine of one dollar may be a much more serious matter than a penalty of twenty-five dollars is to the moderately well-to-do automobilist who can't refrain from exceeding the speed limits. The terrible to-do that was raised by corporation interests over the fine imposed upon the Standard Oil Company was the hot and imprudent talk of men who have become so accustomed to practical immunity that they don't know when they are let off easy. If the officers of the penalized corporation are guilty of one-tenth of the crimes charged against them they should go to the penitentiary.

The fine for all, poor or rich, or imprisonment for all, rich or poor; that is the only righteous, the only democratic alternative; and we sincerely hope that some political party in both State and nation, in its effort to check the unrepublican development of our laws and procedure, will make a vigorous and persistent demand for this fundamental reform.

The Olive or the Laurel

Swarthmore College has an unequaled opportunity to show what are its educational ideals, whether it wishes its students to strive for the wreath of wild olive, as the prize of athletic prowess, or for the crown of laurel as the reward of artistic and intellectual achievement. Most of our American colleges are attempting, with very bad results, to combine the antagonistic ideals of the sporting ring and the forum. They are trying by all kinds of sophistries, subterfuges and compromises to prevent the conflict between the opposing forces from coming to a decisive issue. But now Swarthmore has been forced into the open to make the great decision before the world by the bequest of coal lands valued at a million dollars or more by the late Miss Jeanes to that college on condition that it "shall discontinue and abandon all participation in intercollegiate sports and games."

By accepting this the college does not sacrifice any of the objects for which such institutions are founded and maintained. It does not limit the cultivation of the human body by any rational method or the indulgence of the play spirit in any of its natural forms. It only checks an extravagant and abnormal development of these legitimate interests, for the modern athletic game, as Veblen says, bears the same relation to true physical culture that a bull-fight does to agriculture. If we could have a real intercollegiate contest, in which the whole number of students of the respective colleges should have a competitive comparison by tests and measurements to show which had on the whole the soundest bodies and the most symmetrical physical development, it might do a great deal of good, but under present conditions the athletic championship may be, and indeed is quite apt to be, obtained by the institution that is most deficient in the rational physical training of all its students. The only thing determined by our athletic contests is that one college has had money enough and energy enough to get together, by fair means or foul, a dozen or two youths of extraordinary physique thru the abnormal development of their congenital abnormalities. A true sportsman like Sir Thomas Lipton would refuse to compete with such "freak craft."

It is absurd to call Miss Jeanes's bequest a "bribe." It merely offsets in part the money pressure from the other side, leaving Swarthmore free to do what many other colleges would be glad to do if they could afford it. Talk in private with almost any college professor. He will probably acknowledge frankly the evils of grand-stand athletics; he may condemn the system in the strongest language and adduce instances of the ruin it has wrought to individuals and to

the scholarly spirit of institutions, but he will end up with, "What can we do about it? All the other colleges do it. It is the biggest advertising scheme they have. It attracts students and money and the interest of the alumni as nothing else can."

But a million or so to a college the size of Swarthmore would insure it against any serious financial injury, and we believe that the adoption of this new policy would be to its advantage in other respects. It would draw students who have higher aims than the applause of the bleachers. It would attract the attention of the large and increasing number of parents, philanthropists and educators who are dissatisfied with present college tendencies. It would set a good example to the world, and other colleges might get up courage enough to do what President Eliot, of Harvard; President Butler, of Columbia, and President MacCracken, of New York, say ought to be done.

The college world would be the better for the injection of a little of this kind of quakerism. We do not go to the extreme of objecting to all forms of competition. The competitive spirit is undeniably needed in modern life, and a moderate training of it may be advantageous. But to avoid its evils the object of competition should be either considered of slight importance or be really of great importance. In the former case the passions of strife will not be aroused and in the latter case they will be justified by the attainment. In athletic contests both conditions are violated; the prize is worthless in itself, yet is regarded as worth every sacrifice. Hooting the umpire, rattling the opposition, rooting for his own side right or wrong, and staking his money on a chance event, is not the sort of training a young man ought to have if our business and political life is to be raised to higher levels. Neither is it good for our colleges to compete for some bulky brute who can buck the center.

The extravagances of intercollegiate sports have become so great that while we do not advocate their general abolition, it would be well to have one college stand out against them.

New York's Street Railways

CHARGES of a serious character against the financiers and corporations that controlled the street railways of New York were made a few years ago by a man who had been an officer of one of the companies. These charges, involving fraud and many violations of the law, were submitted to the District Attorney, who, after some examination, declined to proceed in the matter. Since that time the accuser has been almost constantly under the surveillance of detectives employed by the street railway company. Quigg, the agent who has spent so much of the company's money at Albany and elsewhere, testifies that he employed detectives to watch this man, who asserts that he was not only watched but persecuted. Thanks to the new Public Service Commission and its keen counsel, Mr. Ivins, the public is beginning to understand why the company has regarded that accuser as a dangerous foe who must be closely watched. Already the investigation has shown that several of his charges were true.

Control of all the street passenger lines in New York is exercised by means of a labyrinth of allied corporations, two of which were recently placed in the hands of receivers. The final consolidation of interests was made nearly two years ago. At an earlier date, the process of uniting the surface lines was accompanied by an astounding series of overcapitalizations, the enormous weight of which has now caused bankruptcy. These overcapitalizations, created for subsidiary properties at the time when they were taken into the monopoly organization, were for the benefit of the manipulating financiers, who were able to unload their holdings upon the public at high prices. It is with respect to these operations that the investigation has already brought to light much secret and shameful history, and there is more to be uncovered.

Some of the transactions of those days were recorded in books that have been destroyed. Indeed, all the books of the main company for the eleven years from 1891 to 1902 have thus been put out of the way. It is admitted that they were sold to a purchaser who promised to destroy them. Why should records be kept

that would show how lines bought for a few hundred thousand dollars were put into the combination at a valuation of ten or twenty times that sum? In the future some stockholder, suffering from the ruinous weight of these overcapitalizations, might want to ascertain who had been the beneficiaries of this extensive preliminary watering. One inviting field for official inquiry is that in which evidence as to these remarkable and highly profitable operations may still be found. Another is indicated by the shameless testimony of Lemuel Ely Quigg, who for six years was a member of the national House of Representatives.

Quigg admits that in the last four years he received from the street railway company $217,000. This was charged to a construction fund, part of which was another sum of $798,000 paid to persons whose names have been concealed. The checks have been destroyed or "lost," and no names can be found on the stubs of them, which still exist and can be inspected. Of the money received by Quigg, $40,000 or $50,000 was paid by him to persons whose names he does not remember or will not tell. He had a record of these names, but he destroyed it in order that there should be nothing of the kind to refresh his memory. The expenditures of which he submits a record were for interesting purposes. By means of hired agents he caused the organization of numerous citizens' associations, whose influence was used at Albany and elsewhere for or against pending measures in which his employers were interested. One of these associations recently appealed to the very commission before which he testified last week. Previous to the merger of the Ryan and Belmont interests (which, by the way, was accompanied by an injection of $108,000,000 of additional water) he created associations to oppose Belmont's designs; afterward he served the combination and occasionally promoted legislative and other projects which at an earlier date he had opposed. His expenditures ranged from $50,000 for a great petition from the tenement districts down to $500 paid to a labor leader for "agitation" in behalf of one of the company's schemes. Among those whom he employed directly or indirectly to make arguments at Albany were two men who have recently become justices of the Supreme Court of the State. If the commission could trace the expenditures of which he preserved no record, and could ascertain who were the beneficiaries in the distribution of the $798,000 not accounted for, the story of this misuse of corporate funds would be still more interesting, and probably even more discreditable to the persons involved.

These revelations or discoveries have suggested the question: Why was there no interference by the authorities? Some explanation from District-Attorney Jerome appears to be due. It may be that the law was not violated, altho it seems to us that it must have been. If such acts are not forbidden by existing statutes, new ones that will forbid them are needed. And if any of these offenses are covered by the present law, the evidence should now be laid before a grand jury.

The value of Governor Hughes's new Public Service Commission has been shown as clearly as was that of the Insurance Committee in connection with which the Governor, as counsel, won good fame. If such a commission had been at work during the last ten years, this shameful exploiting of New York's transportation facilities could not have taken place. Quigg could not have drawn $217,000 from a "yellow dog" construction fund, nor could $798,000 been paid from that fund to persons who are ashamed to let their names be known. If the commission's powers are insufficient, they should be increased by next year's Legislature. Let us have full publicity, strict regulation and thoro financial inspection for all these municipal service companies. In this way can fraudulent overcapitalization and manipulation of securities be prevented, and the treasury funds withheld from corrupt lobbyists.

From Lake Michigan to the Gulf

THE President's little vacation is not to be thought of chiefly as a hunting excursion to shoot bears and stick pigs in the cane-brakes of Louisiana, but rather as a lecturing lesson to the country of the importance of maintaining and improv-

ing the great free waterways that traverse our national domain. He has sailed down the Mississippi on one of the remaining steamboats, that he may see for himself what is left of what was once a great commercial industry, and that he may remind, or teach, the Atlantic East and the Pacific West that the great Mississippi River is the chief arterial system of our country, and that it is of vital importance that its current flow unimpeded from the Canadian border to the Mexican Gulf.

The oceans are free to all. There competition is open to the whole world. No nation can shut out other nations; the worst it can do is to forbid its own citizens to sail the seas in ships built abroad. Equally the great rivers of our country are open to all who will sail on them. They are interstate waterways along which any tramp steamer or any man's sloop or boat may pass. No State, no trust or combination can monopolize their trade. Railroads may belong to corporations or to a combination of corporations, and we have learnt that it is necessary to curb their wild finance and to prevent their unfair discriminations. But the rivers are free.

Yet the railroads have got the better of the rivers. Their trains cost more, but they are faster and surer. The rivers have tortuous channels, and they have broad shallows that forbid all but the flat-bottomed boats. The rivers fail to do their proper work in providing an automatic curb on the extravagant charge of railroad traffic. Particularly from Cairo to St. Louis there is needed a thoro system of a safe channel, which shall give us a regular depth of 14 feet, so that respectable steam-craft can safely pass along to the Gulf.

One who has sailed the muddy Missouri in one of the old flat-bottomed steam-craft, square and open at the prow, where stands the man with line kept thrown all the time, knows the difficulty and danger of these sand-bars. Deliberately he calls out, "Twelve feet," "Eleven feet," "Mark twain," "Nine feet," "Eight feet," as the water shallows, but when he comes to "Five feet," "Four and a half," "Four," the line flies fast and the voice calls sharp, and the pilot backs the boat in a hurry, unless it has already stuck on the bar, when the two long legs of beam are dropt on end into the water, and by them, attached to ropes, the prow of the boat is lifted up from off the bar. That was, or is, the tedious experience of the river craft. It is but natural that commerce should have taken to the railway.

But the railways are now overwhelmed with business. Much fast freight and most of the passenger traffic will always go by them; but for the cheap and bulky freight we ought to be able to depend on the water traffic. Europe understands this. Germany, the most progressive of nations, is intersected with canals supplementing her rivers. The rivers themselves are canalized. Other old and rich countries are doing the same. Manchester has her deep and wide ship canal from the ocean. She no longer needs to depend on the railroad to bring her cotton to her mills. It is carried in the same bottom from New Orleans to Manchester. We have been very slow to develop a similar system. We are just beginning to understand the duty. We are digging the Panama Canal, and we are widening and deepening the Erie Canal, but we have done little for our rivers. We have not understood the value to us of our natural sources of wealth.

The country is rich, and it can afford to undertake the great task of creating a 14-foot waterway from Lake Michigan and Chicago to New Orleans and the Gulf. Then will follow the improvement of the affluents of the Mississippi. But this will cost much money and will take years to accomplish. Already Congress has appointed a commission to study the problem and prepare a plan. That work should be carefully done; and when done Congress should unstintedly provide the means for carrying it out to its full conclusion. Hitherto jetties and levees have been built here and there, now and then, but on no settled and continuous system independent of party politics. We should undertake this as we have undertaken the Panama Canal, largely, and until it is done. It is not a matter for States, but for the National Government. Perhaps the States can make their own levees, but it is for the National Government to create and keep open the channel which so often divides the States.

And this is not the only task which President Roosevelt, with his large out-

look, has set before our people. The field for irrigation in our arid territory is an immense one; and where only sage-brush grows we shall one day see the garden of America, with many millions of population, unfailingly supplied with abundant crops. And our streams and rivers in the highlands will supply power and themselves create huge hives of industry. All these will require the care of the Government, for the day is past in our history when any party will oppose the support of internal improvements.

So we thank President Roosevelt that he has engaged in this lecture course of addresses along the river towns, and we do not begrudge him his rough outing in his favorite relaxation with the rifle and the wild game.

Church Union as Missionaries See It

DOUBTLESS a strong city church can assume an indifference to such considerations as draw those churches together which feel the advantage of mutual helpfulness. The National Council of the Congregationalists is to be held this week in Cleveland, and they will decide whether they wish to unite with the United Brethren and the Methodist Protestants on the basis proposed. A few city churches have sharply objected; they don't feel the need of union; and several conferences have been persuaded cautiously to say, Good, but go slow. We have a wise word from Japan, where the three denominations all have their missionaries, and they unite in session, officially and unanimously, in sending an appeal to their several boards in favor of adopting the basis of union. They say they have watched the progress toward union "with keenest interest," and that they have "prayed heartily for its consummation." They feel, as missionaries, "the disadvantages of separate organizations and work," and the difficulty of explaining "the apparent divisions and antagonisms of Christian sects." They see that such division prevents "the most economical use of mission funds and forces," and results in "real jealousies and interferences." They deprecate the magnifying of "unessential differences," and they conclude:

> "The sympathy, inspiration and effectiveness that would result from a wider fellowship and a larger unity in plan and organized effort far outweigh, in our judgment, the advantage arising from separate organizations.
>
> "We therefore desire to express our earnest hope that the contemplated union between the three bodies may be duly consummated in America and especially that it may be made possible to unite under one joint organization the missionary work in Japan."

This corporate union, with the consolidation of the missionary societies, is precisely what the plan proposes. It should be considered not with suspicion, but with trust in the good faith of the brethren. Nor should ecclesiastical selfishness have any part. Each denomination should consider how much it can give, not how much it can get. Each of the three can give much, and the three together can do more and can have more enthusiasm and confidence than they can apart. There is no lion in covert crouched to devour the unwary. Certainly the Congregationalists, who meet first, have least reason to fear that they will be swallowed up, for they are a larger body than the other two combined.

Country Teachers

IN September, 1904, Mabel Carney, a young Irish girl just out of Normal School, began teaching in a country school in Magnolia Township, Putnam County, Ill. She had high ideals of the dignity of her work, was ambitious, hard-working, persistent. Her school was small, the building dilapidated and poorly equipped, the site unattractive. Two neighboring schools were equally typical of a condition commonplace in every State in our country. There are ten thousand of these one-room country schools in Illinois, and over nine thousand are far from ideal for their work. This Irish girl had been fired by the enthusiasm and success of the ideals set forth by O. J. Kern, of Winnebago County, and of consolidation of schools in other States. She thought consolidation, dreamed consolidation and talked consolidation of these three inefficient country schools.

She won hearers enough to put the question to a vote in the spring of 1905. The electors voted down the proposition,

The defeat but aroused more of the Irish persistence, Irish determination and Irish eloquence. In 1906 the three districts voted to consolidate. A sympathetic citizen, John Swaney, gave twenty-four acres for a campus. A *campus* for a country school! Eighteen thousand dollars voted by the people made the building one of the best school houses in Illinois. Wagons carry the children who are too remote from the building to walk. The principal of this country school is paid a salary of $1,000. On the campus is an agricultural experiment plot of six acres conducted in co-operation with the Agricultural School of the State University. A four-year high school course is offered with liberal opportunity of election of studies. Country boys and girls may here study agronomy, animal husbandry, horticulture, domestic science and art, and all phases of work vitally related to the fundamental needs of a people living in the country. "Culture" subjects are not neglected, but most of all, the real basic interests of culture among an agricultural people are given due emphasis. The culture here developing is more than a veneer. A well-graded elementary and high school course in a building of exceptional excellence, a campus of twenty-four acres devoted to agricultural work, a tract of splendid natural forest, an enlarged country neighborhood bound into a sympathetically co-operative social unity, an abiding interest in the best and the truest in real country life, possibilities for higher culture not inferior to those of cities of ten thousand people—these are the products of the two years of strenuous endeavor of the Irish girl with the dynamic ideal.

The insight of the principal of the Western Illinois Normal School soon discovered this teacher of the new order and has made her the supervisor of a model country school as an integral part of the work in solving the problems of country schools in Illinois. A formerly dilapidated country school two miles from the Normal School is the present scene of her immediate efforts. In the summer term of the present year, seventy teachers came to learn of her. On July 18th, these country teachers organized themselves into the Country Teachers' Association of Illinois, of which Miss Carney is president, so far as is known, the only one of its kind in this country. It is unique in that it concerns itself wholly with the problems and interests of country teachers and country schools. Its strong appeal thru its endeavor to "make life large and lovely for the country child" reaches a feeling of real need, and on the first of September, the membership was over three hundred country teachers and county superintendents of schools willing to co-operate in turning the thoughts and interests of the city-mad population "Back to the Country."

The organization is for *work*. Consolidation of schools is but one of the devices for the betterment of country schools. Strategic districts will be systematically educated into consolidation. Others will be helped to solve their problems thru the one-room, ungraded school. Every member of the organization will go constructively to work to contribute some definite item in the direction of betterment. Opening the eyes, the ears and the intelligence of country boys and girls, and parents as well, to the wealth of opportunity and culture in their own work and life is the large but as yet unsolved problem of the country school. The Irish girl with the practical ideal has partly solved it, and the Country Teachers' Association will aid her materially thru its individual and co-operative attack upon the thousand smaller problems which together make the larger one.

Municipal Betterment

THE Municipal League, of Greenville, S. C., has issued a report which is a model of its kind—based on the principle that municipal and national patriotism are alike in kind. The two points to aim at, we are advised, are, first, the removal of the unsightly and unwholesome; secondly, the multiplication of the beautiful and useful. The immediate results expected are an improvement in the streets and highways; less conventionalism in building and in gardening; less white and noisy coloring; the appreciation of the streets as part of a public garden; the control and esthetic use of all trees, brooks and natural retreats or parks.

The stages of progress are a town meeting; a rural improvement society; an executive committee; and progress reported once a month. The purpose of the society is to raise funds, while the executive committee should be endowed with very broad power, and it should include, if possible, landscape gardeners and architects. A little public enterprise in the way of developing the beautiful soon finds its way over the fences into private yards. These become sweetened with simplicity and a passing out of the conventional. Grand trees are carefully preserved, rubbish and dumps are removed; and there are everywhere signs that the people are becoming townsmen. The executive committee will need judicious aid, for its official work will include the trimming of street trees as well as their planting; the entire abolition of back alleys, where squalor breeds misery and disease; the removal of many time-honored nuisances; as well as have much to do with moral evolution. Our more recent conceptions of right town life include not only the widening of streets and the provision of parks, but playgrounds for the children, resting places for pedestrians, and provisions for the comfort of animals. Community culture may be fairly gauged by the extent of the work done in the way of parks, clean streets, playgrounds, schools placed in parklike areas, libraries, and improved architecture. The Greenville Report sums up its work as an intent to supply a just measure of God's pure air and sunshine, green trees and grass, untainted water and food, sanitary home surroundings, healthful labor conditions, and legitimate recreation.

Greenville accepts the principle that all town buildings should be grouped, so as to constitute an architectural element, at an administrative center. Every building that stands for the town should constitute an expression of the town's character and purposes.

Cleveland, Ohio, is expending $16,000,000 to group her buildings, and considers it already a financial saving. With such a grouping an Art Commission becomes desirable, having jurisdiction over the design as well as the location of public buildings. Other points specially considered are the desirability, even in very small towns, of permanent street grades —a matter in which every building, public or private, is interested—in order to prevent the damage done by dashing rains. A matter of great importance, rarely considered even in our larger cities, is the presence of artistic business signs and useful street signs. Attractive signs are quite as possible as ugly ones, while the latter ruin the vista of the most beautiful streets. A narrow street should never be laid out, or, if once opened, it should be widened before business development makes it costly. The criticism is just that, in the majority of cases, street trees are either unwisely selected or are too closely planted—or both evils are found together. No escape has been found from this helter skelter business except in a permanent Tree Commission —town officers having absolute control over the street trees. It is particularly desirable that town approaches be made beautiful.

In Rochester the railroad beds have been grassed over, while trolley poles and brackets have been robbed of their unsightliness. Flaming billboards should be removed from the vicinity of depots and disagreeable advertisements no longer plastered on the fences. We are glad to get with this report an elaborate set of maps, showing the possibilities which can be worked out. There is not a town in the United States that has not a public duty along this line of public improvement.

Theological Extremes Meeting

Under the leadership of Prof. R. Seeberg, of the University of Berlin, Dr. Th. Kaftan, superintendent in Kiel, and Prof. Karl Beth, of the University of Vienna, all three prominent men in the conservative Church of Germany, a new school of theological thought is being established which insists that the traditional theology of the Church must, to a certain extent, be modified to meet the advanced research of the times. Kaftan's work, entitled "New Theology of the Old Faith," has furnished the war cry for this new propaganda. Kaftan is willing to sacrifice the old inspiration doctrine and to reconstruct theology along the lines of Ritschlianism, insist-

ing, however, on the historical correctness of the three fundamental truths of the Divinity of Christ, the Trinity and the Atonement. Seeberg wants a good deal of the traditional dogmatics eliminated, because it does not represent Biblical teachings, but only deductions from these. He argues aginst "rationalistic orthodoxy" and the pretense of conservative theology "to understand everything." Beth is a follower of Seeberg, but goes somewhat further.

The new school itself is widely discussed. Professor Bousset, leader of the liberals, devotes nearly fifty pages to it in his organ, the *Theologische Rundschau,* and concludes that the concessions are not enough to furnish a basis for a *modus vivendi* with advanced theologians. Professor Herrmann, of Marburg, reaches practically the same conclusion, declaring that it is only a compromise. The liberal organ, the *Christliche Welt,* insists that no real concessions are made.

In conservative circles the new school is condemned for unfaithfulness to the formal principle of the Reformation; but yet the movement is progressing, as Kaftan's book is being discussed and read more than any other German theological book since the publication of Harnack's "Essence of Christianity."

In the meanwhile the signs are increasing to show that at least in the New Testament department the antagonistic schools are beginning to understand each other, and the liberals are coming into touch with the conservatives. Professor Tietzmann, of Jena, a well-known protagonist of the critical school, in his recent work on the Gospel of John, declares that we have the best of reasons now to accept a date of about 100 A. D. for the Fourth Gospel, because it has now been learned that Gnosticism, which formerly was regarded as having become a factor in the Christian Church only in the middle of the second century, really accompanied the development of Christianity from the very outset. In Harnack's works on Luke as the author of the Third Gospel and of the Acts, he has assigned an importance to the principles of tradition that has frightened the critics, and finds in the Acts an historical reliability no critic would have conceded a few years ago. He thus approaches the positions of Professor Ramsay, who accepts Luke as the author of the Acts.

Taft in Japan

Secretary Root and Secretary Taft have done admirable and unusual work in cultivating good will between the United States and foreign countries. They have both traveled to good purpose, messengers of peace. Particularly do we rejoice in the wisdom and sincerity of Secretary Taft's utterances at public functions in Japan. He spoke for peace with an emphasis which is not too strong as representing the sentiment of the Cabinet and of the people. The journals which have been prophesying war with Japan have been engaged in a hellish business. Language cannot be made too strong to characterize their conduct. Mr. Taft can be believed, and was believed by his hearers. And it is nonsense to declare, as some European journals do, that President Roosevelt's speeches on his Mississippi River trip mean war. He was himself in the Navy Department. He knows and believes in the navy. He wants it enlarged, as a guarantee of peace. He would have it strong on both oceans But to represent that his repetition of these old sentiments, or even his sending the fleet to the Pacific—whether unwise or not—was meant to provoke war with Japan, or anticipated war intended by Japan, is fatuously absurd. Some European Powers are afraid of the growing military and commercial power of Japan and wish that the United States might be goaded into a war which would wear Japan out. That is the occasion of their false interpretation of the President's speeches.

A Sharp Trick Exposed

The leading newspaper in South Carolina reports that Booker T. Washington has purchased from Governor Comer 18,000 acres of land in Alabama, he being the agent, it assumes, of Northern capitalists, whose purpose it thus explains:

"It is perfectly plain that Northern men, with ample capital at their disposal, have deliberately set about to fasten the negro to the South. They are determined to attach him to

the soil. Having freed him, they are determined that he shall not be free to afflict the North with his presence. Seeing that the laboring men are resolved to starve him or beat him back with staves when he comes North, the wealthier class of Northerners are conscience-pricked sufficiently to exert themselves for the negro's comfort in the South. Hence the lordly gifts to Tuskegee, hence its wealth far over-topping any Southern college with a possible single exception, and hence the purchase of domains for negro habitation."

Here is reason for fear, it continues; for Dr. Washington is sifting out the brightest of the negroes for such a farm-colony, and it is idle to say that the strongest, picked negroes may not be more than a match for the weakest and most shiftless whites:

"One negro boy, let us say, in thirty, may be developed into a man capable of taking care of himself in business. When a hundred of these are set on their feet in the colony, each on his little farm, when they have accumulated money, they will buy lands elsewhere, and from the settlement there will go out negro purchasers of farms in all parts of the South. In this way the hold of the negro on the South will be made firm, and his scattering thruout the Northern States prevented. It is vain to contend that the property-owning and trained negro will not, perhaps, some centuries in future, be a factor in the government of the South, and the hordes of other negroes will rally around him."

What is the remedy? It is a radical one, to bring in "white immigrants, of every nation, tribe or tongue, so they be white," "to contend with the blacks for the possession of the waste places," and so make "the negro's competition with the white man in the South no less severe than it is in Pennsylvania." All this is amusing. There are laws to prevent the seducing of negroes to leave the Southern States where they think they have the best labor in the world. The North welcomes all that come, finds their work profitable, and gives them the ballot.

Cheap Game for the Markets

Mr. Dwight W. Huntington's article, in this issue, on "The State and the Game," is of more importance than one might imagine before reading it. Certainly our present system of protecting game birds is a failure. They are being protected off the face of the land. We forbid men to shoot them, when it is impossible to prevent it, and we do not forbid vermin to destroy them. We shut the markets against the sale of game, and so we prevent farmers and others from having any interest in breeding wild fowl and stocking the markets. It should be made for the interest of those who have land to see that quail and partridge and woodcock breed and live, in which case they will multiply freely. If cared for and fed in the winter we have known them to come in flocks and coveys about a woman's house and orchard in a semi-tame state, and that, too, in a region where they seemed almost exterminated. But she, who had multiplied their numbers, could not sell them for food. What is the use of appointing policemen, to hang about markets or watch the trail of hunters, when snakes and foxes and crows are allowed to eat the eggs and kill the young birds? What is needed is gamekeepers, not policemen. Our woods and fields should be full of these fine birds, and in the markets they might be cheaper than beef if we only made it profitable to make this use of our land.

Clerical Congresses

It may not be understood what is the meaning of the interdict in the last papal encyclical against clerical congresses. One might suppose clerical congresses to be a stimulating influence, if stimulation is desired. The inwardness of it is, that the priests of France a few years ago held a sort of national convention in which they discussed the modern needs of the Church. The bishops took alarm, the cry of liberalism was raised and Rome was highly displeased. Pius X is taking care that such meetings shall not be held again. Such a custom as that of the Protestant clergy of this country of meeting regularly in clerical clubs in which papers are read and freely discussed is hardly known in the Catholic Church. In all dioceses there is the custom of holding clerical conferences twice or four times a year at which papers in theology, canon law and Scripture are read and discussed, but these are official affairs often presided over by the bishop, and none but the most exact conservatism would be tolerated for an instant. Anything else is extremely rare.

Father Tyrrell's Case

Father Tyrrell's case is an extraordinary one. He was a distinguished Jesuit priest. He was tinctured with Modernism. He wrote a private letter to a professor of anthropology, in which he tried to show how he might hold his modern scientific views and yet remain in the Church. That letter got published, and the result was he was dropt from the Jesuit order, which deprived him of his right to act as a priest, and he was required at Rome, as a condition for reinstatement, to submit his private as well as public correspondence to censors. That removed his livelihood, and he had to depend on his writings for bread. Friends interceded for him at Rome, and he signed an agreement that "from the date from which I receive permission to celebrate mass, and for as long as I may retain such permission," he would not publish, or diffuse in any way equivalent to publication, any theological matter without authorization. It was immediately published at Rome that he had submitted; but he made haste publicly to deny it, saying that what he had promised was no more than was required of every priest, and that the demand made to submit his *personal* correspondence he would never yield to. Meanwhile, on the strength of his agreement as above, it had been determined to restore his *celebret*, or permission to celebrate mass; but this denial of his, and the publication the next day of an article that displeased Rome, have prevented the *celebret* being given. It all makes a very curious correspondence; and now the London *Times* announces two articles by him on Modernism and the late encyclical. It may now be fairly understood that he remains, for the present, like the Abbé Loisy, a nominal, but a recalcitrant, member of the Church, excluded from its privileges.

"The Cost of Raising a Child"

The pastor of a certain church in a certain college town of the Middle West sends us a note, from which we cull the following, occasioned by a late article in THE INDEPENDENT:

But it may be interesting for the editor to know, and profitable for many who fear to have children, because of the cost, to read, that my good wife and I have been married about twenty-five years, and have had eight children. Our oldest daughter has graduated from a good college, and is now assistant principal in a public school. We have a son and a daughter, both in the senior class in college this year, and a son in the Freshman class. We have two sons in High School, and a daughter and a son in the grades.

We have ten at our table regularly. Our salary has never exceeded $100 per month, has been that much for less than two years, and most of the time has been much less. I have never made any money "on the side." When we married we did not own earthly goods to the value of $200. Besides raising our children so far, we have managed to save enough to get a good brick house, with nine acres of land, with orchard, fruit, a horse, cows, etc. All of this is within city limits, and within a fourth of a mile from the college grounds. We "owe no man anything, but to love."

I write this, not to boast, but simply to enforce a sentiment that my sainted mother-in-law expressed when the little ones were coming thick and fast, and passionately welcomed —"God never made a mouth, but at the same time he made something to fill it."

I could speak of ways in which all of this is, and may be done, but that would be another story.

Nebraska Democracy

We look to the Nebraska Democratic platform to represent the next Democratic candidate for the Presidency; and it is in Mr. Bryan's *Commoner* that we read on his first page that platform. As might be expected, it quotes Jefferson on State rights, and declares:

"We are opposed to the centralization implied in the suggestions now frequently made, that the powers of the general Government should be extended by judicial construction.

That is, the Federal Government must not trench on State rights, but must stick to the literal construction of the Constitution. Now we proceed to another plank of the platform:

"We favor the enactment of such law as may be necessary to compel foreign corporations to submit their legal disputes to the courts of the States in which they do business, and thus place themselves on the same footing as domestic corporations."

That is, while the Constitution provides that United States courts shall decide disputes between residents of different States, this platform asks that this provision be nullified, and that a manufacturing company domiciled in Illinois, but doing business also in Nebraska, be deprived in case of a lawsuit from appealing to the Federal court, but must sub-

mit to a Nebraska court. So we must not let Federal trench on State jurisdiction, but we must have the State jurisdiction usurp that which the Constitution gives to the nation. Thus, "Heads I win, tails you lose."

The Deceased Husband's Brother

It is a most curious position in which the Anglican Church is left by the enactment of the bill allowing marriage to a deceased wife's sister. The bishops and archbishops have protested against it, and have advised their clergy not to allow such marriages in their churches. And yet this is an established Church. The head of the Church is the King, and he favored and signed the law. Parliament rules the Church, not the bishops and archbishops. It is a sort of rebellion thus to attack their creator. It ought logically to lead to separation from the State. And as a matter of legislation it is very illogical. Why allow a man to marry his deceased wife's sister and still not allow him to marry his deceased wife's niece? Or why not allow a woman to marry her deceased husband's brother? Both such marriages are still forbidden by British law. It is interesting to note that the Irish Catholic vote in Parliament was divided on the question, for the reason that while the Church forbids such marriages as a rule, it yet allows them by dispensation, showing that they are not regarded as really incestuous. Cardinal Wiseman strongly favored such a bill, while Cardinal Manning strenuously opposed it.

We published a word of appreciation of the late D. Willis James, a distinguished merchant of New York. Now we have the account of his will, which leaves $100,000 to each of ten institutions. Three of them are colleges, Amherst, Columbia and Yale. Hampton Institute is also included, and Cooper Union of the teaching institutions of the next grade, and Union Theological Seminary of the post-graduate class. The Children's Aid Society and the Presbyterian Hospital form another class, and there are left the American Board of Foreign Missions and the Episcopal Cathedral in this city. It is noticeable that his selection was catholic as well as wise. But two of the gifts were to the Church of which he was a member, the Presbyterian Hospital and Union Seminary, if the latter can still be called Presbyterian.

There are certain careless faults of writers for the press which account for various disappointments that come to them. The writer who does not put his name and address on the manuscript itself, but puts it only on the accompanying note, or, still worse, in a separate letter, has no one but himself to blame if he never hears from it. The manuscript and the note may easily get separated. Nearly as heedless is the writer who drops loose stamps in the note, forgetting that they will drop on the floor unnoticed. Put them on the enclosed and addressed envelope, or, at least, attach them where they will stick by a corner. Such neglect of ordinary precautions is sometimes very annoying to a conscientious editor.

There is one little fact which President Roosevelt does not tell in his article in *Scribner's*. He speaks of his challenge of the identification of a rare bird, by two ladies. But when the ladies sent for him to come over and see the bird for himself, the glasses told him that they were right. What the President omits is, that he shot the little bird, and sent the skin to Mr. Chapman, and it now belongs to the Museum of Natural History in this city. We understand that the ornithologists have much respect for Mr. Roosevelt's bird-knowledge, but they are slow to believe that he has seen any passenger pigeons in Pine Knot, much as they would like to see that exterminated bird resurrected.

We now have the entire text of the Pope's late encyclical, and its drastic provisions to control the spread or teaching of "Modernism" read even more stringent than in the cabled account. Take this:

"It is also the duty of the bishops to prevent writings infected with Modernism, or favorable to it, from being read when they have been published, and to hinder their publication when they have not. No book or paper or periodical of this kind must ever be

permitted to seminarists or university students."

Therefore the censors in every diocese, and, for fear the bishops may fail in diligence, they are required to make regular reports of their fidelity to Rome.

Of course, a magazine like THE INDEPENDENT, which buys paper by the ton, has an interest in getting it cheap, and we have, for ourselves and for our readers, a natural desire to have paper pulp put on the free list. Paper is not a luxury of the rich; it is the necessity of the poor, quite as much as tea and coffee. Paper pulp comes mostly from poplar and spruce, and the American sources are getting exhausted, so that we have to import it from Canada in rapidly increasing amounts annually—167,504 tons of pulp in 1905, costing $4,500,955. To take off the duty would be to protect our own forests.

We are quite willing to credit the report that Dr. Henry Van Dyke was in certain sense inspired when he wrote the "Story of the Other Wise Man," for it is an inspiring tale, but what we want to know most is whether he is inspired now in defending the Princeton Club system against President Wilson's proposed reform, and, if so, whether the inspiration makes him infallible. A new reason to think that President Wilson knows what he is about is found in the parade of the Princeton seniors Saturday night, when a banner was borne with the inscription, "We're for the quad system—the hell we are."

As several times before, a colored student presented himself at Amherst College the other day as a candidate for the football squad. One or two white boys asked him to withdraw, but he declined. When tested in a trial game, these fellows took occasion to pummel him and disfigure his face, but he still held his ground like a free man and a gentleman. We are pleased to see that *The Amherst Student* lays down the law to the ruffians in a very plain way, and tells them that any such gross assumption is a trifle late to be allowed in a New England college.

Two by two the nations are beginning to bind themselves by arbitration treaties. The last is the treaty between Italy and Argentina, which seems to exclude all possibility of war between the two countries. It is thus that Argentina follows her own incomparable precedent, in her treaty with Chile, as closely as Italy would consent. Is it not grievous that the United States, which set the example of free government, could not have led the way in a general treaty of arbitration with England?

They get hold in France of strange news from America. We have before us the *Semaine Religieuse d'Avignon,* in which we read that the American Congress has lately past some rigid Sunday laws, one of which requires that "those who, except for sickness or other sufficient reason, fail to attend church for three months, shall be fined ten shillings." "Shillings" in these United States! That sounds like the old Blue Laws of the Colonies.

There is one part of the country where they are not so afraid of injunctions as is Mr. Bryan. In South Carolina the fight against the blind tigers has been by injunctions. The whole power of the State was arrayed to uphold the dispensary law, and violators were caught with injunctions and sent to prison. They do not quite understand Bryan.

No more railroad building for a long time to come, says James J. Hill, who also predicts that Congress will soon be "asked to give a bonus" for railway construction. In the first half of the present year, however, the increase of the gross earnings of our railroads was $114,000,000 and their net earnings showed an increase of $19,000,000.

We get a very small illustration of what protection costs the country in the statement that it will cost $200,000 more to transport the coal to Hawaii and other American ports for the Pacific squadron in American bottoms than if foreign-owned vessels were used for the purpose.

Insurance

Patent Insurance

MANY a man seized with an idea has spent months, if not years, of time working out the details of his invention for which he ultimately secures a patent. If his idea turns out to have value there are, only too frequently, men who unscrupuously seek to profit by the results of his work thru infringements. Many an inventor has suffered tragic financial losses by such methods. Some have been broken in spirit and have come to untimely ends on account of bitter disappointments arising because of the fact that their patents did not protect. Most of us are not aware that in this country a patent of invention is primarily an official certificate of search, indicating the probable patentable novelty of the alleged invention therein claimed, and granting to the patentee the bare right to bring a suit, in good faith, for supposed infringement. The Government in granting a patent by no means guarantees that the patentee is the real inventor. It does not guarantee that the patent describes and claims a patentable invention, nor that the alleged invention is patentably novel; nor that it has been properly, not carelessly or ignorantly, described and claimed; nor even that there is no fatal cloud upon the title to the patent or to the invention. In view of all this, inventors and owners of patents cannot fail to be interested in a new field of insurance activity that has been developed by the organization of the Industrial Surety Company of New York, which has for its object the protection of inventors and owners of patents against infringements. This organization proposes to lessen, if it cannot eliminate, financial losses caused business men operating under patents and subscribers to its scheme will be relieved of all litigation expense connected with the establishment of rights against those guilty of infringements. The Industrial Security Company is incorporated under the laws of this State and its officers and directors are all New York business men of means and standing. Patent insurance will of necessity occupy a special field, but it will serve to encourage and protect men who stand in especial need of the present application of the insurance principle. The company looks confidently forward to the occupancy of a position as an authoritative adjudicator of alleged patent infringements and expects to be able, thru its strength, expert ability, experience and fairness, to settle differences quickly, without costly litigation and without financial loss to controversial parties.

The Massachusetts Annual Life Report

FREDERICK LORD CUTTING, Insurance Commissioner of Massachusetts, in this year's life report, just issued by him, reviews the principal changes made in the Massachusetts life insurance laws during the past twelve months. The report is made somewhat lengthy by including therein the replies of companies to an inquiry as to the methods employed in apportioning dividends. In view of the recent arraignment of savings bank life insurance, as established in Massachusetts, by Mr. Alfred L. Aiken, of Worcester, Mass., made at the last annual meeting of the American Bankers' Association at Atlantic City, N. J., the commissioner's reference to this subject is more than ordinarily interesting. He points out in this connection that the new law bearing on savings bank life insurance does not become fully operative until November 1st. The large shrinkage in the amount of new business written in 1906 is not considered by him as a menace to general prosperity in the insurance business. The matter of State supervision, with the possibility of abuse which always exists, is regarded by Mr. Cutting as having been called into existence because the need for it really existed, and the trend of such supervision seems to him as tending toward soundness and solidity on the part of the supervised companies.

Financial

The Crops

ACCORDING to late reports, the yield of wheat in the three prairie provinces of Canada will not exceed 65,000,000 bushels, against about 100,000,000 last year. The loss is due to a late spring and low temperature in July and August. In this country the crop is about 630,000,000 bushels. A final official report shows 405,000,000 of winter wheat. September's official report indicated a reduction of 6,500,000 from the previous estimate of the spring wheat yield. It also required a reduction of the corn estimate to a little more than 2,500,000,000 bushels. The same report disclosed an extraordinary decline of condition (from 75.6 to 65.5) in the case of oats. This reduces the crop estimate from 910,487,000 to 789,275,000 bushels, which falls below the crop of last year by 175,000,000 bushels. In Aroostook County, Me., noted for its yield of potatoes, only 8,000,000 bushels have been produced this year, against 17,000,000 in 1906. Owing to the high prices of cereals, it is estimated in the West that farmers' receipts for grain will exceed those of last year by $500,000,000. *The Financial Chronicle's* returns (completing the record to September 1st) make last year's crop of cotton 13,550,760 bales, or 73 per cent. of the yield of all the world's cotton fields. Our exports of cotton during the crop year amounted to $473,000,000. Secretary Wilson asserted at the convention of the cotton manufacturers, last week, that the product of cotton per acre in this country could be doubled by improved methods of cultivation which have been tested by the Department of Agriculture.

Trade Barriers

THERE was no address more interesting or suggestive, at the Cotton Manufacturers' Convention, last week, than the one made by Secretary Straus, a man of much experience in business. Pointing out that, while $613,000,000 was invested in the cotton mill industry, its exports were only $53,000,000, or one-ninth of the output and one-twelfth of the value of such goods moving in international trade, he said:

"The so-called yellow races are steadily increasing customers of your goods, and as they advance and prosper, provided we keep their good will, they will buy more and more of your product, and of other American manufactures. China took $20,000,000 less from you last year than the year before. How much of this was due to a 'silent non-importation agreement,' which was used so effectively by us preceding the Revolutionary war, and which is known by the modern name of 'boycott,' I leave you to figure out.

"If you build your tariff walls too high in this country, you will encourage high walls on the other side, which are known by the name of 'discriminating duties.' We are striking that wall now. No one foresaw this more clearly than President McKinley, and no one has shown the way more clearly how to overcome the existing and increasing obstacles that lie in the path of our foreign commerce. He recommended reciprocity and a revised tariff to meet the changed and changing conditions, in order to gain our proper share of the foreign markets."

Many treaties of reciprocity have been negotiated in the last few years, but in vain. The Senate will not accept them. There must soon be a revision of the tariff, and the new law should include definite provisions for reciprocal concessions.

....Our consular officers in Mexico estimate that $125,000,000 of capital from the United States has been brought into that country since 1902 and invested in mining and smelting.

....A new financial institution opened its doors last week in the old *Evening Post* building at the corner of Broadway and Fulton street. It is called the International Trust Company, and its capital and surplus amount to $1,000,000. The president, Howard Maxwell, was born and educated in Brooklyn, and from 1885 until 1902 was cashier of the Kings County Bank in Brooklyn. When the last-named institution went into liquidation, Mr. Maxwell became president of the Borough Bank. The vice-presidents of the new Trust Company, Henry E. Hutchinson and Oliver M. Denton, are the president and vice-president respectively, of the Brooklyn Bank. John S. Jenkins and Nelson B. Burr are also vice-presidents, making four altogether. The secretary, J. F. Bouker, has been for ten or twelve years connected with the New York National Exchange Bank (now called the Irving National Exchange Bank) of this city.

Survey of the World

Secretary Taft in China

Secretary Taft was cordially welcomed at Shanghai, on the 8th, by the Chinese and the foreign residents of that city. In the afternoon he spoke at the dedication of the new building of the Young Men's Christian Association. Afterward an elaborate reception was given to him by prominent Chinese merchants representing forty-five of the guilds formerly engaged in the boycott of American goods. Addresses were made by Chinese officials, and a silver punch bowl was given to the Secretary. For the first time in China at a gathering of this kind, Chinese women of aristocratic families were present, and they even presided at the tables where refreshments were served. In the evening, the Secretary was entertained by the American residents at the largest banquet ever given in the city. He made a long address, saying that he spoke as an American citizen and not as an officer of the Government. The United States, he declared, had no intention of selling the Philippines, being in honor bound to retain them or to give the natives their independence. Speaking of the "open door," he said that certain branches of American trade with China were sufficiently important "to make it incumbent upon the American Government to listen to the protest of every legitimate business man against diminution of or injury to this trade, or against political preferment for any competitor":

"We do not complain of loss of trade that results from the employment of greater enterprise, ingenuity or attention to the demands of the Chinese market, or the greater business acumen shown by our competitors. We would have the right to protest at being excluded from the trade of China by reason of our insistence upon the policy of the open door. The acquiescence in this policy of all the nations interested has been so unhesitating and emphatic that it is hardly worth while to speculate upon the probable action of the United States in case the interests of American merchants were placed in jeopardy, and how far the United States would go for the protection of its Chinese trade I cannot say. It is clear that our merchants are being roused to the importance of the Chinese export trade, and they would view with deep concern any and all political obstacles to its maintenance and expansion. This feeling is likely to find expression in the action of the American Government."

This trade of the States with China, he continued, had grown without Government encouragement and it had a sure future:

"The United States and other powers favor the open door, and if they are wise they will encourage the Empire to take long steps in administrative and governmental reform, the development of the resources of China, and the improvement of the welfare of the people. To do this will add to China's strength and position as a self-respecting government and aid her in preparing to resist possible foreign aggression in the seeking of undue and exclusive proprietary privileges. Thus no foreign aid will be required to enforce the open door and the policy of equal opportunity for all."

"China has no territory we desire, and she can have no prosperity that we will begrudge, nor will we resent any degree of political power or independence as an empire that is justly exercised. It is pleasant to note the improvement in our relations with China that have resulted from the efforts made by President Roosevelt. The harshness in the administration of our immigration laws has been mitigated without impairing their efficiency, and the boycott which resulted in more or less ill feeling and injured China as much as it did us is now a thing of the past. We gave evidence of our desire to do full justice

to China by the return of our share of the Boxer indemnity. In that case we did only what we should have done, but this nice sense of international obligation is not so universal that our act may not properly increase the friendly feeling between China and the United States."

At the close of his address, the Secretary commended the work of the United States court in Shanghai and the action taken by Judge Wilfley in procuring the disbarment of certain American attorneys there. The judge, he said, had made the flag stand for order and decency.

The Oil Trust Suit

Much additional testimony was taken last week in the suit of the Government against the Standard Oil Company. It was shown from the books that the dividends paid by the combination from 1882 to 1906 were $551,922,904. The profits exceeded $800,000,000. Having obtained the records relating to the liquidation following the decision of the Ohio Supreme Court in 1892, counsel for the Government asserted that by the evidence of these books the liquidation was shown to be a sham. This is an important point in the Government's case. The records are those of the trustees of the old Trust. In a statement for the press, Mr. Kellogg, who represents the Government, said that the trustees claimed, on March 21st, 1892, to liquidate the Trust by a division of all the stocks pro rata among the holders of Trust certificates, and that in fact, before making any division, they turned over to the Standard of New Jersey, the Standard of New York and other companies controlled by them, the stocks of sixty-four corporations, retaining the stocks of twenty:

"The stocks of these twenty corporations they divided into parts equal to the number of Trust certificates outstanding, and it appeared by the exhibit that on November 30th, 1892, and December 31st, 1892, a bare majority of the outstanding certificates, to wit, $49,461,900 par value, were canceled (out of the total issue of $97,250,000) and a proportionate amount of the stocks of the twenty sub-companies distributed to the persons who surrendered their Trust certificates. But it also appeared that the only parties who received such distribution were the trustees themselves —and three or four of their immediate associates. The trustees, therefore, instead of distributing the stock of all the companies, turned over sixty-four of them to companies which they controlled, and distributed the stock simply to themselves. The balance of the stock, belonging to the public, was retained by the trustees, so that during the years of the pretended liquidation, from 1892 to 1899, the trustees controlled all the corporations in exactly the same manner as before."

According to the testimony of witnesses representing independent producers, all the steamship companies carrying freight from this country to South Africa discriminate heavily in favor of the Standard, their rates for independents being more than double the rates paid by the Trust. Contracts were produced in support of this statement. It was shown that the pipe line crossing New York under Central Park, the existence of which appeared, two weeks ago, to be unknown to the Standard's officers, was bought by the Standard from the National Transit Company (a subsidiary) in 1892 for $55,000, and is carried as an asset at $64,000. For this line the National Transit Company has since paid rent which in one year amounted to $1,191,000. The city's franchise revenue from it is about $1,700 a year. Several large items in the books were not explained. One of these shows that in 1906 the Standard loaned $32,761,000 to "outside interests." Payments amounting to more than $20,000,000 during the last six years are recorded as having been made to P. S. Trainor by the Southern Pipe Line Company. For some years he was a purchasing agent of the Standard, buying oil at the wells and selling it to the refineries. There were no vouchers nor any record of repayments. Trainor, on the witness stand, said he had never received the money, had never given receipts for it, and knew nothing about the matter. He had had merely an oil account with the company. He testified that the price of oil had been fixed by Vice-President John D. Archbold at weekly conferences with himself. There was testimony that the railroad companies obtained their supplies of lubricating oil from the Standard, paying much more than the price charged by independent producers. The latter offered their oil at much lower rates, but could not sell to the railroads.——Mr. Kellogg was in conference with Attorney-General Bonaparte at Washington, on the 11th. It was decided that neither John D.

Rockefeller nor H. H. Rogers, nor any other of the prominent figures in the Standard should be called to the witness stand. It is said that while the Government has not yet decided to proceed against any of these men in criminal suits, it desires to avoid granting to them the immunity which they would acquire by testifying.

Results of Interesting Trials

At the end of the trial of Tirey L. Ford, chief counsel of the San Francisco street railway company, who was indicted for bribing the supervisors in the interest of that company, the jury disagreed, standing eight for acquittal and four for conviction. It is said that this result was due to the failure of the prosecutors to place Abraham Ruef on the witness stand. At the beginning they promised to do so, but it is reported that afterward he refused to repeat the confession which he had made to the grand jury. Ford will be tried again this week. Two of the former Supervisors, Andrew M. Wilson and Michael W. Coffey, have been indicted, their testimony at the Ford trial not having been in accord with their previous confessions, on account of which immunity was promised to them.——All of the fourteen men accused in the report of the investigating commission concerning the Harrisburg, Pa., capitol frauds have been indicted, and the trials will begin on January 27th.——Senator William E. Borah, of Idaho, was acquitted at the end of his trial for complicity in land frauds in that State. There was abundant evidence of fraud, but he was not connected with it by the testimony. Counsel for the Government argued that, as counsel for the Barber Land Company, he must have known of the frauds because all the transfer papers passed thru his office. In a statement to the public, the Senator asserts that the prosecutors were "actuated by corrupt motives," and adds the following:

"The stone and timber law is a piece of infamy as administered by the Government. The Government makes a man swear that he doesn't take the land on speculation, and the Department construes this to mean that he must not take it with a view of selling it. There is not a man in the Department of the Interior, and presumably none in the Department of Justice, but who knows full well that ninety-nine men or women out of one hundred take up these claims with no other view than to sell them as soon as they get title. Yet the Government continues to issue final receipts, and thus connives at the doing of that which it afterward seeks to visit upon some one as a fraud."

Immigration From Japan

Owing to a recent increase of immigration of Japanese laborers, our Government has enlarged the force of immigration inspectors along the Canadian and Mexican boundaries. Japan issues no passports for the United States to laborers, but does issue them for Hawaii. By way of the islands they enter Mexico or Canada, and the States are the destination of a large majority of those who land at Canadian or Mexican ports. Hereafter the borders are to be patrolled more carefully. The number of Asiatics who have entered at Canadian ports this year is 8,286. Of these, 4,811 were Japanese, 2,872 Hindus, and 603 Chinese. This is about twice as many as arrived in the corresponding months of last year. In the fiscal year ending with last June, 30,824 Japanese arrived at our ports. It became known on the 9th that the Government at Tokyo has recently imposed heavy restrictions upon the Japanese emigration companies, no one of which is now allowed to send more than thirty-five persons to Hawaii in a month, and not more than eighteen of these must be men. The Government is promoting large colonization projects in Korea and striving to direct emigration to that country. Competent observers assert that the opposition to the immigration of Japanese and other Asiatics is much more intense in British Columbia than in our Pacific Coast States. Canada will send to Japan Mr. Lemieux, her Minister of Labor, as special envoy to negotiate an agreement concerning immigration. It is understood, however, that Japan will consent to no written restriction, altho she may apply restraint by voluntary executive action. Some Canadians say Japanese are greatly needed for the construction of Canadian railroads.——Attorney-General Bonaparte decides that the British ships carrying coal for the battleship fleet are not subject to the alien tonnage and lighthouse dues. An attempt to col-

lect such dues has been made at certain ports. It was predicted that the transfer of the fleet would suggest a call for many new ships, and now the General Board asks that the appropriations for next year shall provide for four battleships of the most powerful type, three scout cruisers, six destroyers and four submarines. Much progress has recently been made in fortifying the entrances to Subig and Manila Bays, in the Philippines.

Various Notes

Since the 5th inst., President Roosevelt has been at a camp in the canebrake of Louisiana, near the Tensas River, and about thirty miles from Lake Providence. At last reports he had had no opportunity to shoot a bear. Before leaving Memphis he said that, with his approval, the Inland Waterways Commission had decided to call a conference on the conservation of natural resources, and that it would be held in the coming winter. It was at Memphis that he said the losses of innocent investors (due to the prosecution of wrongdoers) might be likened to those of persons who had innocently accepted counterfeit money for services rendered. The Government could not permit them to pass the counterfeit bills:

"Just the same thing is true when it comes to enforcing the law against business men of great wealth who have violated it. People are always beseeching me not to enforce it against them, because innocent outsiders may be hurt, or, only to enforce it with a gentleness that would prevent anybody, good or bad, from being hurt. It is not possible to comply with such requests."

——Postmaster - General Meyer will recommend in his report the establishment of postal savings banks.——An important decision concerning the right of a State to solicit immigration from a foreign country has been rendered by Attorney-General Bonaparte. The case in point was that of one Garcia, whose passage from Cuba to New Orleans was paid by agents of the Louisiana Board of Immigration, who had promised that employment as a farm laborer would be secured for him. Mr. Bonaparte holds that it is unlawful for a State, as for a citizen, to induce immigration by such promises. The decision causes much dissatisfaction in the South.——Premier Bond, of Newfoundland, has sought to make the new *modus vivendi* inoperative by orders regulating the sale of herring and forbidding the shipping of Newfoundland fishermen on American vessels within the three-mile limit. Senator Lodge asserts that the Premier has no authority thus to interfere with the *modus,* which, he adds, will stand until the whole matter can be submitted to The Hague tribunal.

Cuba

Complaint has been made to Governor Magoon by the railroad employees on strike because strike-breakers from this country have been allowed to land at Havana. They were told that the men in question could be excluded if it should be proved that they had come under contract. As all of the newcomers were well supplied with money and swore that they were tourists, they were not disturbed. It is understood, however, that they were sent by an American whose business is to furnish strike-breakers to order. A few of them have entered the service of the railroad company by way of employment agencies. All the trains are moving, and the strike appears to be broken. The island unions voted on the 8th to order a general strike, but on the following day this action was reconsidered.——It was officially reported on the 9th that there were no cases of yellow fever in Cienfuegos for the first time since the beginning of August.—The American Sugar Refining Company (the Trust) has recently expended about $20,000,000 in buying sugar plantations, its latest acquisition being the Colonial Sugar Company's property. It now controls at least 15 per cent. of the island's output of raw sugar.

The Shortest Atlantic Voyage

The Cunard turbine steamship "Lusitania" has succeeded on its second trip from England to America in accomplishing the purpose of the men who built it and the Government which subsidized it by cutting down the time of crossing to less than five days, and beating every other ship in average speed, in greatest daily run, and total time of trip. A still further reduction of time is expected in future voyages. From Daunt's

Rock to Sandy Hook, a distance of 2,780 miles, her passage, according to the official log, was 4 days 19 hours 52 minutes. The daily runs were: To Sunday noon, 41 miles; to Monday noon, 590; Tuesday, 608; Wednesday, 617; Thursday, 600; Friday, 324 miles to Sandy Hook, arriving at 1:17 a. m. The best run in one hour was 24.76 knots, and average speed for the trip, 24 knots. The Hamburg-American Liner "Deutschland" made a run over the longer course from Cherbourg in 5 days 11 hours 54 minutes. Her best day's run was 601 miles, and her average speed, 23.15 knots. The North German Lloyd Liner "Kaiser Wilhelm II" has a record of 23.58 knots average speed.

THE CUNARD STEAMER "LUSITANIA" ON ITS ARRIVAL IN NEW YORK HARBOR COMPLETING A RECORD VOYAGE.

The Hague Conference

The Hague Conference is now nearing its close. This week Wednesday there will be a special sitting at which Count Torrelli, of Italy, and Señor Esteva, of Mexico, will sign the arbitration treaty just concluded between their respective governments. This Friday a plenary sitting will take place, and another one next Monday. The closing session will occur on the 24th, when President Nelidoff will propose sending a cable message of appreciation from the Conference to President Roosevelt, who proposed the Conference, the Czar of Russia, who convoked the Conference, and Queen Wilhelmina, who invited the Conference. It is generally believed that Russia and her European allies were trying to bring it about that President Roosevelt should get no credit for his part in convening the Conference, in order that the Czar would have the full credit of calling the First and Second Conferences, and it would be easier, therefore, for him to continue to convoke future conferences, instead of having the conferences convoke themselves. Fortunately this plan was nipped in the bud by the friends of President Roosevelt. During the week the Anglo-American project for an obligatory arbitration treaty won a great victory in its committee, tho Germany, Austria and several of the smaller European states opposed, but later in the week the Conference in plenary session refused to express any opinion on the sub-

ject, except by unanimous vote, and the only plan they could all agree upon was:

"The Conference unanimously favors:

"First—The principle of obligatory arbitration.

"Second—That certain differences, especially those regarding the interpretation and application of conventional clauses, are susceptible to being submitted to obligatory arbitration without restriction.

"The Conference unanimously proclaims that, while a convention on the subject was not concluded, the differences of opinion had more of a juridical character, as all the states of the world, in working together for four months, not only learned to know each other better by getting closer together, but developed during this long collaboration high ideals for the common welfare."

Mr. Choate regarded this as a distinct retreat from the committee's action, so America abstained from voting on the proposition altogether. In his argument in support of the American vote, Mr. Choate declared

"that nothing had shaken his belief that an international bureau to act as chancellary of the Court of Arbitration of 1899 should be instituted as soon as nine Powers adhered to the proposal. Although the immediate results of the Conference were distinctly limited, he sincerely hoped that each succeeding Conference would take as its point of departure the position reached at the preceding Conference. Thus by successive steps results would ultimately be obtained that in the beginning had appeared quite impossible.

"We regard the present resolution as a very decided and serious retreat from the advanced position in favor of obligatory arbitration, which the committee has already reached, and one which in our judgment cannot but retard the imperial progress of the cause of arbitration in general."

Marchall von Bieberstein, the first delegate of Germany, who led the attack on obligatory arbitration, said that Germany could not agree to declare beforehand to submit any one subject to arbitration with every other nation, altho he admitted that Germany had concluded some twenty arbitration treaties with the different Powers. His idea was that if the nations continued to make special arbitration treaties with each other, universal arbitration would be brought about in that way sooner and more safely than thru a universal arbitration treaty. The Arbitration Commission has reported almost unanimously in favor of a permanent court of arbitration. This, however, does not mean as much as it sounds, for in Sir Edward Fry's resolution the court cannot be constituted until the Powers have decided upon the method for the selection of the judges. This question of the Permanent Court will come up in plenary session for its final approval this week. General Porter's proposition that debts shall not be collected by force until after recourse is had to arbitration has past its commission and will undoubtedly go thru the plenary session unanimously. It is the one great pacifist victory of the Conference. In the questions relating to the improvements of the conditions during war, the convention on mines and the convention defining the rights of neutrals have been adopted unanimously. Next March Mr. W. T. Stead is to organize a peace pilgrimage thru Latin-America. Starting from England the pilgrims will go to New York, thence to Mexico and then to all the countries of Latin-America, spreading the gospel of peace and expounding the work of the second Hague Conference. It is said that Drago (Argentina), Barboza (Brazil), Bourgeois (France), Martens (Russia), Baron d'Estournelle (France), Lord Weardale (England) and others approve the scheme.

The Moroccan Turmoil

Great Britain has arranged for the release of Kaid Sir Harry MacLean, who has been held captive by the brigand Raisuli. Raisuli at first demanded a ransom of $550,000, revenge upon his Moroccan enemies and the appointment to the governorship of a large district in northern Morocco. These extravagant terms have been materially modified. He will receive $150,000 ransom and the British Government will protect him and his family against punishment. Great Britain's advance of the ransom will be guaranteed by Sultan Abd-el-Aziz. Mulai Hafid, brother of Abd-el-Aziz, who is contending for the sultanate, is reported to have divided his troops into two parts. One under the command of Mulai Rachid to go to Fez in order to proclaim Hafid Sultan there, as has already been done in Marakesh. The other division is to march on to Rabat to capture the Sultan. On his

journey from Fez to Rabat Sultan Abd-el-Aziz received the allegiance of the tribes along the route, and at Rabat he gained the esteem of the Orthodox Mohammedans by complying with the traditional ceremonial in all particulars and offering a white bull as a sacrifice at the tombs of the holy men outside of the city. He also endeavored to gain the support of France and Spain by an elaborate entertainment of the French and Spanish Ministers in Rabat. The French Minister to Morocco, M. Regnault, General Liautey, who has been in charge of the French troops occupying Udja, and Admiral Philibert were received in audience by the Sultan Abd-el-Aziz in great state at the Kondibat Palace, Rabat. M. Regnault presented his letters of credence, and expressed the expectation that the Sultan would co-operate with France in the execution of the reforms provided for by the Algeciras Convention. The Sultan in his reply expressed his entire confidence in France and a willingness to collaborate with her in all matters concerning the common interests of the two countries. At the conclusion of the audience M. Regnault, in the name of President Fallières, conferred on the Sultan the Cross of the Legion of Honor. The acceptance of this Christian emblem by the Commander of the Faithful has still further alienated his Mohammedan subjects. In an interview with French newspaper men the Sultan said that he thought his brother, Mulai Hafid, had been misled by the tribes at Morocco City, and that by the aid of God he would soon see his error and return to his allegiance. The reports of the progress of Mulai Hafid do not, however, give any apparent ground for this confidence. The Governor of Mazagan, a seaport on the Atlantic, seized a number of rifles, machine guns and a large amount of ammunition, which he has loaded upon camels and sent to Hafid. Kaid Anfloos has occupied Mogador in the name of Mulai Hafid, and the Governor, Bargash, has escaped on board a French cruiser. One of Mulai Hafid's armies, with four pieces of artillery, has arrived within 20 miles of Casablanca. It is also reported that since the departure of Abd-el-Aziz from Fez, the Ulemas or Mohammedan doctors of law, have declared in favor of his brother, Mulai Hafid.

Kongo Annexation

The Committee of Eight appointed to prepare a plan for the annexation of the Kongo Free State by Belgium, has completed its bill, and it is now under consideration by the Parliamentary Commission. Since the eight members of the committee were all appointed by Leopold, four in his constitutional capacity as the King of the Belgians and four in his autocratic capacity as sovereign of the Kongo, the bill naturally was strongly in favor of the King's prerogatives, and in its original form it could not even pass the Parliamentary Commission, to say nothing of Parliament itself. The principal provisions of the bill are the following:

Every Colonial possession of Belgium shall have a judicial personality, distinct from that of the mother country. Such possessions shall be governed by special laws. The legislative power in the Belgian Colonial possessions shall be exercised by the King in the manner laid down, and save for the exceptions prescribed in the present law. The executive power shall belong to the King. No act of the King shall have effect unless countersigned by a Minister, who thereby becomes responsible for it. The budget of revenue and expenditure shall be determined annually by the King. The salary of the Minister of the Colonies and the expenses of the Central Colonial Administration in Belgium shall, however, form a special budget, which shall annually be submitted to the Chambers. Decrees authorizing loans chargeable to or guaranteed by the Colony, and works to be paid for out of extraordinary resources shall be issued only on the proposal of Ministers in council. The judicial authorities shall be appointed and removed by the King. Their removal shall take place only upon the proposal of the Governor-General for reason provided for by decree, and with the assent of the Supreme Court of the Colony. A report on the administration of the Colonial possessions shall annually be submitted to the chambers in the King's name. This report shall contain all information necessary for the enlightenment of the representatives of the nation as to the political, financial, economic, and moral position of these possessions. There shall be a Minister of the Colonies, who shall be appointed by the King. He shall be a member of the Council of Ministers. The Colonial Council shall be composed of nine members appointed by the King. The Council shall deliberate upon all questions submitted to it by the King. Save in cases of urgency and in those provided for

in the present law the Council shall be consulted on all projected decrees.

If it should be adopted in this form, Belgium would have no control over the finances of the colony, and the Colonial council would be independent of the Government, subject only to the caprice of the King. The bill takes no notice of the interests of foreigners, altho the Kongo, by the treaty of Berlin, was placed under international protection, and the rights of the natives have no safeguard. The Belgian Government would not be able even to criticise in advance the acts of the Colonial Council, and their only power would be a belated censure. Parliament must either accept or reject the Treaty as it stands, for it cannot be amended without a renewal of the negotiations. Since it is opposed by all the radicals of the Chamber, and even by M. Beernaert, the Minister of State, it is certain to be rejected, and a stubborn conflict will ensue between the King and his people. The recent action of King Leopold in transferring the Crown Domain, including no less than one-sixth of the territory, to a limited liability company of his own creation, has aroused a great deal of bitter feeling against him. It has been estimated by Professor Cattier that the King has personally derived $15,000,000 from the Kongo revenues within the last ten years, and that he has purchased, within and around Brussels and Ostend, 117 separate properties valued at over $3,500,000, besides estates in France and elsewhere. Mr. E. D. Morel, of the Kongo Reform Association, argues that since these revenues have been devoted to private property, instead of being employed for the benefit of the State, King Leopold has violated not only the Berlin act, but also the anti-slavery clauses of the act of Brussels. The Kongo Reform Association is endeavoring, by means of public meetings, to induce Great Britain to interpose by right of her authority as signatory of the Berlin act.

The Awakening of China

The Empress Dowager continues her remarkable series of edicts, which, if carried literally into effect, would result in reforms so violent as to be practically revolutionary. China is declared to be a constitutional monarchy, a national parliament is to be assembled, the distinctions between Manchus and Chinese are to be obliterated, feet binding is to be abolished, opium prohibited and compulsory universal education to be established. Local authorities are ordered to see that the people are instructed in the principles and methods of constitutional government, so they may be prepared to exercise the rights of local self-government and to elect their representatives. The Board of Education is directed to compile and publish textbooks for the instruction of scholars. This board, on October 13th, conferred degrees on the Chinese students who had been educated in foreign lands, those of American training receiving the highest honors. The Chinese Government has decided to support 160 students annually in the colleges of Tokyo, Japan, to take full and thoro courses. The short and superficial courses have proved unsatisfactory and will be discouraged. It was freely prophesied that the anti-opium decree issued last November ordering public officials to cease the use of opium within six months would prove to be merely "a bit of Chinese bluff," but it seems that the Government is in earnest about its enforcement. An imperial edict has suspended Prince Chuan, Prince Jui and others from office for failing to cure themselves of the habit. Other officials have been warmed and allowed a further period of probation. Officials over sixty years of age who cannot break off the habit will be treated leniently. Both the Emperor and Empress Dowager are reported in a dangerous state of health and the death of either or both is regarded as imminent. Under these circumstances the question of the heir to the throne has become a matter of concern and the object of palace intrigue. There are three prominent candidates, Tsai Feng, commonly known as Prince Chun; Pu-Tai, known as Prince Kung, and Pu-Lun. The present Emperor, Kuang-Hrü, is childless, but the three are grandsons or great-grandsons of his father, the Emperor Tao-Kuang. The first of the candidates, Prince Chun, is a scholar, and has the support of the venerable Viceroy Chang, who now is the chief rival of the ex-Viceroy Yuan Shih-Kai in the management of Chinese affairs.

Ibsen's Women

BY ALLA NAZIMOVA

[From our monthly notes on the drama our readers are familiar with the career of Madame Nazimova, who first came to New York three years ago with a company of Russian actors and played in a little rented hall on the East Side to audiences composed in part of the people of the neighborhood, in part of lovers of art and literature from other circles who appreciated her interpretations altho they could not understand the language. Last year she learned English and appeared on Broadway in Ibsen roles with unprecedented success. There are now many readers of Ibsen thruout the country, and we believe they will be interested in her views of the characters she has impersonated.—EDITOR.]

YOU do not have to go to the theater to meet Ibsen's women. They are to be found everywhere. You may have met Nora on the street or taken Hedda Gabler down to dinner. But you did not recognize them because Ibsen was not at hand to introduce them to you. That is why you have to go to the theater to see them. Just as the stage is merely a room with one wall gone, so Ibsen opens a window into the soul of his characters thru which you can look and see them as they are—and often see something of yourself, too.

It is a mistake to talk of "Ibsen's heroines." Ibsen has no heroines; he has women. Shakespeare has heroines. There is a simplicity and grandeur about them that make them seem very remote from us and very difficult for us to interpret and present on the stage. Sometimes when I read Shakespeare I think it is all so simple and plain that there is nothing to study in the parts. I have played them all, Rosalind, Juliet, Desdemona and the rest, and they seemed to take well, but I have a fear that I was a failure in them. Shakespeare's women seem more like types, ideals than real persons. They are clear and definite, either good or bad, coquettish or demure, vixenish or humble, and what they are at the beginning of the play that they stay till the curtain falls.

Perhaps women really were like that three hundred years ago and Shakespeare drew them as he saw them. But the position of women has changed so much since then and we ourselves have changed. Our Russian women three hundred years ago were good housewives and slaves and nothing else. Now, see, they are leaders of the revolutions. The modern woman is more complex and she lives in a more complex world. She knows more; her nerves are exaggerated. Little things loom larger in our lives. Our characters are apt to be swamped in the mass of petty details.

Now Ibsen's women mean more to us of today than Shakespeare's, because they are complex instead of primitive. They are in a way difficult to understand, it is true, not because they are artfully mysterious, but because they are real and therefore like all real people not to be classified by a simple formula. They are full of the pettinesses, the peculiarities, the inconsistencies, the contradictions that we find in everybody we know intimately. That is what makes them so fascinating; that is why we want to learn more of them. Take Hedda, for example. She has a little of all women in her.

She is weak and strong, capricious and determined, petty and powerful, yet always herself, always real. She is true to life. Ibsen did not exaggerate her. No, he had to make her smaller to get her on the stage.

I know that some critics, especially William Archer and John Corbin, have found fault with my interpretation of Hedda Gabler on the ground that I exaggerated her physiological condition, but I cannot change my conception of the part to suit them. Her condition does

Photograph by Falk.

NAZIMOVA AS NORA HELMER IN "THE DOLL'S HOUSE."

not change Hedda's character, it only serves to accentuate her natural peculiarities and make them more dramatic. Ibsen might just as well have left that point out, only it would have been more difficult then to make the character effectual.

Nora, in "The Doll's House," is equally real, but altogether different. It is curious that men are more interested in Hedda; women in Nora. I played them alternately last year and I could have told by looking at the audience thru the peephole in the curtain which play was to be given, because there were so many more men in the audience on the Hedda nights.

But all men do not hate Nora. Some understand her and sympathize with her point of view. They realize that her action in leaving her "doll's house" was forced upon her. I received a letter from a man, who had seen "The Doll's House," a beautiful letter, that I prize very highly for it shows what an influence the drama can have on people. He thanked me for having taught him a salutary lesson which would, he thought, be the saving of his married life. He realized that he, too, had been living in a doll's house, that he had treated his wife as a child and a plaything, and he said that he was going to change it all and make a real home and his wife a real wife. I wrote to him that I was glad if I had helped him. But I do not know, after all, that I did help him. Can a man reform his doll's house? Does it not have to be done by the woman herself? Is not that the whole lesson of the play? The husband may spoil his wife but he cannot make her into an independent woman, an individual standing upon her own feet and knowing herself.

Many times people ask me, "Why did Nora go away? Was she not happy? Did she not have a kind and indulgent husband? How could she leave those children whom she loved and who loved her?" She had to go away to grow up. She could not help herself so long as she remained in those surroundings. She had to get out of it all. Her children were better off without her. She saw that. What could she do with them except to spoil them as she had been spoiled?

It was the misfortune of Nora that she had been made into a doll thru her training first by her father, then by her husband and last by her children. She has brains. There is the material for a good woman in her, if she has a chance to develop. See what a friend she is to Dr. Rank! There is hope for Nora. She can change. There is no hope for Helmer. How can he change when he thinks everything he does is just exactly right? She could not help him; he could only hinder her. That is why she never

came back. How could she? If she came back it would only be to fit into her old place, to take up her old role, and she had already grown too large for that when she past out of the door.

Nora goes out of a man's life forever as she closes the door behind her; Hilda comes into a man's life to influence and inspire him when as "the younger generation" she comes knocking at the door of the Master Builder. She had nurtured her ideal in her girlish imagination from the day ten years before when he

Photograph by Alice Boughton.

NAZIMOVA AS HILDA WANGEL IN "THE MASTER BUILDER."

had looked down upon her from the top of the steeple. It was only a village church but it seemed to her so high, reaching into heaven, and the man who could climb it as one of the gods.

As she grew up and her ideas changed, her conception of him grew also. When she came to find him a timid and prematurely aged man, afraid of his clerk, afraid of public opinion, afraid of his work and of himself, she was disappointed in everything, everything. Then she sets herself to make him over into her ideal. The little scene in the third act between the two is very, very deep. Hilda listens while Solness tells her as tho they were his own the thoughts she has inspired in him. She has made him believe in himself. So she triumphs even tho he fails. At the last he is hers alone, and when he falls she shouts triumphantly "My—my Master Builder."

It was really Hilda's fault that she was disappointed in Solness. She expected too much. She had thought too much about him. When she saw him he seemed so little, just as everything seems little to you when you go back to the town where you were born, the houses are lower and the streets narrower—even the people seem smaller.

I remember how it was with me when I was a little girl. My father left me with a peasant family in the Alps near Zurich. The woman I called "Mother" I remember as a big, bony woman, very tall and stiff, with straight hair and stern mouth and severe eyes. Never a kiss, never an embrace, never anything but "Come!" "Do this!" "Comb your hair." "Go to school." "Make the beds." My father came when I was eleven and I begged him to take me back with him to Russia, to Yalta where our home was.

But the longing to see Switzerland once more, the big mountains and the big woman never left me. And always I thought of her as tall and bony and stern of voice. After ten years I went to see the place of my childhood. When I got to the station I took a cab to drive up the mountain. It was nine o'clock in the evening when I got there and I rushed to the door and knocked. It was opened and I saw a little old woman in the passage. Looking down to her I said, "May I see 'Mother?'" And she answered in a mild and pleasant voice, "I am 'Mother.'" But she was not the tall tyrant who had dominated me for years, and haunted me in my imagination; just a commonplace, kind-hearted little woman. If you could recall your own experience of this kind you will understand the way Hilda looks at Solness in the first act. She finds herself far cleverer than he and that too is a disappointment. The things that worry him

seem to her too little to bother about. She is furious because her ten years of waiting and longing have been wasted.

Hilda is not a rival of Mrs. Solness. She meets him on another plane entirely. It makes no difference at all to her that he is married. Notice how annoyed she gets whenever she sees that Solness is thinking of her as he does of his wife or Kaia. I never could detect anything physical in Hilda's part. Mrs. Solness is intensely lonely, as lonely as the Master Builder, and like him thwarted in not accomplishing her life work. She is absorbed in the past, her lost children, her lost hopes. Of all Ibsen's women Hilda Wangel is the one I like best to play, and I am glad that this year we have been able to put "The Master Builder" on the American stage.

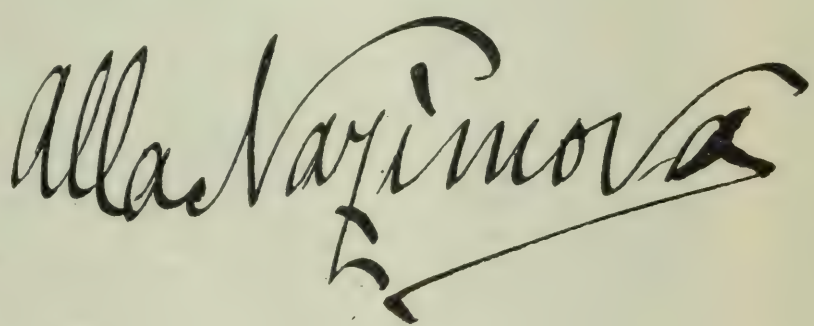
NAZIMOVA AS REGINA ENGSTRAND IN "GHOSTS."

In "Ghosts" I always play Regina instead of the more important part of Mrs. Alving. I do not think I could play Mrs. Alving yet. But Regina is an interesting and important part, altho she only has about twenty-five lines to say. I went to the theater in Vienna on purpose to see how Regina was played before I began to study the part, but Mrs. Alving was so beautiful that I did not notice Regina at all, and when I came home I could not tell a thing about her. But Regina has a great deal to do on the stage in the course of the drama. Do you remember how she sits on the edge of her chair and sips champagne, visibly enjoying every drop as it goes down? She, like Hilda, is full of

the spirit of youth, but she is the opposite of Hilda in character. Hilda is for all that is highest and purest in life. Regina loves the *frou-frou* of silk and the sparkle of wine; she longs for a big house, a mad life and a gay time.

I wanted to play Regina for my graduation piece at the dramatic school at Moscow, but they would not let me. "Ghosts" was at that time prohibited by the censor, because it reflects on the Church. The character of Pastor Manders is a silly one, and they would not stand that. There is the difference between Russia and America. In Russia you can make love on the stage in the wildest way, but you must not touch on politics or religion. Here you have to be very conventional in lovemaking, but you can say anything you please about politics and religion. Since I could not have Regina I took "Little Eyolf" for my graduation exercise. Since then I have played Hedda, Nora, Hilda, Regina, Petra, Irene, almost all the best-known Ibsen women, except Rebecca West in "Rosmersholm." That requires a great actor in the part of Rosmer or it is a failure; it is like "The Master Builder" in that respect, but Nora or Hedda can carry the whole play by themselves if necessary. "The Lady of the Sea" is a great play to read, but not to act. It is too long drawn out and tedious. You could cut out whole scenes and not miss



Photograph by Bangs.
NAZIMOVA AS HEDDA GABLER.

them. Petra in "An Enemy of the People" is the most advanced of Ibsen's women, but a straightforward character, easy to act. Irene in Ibsen's last play, "When We Dead Awake," is a symbol, an abstraction. She is a ghost, no, the photograph of a ghost. The audience is never for a moment deceived into thinking that she is a real woman. In this play Ibsen has rehearsed all his thoughts. It is a dramatized *résumé* of his life.

Is Ibsen difficult to understand, as some people think? Here in America you always say: "Ah, Ibsen," with a little side smile. But see how the people turn out to hear him when they get a chance. I think the fault is in making a mystery of him. He must be played simply, then people recognize the truth of the pictures he presents. I do not think any other writer understands the soul of women as he does. He picks out some little thing that you do not notice and opens it out and shows you a whole world in it. There is no end to Ibsen. But we are afraid to see the things as they are.

We shut our eyes that we may not see what we do not like. Ibsen forces them open. That hurts. Then we say we do not like Ibsen, or we pretend we do not understand him.

NEW YORK CITY.

October

BY FRANK CRANE

O DEAR, clear October,
Cold hand and fire heart,
When there's frost on the meadow the hearthstone's warm.

O clean, strong October,
You're bonny and you're wholesome,
And I'd rather kiss your cool lip than June's warm mouth.

O ruddy-cheeked October,
Blue's your eye and fresh like morning,
And your hair blows like the sunset with a yellow maple flame.

O night of October,
You smell all of nuts and apples,
And I see the moon like fire between the haystack and the barn.

O wayward, sweet October,
There's wine and there's cider,
And the sun strolls thru the day with his eye half shut.

Then love me in October,
When the air is like champagne,
And the life that's falling in the leaf is rising in the blood.

WORCESTER, MASS.

Working with the Jerries

BY

HANSCOM PACKARD

PHOTOGRAPHS BY
BERTRAND H. WENTWORTH

THE doctors advised two years out of doors; and as I then attached much importance to the opinions of doctors, after a long period of convalescence, I found myself in Arizona, a tenderfoot in the saddle and in camp. This was all new and interesting, but unproductive. As my purse was running low, I improved the opportunity to ride over to California as the guest of the superintendent of the A. and P. I knew that if I did not find work promptly in California, I would have to beg, borrow or steal means for my next railroad journey.

Two months went by — two months of fruitless search for something suitable to do in the open. I at last reached the conclusion that if I persisted in my determination to live out of doors to the end of my allotted two years, in a self-sustaining way, my available equipment consisted of youth, weight and muscle. One must have an end of worries—I put a stop to mine by deciding that I would work with my hands at the first opportunity. The first opportunity came in the shape of a letter something like this:

"JOE."

DEAR SIR—Replying to yours of ———, I do not know of anything in this department that would suit you at the present time. However, if you choose, you might apply to the nearest section foreman, and when he has a vacancy he will perhaps give you a trial.

Yours truly, JOHN MCNEIL,
Road Master.

I sought out the section foreman at once. It was dark when I found him that Saturday night; and, missing his chance to see my soft hands, he gave me full credit for weight and strength, and told me to report at the section house on Monday morning at 6:30.

On Monday morning we got in the handcar and started off. This little ride was too soon ended, and the car having been removed from the rails, and a shady place found for the cask of drinking water, I was assigned a place to work with Jack as a partner in tamping. Jack, like many another one rubs elbows with in the West, had "seen better days back East." He had long experience at track work, had been a switchman, had even "bossed a crew." Conscious of his superior attainments, he proved a willing teacher, and from his frost-fringed lips, foul with tobacco, I learned the elements.

Before noon I had the knack of tamping. This would seem less a boast if you knew how long a forenoon my first was. Indeed, the time never came in my time of service on the track when the sun did not seem a sluggard. At length the lunch hour came—gratefully enough to me. With our backs to the sloping wall on the shady side of a cut we emptied our dinner pails, lighted pipes and discussed the topics of the day.

Once more the sun resumed the snail's

pace toward the mountains. Wearily I listened to Jack's incessant reiteration of the morning's lesson and to his coarse stories. The long afternoon wore slowly away, and at the end of the longest day I ever knew the handcar was re-

TYPICAL SECTION LABORERS' HOME.

placed on the rails, tools were gathered up and we raced home, as tired workhorses race for their stalls—my fellows to the oblivion of the day laborer's perfect sleep and I to my first night of torture.

Inured to voluntary hardship tho I was, sound of body and well trained, my nights were nights of exquisite pain. My arms were like strange appendages of aching lead; nightmares trampled my bruised body; I groaned in restless sleep when I slept at all; and when the heartless alarm clock sounded at five, like Rip Van Winkle, I awoke to a painful uprising.

Well, that would wear off; and so it did each day as the sun warmed me and the exercise limbered me up. My second day brought new lessons, less patiently taught by the Irish boss. I had not imagined it could be difficult to throw dirt from the foot of an eight-foot embankment to the rails at the top. John was beginning to wonder what sort of a man his new man was. My inaptness in throwing dirt was opening his eyes. Some time later our Dusty Rhodes discovered that John, at this stage, was not quite clear in his mind as to whether I was a *bona fide* man needing work or a "spotter" for his roadmaster.

This doubt did not spare me his curses. Of these I had my share. One weary day when set to work by myself, the boss descended upon me with a string of disciplinary oaths, ending with: "Any ordinary man would have done twice as much as you have in half the time." I calmly replied that I supposed he would have discovered before then that he did not get any ordinary man when he hired me. With such a soft answer it was sometimes possible to turn away his wrath.

At the second noonday lunch my

mates broke thru their reserve and mine, and frankly "sized me up." They had not been deceived as to my character, nor did they fall into the error of supposing that I intended to deceive them. The man who, at twenty-six, has pushed a pen over mahogany counters for ten years will find no suit of jeans old enough to disguise the stamp of his sedentary life. The eyes of gentlemen in fine clothes may indeed pass him over; but the man of overalls looks at the man in overalls with the same keen scrutiny that we all bring to bear on those who come before us in the character of equals. The hands unused to manual labor will not escape his notice; the facts of birth and breeding, if they exist, he will see.

candor and my reserve alike, and admitted me to the full fellowship of the dinner pail.

There was no other opportunity in my day for gratification of the social instincts. When, after weeks of intense physical pain, where I had expected days, I hardened at last to the work, the work was not too unpleasant. In my physical wellbeing, I rejoiced as a strong man to run a race. Still, there was no margin, no available hour for books or people. The dinner hour was the only social hour; and as the social need is an insistent one, I made the most of the fellowship of my mates; not at first without some misgiving that it would be difficult here "in the midst of the crowd"

SECTION GANG READY TO START OUT.

In response to their not unkindly questions, I owned that I was accustomed to doing work in some respects easier and better paid; that I was doing this work for a reason very like their own: to get a living for a time. They respected my

to keep "with perfect sweetness the independence of solitude"; "to keep a few friends and these without capitulation." But my mates were men, and with such the uncompromising attitude is respected if at the same time it be not unfriendly.

Their fellowship was well worth while. Men who labor obscurely and faithfully, with little hope of advancement, are men of character, even if their tools be of the crudest, their tasks the most humble. For me the best compensation was the lifting of the scales from my own eyes, the new power of seeing manhood and worth where it existed, in spite of outer coverings good or bad; the broader and deeper sympathy with mankind.

What of my mates? I can best tell you what qualities in them enlisted my interest by telling you for what I remember each of them.

The boss was an Irishman, a "single buck" who had drifted all over the West, usually on construction work. He was a past master in driving his men. He organized his force and plotted his work in such a way at all times that no man might ease up without an evident falling behind. He was without faith in his men. He always assumed that they would shirk if not berated. The contrary was true—they would not have shirked if they had not been berated.

As it was, his very hardness served to build up an *esprit de corps* among the men against him; and it became true that in his presence he must be watchful. But when he went in to see the roadmaster (or for a day's dissipation) his crew, being left in charge of one of their number, worked hard for the credit of their mate.

I know several section foremen who have a different way. One of them is an Irishman of fifty-five, whose every tone expresses kindness and trust in his men; and every hand responds as readily to his direction as his own. Another is a German. You will know him here by the hands of exquisitely modeled strength. The same kindly tone was in his voice; his orders were directions merely; and tho his crew were Mexicans, when he called them off at night every man carefully finished what he was about before leaving his task.

But whatever John lacked as a boss he was a good track man. His curves were right, his lines were true, and no defect of roadbed on his section escaped his vigilant eye. If he did not spare his men, neither did he spare himself. The best that can be said of him is that he had a true workman's pride in his work.

A SECTION CREW AT WORK.

THE BOSS TAKES A HAND.

If our railroad presidents were as faithful to their trusts as John was to his, we would ride over better roadbeds than we do now.

The fellowship of our crew was not fully enjoyed by my working partner, for he was stigmatized as a "company man." Jack was aware that a vacancy was soon to occur in the foremanship of a neighboring section. His zeal was boundless. He worked himself—and me—nearly to death in a vain attempt to win the coveted prize. He was unfit, and conscious of his unfitness, but more anxious to conceal his deficiencies than to correct them. Dissipation, long since overcome, had dulled him beyond all hope of progress. When the place was filled Jack quit—and I had relief from the unspeakable filth of his daily talk. *That* I wish I might altogether forget; but I shall always remember that he had courage to avert what might have been a disaster thru my fault. When I was a green hand I left a clawbar standing next to the rail as we made way for a train. Jack rushed across the track to knock it down, with little time to spare.

Charlie was the plodding and unlucky member of our crew. We all knew, except the boss, that he was violating a rule of the company by "backing" instead of boarding. He knew his own poor measure; his face was as hopeless as a Millet peasant's; but he gave his poor best faithfully and without complaint.

One day we had to unload a car of ties that was left on the main line, in rush time between trains. It was very hot, and when Charlie collapsed in a kind of faint, it suited Dusty Rhodes' sense of humor to tell me just then, when I was feeling a bit shaky myself, that I would be next. I offered to wager Dusty a ride on the handcar that he would fall first. I would have lost, for eventually I succumbed to the backbreaking work of weeding, and was compelled to find cooler air, if not easier work, in an Arizona lumber mill.

The warm place in my heart is for Rhodes. Reticent, resigned rather than

content, burdened with regrets for misspent years—he, as I believed, while not scorning nor shirking his present work, was looking forward to better things, to retrieving lost ground.

I owe him a debt of gratitude. Without any ostentation of kindness he was always managing, unobserved, to take a share of my work. How often in those hot days when my strength was nearing its end did he contrive to work the joint (rail length—the unit of work) next to mine, and to smuggle thru in filling, or dressing, or weeding enough work on my joint to enable me to hold on. Unsolicited he kept this up at every opportunity—the silent expression of a genuine sympathy which was best pleased if unnoticed and unthanked.

Joe enjoyed the distinction among us of being the only man who ever shamed

A GERMAN SECTION FOREMAN.
And the smile which accompanies his orders.

the boss into taking a hand. We were loading ties on a push car. As the load grew high, Dusty and Charlie threw up a tie with a heigho heave! Then Jack and I with a heigho heave, and then Joe came up—alone—and threw his tie up with as lusty a heigho heave as if he were a dozen sailors instead of one. When he came up next time the boss was at the other end of his tie.

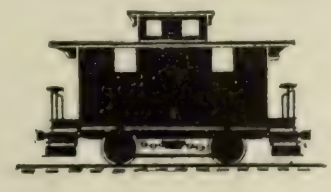
Joe was the life of the dinner parties. He viewed everything from an angle of his own, and found humor in everything. He came to America to escape service in the German army. A rollicking variety of experience as a drifting sailor and laborer brought him finally to his present post, when he married, and began the payments for a little home. On the morning of his wedding anniversary we asked him what he had given his wife.

"I gave her the promise of a sewing machine next year," said he, and when the laugh had gone round, "I have given her that same present for three years now." I asked him how Gretchen liked her present. "She knows she will get it some day; she don't complain," was his sober answer. I tried to find Joe when I went over these old scenes to assist the photographer in finding typical views for these illustrations; but Joe had risen from common Jerry to section foreman, and from his little salary had saved enough to buy a ranch somewhere. This was his old dream—and Gretchen doubtless has her sewing machine now.

If a crisis were to be met Joe was the man. To tell you of the incident by which I best remember Joe, I shall have to explain that when track is being surfaced there is an inclined rail between the levels of the old and new surfaces. When this rail is temporarily tamped up and made secure for trains, it is spoken of as a "runway." The careful foreman makes sure of good runways at hours when trains may be expected.

On this occasion an unheralded special surprised us before the runway was safe. So many spikes had been drawn that the rails were likely to spread; a full length of rails or more carried ties which did not touch the ground.

Under the excited commanding oaths of the foreman dirt was hastily thrown in and tamped under the ties, while Joe



LOADING THE PUSH CAR.

followed with spikes and maul. Our work was rush work easily enough completed; but Joe had to work away sending spike after spike home till the last. It is no easy feat, at best, to send spikes home in a way to make the rail fast exactly at gauge, clinching the spike by a peculiar turn of the last stroke. No appearance of excitement, scarcely a suspicion of hurry, marked Joe's movements. In the face of that locomotive rushing down upon him, its roar ever-increasing in his ears, knowing that a false stroke or two might mean a ditched train, he worked steadily on, in the utmost coolness, and with faultless precision, until the instant came when another stroke would have meant death to him. The runway was safe; and still without excess of hurry Joe stepped aside, without perceptible change of countenance, with no glance betraying anticipation of praise—utterly unconscious of his simple heroism.

Such was Joe; contented, simple, straightforward, blessed with a perfectly normal healthfulness of heart, mind and body; and to the cool nerves and warm hearts of hundreds of such faithful Jerries as he do we owe our security every time we travel—to these true knights of the road, to whom, for all that, their work is as hateful as the like work would be to us, were we in their places.

GRANVILLE, MICH.

The Negro and Justice

[The white woman who writes this article is a Northerner, now a resident in the South. Naturally it would be unwise to print her name.—EDITOR.]

IN respect to its history, the negro question has little in common with the race's famous representative in fiction who "jes' growed"; wherever one may incline to place the responsibility for its birth, the fact remains that since it was begotten it has been nourished and guarded against dissolution as carefully as an incubator baby. However, the nation as a whole may busy its fickle mind from season to season with trust investigations, trades' unions, polygamy, socialism and woman's rights, one section of it steadfastly and with ever-growing enthusiasm has invited the country's contemplation of its own pet issue, and has labored night and day to adorn in scarlet hue the race question which it itself has made.

It is an old saying that any lover may win the most reluctant sweetheart if he but persist stoutly and long. If the plan pursued by the South has been evolved from this primitive principle of courtship, results would seem in a fair way to justify the soundness of it. There can hardly be a doubt that the Southern view of the negro's character and destiny is gaining a wider acceptance, and it does not need the Southern newspaper's jubilant comment upon every exhibition of race prejudice outside the borders of the Solid South to convince candid persons of the distasteful fact. Until recently I had believed and argued that Northern anti-negro sentiment was confined to the ignorant, who resented his competition in labor, and those sweet-tempered individuals whom a real desire to show a kindly and sympathetic spirit toward the South had led to believe that acquiesence in its views was "broad-minded." I am forced to admit that the latter class at least is very much larger than I had once supposed. As these amiable people are presumably always especially open to conviction, it is to them that I would particularly address myself.

The ardent supporter of a theory rarely sees its defects; far less is he able to give any just presentation of it when peculiar circumstances have led him to elevate the theory to the dignity of a cause for which he is being persecuted. This is precisely the Southern position in respect to the race question; hence it may be judged how large a grain of salt must be taken with all Southern descriptions of existing conditions. The most scholarly men of the South, calm enough reasoners upon other themes, speak and write of the negro in the impassioned, white-hot style of the popular orator. When the subject thus upsets the man of learning, a judicial attitude is hardly to be expected from the multitude or the partisan newspaper. One of the latter, commenting bitterly upon some reproof administered to the South by a Northern Democratic sheet desirous of blaming somebody for the results of the last Presidential election, said:

> "The South will join no party . . . that wishes to treat negroes as gentlemen, and to compare 'negro scholars' with 'white ignoramuses' or 'negro gentlemen' with 'white blackguards.'"

Such is the admitted platform of the section which "only asks to be let alone" to "work out its own problem." Does its just and temperate tone appeal to Northerners inclined to accept the Southern view of the race issue? It is not, under ordinary circumstances, an admirable thing to attempt to mind other people's business, but when your neighbor beats his wife or drags her around by the hair, interference is not commonly an unjustifiable impertinence. And that, too, tho he may defend his methods of discipline by a very truthful assertion that he knows her failings better than anybody else because he lives with her. Proximity, when once conjugal affection has begun to give way to irritation, may be the very thing which blinds him to all else *but* her failings. Very similar, it seems to me, is the case of the Southerner and the negro. The credulous outsider, especially if afflicted with the pre-

vailing arrogance because of his descent from a tribe of German barbarians, lays all stress upon the closeness of their relations, totally overlooks the fact that here too proximity has bred irritation rather than any real acquaintance, and "swallows whole" a one-sided account of conditions in the South. So a Northern paper, in commenting upon the late Atlanta disturbances, expressed surprise that Southern men had shown as much moderation as they had, altho it did add the saving clause, "if what Atlanta papers say is true."

But passing over the now familiar episodes of the Atlanta massacres, let us see what is done in cold blood, when no reported "assault" has roused men to what they may regret in saner moments. In New Orleans they substitute for the Jim Crow car proper a screen in all cars between the ends designed for white and colored passengers. Last year, in course of extended reconstruction of the car tracks, the switching of cars to other routes was frequently necessary. In the case of one line this involved the reversing of the car, and thus arose a (to the Southern mind) complication which can be best appreciated thru extracts from a half-column article in one of the leading dailies:

"Complaints have been received because of the disagreeable and annoying conditions created by the change in the route of the Prytania street cars. It is urged that unless remedied bad blood is bound to result, and clashes between the races are probable. . . . The Jim Crow law provides that the separate compartment for negroes shall be located in the rear of each street car. . . . When the car is reversed, in switching into Poryfarre, however, the negroes are in the front of the car. Yesterday the conductors transferred the screens dividing the white and negro passengers; when the change was made and required the passengers to change seats, necessitating a general move upon the part of white and negro passengers. . . . Frequently in the evening the Prytania cars are crowded with theatergoers in evening dress. If the negroes are allowed to retain their seats, they will be obliged, on entering or leaving, to crowd thru the car from rear to front, elbowing the ladies and creating almost unendurable conditions. If, as was practiced yesterday, the whites and blacks are required to change seats, the same disagreeable crush and shouldering of the two races will ensue. When seats and aisles are crowded, as is often the case, bad temper and bad blood are sure to grow out of this attempt of the blacks to crowd through the aisles, or in the interchange of seats, and clashes between the races are not only possible but very probable. . . . Patrons of the line are indignant at the method in use yesterday."

The Prytania car line runs thru the most fashionable residence portion of New Orleans, and, because of its route, is naturally the least patronized by negroes of any in the city. The small compartment reserved for them is rarely filled, and at the hour when "the cars are crowded with theatergoers in evening dress" there is frequently not a negro in the car. To this providential circumstance is doubtless due the fact that the reconstruction of the Prytania street tracks was finally accomplished without the precipitation of a race war!

This eagerness to cross the bridge before they come to it, this sensitiveness to the prospect of possible "shouldering" by a negro passing to a *front* seat on the part of people who without a qualm risk the same contact when they crowd past *him* in a *rear* seat is a type of the manifestations of the race issue in its larger aspects. For that reason I have quoted it. It may be readily gathered from this how easily every suspicious movement is converted into an "assault." My personal observation indicates that the reiterated cry of the Southern newspaper that "conditions are becoming wellnigh unbearable" is, to say the least, a conspicuous exaggeration. And I think that my observation should count for something, for I am a white woman, living in one of the larger, and, by common consent, one of the wickedest of Southern cities, in which I go about unattended day or night, whenever occasion arises, as it does very often. At all times I meet negro men; my only approach to an unpleasant experience in all my life has been on two occasions when I was spoken to by fashionably dressed young white men. I know a very considerable number of other women who go about alone as I do, among them a young physician, who answers all her night calls unmolested. Such "conditions" seem hardly "unbearable."

Doubtless so long as woman continues to be looked upon only as the pet of the respectable man and the prey of the vicious, she must everywhere run a certain risk whenever she ventures abroad alone, but women have met more ghastly

fates in Chicago and other cities than the "unspeakable crime" of the Southern negro. Yet there is no frenzy over "unbearable conditions," nor do infuriated citizens follow up the murders by burning a few tramps at the stake as a relief to the emotions and *pro bono publico.* I do not mean to speak lightly of the "unspeakable crime," but I do think that I am in a position to say that the impression being so industriously spread by the Southern press that women here dare not venture outside their doors alone is utter nonsense. And, further, save that its hideous brutality is more shocking, I do not see that the crime of the negro is more awful in its actual results than the same impulse gratified by the more refined methods of the white man. The motherless girl whose death some time ago from the effects of a criminal operation caused a sensation in a certain Western city was no less surely murdered by the respectable (?) married man who ruined her than if she had been attacked suddenly upon a dark street or lonesome country road. And if she had lived, the effect upon her character and after life would have been something to which the fate of the negro brute's victim is in no way comparable. I hope that I am not an ungrateful member of my sex, but truly, considering the moral standards of men in general, the present crusade to "protect the purity of white womanhood" seems to me about the most exquisitely funny thing that our national life has developed in many years. It might save the life of a considerable number of negroes if he who is without sin among the lynchers could be required to fire the first shot. If womanhood is indeed so sacred a thing, it is hard for me to understand why it is only to be revered and guarded when accompanied by a white skin. Also the protection of white women against the occasional assaults of black men would appear to be a somewhat inadequate provision for maintaining the much desired "race purity." The following pleasant little story of an ex-Confederate officer, gentleman and father of a family, will perhaps illustrate my meaning:

Several years ago he and his family were living in the home of the young woman who told the story to me. She said:

"Colonel Y. was simply wild over the 'Booker Washington incident'; he could hardly talk of anything else but the outrage of it, and the kind of man it must be who would associate with a nigger. Well, that winter mamma had the worst time with her house-girls; she just couldn't keep one a month to save her life. Finally, when a particularly good one gave notice, mamma concluded to ask her why she wasn't satisfied with the place. She said: 'I like the place well enough, Mrs. E., but you can't keep any house-girls as long as Colonel Y. stays here.' Then she told mamma that that was why every girl had left; that there was no place in the house where they were safe from the advances of Colonel Y.; that he even stopped them in the halls and followed them into the rooms where they were doing up the work." As this same young lady had previously recounted to me her indignation at seeing a colored woman in one of the large stores *actually* trying on a *silk-lined* suit, "trying to dress as well as white people," it will not be supposed that she was influenced by any "academic" doctrines of negro equality when she ended by saying:

"I don't like niggers any better than anybody, but it did make me tired to hear a man who was ready to make love to the blackest negro servant girl rant about the 'contamination' of sitting down to lunch with a man like Booker Washington."

Since this uncompromising defender of "race purity" and foe to "social equality" is prominent and influential in high social circles, the assumption seems moderately just that among his associates his methods of warfare for social betterment in the South are considered neither unusual nor unbecoming. But it *would* be unjust to say that all this talk concerning the "protection of white womanhood" is now confined exclusively to Southern men. A rather strong novel appeared recently whose plot hinged upon that very idea. I read it as the one-sided plea of a clever monomaniac upon the paramount Southern issue. Great was my amazement to learn a few months later

that he was born in Republican Iowa. And, speaking of Iowa, it was its capital city which distinguished itself not so very long ago by attempting, even if not so offensively as Southern papers joyously reported, to draw "the color line" in the Presbyterian General Assembly; what is even less to the city's credit, tho less generally known, a small riot occurred on its streets last summer because a woman was pushed off the sidewalk by some disorderly negroes, and the *Register and Leader,* known ordinarily for its editorial championship of the black race, permitted an enterprising reporter to write up the incident in a style that would have done credit to the most sensational Southern sheet. The Southern man may possess an excessive share of his sex's chivalric ambition to protect woman from every masculine brute except himself, but it is manifestly base slander to assert that he has a monopoly on it.

Yet, true as this is, the burden of responsibility for the increasing acuteness of the race issue rests with the Southerner, for it is his perpetual harping upon it, rather than "an inherent race antipathy," that is upsetting the Northerner's "academic" notions of "abstract" justice to all men. Even in the South it is not "inherent" race antipathy that is to blame. The Southerner has no "antipathy" to the negro as a negro; daily contact with him *as an inferior* excites not the slightest emotion. It is the black man's *ambition,* not his black skin, that gives offense. An ignorant colored nurse traveling with a white family disturbs nobody in sleeper or dining-car; but when educated negroes petition the Interstate Commerce Commission for decent railway accommodations, for which they are willing and able to pay, the act is characterized as "impudent and unspeakably brazen." The colored valet of a college student was once the friend of all the boys; now they will not live in the same boarding-hall with a negro undergraduate, and if a Northern college would be boycotted by Southern students, it has only to get a reputation for encouraging the attendance of black ones. The negro maid tricked out in her mistress's cast-off finery is not an element of disturbance; ominous is her thirst for "social equality" if she pays for her own silk petticoat. And we are solemnly informed that hitherto inoffensive negroes who served as soldiers in the Spanish War came back from Cuba "completely spoilt" by the social privileges which they saw there accorded to members of their race.

If the apparently innocent ambitions of the negro are thus estimated, is it likely that their real offenses are reported without exaggeration? I have no desire, certainly, to whitewash negro crime, but it is not always the negro who begins the trouble—in a late disturbance in Arkansas even a Southern reporter's version could not conceal that fact—yet he always gets the credit for it. The Atlanta riot was followed in one Southern town by the posting of threatening notices upon the houses of even the most respectable negroes. The white citizens, touched by the alarm of these unfortunate creatures, called a meeting to make provision for their protection. Its result was a long set of resolutions, whose numerous "whereases" opened by announcing that efforts to educate and elevate the negro had proven vain, and the declaration of its purpose to "protect the lives and purity of our women and children" required so much space and eloquence that the original object of the meeting was overlooked until the very last paragraph! It is strange that we cannot see that if we go on alienating the better negroes by such persistent unfairness, if, after repeatedly calling upon them for co-operation in suppressing crime among their race, we give a slap in the face to those who publicly respond to the appeal by echoing the sentiment of many newspapers that "we can never be sure that tenders of co-operation now coming from negroes in many portions of the South are genuine," the plan of closing the dives where negro criminals are bred, good as it is in itself, must be surely futile.

Again, however little we like today's negro as compared with the delightful old-time "mammy" and "uncle," it is he with whom our generation has to deal, and we cannot bring back the old type. My old washerwoman is, I confess, more picturesquely attractive to me than her

daughter, who can read and owns a piano, but I must in fairness say that the latter is just as honest and just as proud of the artistic touches which she puts upon my summer gowns and what her mother calls my "wais'es." Is it not the merest common sense to cease our lamentations for the negro that is passing away, and offer fair recognition and encouragement to him who now is, whether he would study agriculture or Greek? Call him "inferior" always, if that idea is comforting, but remember that it is not from the schools that negro criminals come, and let him be educated for *our* safety, if not for *his* benefit.

As to "social equality," social lines have ever been drawn, or I am mistaken, upon considerations of congeniality. Never having been compelled to invite to my house people whom I found distasteful, I fail to see why any Southern white man should ever entertain a negro guest against his will—or why it is any of his business if a Northern man wish to do so. And since all of us have been in dining-cars and hotels with highly objectionable white people and still survived, I suppose that nothing but our "uncompromising racial pride" would suffer much from like proximity to a respectable and intelligent negro.

And, finally, I cannot understand this self-felicitation of Southern scholars, lawmakers and ministers of the Gospel, no less than of thoughtless people and partisan editors, that "the North is coming to our view of the negro." Such men are supposed to look thoughtfully into the future. Do they find it, then, an advance step in the solution of our problem that we have in our land some millions of people for whom there is now no place either North or South — except, to be sure, our kitchens and our back yards?

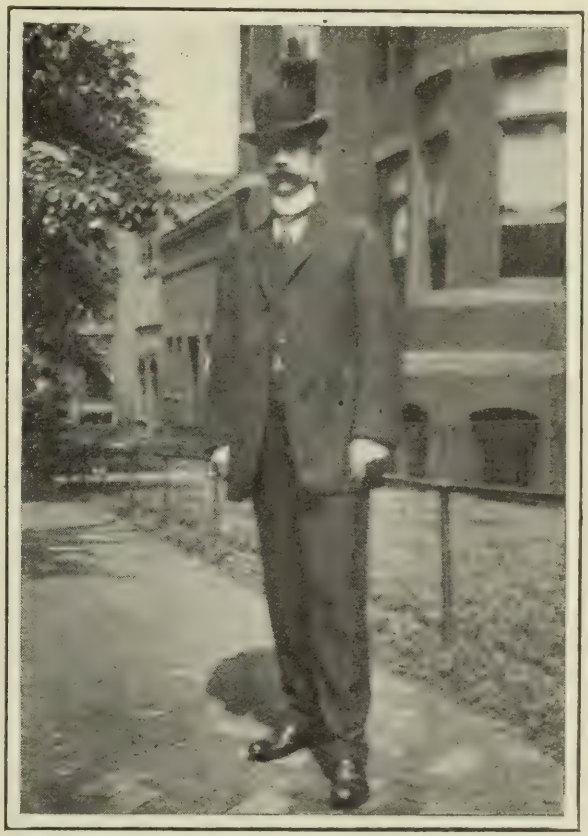
Utah in Politics

BY REED SMOOT

United States Senator from Utah

POLITICS in Utah nowadays differ but slightly from that feature of national life as it exists in the Northern States generally. There are the great national parties, with occasional political outgrowths from local causes, all finally adjusting themselves to the national line-up, preliminary to a recurrence of the outbreak.

The distinction I have referred to in the case of Utah is where individuals having in view certain personal ends, and being unable to secure and retain political power with either of the national party organizations, have utilized an existing religious antipathy to attain ulterior purposes, for which otherwise they would gain little support. The strong prejudice which has prevailed in the minds of many people against the Latter-day Saints, or Mormons, as they are commonly known, has made it comparatively easy for venal combinations to make of the anti-Mormon feeling a strong weapon of war, no matter how unjustifiable may be a resort thereto. The conditions permitting this have received pliability in the fact that prior to 1890 there had been practically no national politics in the commonwealth—the People's party being composed chiefly of Mormons, the non-Mormons lining up with the Liberal party, and religious views being dragged into the conflict as political issues.



Upon the formation of national party lines in Utah, in the early nineties, there was a general drift to the Democratic ranks, largely because of the national trend then prevailing in that direction. As the discussion of political issues became general, however, a readjustment followed, and in 1894 and 1895 Utah developed into a Republican State. This latter attitude was as natural as is the Republicanism of Pennsylvania, for, as

in the Keystone State, the dominating material issues are in favor of a protective tariff, so also are they in Utah. The great wool and lead industries, and the manufacturing interests, so important and potential in the State, looked to the Republican protective policy for defense and encouragement. Hence it may be said that in the absence of any specially paramount issue operating to another result, Utah is logically a Republican State, tho the contest is usually close and sharp.

Such a specially paramount issue swept the State into the Democratic procession in 1896. The free-silver wave took in nearly every Western State—some of them in more pronounced form than Utah. Against the free coinage of silver as a political battle-cry, the Republican party in Utah had barely one-sixth of the ballots cast in 1896, and the first electoral vote of the State went to William J. Bryan. Again, in 1898, the free-silver cry carried the Democrats to victory in Utah—the Republican fight was hopeless so far as electing a candidate on the State ticket that year—but the Democratic ticket had less than one-eighth of the majority it had in 1896. Next, in the special election of March, 1900, the Democrats won, but their majority was again cut away by more than two-thirds. The State was returning to the Republican fold, just as were the other States which had been caught by the "16 to 1" slogan. So it was that in the election of November, 1900, in which the Republicans carried on a strong and brilliant campaign, the McKinley electors in Utah were successful by 2,000 plurality. In the elections of 1902, 1904 and 1906 the Republican vote was further augmented by the popularity of President Roosevelt's administration.

The Democratic Legislature chosen in 1898 failed to elect a United States Senator, and left Utah with only one representative in the Upper House of the national legislative body. Thus it came that when a Republican Legislature was chosen in 1900 a Senator was to be elected for the remaining four years of an unexpired term. There were a number of candidates, among them ex-Senator Arthur Brown, William S. McCormick, George M. Cannon, Arthur L. Thomas and Thomas Kearns. I had strong supporters for the place, and two years before had received the complimentary vote of the Republican minority in the Legislature for United States Senator, but I declined to be a candidate for the unexpired term. A vigorous contest was carried on by those who were candidates; thru the support of prominent friends, some of them Mormons and some not, and by other means reputedly less commendable, Mr. Kearns secured 19 votes, a majority of the caucus, and was accordingly elected.

Most of the people acquiesced quietly,

REED SMOOT.

but there was exhibited considerable dissatisfaction, especially among the non-Mormon element of the population. These expressions of dissent grew more vehement as time wore on, so that two years later there was a strong anti-Kearns feeling among the non-Mormon citizens, causing a large defection in the Republican vote in 1902, tho not sufficient to defeat the party in the State.

In the spring of 1902 I announced my candidacy before the Legislature to be elected that year as successor to Senator J. L. Rawlins, if the Republican party

won—which I, like every other active Republican worker, hoped it would do. There were no other openly avowed candidates on the Republican side, as there were none on the Democratic side except Senator Rawlins. But there was much talk of candidates under cover, and of a scheme by Senator Kearns to turn, at a critical moment, his official and financial influence against me, urging the fact of my being a Mormon as a weapon, in the interests of a candidate of his own. One such reputed candidate under cover was Perry S. Heath, then manager of the Salt Lake *Tribune,* and secretary of the Republican National Committee, a man recognized as of much greater ability, reliability and respectability than Senator Kearns; another was David Keith, Mr. Kearns's business partner, president of the Salt Lake *Tribune* Company, and wealthy—accredited with some attainments superior to those of Senator Kearns, yet having less force and cunning, and consequently subservient to him.

When a Republican Legislature was assured the war against me began, on the matter of religion, just as my friends had anticipated and prepared for. There also were efforts on the part of Senator Kearns to draw in the Chief Magistrate of the nation, as assuming to defeat me and dictate the election of a Senator from Utah. Yet, absolutely without undue influence or pressure, or anything in the slightest degree of questionable propriety, I was named by the Legislature to be United States Senator from Utah, being the undoubted choice of the people of the State. Then came the campaign for my unseating, religious prejudices being aroused against me to a remarkable degree of intensity for this age—and all thru the most glaring misrepresentations and vilification by Senator Kearns's defeated machine. The result is known to the world—that the United States Senate was not swayed from its high and honorable position by the narrowness of misguided religious intolerance or the malevolence of a defeated political aspirant for supreme power, whose repudiation by his State came in the election of 1906, when a non-Mormon representative citizen, Senator George Sutherland, was chosen to succeed Senator Kearns.

This brings me to a further brief explanation of the distinction noted at the beginning of this article as existing between politics in Utah and other States. The effort to engraft this distinctive feature upon national politics was defeated conclusively and for all time by the vote of the United States Senate on February 20th, 1907. The work now remaining—and nearing accomplishment—is to eliminate it from Utah politics in accord with the national sentiment. It was introduced there in late years by means of the wealth of Thomas Kearns and the influence he had attained thru being honored by election as United States Senator. Failing in his effort to dominate without let or hindrance the politics of Utah, he began a campaign to bend or destroy some of those who, not bowing to his will, preferred to exercise freely their rights as American citizens. Being unable to gain control of the Republican State Convention in Utah in 1904, and thus to insure his re-election to the United States Senate, he organized a new political party, to which he gave the name American, tho it was utterly un-American in its intolerant and improper aims and dishonorable methods. It was hoped by its sponsors that the new organization would cause such serious defections from the Republican party as to give the State to the Democrats; but it did not do so, and therein was its first failure.

In the municipal campaign in Salt Lake City in 1905 there were three tickets in the field—Republican, Democratic and American. By a long period of bitter calumniation thru a once-powerful newspaper—the Salt Lake *Tribune* —there were gathered into the ranks of the last-named party all whom the voice of bigotry and anti-Mormon antipathy could reach; many comparatively new residents of the city, having come from the Eastern sections of the country during recent years, were imbued with a dislike for Mormons, and not being thoroly informed, were beguiled into the new camp; that class of political hangers-on which looks upon office as a means of graft also was lined up therein.

This three-cornered contest resulted in the so-called American party slipping between the Republicans and Democrats

and electing its municipal ticket. Its administration has been one of woeful incompetency, as that of hybrid organizations usually is; its unsavory policies have made those well-meaning but misguided citizens who once supported it pay dearly for their whistle, and they are anxious to bury it and all memory of its noisome exhalations. It made an effort in 1906 to capture the county in which Salt Lake City is located and failed; then it engaged in an attempt to seize the Salt Lake City school board machinery, but the people jolted it with defeat. It came into existence thru the circumstances stated, and by its destruction, which of necessity is close at hand, there will be removed the only feature which can be interpreted as having made Utah politics appear different from the politics of other States. The elimination of this distinction being already practically assured —and that chiefly thru the beneficial influence of the United States Senate's action herein referred to—politics in Utah and politics in the various States of the Union generally are henceforth in perfect accord. Utah is hand in hand with the nation at large.

As to the relative prospects of the great political parties in Utah, they are about the same as in the nation as a unit. The Democratic outlook does not appear to have an exhilarating influence upon the adherents of that party—at least not at present. As for the Democrats of Utah, however, I am impelled to the conclusion, based upon close observation for several years, that the rank and file among them are possessed of keener political insight and a greater degree of wisdom and independent judgment than appears to be exhibited by their party associates in some of the older States. The Republican party outlook in the State is encouraging; its officials are giving conservative, energetic, economical and generally good administrations. Sometimes it has made the mistake of electing men who, when inducted into office, have felt themselves too exalted for the humble citizen to approach; but the man who imagines that the honors of office make him greater than the merely representative citizen he was intended to be, would better hie himself to some other than the field of politics in this land where the people rule. Just as the Republican party keeps in touch with the needs and wishes of the people—the great body of the commonwealth—and thereby retains their confidence and esteem, the brightness of its prospect for continued control will be determined.

The electorate of Utah is forceful, thoughtful and independent. This is true of the women, as well as of the men, for in Utah women have the franchise, and exercise it freely and intelligently as do their brother voters. The Australian system provides a secret ballot; but apart from this the people are as frank, open and independent in expressing their views thru the ballot box as are the inhabitants of any commonwealth in the Union. They cannot be coerced; nor does any one try it. There is no effort at influencing them except such as may be found in every State along purely political lines. Mormons, Jews, Catholics, Episcopalians, Congregationalists and other religionists, and professors of no religion, are candidates and are elected to and hold office without discrimination, except in the one city administration which is controlled by the so-called American party, where a religious test bars Mormons and some other good citizens; this intolerant element is vanishing, however, before the broad and enlightened spirit of true Americanism, which everywhere condemns religious disqualifications for office. Thruout the State there is a free and fair field for all, regardless of creed.

Preachers in Utah, too, have something to say about politics. This condition is probably more directly applicable to the non-Mormon organizations than to the Mormons, for there have been so many assaults made upon the latter that silence on political matters, in church meetings, has become the rule. But I am not a believer in closing the mouth of the preacher, whether he be for or against me. I think he is often a poor politician, and a poorer statesman, by reason of the fact that he is too apt to look at questions exclusively from the standpoint of his creed. But all are not so narrow; and often there come from that source suggestions of paramount importance. Besides, it is better for the preacher to speak right out with as per-

fect freedom from restraint as any other citizen. Then his expressions receive just the weight they are entitled to as coming from the citizen. But let him be muzzled so he has to express his views under his breath, or in mysterious utterances, and his influence in politics changes from that of a mere citizen to one of greater or less occult force, according as certain questions may disturb his congregation. So let the preacher have and express his opinion the same as every other citizen, while he seeks to be decent and truthful. That I find to be be the common sentiment in this State, as I am informed it is elsewhere.

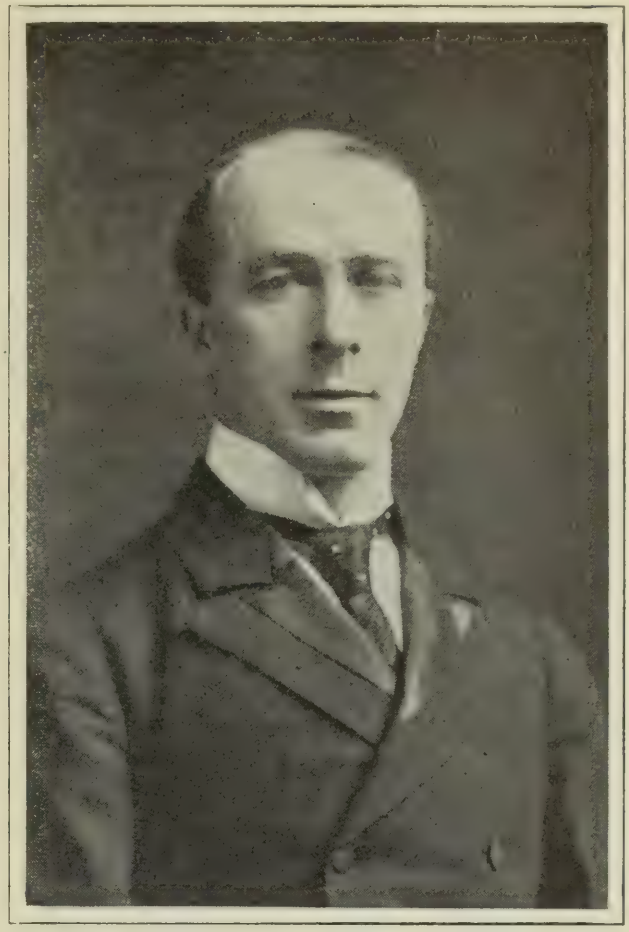
The people of Utah are not "dumb, driven cattle." They are devoted to schools. They think. They are uniformly sober and industrious. They are owners of their own homes to a larger extent than the people of any other State. They are as highly cultured as any other commonwealth in the land. They are ambitious for material progress. They foster education and the arts. They have developed character and American manhood. They compare in morality and material results with any people on the continent. All this makes them good citizens.

In the field of politics they are a fit and worthy part of the great republic. They have laid the foundation of a great State, and they freely invite their brother Americans in other parts of the country to join with them, and hand in hand work out its great destiny as a bright star in the glorious galaxy comprised in the American Union of States.

SALT LAKE CITY, UTAH.

The Quietude of the Recess in Westminster

BY JUSTIN McCARTHY



THE Parliamentary recess this year seems to have brought upon Westminster and its surroundings even a greater degree of political slackness and apathy than is usual at such a season. There is not much talk about the events of the past session, and, what is perhaps stranger still, there is not much talk about the prospects of the coming session, altho it promises to be one of decisive importance so far at least as two great public questions are concerned. Perhaps the main reason for this apparent slackness and indifference may be found in the fact that the Government got thru before the recess all the work which they had definitely resolved to do and had also made most clear and distinct announcement as to the measures of highest importance to be presented to the Houses of Parliament in the session to come. There is not much temptation, therefore, to indulge in controversy as to the past or conjecture as to the future.

The newspapers have occupied themselves chiefly in writing about foreign affairs, about the French in Morocco, about the possible alliances between Russia and Germany, about the doings of Japan, about the "Japs" in Vancouver and the misdeeds of the Ottoman Empire. I shall not invite my American readers to make an excursion into all these various subjects, but shall confine myself for the moment to the neighborhood of Westminster and to some reflections as to the development of certain Parliamentary reputations made during the past session.

One of the most prominent figures during the latter part of the session has undoubtedly been that of Lord Rosebery, altho it is by no means easy to say whether Lord Rosebery has been promoting or reducing his rank as a political leader during that time. Liberals for the most part will be sure to hold that whatever genuine political repute the noble Lord once had he has lately been

reducing to mere dust and ashes. On the other hand, Conservatives and Unionists are beginning to think that here at last they may find the man who can lead them once again into political prominence and can save them from being dependent on the philosophic doubts and untimely studies of Mr. Arthur Balfour, who always wants to satisfy his mind that he has a good reason for supporting or opposing this or that political measure.

Lord Rosebery, after a comparatively long withdrawal from active political life, has lately come to the front again, and has to all appearance been proclaiming himself as the heaven-appointed leader of downright Tory opposition. He has abandoned most or all of that political creed which he at one time seemed to hold, and he is now, so far as the outer world can judge, a thoro fighting Conservative. He is unquestionably a man of great debating power, who often rises to a high flight of genuine eloquence, and if the Tories want a new leader I do not know how they could find one better fitted for the post. It is not under ordinary conditions a desirable thing for a political party to have its leader in the House of Lords, but I do not see how it could make much difference in this instance, inasmuch as for some considerable time to come the Conservatives can under whatever conditions have only a small minority in the House of Commons, and their leader, whether in one House or the other, could be little more than a mere figurehead.

REGINALD McKENNA.

WINSTON S. CHURCHILL.

Mr. Haldane has unquestionably made for himself a great position during the past session, and has fulfilled the very highest predictions as to what might be expected of him in a task so new to his life as the reconstruction of an army. Mr. John Morley is naturally too much absorbed in the study of movements thruout India to have any leisure for concerning himself with the ordinary political discussions of the House of Commons, and I fear that the prospects of the great Indian Empire do not seem as if they were soon likely to relieve him from this pressure of responsibility and anxiety. Mr. Winston Churchill kept on until the very close of the session, add-

ing more and more with each speech he delivered and each official answer he gave to the remarkable reputation which he has lately won for himself. He is a brilliant speaker and especially a brilliant Parliamentary speaker; he is clear, accurate and concise in his setting forth of facts and his array of arguments, while he has a most happy faculty of humor, and in it is a skill of sarcastic touch which often reminds old-stagers like myself of Benjamin Disraeli. Winston

MR. HALDANE.

Churchill is evidently destined to obtain a powerful position in the political life of England. Another reputation which has grown much during the past session is that of Mr. Reginald McKenna, President of the Board of Education. Mr. McKenna, before he entered the House of Commons, had won great distinction as a leader in movements for the advancement of public education, had worked with untiring zeal and energy on those subjects in the London County Council and outside it, and he is now at the head of one of the most important ministerial offices and is a member of the Cabinet. I may acknowledge that I welcome Mr. McKenna's success all the more because he is, on one side of his family at least, a man of Gaelic origin, and is a nephew of the late Sir Joseph McKenna, who was for many years one of the Irish Nationalist members of the House of Commons. Reginald McKenna is, I need hardly say, esteemed and admired by men of all parties in the two Houses of Parliament.

The trial trip of the "Lusitania" had, among its other and more splendid effects, the welcome result of creating a new topic of conversation among those whom the close of the Parliamentary session had left without anything particular to talk about. It may seem a somewhat ignoble way of regarding such an event to contemplate it as a timely stimulant for the talk of those who might otherwise have nothing whatever to talk about. Yet in some, even of the greatest poets, we find an event of all-world importance associated with some comfort brought to a lowly homestead or even to some suffering quadruped. This is perhaps the only excuse I can offer for describing the trial voyage of the "Lusitania" as among other things supplying a subject of conversation during a season of more than ordinary dullness.

The event has assuredly been watched and waited for with the most intense interest by all classes in this country. Of course it really adds little or nothing in itself to what everybody might have known or must have known who took any interest in the progress of oceanic navigation. We all knew that the voyages of transatlantic steamers were certain to grow shorter and shorter as the years went on, but we, most of us, get into the way of taking such progress as a matter of course, and only some peculiar event in the continuous story suddenly calls back our attention to the whole subject. I can well remember in one of my early crossings of the Atlantic making a passage of thirteen days from Liverpool to New York, and altho that passage was because of severe weather somewhat slower than the usual course, it was not by any means regarded as anything much out of the common. Then

we have to bear in mind that the voyage of the "Lusitania," like most other great voyages of recent years, illustrates the development of science in much more strange and striking fashion than could be done by any mere increase of speed.

The "Lusitania," we are told, received and delivered during her voyage numbers of messages sent by the wireless telegram, and of all the marvels of modern science the wireless telegram seems to me by far the most marvelous. From the day when first a vessel impelled by steam was sent to cross the sea everybody must naturally have expected that the speed of steam-impelled vessels would be increased as time went on, but I should like to know what gazer into the future could then have anticipated that a time would come when messages could be sent thru the air across vast distances without any aid of telegraphic wire. Naturally we all now begin to ask ourselves what is to be the next development of science in regard to the movement of human beings thru space and how far it is the destiny of mere human science to take the place of that magic in which the early ages so firmly and fondly believe.

I have just read in one of the newspapers that the son of the late Sir Charles Gavan Duffy has avowed himself a cordial sympathizer with the Sinn Fein policy in Irish political affairs. Mr. Duffy, according to this account, expressed himself fully and very clearly as to his views on that subject, and it is impossible for any one who takes an interest in Irish political life to read his observations without feeling a thoro respect for their author and a recognition of his evident sincerity.

Sir Charles Gavan Duffy made for himself a name distinguished thruout Europe and the United States and afterward in Australia, where he became Prime Minister of Victoria and was later Speaker of the Legislative Assembly there. I had followed Sir Charles Gavan Duffy's political and literary career since the days of my youth, and when he paid a visit to England, some twenty years ago, I often met him in London at the houses of friends. Naturally, therefore, I read with close attention the arguments put forth by his son concerning the new national Irish movement. I cannot say, however, that my opinions underwent any change on the subject. I am still as much convinced as ever before that the restoration to Ireland of a native Parliament is to be accomplished only by the efforts of that Nationalist party in the House of Commons which was founded by Charles Stewart Parnell. Let it be remembered that the present Liberal Government, controlling an enormous majority, must be regarded as pledged by repeated promises to introduce a measure for the establishment of home rule in Ireland, and that there seems not the slightest likelihood of any return of the Conservatives to power for a long time yet. Furthermore, even if Conservative statesmen should again come into power before Ireland gets her home rule, such statesmen would soon find that it would be impossible to carry on the business of the English Parliament in defiance of an Irish National party devoted as is that led by Mr. John Redmond to the obstruction of all Parliamentary business until justice be done to Ireland's demand. Ireland has on her side not merely the rightfulness of her cause, but the growing sense of the English people that that rightfulness must be acknowledged if the British Parliament is to be of any use as a legislative assembly. Mr. Redmond and his party are as strong as ever they were in the confidence of the vast majority of Irish Nationalists at home and abroad.

Many of my American readers must already know something of the Titmarsh Club, a literary and social institution founded not long since in London with the object of paying periodical homage to the memory of W. M. Thackeray. The club includes in its members a large number of literary men whose names are well known thruout the reading world. Among such names are those of Sir F. C. Burnand, J. M. Barrie, Comyns Carr, Frederick Harrison, Anthony Hope, Sir Gilbert Parker, Owen Seaman, the well-known member of the staff of *Punch*, Percy White, Beerbohm Tree, Harry Irving and Theodore McKenna. The third dinner of the club is to take place on Thursday, October 24th, when the chair is to be taken by Mr. Whitelaw Reid, the United States Ambassador,

who is one of the club's original members.

I may perhaps be excused if I indulge a little personal and family vanity by mentioning the fact that my son and I were also among the original members of the club. It seems to be especially appropriate that the United States Ambassador should preside at the forthcoming banquet. The genius of Thackeray has never been more thoroly appreciated than it was thruout the United States, and I have myself heard the great author allude in terms of the highest gratification to the welcome which his lectures received thruout the great cities of the American Republic. Mr. Whitelaw Reid is, I need hardly tell American readers, a brilliant speaker, who, upon such an occasion, is not at all likely to disappoint, and I am sure that his address delivered at the opening of the Titmarsh Club banquet will find its echoes ringing thru the hearts of all educated men and women in these islands.

The letters and circulars issued officially by the club all bear in imprint an

effigy-portrait of Thackeray, and I enclose one of these, with a hope that it may be reproduced in the pages of THE INDEPENDENT. The mass of thick hair on Thackeray's head, which is well represented in this sketch, had grown snowy white long before his too short living career had come to its end.

LONDON, ENGLAND.

How to Preserve Bob-white

BY DWIGHT W. HUNTINGTON

[Last week we printed a very important article by Mr. Huntington calling for a reform in our methods of game preserving. This week he shows how any farmer may preserve "bob-white" with a little study and care. Mr. Huntington is the author of "Our Feathered Game" and has just been appointed by the Secretary of Agriculture on a committee to report on "Wild Food Birds" to the government.—EDITOR.]

OUR best game bird, the quail or partridge,[1] bob-white, was a common bird a few years ago on every farm from Southern New England to Texas, and when the writer began to shoot it was no difficult matter to make a large bag of these birds almost anywhere in the Central and Southern States. They were abundant and cheap in the markets of all the large cities. It is not surprising that birds so highly entertaining to both sportsmen and epicures diminished when no attempt was made to preserve them; the wonder is that they have not been exterminated everywhere as they have been in many places. It is gratifying to know that the bob-whites can, easily, be made far more plentiful than they ever were by a simple and inexpensive system of game preserving, which may be undertaken by any one owning a country place or by any farmer who wishes to have game in abundance for his own shooting or as an asset which may be made to yield handsomely.

The laws having failed to stay the extermination of the birds and to restock the fields, sportsmen are quite ready to

[1] It seems necessary in writing about this bird to use both words. Those who wish to speak precisely say *partridge*, since the ornithologists have decided that there are no *quail* in America. In the Southern States the bird has always been a partridge, but recently I observed that Southern sportsmen in conversation sometimes call the bird "quail," having acquired the name from Northern visitors. The wrong word, therefore, seems to be in the ascendancy.

try game preserving, and the writer, without hesitation, predicts, at their hands, the repeal of the laws prohibiting the sale of game.

The diminution and extermination of the quail or partridge was brought about by excessive shooting, trapping and an utter disregard of the simple rules of game preserving, which require that a few birds be left from each covey for restocking; that the place be made safe and attractive; that food be supplied in severe weather and that all predaceous enemies (including domestic cats and dogs, which are believed to be more harmful than foxes and hawks) be destroyed. The laws are now sufficient everywhere to prevent poaching, and any farmer who wishes to preserve and increase his game has little to fear from trespassing shooters. The farmers and their boys were responsible for most of the trapping, which is now prohibited by law.

Enough experiments have been made in many States to prove that game can be protected, and in many places it has been made sufficiently abundant to pay the entire taxes on the land and buildings.[2]

The number of men who can afford to pay for their shooting is increasing rapidly, and there can be no doubt that the shooting rights will increase in value, as they have in England, until on some lands the shooting will be more valuable than the crop.

The bob-whites are distinctly birds of the farm and are fond of grain fields, and any farm where grain is raised may be made a game preserve. The birds thrive in civilization and will nest very near a house provided it does not contain enemies. A covey or two may be induced to nest in the kitchen garden or in an angle of its fence, and since these birds are very prolific every likely field, including potato fields and some pastures, can be made to yield one or more covies. The potato fields are especially attractive to bob-whites, and the birds have recently been found to be a great benefit to the crop since they devour with avidity the Colorado potato beetle (known everywhere as potato bug), which, since its migration eastward, has threatened the potato crop. Writing of this bird's relation to this insect C. E. Romaine, of Crockett, Tex., says: "Quail have built their nests around my fence and even in my garden, within fifty feet of my house. They have kept my potato patch entirely free from the Colorado potato bug.[3] In the South bob-white also destroys the dreaded boll-weevil in the cotton fields.[4]

Because of the great benefits to the crops it would seem that the birds should not be shot at all. But we learn from the game preservers that the birds thrive best and are most abundant where shoots are held, which would seem excessive from the size of the bags. The birds do better after the thinning out. The shooting takes the place of the destruction by natural enemies. The strongest and best birds survive, and there is no danger of an over-abundance, which proves disastrous when the covies are not broken up.[5]

In order to have the birds abundant, it is necessary to make the place attractive, or leave it attractive if its natural advantages have not been destroyed. The bob-whites despise bare ground and are not fond of closely-cultivated fields where their natural hiding-places, the brush heaps, briar patches, weeds and grasses, have been cleared away, and where the barbed-wire has replaced the old rail-fence with its sheltering angles overgrown with weeds and bushes, especially the sumac, which furnish food as well as shelter. Cover is almost as essential to the happiness and well-being of bob-white as food and water are.

There can hardly be too many brush heaps and briar patches about the fences and in the woods and orchards, and a few stumps and old fruit trees left in the fields, about which a small patch of grass and briars is permitted to grow, will add much to the comfort of the birds and will save many young broods from destruction by reaping machines at the harvest time. A wire fence with no cover beneath it may be made attractive by plac-

[2]Bob-white pays the taxes on many farms in New York, New England, New Jersey and in many of the Central and Southern States. The area of leased shooting in North Carolina is larger than the State of Rhode Island.

[3]Bul. U. S. Dept. Agr. Other accounts of the benefits of this bird may be found in "Birds of Ontario," "Notes on Nebraska Birds," etc., cited.

[4]*Ib.*

[5]Gamekeepers who have shown me more birds than I ever saw on unprotected ground are my authority for the above statements.

ing brush along its entire length and by permitting a strip of grass, briars and weeds to grow on either side. An occasional stump and brush heap in a field may not seem attractive to the modern farmer, but when he becomes a game preserver he will know that the birds sheltered by such covers are worth far more than anything he could raise on a few feet of ground.

The bob-whites are terrestrial birds and feed, nest and roost in the fields. When alarmed it is their habit to fly at once to the woods, and it is, therefore, desirable that the preserve contain woodland. Since they seldom fly far into the woods and are never found in the center of large forests, the woods reserved for the birds may be small—a few acres or less in extent. The ordinary wood-lots on every farm and even small thickets are sufficient.

Where the woods are large I would advise cutting them up into small tracts (unless ruffed grouse or turkeys are to be preserved), making fields between the smaller woods, and here I may observe that the fields also may be small, since these birds do not require large fields and the number of covies may be increased when new fields are added.

Since the shooting is better on the wheat stubbles, wheat should be the principal crop of the game preserve; but corn is an excellent winter food for the birds, and a farm where both grains are cultivated is the best. The birds were once abundant on the corn lands of Indiana, Illinois and Kansas, and there can be no doubt that farms where corn only is raised may be heavily stocked with birds.

In severe winter weather, when they most need a hearty meal, the snow should be cleared away at given places and grain fed daily to the birds. They will soon learn to come to the feeding places. I am firmly of the opinion that birds properly fed will survive the severe weather, even as far North as Massachusetts.

The often-reported covies which come to the barns in New England to feed with the poultry do not suffer from the cold.

It is best to feed the corn on the cob, since a little more effort is required in eating it, the exercise is good for the birds, and the grain will last longer and be less liable to be lost in the snow or buried in the ground when it rains.

On the great game preserves of North Carolina, the largest partridge preserves in the world, the bob-whites are extremely abundant. There are records of upward of thirty covies being found in a day's shooting, and a day's shooting on the preserve is usually a short one by reason of a late start, the return to the lodge for luncheon and an early quitting hour. The cover on all these preserves,[6] I observed, is abundant. Great heaps of brush are left where the trees and undergrowth have been cut and brush fills many depressions in the fields. The briars and broom-sedge grow luxuriantly about the fences, border every woodland and overrun many fields. The farming in North Carolina is eminently satisfactory to the game, and much food (usually the cow-peas) is planted by the gamekeepers. The land is nowhere closely cultivated, and so long as present conditions prevail no artificial cover need be provided. The principal duties of the gamekeepers here are the destruction of vermin and the prevention of trespass. Relentless war is waged on all predaceous animals and birds, and on one barn where the hawk, owl and crow trophies were tacked up, I observed the feet of many "pussy cats," which are regarded with especial disfavor by all the gamekeepers.

The game preserve should be well watered, since the birds need water and will migrate if the water supply gives out. A small stream which runs thru the fields and woods and which never runs dry is especially grateful, and the same may be said of ditches which always contain water. Small lakes and ponds are even more valuable on the preserve, since they may easily be kept as full of wild ducks as such ponds are in England. Springs which yield only a little water, provided they be unfailing, are sufficient, but on places where there is no water it must be supplied by windmills similar to those used at many coun-

[6]The preserves visited belong to Messrs. George Gould, Clarence Mackay, O. W. Bright, W. G. Brokaw, J. P. Morgan, Jr., and others, and all contain many square miles.

try places to furnish water for the house and barn and for gardens and cattle in the fields.

I have put down a few birds on a farm and have watched them nest near the house, in the garden and in fields, and have had excellent shooting the following autumn. I know others who have tried the experiment in a small way and who have been equally successful, even at the boundary of a village and near a large city. A few dozen partridges put down on attractive ground will yield a bag of several hundred head the first season.

On large estates a gamekeeper is, of course, necessary, and here I may observe there are few good gamekeepers to be had in America. There are plenty of men who with a little training and experience will make good gamekeepers, but at present many of the larger preserves are managed by English and Scotch keepers, who have been quick to learn the habits of our game birds and how to handle them successfully. All of these men whom I have met are enthusiastic in praising bob-white.[7]

YONKERS, N. Y.

[7]Recent field and laboratory investigations of the food habits of bob-white conducted by the Biological Survey of the Agricultural Department prove that he is insectivorous as well as gramnivorous. In addition to seeds, fruit, leaves, buds, tubers and insects, he has been known to eat spiders, myriapods, crustaceous mollusks and even batrachians. The vegetable part of the food consists of grain, 7.38 per cent.; various seed, chiefly weeds, 52.83 per cent.; fruit, 9.57 per cent.

Old-Age Pensions

BY EDGAR YATES

Member of Typographical Union, No. 13, Boston.

WHILE in Germany, Denmark and certain of the Australian States the old-age pension policy is in actual operation, as a government institution, and in Great Britain is at present the subject of a government measure, in the United States it has barely reached the stage of legislative inquiry, and that in but one or two States. Many publicists and most legislators, when the subject is broached to them, wave it away as more or less Utopian, and the ordinary taxpayer protests that we have all the pensions now that we can pay for. But this is the land of individual initiative; and in a most unexpected quarter the old-age pension plan has substantially been adopted.

The International Typographical Union, made up of the most skilled workmen of the printing craft in the United States and Canada, at its recent convention in Hot Springs, adopted a carefully formulated and conservative scheme of old-age pensions. A summary of the measure, presented in the committee report, is this:

"Age of eligible applicants—60 years.

"Continuous membership in the I. T. U.—20 years.

"Amount of weekly pension—$4.00.

"Source of revenue for fund—½ of 1 per cent weekly assessment on earnings of membership (estimated)—$168,000.

"Amount disbursed yearly (estimated)—$104,000.

"Balance for sinking fund, administering and incidental expenses—$64,000.

"Qualifications of applicants are based on twenty years' continuous membership for members 60 years of age, who earn less than $4.00 per week, in any one week, and who have no other income or means of support."

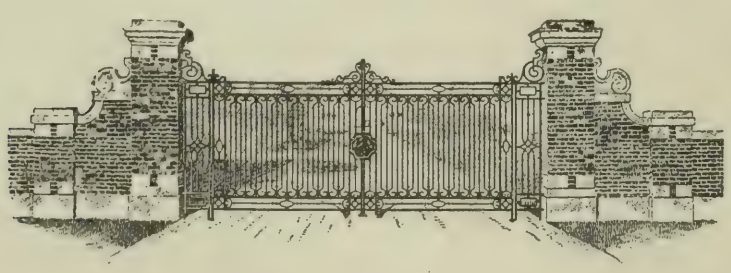
This plan, submitted as an amendment to the constitution of the International Union, and adopted by the delegate body, now becomes the subject of a referendum vote by every union printer. But the sentiment for the adoption of the idea, as reported by the delegates, is so strong that there is no doubt that the amendment will carry.

The solidity and the conservatism of the Typographical Union as a great trade organization, no less than the unusually high standard of intelligence among its members, are well known

And the entire machinery for the collection and disbursement of the pension funds is already in working order; and it was thoroly tested in the recent strike for the eight-hour day, when for nearly a year 10 per cent. of the wages of each union printer under employment—in the aggregate about $3,000,000—was collected and disbursed by the International officers, and every cent accounted for.

Not only will the International officers attend to the collection of the money, but they will place applicants on the pension roll and may likewise remove them. But no applicant may be placed on the list until thirty days after his name and application have been put in the hands of every union printer in the country, and the objection of one member is sufficient to make necessary a hearing by the executive council of the International officers. Moreover, the individual pension is payable, not quarterly, nor monthly, but each week; and in this manner:

"Secretaries of subordinate unions shall forward weekly to the International secretary-treasurer a true and correct list of applicants entitled to pensions. On receipt of such list the international secretary-treasurer shall transmit the amount due to the local secretary for distribution."



The "poverty qualification" was objected to by many; but the feeling of the International gathering was that so momentous a step must be taken with great carefulness. Yet if the general plan turns out well, ultimately every union printer at sixty will receive a pension unconditionally; such was the undercurrent of the meeting.

For not poverty, but the waning of the powers of a faithful workman, is the basis of the old-age pension idea in the Typographical Union. Says the young craftsman: "These old fellows were once the best men in the office; they made a printer of me; it is in no small part to their skill and their unionism that I owe my daily bread; and I should be ungrateful if I couldn't stand an assessment of ten cents a week to take care of all the old printers in the country." "Besides, some day I may need it myself," thinks the middle-aged workman; "four dollars a week as long as I live, after I'm sixty, looks pretty good." Thus both altruism and self-interest underlie the plan.

A third reason presented for its adoption is that the old-age pension feature will make membership in the Typographical Union more desirable and more permanent. It will offer a strong inducement to any good printer who is not already in the union; and, by reason of forfeiture thru lapse, it will discourage any dereliction from membership. In short, the pension idea is a good thing, not only for the individual, but for the union.

In this country, then, under especially favoring conditions, the International Typographical Union is about to start out as the pioneer in the old-age pension movement. Should it succeed, the cigar-makers' organization is likely soon to follow.

EVERETT, MASS.

Literature

The Spirit of American Government

It is refreshing to find amid the arid compilations and inconsequential manuals on American Government that pour forth annually from the press a volume that is well written, vigorous and highly contentious in a scholarly fashion.* Moreover, it is encouraging to find a professor who does not find it hazardous to entertain not merely opinions, but positive convictions matured in the contemplation of both primary materials and the political philosophy of unquestioned masters. Tho highly controversial and severely critical, Professor Smith's little volume is to be commended especially to those who have never considered the psychological and economic foundations upon which our institutions rest.

The author's thesis is a simple one: the Constitution of the United States was formulated by men inherently opposed to democracy, it deliberately places obstructions in the way of majority rule, its system of checks and balances destroys responsibility, and its structure very largely answerable for the so-called evils of democracy.

This thesis is sustained by a lengthy and well-documented historical and legal argument, for Professor Smith is a student of history and political science and a lawyer besides. The thread of the argument may be briefly summarized. American government is grounded in eighteenth century undemocratic ideas—the democratic fervor of the revolutionary days having subsided before a conservative reaction directed by what President Woodrow Wilson designated as "a strong and intelligent class, possessed of unity and informed by a conscious solidarity of material interests." The amendment clause of the Constitution was deliberately designed to protect the interests of the ruling minority against innovation. The Supreme Court, with its power to annul legislation and govern by injunction:

"was designed as a check, not upon an irresponsible executive as was the case in England, but upon the people themselves. Its aim was not to increase but diminish popular control over the government. Hence, tho professing to follow the English model, the framers of the Constitution as a matter of fact rejected it. They not only gave the Federal judges a life tenure, but they made that unqualified and absolute, the power which Parliament had to demand the removal of the judges being carefully withheld from the American Congress."

The system of checks and balances and division of powers, which originated in semi-monarchical political arrangements, belongs to an outworn stage of political evolution, since the whole modern tendency is to establish unlimited but responsible governments. To the constitutional checks on democracy Professor Smith adds those imposed by the development of the Congressional committee system and the irresponsible party organization. This system of checks, balances and irresponsibility obtains likewise in State and municipal governments, with undemocratic and corrupt results.

In short, the author agrees with conclusions set forth by Professor Goodnow in his "Politics and Administration," but is more drastic in his proposals for reform. He advocates the straightforward democratization of our government—a thing which Professor Goodnow refused to regard as within the realm of practical politics. But Professor Smith does not propose or deem feasible any very immediate far-reaching changes; he advocates begining with State governments in the direction indicated by Oregon in the Direct Primary law of 1904 controlling elections to the United States Senate.

Barbary Sheep

Mr. Hichens's admirers were disappointed last year in his "Call of the Blood." Despite the praise of many critics we felt that it was merely a fashionable story which lacked those elements

of strange power and fascination that distinguished "The Garden of Allah." But now once more the desert furnishes the sheet music for his passion song, as the characters in the book furnish the words.* The title has about the same relation to the story that Owen Wister's "Lady Baltimore" had to his late tale of old Charleston. It refers to the kind of game Sir Claude Wyverne went to shoot while Lady Kitty, his wife, remained at El Akbara, the inn at the gates of the great desert. Sir Claude was of that red and blond type peculiarly English, large and dull and kind, with an awkward streak of fat thoro British refinement in him which made thin feline races like the Arabs obnoxious to him on the same principle that a terrier is never attractive to a bull pup. With him taste was a trait, not a culture. With Lady Kitty, however, the reverse was true. Her traits were not national, but feminine. She was capricious, a follower of fancies and fashions. Therefore she follows the young Arab officer who happens also to be at El Akbara beyond the wall into the desert while her husband sleeps and dreams of Barbary sheep. She was simply the little pattern plate upon which the desert scrawled a fleeting, ferocious image of itself.

Most authors use the scene in which their story is laid merely to produce the illusion of locality and reality, but both Mr. Hichens and Mr. Phillpotts differ as much from the rest in this particular as they differ from one another. The latter empoys the Dartmoor merely in the guise of fate, which overtakes and overawes his men and women. They are the helpless victims upon whom the terrible scenery works despair and remorse and madness. Passion is always a sorrowful rather than a fiercely natural experience. But in Mr. Hichens's stories the desert is the dominant inspiration. Every man who walks in it becomes its monochrome in so far as he is capable of receiving impressions. It fires the blood and fascinates rather than terrifies. The long thirst of it is expressed in the famine souls of the natives, its spirit leaps forth in their lust and greed. And so what some call Hichens's "wonderful atmosphere of the desert" became the atmosphere of the human mind there, a strange luminosity, as if beneath the soul's opal surface every evil desire burned in prism flames. Therefore if the reader wishes to understand the desert, he will attend not so much to the descriptions of it given in this book, but he will study the character of the Arab officer of the Spahis, who is at once Lady Kitty's lover and her robber. A slim, beautiful heathen, with the instincts of a bird of prey; a tongue of fire shot out of the livid heat of the desert to devour and to destroy—a wonderful creation wonderfully portrayed in this story.

*Barbary Sheep. *By Robert Hichens.* New York: Harper Brothers. $1.50.

Luke the Physician

Professor Harnack's *Lukas der Arzt** is one of the most important contributions to the study of the New Testament made in recent years, and English readers are fortunate to have it in hand so promptly in a reliable translation. German opinion of recent years has been decidedly against the Lukan authorship of both the Acts and the Third Gospel. Among the eminent students who have advanced cogent reasons against the traditional opinion are Holtzmann, Weizsäcker, Wendt, Pfleiderer, Von Soden, Clemen and Jülicher. Professor Harnack is in general critical sympathy with these scholars, yet no doughty champion of the opinions of the fathers argues more eagerly and keenly for the authenticity of the books in question than the leader of German liberal Protestants. His argument is chiefly philological. By painstaking examination of vocabulary and style, occupying with dry detail the larger part of the volume, he seeks to prove that the author of the "we-sections" is the author of the entire work, including the gospel, and that the tradition which ascribes the treatise as a whole to the physician who accompanied Paul, is entirely worthy of credence. The assertion that the language of both Gospel and Acts betrays the hand of one familiar with Greek medicine is not new, but never before has the argument re-

*Luke, the Physician, the Author of the Third Gospel and the Acts of the Apostles. *By Adolf Harnack.* Translated by the Rev. J. R. Wilkinson, M. A.; Edited by the Rev. W. D. Morrison, LL.D. New York: G. P. Putnam's Sons. $1.50.

ceived such skilful treatment. It appears to be very strong, yet the suspicion which always attaches to such minute technical investigations is not unfounded.

In some quarters Harnack's views have been heralded as a triumph for conservative criticism. This is a mistake. To be sure he defends the traditional opinion as to the authorship, but no traditionalist will find much comfort in his characterization of Luke as an historian. He accuses Luke of colossal credulity, theological superficiality and Greek fondness for fabulating. He declares that Luke misrepresents the facts as to the friendliness of the Roman government toward the new religion, and in particular as to the attitude of Pilate. He agrees with Weizsäcker and other historians who find the early chapters of Acts, and the account of the Apostolic Council in Jerusalem, very unreliable and misleading. At most he has saved the name of the author: it would not appear that he has endeavored to save very much beside.

By thoro criticism of the Acts of the Apostles and by exhaustive study of the letters of Paul, recent scholars have worked out a conception of the real course of things in the Apostolic Age and of the true greatness of Paul which is far in advance of the notions which obtained when the Acts and the Epistles were placed side by side as authorities of equal weight. Professor Harnack would be the last to discard as valueless the newer views of Apostolic history, and any persons who note merely his defense of the traditional authorship, and conclude therefore that recent students have been largely in error, will make a sad and needless blunder.

There is one matter of great importance in which Professor Harnack has earned the gratitude of all students of the New Testament. He has shown that the third gospel, unquestionably written by a Greek, and the farthest removed from Palestine of all the evangelic narratives, nevertheless holds firmly to the tradition which grew up on the soil where Jesus lived and taught, and therefore that the canonical gospels, while written for the edification of the Church and therefore subject to historical criticism, are nevertheless products of a life and belief which unquestionably had its source in the founder of Christianity himself. The criticism, that is the careful examination and estimation, of the gospels is seen to be more imperative with the lapse of time, but all the more certain and established is the substratum of fact when criticism has done its work.

The Opening of China

BLESSED be the interpreters of the West to the East and of the Orient to the Occident! Their work is great and the need pressing. For consummation of so great a task, the views of many men of many minds, and the setting forth both of things permanent and things changing are necessary. Dr. Paul Carus, editor of the *Open Court,* in an indexed and well-illustrated volume of nearly 200 pages, packed with the fruits of wise research, attractively set forth, presents a mosaic picture of the Chinese mind and civilization.[1] He treats of elements, structures, products and problems; of script, occultism, of the throneless king, Confucius, and his empire—filial piety. He furnishes also an illuminating chapter on the zodiacs of different nations. Without sympathy with the missionaries or with Christianity, he yet points out for unwise propagandists a more excellent way —fulfilment, not destruction. In his second book, the illustrations, being entirely by Chinese artists, afford suggestive comparison with that subjective interpretation of China which Western pictures give. The whole volume is marrowy, rewarding and astonishingly cheap.

Mr. Soothill, a veteran missionary at Wen Chow, China, already known as a scholar and translator of the New Testament, presents an animated picture of actual missionary work and life, touching almost every phase of it.[2] Unripe greenness, mature tact and masterful experiences are pictured freely. He tells good stories at his own expense. His book is vigorously informative, shot thru and thru with human interest, and made attractive with wit and humor. It

[1] CHINESE THOUGHT: An Exposition of the Main Characteristic Features of the Chinese World Conception; $1.00. CHINESE LIFE AND CUSTOMS, 75 cents. *By Paul Carus.* Chicago: The Open Court Publishing Company.

[2] A TYPICAL MISSION IN CHINA. *By W. E. Soothill.* New York: Fleming H. Revell Company. $1.50.

has in rich measure the fascination of personal adventure, besides bearing on every page the mark of a cultured and broad-minded man.

When we pick up a book on China by Dr. Arthur Smith we know we are going to laugh, perhaps cry, but certainly see ourselves as the Chinese see us. To this Yankee author an American is almost as funny in his "intelligent ignorance" of China as the interior Chinaman is in his "unintelligent ignorance" of the great American nation. We have here[3] in brief space a vivid picture of old but rapidly changing conditions and relations. We learn what railways are in operation and where; the status of present-day native journalism, which shows vast improvement during a decade; and realize our shameful maltreatment of some Oriental gentlemen, and the gross neglect of our opportunities for commerce. Our pride warms as we learn what American missionaries have done in paying back, in part, the enormous debt of Occidental obligation to those people and their ancient society, from which we have long ago and thru the ages borrowed so much.

Mr. Speicher's lectures on practical missionary work in China delivered at the Theological Seminary of Colgate University[4] were well worth bringing out in permanent form, because they give good pictures of present conditions at Kityang and the South China field generally, and are full of sane advice on what kind of missionary the country needs and what kind of training the missionary needs. The chapter on demonology contains some interesting illustrations of the contagiousness of superstition similar to those we published a few months ago from Korea.

While *John Griffith*[5] sets forth the enthusiasm and optimism of a gifted missionary working under nineteenth-century conditions, its real value lies in the fact that it gives the evolution of mission methods under exterritorialty. The book is one of the best ever written for its frank portrayal of the ups and downs of a great missionary's aggressive work and his boundless hope for China. But nearly every chapter shows how difficult it is for the best of missionaries to do Christ's work of love under exterritorial conditions. For the missionary belongs to a conquering race and has the habit of regarding the people as inferior. From first to last the natives are "heathen." This word disfigures every section of this otherwise splendid book, and naturally leads to such expressions as "the moral rottenness of the Chinese" and "the most proud, superstitious and godless people of the human race," with the inevitable result that such great moral forces as ancestor worship and Confucianism, which have built up and conserved the greatest nation of history, are treated as obstacles to Christianity instead of preparations for it. All the same this great man grows and expands until he clearly sees what must be the characteristics of twentieth-century missions, "not hard theological views and dogmas," but the full recognition of the great preparation God has made for mission work. There is no finer passage in the book than this: "I used to think of the missionary going and taking the Holy Spirit with him. Now I think of the Holy Spirit as always there and inviting the missionary to come and work with Him."

[3] CHINA AND AMERICA TODAY. *By Arthur H. Smith.* New York: Fleming H. Revell Company. $1.25.

[4] THE CONQUEST OF THE CROSS IN CHINA. *By Jacob Speicher.* New York: Fleming H. Revell Company. $1.50.

[5] JOHN GRIFFITH. The Story of Fifty Years in China. *By R. W. Thompson.* New York: A. C. Armstrong & Co. $2.00.

Bar—20. By Clarence Mulford. New York: The Outing Publishing Co. $1.50.

This story purports to be "the record of certain happenings that occurred in the otherwise peaceful lives of one Hopalong Cassidy and his companions on the range. The scenes are laid along the borders of Texas and New Mexico and in the town of Buckskin, which claimed two hundred inhabitants, only because every man in it had one or more aliases and insisted upon having all of them recorded in the census report. The time was some thirty years ago, when the cowboy became a sort of typical Western character, a careering figure of raw elemental manhood riding at full speed in a cloud of alkali dust, whirling a lasso in one hand and flourishing a pistol in the other. According to Mr. Mulford, he measured every man's talents with his

rifle and counted courage the greatest of all virtues. He was not ethical, but he was stimulating. And we are greatly indebted to the author of *Bar-20* for recalling him to memory in this delightful one dollar and a half "dime" novel.

The Last of the Royal Stuarts. Henry Stuart, Cardinal Duke of York. By Herbert M. Vaughan, B. A. Pp. xix, 309. New York: E. P. Dutton & Co. $3.50.

All Mr. Vaughan's loyal efforts to place Henry Stuart in the best possible light can scarcely suffice to remove the impression that tho the last of the Stuarts was shrewd enough to see the way thru the Church to wealth and certain dignity, he was not blessed with brilliant intelligence. The younger brother of Bonnie Prince Charlie, tho he took the title of Henry IX on the death of "Charles III," never set foot on English soil. When Prince Charles was in Scotland in 1745 and 1746, Prince Henry went as far as Dunkirk, where he remained for some months waiting for Louis XV to fulfil his promise of sending an expedition to aid the Jacobite cause. This was the most he ever undertook toward the recovery of the throne of England for the Stuarts, and from France he made his way back to Rome to enter the Church, and at twenty-two to have conferred on him the red hat of a cardinal, by this action putting an absolutely insurmountable obstacle in the way of his ever attaining royal dignity in England, where the very idea of having a Roman Catholic churchman on the throne would have been inconceivable. Mr. Vaughan is a warm partisan of the Stuart cause, and his pages bristle with titles which have an unfamiliar ring to readers who are not of the Stuart cult. James III and Queen Clementina, Charles III and Queen Louise, and Henry IX are all unknown to ordinary British histories; but in the case of the Cardinal Duke, whose title of Duke of York has for some reason been much more generally conceded in England than most of the titles assumed by the Stuart family, one is inclined indulgently to grant the empty dignity which never disturbed the peaceful slumbers of an English Prime Minister or a Secretary of War. Much good and careful work has gone into Mr. Vaughan's history of the Cardinal Duke of York, and the book is of value as rounding out the literature of the Stuart family. The references in Mr. Vaughan's footnotes are curiously indefinite, and consequently lose much of their value and usefulness. To refer a reader to the Historial Manuscripts Commission Reports, without any indication of the date or number of the report, or the page where the reference may be found, can only be considered by the historical student either as a practical joke or an insult.

The Events Man. By Richard Barry. New York: Moffatt, Yard & Co. $1.25.

Loaded to the muzzle with twentieth-century vulgarity and slang, suggesting all thru the scare heads and screamers over the columns of sensational newspapers is this lively account of "the adventures of Stanley Washburne, American war correspondent," and writer of cable news for a syndicate of the chief American dailies, on the despatch boat "Fawan" (Good Luck), in the spring of 1904. Mostly told in monolog, the story is rich or tiresome in detail, according to taste, but is an exciting picture of conditions in war time on the water around Port Arthur. It is, moreover, quite as truthful as some famous correspondence of alleged "eye witnesses" of which we could tell. A good story told in rough-and-ready style.

A History of the United States and Its People From Their Earliest Records to the Present Time. By Elroy McKendree Avery. In fifteen volumes. Volume III. Cleveland: The Burrows Brothers Company.

In the third volume of Avery's sumptuous and monumental history of the United States the narrative is carried from the founding of the Carolinas to 1745. The volume has the same general characteristics as its predecessors. Its typography is beyond criticism. Its maps are many, accurate and beautiful. Its facsimiles, photographs and miscellaneous illustrations have been selected and produced with a degree of scholarly and artistic ability rarely shown in American historical publications. It is only with the text that we can take ex-

ception, and here, tho we are in some doubt, we are inclined not to be disappointed. The years in question were those in which the American colonies first came to have a regular and settled life. The romantic fascination of "first landings" had gone, while no national consciousness had as yet appeared. They were years in which England, newly supplied with a royal house and a constitutional contract, undertook to erect a code of law and a system of administration for the colonies over seas. The best historical opinion is still in doubt as to the relation between that legal structure and the facts of colonial administration and life; whether it really describes the colonial situation, or whether it was not enforced and without active relation thereto. Mr. Avery has written only a fair history of his period. Its great difficulties, and the fact that no clear analysis of it is generally accepted, lead us to be lenient in our judgment of the text. But we are acutely conscious of its uneven character. At times there is revealed, often in opening and closing paragraphs, a knack of rapid and effective description. But the body of the chapter is liable to be disjointed and unimportant. The work lacks conscious certainty of judgment, and too often seems to be impartial from caution rather than conviction. We are far from content with this book as a description of American colonial life during the years 1660-1745, but we believe that it is, among popular histories now available, probably the best.

The Crested Seas. By James B. Connolly. New York: Charles Scribner's Sons. $1.50.

The publication of a fourth volume of stories by James B. Connolly will bring joy to all true lovers of the sea and to all who are interested in the routine and romance of life of a Gloucester fisherman. The present collection consists of stories published in various magazines, one, "The Illimitable Senses," appearing in the current *Harper's*. Many of the old characters of his previous books appear in new rôles and scenes: Martin Carr, the good-natured veteran; Tommie Clancy, the reckless sail carrier; Dan Coleman, the soft-hearted skipper, and such familiar hands as Peter Kane, Sam Leary and Eddie Foy. To a farmer who has never seen the ocean these stories would be full of interest, but to one who knows a seine-heaver from a bite-passer, who realizes what it is to carry full sail when the water stands to the helmsman's waist, and has himself heard the rattle of reef points on a tautened sail and the groaning of riggings under a press of canvas, these tales of the sea weave a spell that is difficult to throw off for some time. The romance of a sailor's life is not a new theme, but Connolly has lived and talked with these rough men of the Banks, and has discovered the softer, sweeter side of their lives. In fact, there is nothing of rollicking humor in the book. A few stories have a little humor introduced, but the general theme of the book is the eternal battle with the elements, of men frozen to death in open dories, drowned in attempted rescues, or of whole ships' companies lost in a winter gale. To stand by a shipmate to the last extremity is their law as well as their faith. The influence of home on the fisherman's life at sea we hope is not idealized in the last story, and perhaps the best of the book, "The Magnetic Hearth."

The Seignorial System in Canada. A Study in French Colonial Policy. By William Bennett Munro. (Harvard Historical Studies, Vol. xiii). New York: Longmans, Green & Co. $2.00.

The custom of Harvard University in publishing only the most important of its doctor's dissertations in history produces its good fruit in Professor Munro's volume on French-Canadian government which is now before us. The attempt of France to adapt to American conditions the seignorial phases of the feudalism which was already fast becoming obsolete in the mother country has never had its careful historian. In the "imperishable volumes" of Parkman, to which our present author constantly refers, is still to be found "the most faithful portrayal of the whole political, social and economic organization of New France." But Parkman's purpose was not technical; materials to which he had no access are now available; and a growing interest in institutional history has provided a sympathetic audience for such a study as this. Beginning with an introductory

chapter on the European background of French colonization, Dr. Munro traces the history of the seignorial grants from 1598 to 1760. After this, with the elaborate critical apparatus and bibliography of the "scientific historian," he describes the relations of the seignior to his superiors and his dependents, and the fiscal and religious systems of New France. He concludes with chapters on British Canada which strengthen our growing conviction that the American revolutionists were uninformed when they made the famous Quebec Act a chief grievance against Great Britain. For the student of colonial history this book offers a valuable sidelight; for the Canadian student its direct value must be great. It will be long before the work has to be done again.

History of the Christian Church. By Philip Schaff. Vol. V, Part I: The Middle Ages, from Gregory VII, 1049, to Boniface VIII., 1294. By David S. Schaff, D.D. New York: Charles Scribner's Sons. $3.25.

The late Prof. Philip Schaff wrote a small library of books in English and German on various topics of Church history, some of them small and of ephemeral interest, but others, such as his "Creeds of Christendom," standard and invaluable works of reference and interpretation. He was a man of prodigious industry, accurate and extensive scholarship, widest tolerance and warm Christian heart. He was not a great critic nor a great philosopher. His books were encyclopedic, distinguished for abundance of fact and exactness of information rather than for illuminating analysis of great movements and leaders. He did not formulate new judgments of the men and events of the past, but he selected the best of the judgments wrought by others with exhaustive knowledge and unfailing commonsense. The faculty of the University of Berlin pronounced his Church History the most notable monument of universal historical learning produced by the school of Neander, and in this happy phrase they both bestowed high compliment and told the truth concerning Dr. Schaff's limitations. For he remained always of the school of Neander: the methods and ideals of the newer science of history never really took possession of him. His son, now Professor of Church History in the Western Theological Seminary of Allegheny, abides devoutly in the same school. In the pious task of completing the History of the Christian Church by supplying a record of the period from Gregory the Great to the Reformation, the son has written very much such a volume as the father would have produced. There is the same wealth of fact and caution of opinion, the same mild Protestant prejudice, the same lively characterization with parallels from all ages the sun has seen. Bibliographical references are full and comments are discerning. Perhaps there is no history of the Church, at least in English, which can quite take its place for fulness of information and cautious fairness of opinion. General libraries, as well as those of ministers and ecclesiastical institutions, will find the work invaluable for reference. The period of the present volume is that of the papal theocracy and the scholastic theology, the *Blüthezeit* of Catholicism, when it would hardly do to laugh in one's sleeve at an encyclical. It was the time also of the rise of the universities, of the enthusiasm of the crusades, and of the noblest development of Church architecture. The coming historian who writes a really great history of this period will find the ground well broken by this honorable endeavor of a son to complete a father's unfinished task.

Town Life in the Fifteenth Century. By Mrs. J. R. Green. Two Volumes in One. Pp. xvi, 441; vii, 476. New York: The Macmillan Company. $4.00.

So much has appeared on English medieval life and local government since Mrs. John Richard Green published the first edition of her *Town Life in the Fifteenth Century*, in 1894, that it is now somewhat difficult to appraise at its full value this pioneer work. Yet Mrs. Green's book is still the standard on the subject which she has made her own. Mr. and Mrs. Sidney Webb begin nearly three centuries later in their great work on local government, of which as yet only the first volume has been published. Miss Mary Bateson, in her "Medieval England," scarcely touches the fifteenth

century, and, moreover, she is not specially concerned with life in the towns. Neither Vinogradoff nor Frederic Seebohm is specially concerned with town life. and the manors and manorial records have attracted more attention than has been devoted to the boroughs. Since the appearance of Mrs. Green's book, Messrs. Redlich and Hirst have published their two volumes on "Local Government in England"; but they are little concerned with the older history of borough government, and monographs on individual towns cannot take the place of more generalized history, because in England there was never any uniformity in the charters, the constitution or the powers of the towns and cities. During the thirteen years that have elapsed since the first publication of Mrs. Green's book it has been twice reprinted, and Mrs. Green is certainly to be congratulated on the new edition in its present compact and convenient form.

Hampton and Reconstruction. By Edward L. Wells. Columbia, S. C.: The State Company. $1.50.

This is a biography of the late Wade Hampton, with particular reference to his relation to the reconstruction movement. The narrative is often rambling and disjointed; and the tone, while sincere, is too partisan for the purpose of history. The author is evidently unaware that the South brought down upon itself the horrors of reconstruction by its stubborn failure to accept the results of the war in its first constitutions. He has somewhere got the curious information (p. 70) that the Northern armies were "chiefly recruited from foreigners or those of near alien descent." He attributes the reconstruction acts to the malice of Thaddeus Stevens, and that in turn to the influence of an alleged negro mistress of Stevens's. He is entirely complacent about the demonstrations of the red-shirt bands who swept thru South Carolina during the Hampton campaign of 1876. All of this is interesting reading no doubt, but it is hardly to be classified as history. Just what the author means by referring to the torchlight processions once so common in political campaigns as "a show" of physical force (p. 115) would be hard to say, unless he means to liken such demonstrations to those of Hampton's "red-shirts." The analogy, it may be said in passing, is hardly convincing. There is considerable writing of a rather furious sort in the book, and passages of somewhat overstrained rhetoric are not infrequent.

Uganda to Khartoum. Life and Adventure on the Upper Nile. By Albert B. Lloyd. New York: E. P. Dutton & Co. $3.00.

Mr. Albert B. Lloyd is a notable hunter and fisherman, an intrepid traveler, an acute observer, a courteous gentleman, a wide-minded Christian, and a devoted missionary; but he is not a practiced writer. The story of his travels in Uganda, and between Uganda and Khartoum, cannot fail to contain much of interest to all who wish to add to their knowledge of the Dark Continent. It is full of information both as to the character and climate of the country, and the habits and customs of its inhabitants; and it is written by a man who has a real liking for and sympathy with the undeveloped child races of Central Africa. It is, however, written without system or plan, and is artless and inconsequent in its style—sometimes almost ludicrously so. Mr. Lloyd's description of the beautiful Waki Falls may serve as an example of this unconscious humor. "It was a glorious sight," he writes, "but pitifully spoiled by the dead body of a poor fellow, who, no doubt, had fallen over from above; so many of earth's most lovely spots are marred by the presence of man. 'Where every prospect pleases and only man is vile.'" The book is profusely illustrated with pictures, evidently taken on the spot with the camera.

Semiramis. By Edward Peple. New York: Moffat, Yard & Co. $1.50.

In his preface the author of this novel explains that it is not his purpose to present a series of historical facts, but to entertain with a tale of ancient loves and wars, a tangle of myth and probability. However, whether he entertains or exasperates depends upon the character of the reader. To one acquainted with accepted profane and religious history the book is, to say the least of it, disconcerting. The heroine is Queen Semiramis, represented as a cross between a Venus and an Amazon, a dove and a tiger. And the story is written in

a kind of delirious prose, that is to say it has the rigidity of poetry without its grace or high meaning, and the form of prose without its flexibility.

Literary Notes.

....The hunter after book bargains will do well to refer to the Sales Department Catalog of the Tabard Inn Library, Philadelphia, especially the list of "publishers' remainders." A book that does not sell as well as its publishers expect is not necessarily inferior, quite the contrary in many cases.

....Ivan Somerville & Co. are issuing some very attractive books this season. One thing that makes for the characteristic attractiveness of their publications lies in the artistic printing work lavished upon their output by the Village Press. In its *Day-Dreamer's Harvest,* being meditations by Henry Byron, for example, the title page is most happily designed and its balance is especially to be commended. Mr. Byron has filled his pages with wisdom nuggets that makes the book one into which to dip at odd moments.

....The Museum of Fine Arts (Boston) has just issued a catalog of its special exhibition of Japanese sword guards or tsuba, comprising about one thousand specimens. The text is by Kakuya Okabe, assistant in care of metal work at the museum and a pupil of Kano-Natsuo, one of the most noted metal artists of recent times. The present catalog gives first a brief survey of tsuba-making. specifying the different periods in which the artists worked, the various influences which caused new developments of form and material and the results due to these changes; second, the various schools and artists concerned in tsuba-making, and lastly the museum's exhibition. The whole forms a brief but comprehensive handbook.

....The anecdotal side of stage history is being overdone. And writers are making use of it for no special purpose: neither to illustrate the actor's personality, nor to accentuate the characteristics of an age. It is disappointing to read thru Mr. Fyvie's volume on *Comedy Queens of the Georgian Era* (Dutton, $4.00), and to feel that the only result has been to learn a deal of scandal. He has failed to give us distinct portraitures of the twelve women of the stage; he has repeated much detail that is not new, and has looked at his "queens" from the standpoint of their very common personal existence. Actresses of this status are of value only in their professional capacity. There are many historians who have made use of the same material in much more picturesque fashion. Wherever you read of the careers of these players, however, two facts become apparent: as women, they were products of their age as well as of their stage; and they attained prominence during a period when immorality in the green-room was quite as much the fault of the outside world as of the world behind the curtain. That is why Garrick had to adopt the rule that no outsider, be he prince or knight, was to be admitted on the stage.

Pebbles.

WITH THE EYES.

THE girl with beautiful eyes has mere man at a tremendous disadvantage.—*Somerville Journal.*

ONE SEXTON—Do you have matins at your church?

The Other—No, we have oilcloth.—*Harper's Weekly.*

CHARLES LAMB was writing his eulogy on roast pig.

"Of course," he said, "I don't mean a young pig that has been in cold storage for eleven months. Heaven forbid!"—*The Chicago Tribune.*

MAUD Muller raked the fragrant sod
All strewn with yellow golden-rod;
She loved the blossoms shining bright
And greeted them with keen delight,
But by and by she had to sneeze,
And after that she'd cough and wheeze,
She caught hay fever. Now she cries:
"That golden-rod I just despise."
And when to raking hay she goes
She wears a clothespin on her nose.
—*Chicago Chronicle.*

HOW TO BECOME RICH.

IN order to become rich it is necessary merely to follow the perfectly simple procedure of any king of finance. Thus:

Borrow all the money you can upon the property you already own.

With the money buy more property.

Combine the two properties, float a loan upon them, and with the money buy a third property.

Merge the three properties, use the merger as security for a loan, and with the money buy another large property.

Consolidate this with the others, select a board of directors, and authorize yourself to float twice as much stock as there is.

Sell this stock, and with the money buy five or six more properties.

Organize a holding company which will carry the stocks of all the properties.

You are now so wealthy and influential that you do not need to make any more loans.

Increase the stock of your properties and sell bonds upon them.

Authorize yourself to buy everything in sight with this money.

Now you will have control of everything; also you will have the say-so in any number of subsidiary companies and a controlling voice in eight or nine insurance companies and national banks.

After this there doesn't seem to be much for you to do except to get the dyspepsia, get bald and prattle gently about the excellence of moral proverbs.—*Life.*

The New York Street Railway Investigation

At the beginning of 1906, a consolidation of all the street passenger transportation companies in the City of New York took place. The Belmont interests, owning the profitable subway and elevated roads, were constrained to unite with Mr. Ryan and his associates, who owned the surface lines. These latter, weighed down by an extraordinary load of overcapitalization, were controlled by a labyrinth of corporations, so arranged, however, that directing power was concentrated in the hands of a very few men. The Belmont interests were forced into this merger by ingenious persecution. Mr. Quigg has described the process. He was the agent of the surface roads party for the work, in which great sums were expended. The sensational discoveries made last week by Mr. Ivins for the Public Service Commission relate to transactions which occurred before the merger as well as to others which followed it. They suggest a prompt appeal to the grand jury, which, fortunately, is now in session.

Anthony N. Brady, well known in connection with street railway companies and other public service corporations, had gained possession of the franchise (unused) for a short street railway across the lower part of Manhattan Island in the neighborhood of Wall and Cortlandt streets. This he sold, in 1902, to the Metropolitan Securities Company (one of the surface corporations) for about $250,000, receiving in payment $965,607, with the understanding that he should distribute the excess as follows: to Thomas F. Ryan, Thomas Dolan, W. L. Elkins, William C. Whitney and P. A. B. Widener, $111,652 each; to the brokerage firm of Moore & Schley, $134,028. These payments he made. The franchise has not been utilized, but the property has been carried as an asset at $965,607. Whitney and Elkins are dead. Dolan, Widener and a representative of the Elkins estate now say that the three payments in which they were interested were received on account of loans made to Whitney. This does not account for the payment to Whitney himself, and as an explanation it leaves something to be desired. Curious rumors as to this distribution are in circulation.

It does not appear that the corporate capitalization was increased by this transaction. Most of the water (except the $108,000,000 added at the time of the merger), had been injected into the surface road corporations at an earlier date. It is asserted that nearly $40,000,000 of it was accounted for by the acquisition of five street car lines thru the agency of a syndicate. For one of these the syndicate paid $25,000, and then "put it in" for the comfortable consideration of stock and bonds having a marketable value of $5,500,000. Another, representing a cost price of $100,000, was "put in" at $3,700,000. Upon a third $450,000 was expended in construction, and for this there was received $11,000,000 in securities. A list of the five shows a syndicate expenditure of less than $2,250,000, for which there was received securities having a par value of $22,000,000 and a market value of $41,700,000. Thus was the capitalization of the surface roads swollen, to the profit of the speculators, who, it is understood, speedily sold their holdings at the high prices then prevailing. The two leading surface corporations are now bankrupt and in the hands of receivers. When one considers the operations of the syndicate or group, the private profits of them, and the burdensome load of capitalization thus created, it is difficult to resist the conclusion that the surface traffic would afford large profits to an

honest operating company, if conducted on a basis of 3-cent fares and universal transfers.

John B. McDonald built the present subway. He then deserted Belmont and went over to the Ryan surface company, interesting himself in that company's project for constructing a system of additional subways, between which and the surface lines there should be free transfers. Then came the merger, for the accomplishment of which Quigg, the "accelerator" of public opinion, had labored so diligently. Additional subways were no longer wanted. Competition had been suppressed. But McDonald had a contract, and it was necessary to satisfy him. Therefore the consolidated interests paid him $250,000 at once and agreed to pay him $50,000 annually for five years. Thus the merger appears to have deprived the people of transportation facilities which they needed then and for which there is a much greater demand now.

The books of the surface companies, for a period of eleven years, have been destroyed, but those of the consolidated interests show many payments made without due authority. Some of these are not explained. Of $300,000 received by President Vreeland for expenses, $185,000 is not accounted for. There are fees for political lawyers, and a loan of $25,000 to the editor of a Tammany newspaper, now defunct. When the National Civic Federation undertook a thoro investigation concerning the merits and disadvantages of municipal ownership of public utilities, it was estimated that the cost of it would be about $90,000. The president of the Federation, Mr. Belmont, agreed to be responsible for the needed sum, altho it was expected that a large part of it would be supplied by contributors. It now appears that he obtained from Mr. Ryan a guarantee for $20,000, and that $15,000 of this was paid by the Metropolitan Securities Company, a financing corporation representing the surface road interests. In a letter calling for the third $5,000, Mr. Belmont remarked that the report of the investigators would soon be made known, and that the work, so far as he could learn, was "very satisfactory." It will be recalled that the expert investigators, ten of whom inspected municipal public utilities abroad, did not agree in their conclusions, altho a majority held that public utilities, whether in public or in private hands, "are best conducted under a system of legalized and regulated monopoly."

The money paid by the Metropolitan Securities Company, upon what Mr. Belmont called "Mr. Ryan's guarantee," appears to have been taken from corporate funds without due authority. For this the men who paid it may deserve censure or something more severe, but we cannot see that the Civic Federation's investigators were at fault. There is no indication that the conduct or conclusions of any one of them were shaped or affected by the fact that their expenses were paid in part by the street railway interests in New York. We do not know that they were informed as to this source of supply. Even if they were, to those who are acquainted with the gentlemen the suggestion that they could be moved to favor private ownership by such contributions from a private monopoly is absurd. At least a part of the sum thus guaranteed will be returned out of the money received for copies of the investigators' elaborate report.

The investigation is not finished. For some acts of the companies and their officers and controlling financiers which now appear to have been wicked and criminal there may yet be offered an explanation that will place them in a better light. For others there can be no reasonable defense. The prospect now is that the completed record of this inquiry will show a shocking contempt for law and good morals on the part of many men prominent in American corporation finance; in short, that these men are robbers and thieves and swindlers whose offenses differ little in quality from those of the Chadwick woman who died last week in the penitentiary at Columbus.

The obvious lesson for New York is that strict official regulation, with thoro publicity, is needed—such regulation as we may expect to have hereafter, under the direction of this new Public Service Commission, the creation of which the street railway companies sought to prevent. If it be too late to right the wrongs of the past, or to send the rascals to jail, the people of New York may look

forward now to a great improvement in the future by means of the authority which the new Commission is now beginning to exercise.

The Great Business Superstition

Business men as a class vaunt themselves above measure upon their practicality. They love to jeer at the theorist, and to make merry over the "academic mind." There is nothing wrong about this, nor even indecent, for that matter; it is only amusing, and we suspect that the American business man, at least, whatever may be true of business men elsewhere, is himself aware that it is amusing, for American business men generally have a sense of humor.

The merely amusing, however, when carelessly handled by such as lack the sense of humor, may become injurious. It may even become uneconomical, and therefore unbusinesslike, and there is a point at which, here in America, the business man, in his irreverence for the theorist, oversteps the mark. This he does when for any reason he gives way to that great superstition which his class seems curiously unable to shake off, and allows himself to believe that the President of the United States makes good and bad times, like a medicine man dispensing weather.

If the business man could be persuaded, to give himself up to mere theory for a season, his distress could certainly be alleviated, if not altogether removed. Presidents of the United States have been of varying degrees of intelligence and strenuousness, but to the eye of theory no one of them has as yet had the crops, the catch of the fishing fleet, the output of the mines, and the balance of trade completely in hand. Trifling accidents, like untimely frosts and the miscalculations of Providence in distributing rain and drought, have time after time interfered with the best laid plan of the White House Wizard to reward his friends and punish his enemies.

Apparently, something like this has happened this year, for we have read with much concern in the October crop report that the four chief cereals, corn, wheat, oats and barley, are "shy" 105,738,000 bushels by comparison with last year. This shortage, as The Independent pointed out when it was first indicated, will inevitably occasion a slowing down of our record prosperity pace. The farmers will not have so much money to spend. The railroads will not have so much freight to carry, the iron and steel mills will not have such large orders for rails and other wares. The promoters will not have so "easy" in investing public to "work." Stocks will continue to decline. Exports will fall off, and, if they do not recover beyond present expectation, the balance of trade will be against us, and we shall presently be exporting gold instead of wheat and machinery.

That a President of the United States can disturb "confidence" is not questioned. Old King Canute disturbed the tide with his broom—to some extent. But the assumption that any disturbing of confidence which is in the power even of an American President can more than momentarily check the investment of capital when there is capital to invest is one which the economic theorist would caution the practical business man not to make. It is unnecessarily disturbing, interfering at times with both sleep and digestion.

Mr. James J. Hill, for example, has been telling the American public that railway building in the United States is at an end, all because Mr. Roosevelt has intimated that he will use his good offices to assist railway officials so to observe the law of the land that it will not be necessary to send them to States' prison. Capital is said to be timid, and Mr. Hill has so much capital that he is possibly unduly timid. But, on sober second thought, he will probably admit that certain statistics which he himself has published give ground for hope that things are not quite so bad as he apprehends.

For instance, Mr. Hill says that the American railroads are capitalized at only $57,000 a mile, and that they do a business of 800,000 ton miles per annum, while the railroads of England are capitalized at $230,000 per mile and do a business of only 500,000 ton miles per annum. The mere theorist would certainly cheer up on this information, confidently expecting that when Mr. Hill and others find their capital, which the

disturbance of confidence has driven into hiding, can no longer be stored in the distended safe-deposit vaults, it will certainly overflow into that obvious vacuum which exists between an actual $57,000 and a possible $230,000 per mile.

We have called this notion of the American business man, that the President makes good and bad times irrespective of natural conditions, a superstition. It really is such because the essence of superstition is a fear of something that you can't find when you look where it is. We are sorry to have to say all this, because superstition is supposed to be the proper mental habit of children, savages and chorus ladies. Business men are not necessarily savages; they don't like to be thought childlike, and they do not consort exclusively with chorus ladies. They are, indeed, all in all, a superior order of beings, and they ought not to be superstitious. It would help them, we are sure, if they would for a time put by their prejudices against the theorist and "the academic mind" and take a good nerve-bracing course in theoretical political economy.

Freedom of Advertising

A HUNDRED years ago newspapers used timidly to admit as "paying guests" a few notices of stage lines, runaway slaves and vendues. These brought with them their friends and relatives in increasing numbers, until now they come as near as they dare to crowding out their original hosts, the news and editorials. As in all cases where one roof shelters more than one family, quarrels have been common. In some cases the boarders secretly or openly run the establishment of which they are the support, in others the hosts maintain more or less of their original authority, and some assume full responsibility for the habits and decorum of the boarders and insist on their telling the truth and keeping all their promises. In the best regulated households the boarders have certain apartments assigned to them, in which they are compelled to stay; in others they are allowed to roam all over, living in any room they please. The ethics of the relationship is not settled, and all sorts of compromises are in vogue. Our own belief is that the boarders ought to be strictly segregated and then allowed as much freedom and independence as regard for the general respectability and good order of the establishment permits.

The question has been the subject of hot discussion recently owing to the sharp attack made by *Collier's Weekly* on religious journals for printing advertisements of patent medicines and fake financial schemes. We heartily commend *Collier's* for its exposure of such frauds. It is a work that needed doing, but required a rare combination of courage and capital. We also sympathize with its altruistic efforts to purge the columns of its contemporaries. THE INDEPENDENT has been as strict as *Collier's* in its exclusion of certain kinds of advertising. But, like all reformers, *Collier's* goes too far and sets up an ideal that it is impracticable to attain and undesirable to approach. It holds *Unity* up to the admiration of the world because it announces "We absolutely guarantee all advertisements herein," and it points the finger of scorn at the *Living Church* because it says: "The editors and publishers of the *Living Church* assume no responsibility for the assertions of advertisers."

Now it is not at all obvious that the former policy is any more in accordance with Christian ethics than the latter. On the contrary, the refusal to admit all advertisements which the editor did not personally approve and endorse would be unjust to advertisers and injurious to the interests of readers. If generally adopted it would very seriously infringe on the right of freedom of printing. What could a man do under these conditions when he had invented what he thought was the greatest thing in the world? He could not found a periodical of his own to advertise it, even if he could afford it, because our Government prohibits this. He could not get access to any periodical to tell his tale to the people unless he could first persuade the editor to take his view of his invention. This would be as unjust as it is to prevent a politician of the opposite party from hiring a hall in the town. A man has a right to say that his razor, piano or typewriter is the cheapest and best, if he

believes it, as he generally does, just as every editor who amounts to anything thinks his magazine is the greatest thing in the world.

Periodicals of general circulation are in fact quasi-public institutions like hotels, theaters, stores and street cars, and as such they are bound to serve all comers except for good and sufficient reasons. Their public utility is recognized by law and they receive special privileges, practically a Government subsidy, on account of it. A large part of this utility is due to the advertising, which often surpasses in extent and sometimes, as even editors have to admit, in interest and value the editorial and news portion of the periodical. It has been held by the courts in the Metcalfe case that theater managers have the right to exclude any person they choose. Doubtless periodical proprietors have the same legal right, but in both cases justice to the public demands that it should not be invoked oftener than necessary. The reason why advertising has developed in this country into an extensive and important branch of literature is because it has been free from the restriction which the policy of the paper exercises over its literary columns. The department edited by the people themselves has often taught useful lessons of typography and language to the literary pages.

There is no hypocrisy, inconsistency or impropriety in denouncing editorially what is recommended in the advertising pages. We have not hesitated to contradict advertisements in THE INDEPENDENT, even by name, whenever we thought it our duty. We have a right to the free expression of our opinion in the editorial columns; the advertiser has the same right in the space he has purchased; both being equally subject to the restriction of the implied contract with our subscribers not to publish anything violently inconsistent with the character of the magazine or antagonistic to its purposes. The best example of the relation that should exist between advertiser and editor is the book department. A literary editor who would hesitate to condemn a poor book because it was advertised in the same periodical, an advertising manager who would refuse an advertisement because it eulogized a book condemned on another page, and a publisher who would withdraw his advertisement because his book was harshly criticised, would be rightly regarded as very contemptible individuals.

It is important just now that the real rights of the advertiser should be defined and insisted upon, because more than the commercial question is involved. It is becoming the custom to utilize advertising space for discussion and personal appeals, and this should be encouraged. Public service corporations, such as electric lighting, water supply and street car companies, are replying to the attacks made upon them in the newspapers by publishing "talks to the people" in their advertising columns. We believe that the printing of such advertisements, contradictory tho they be to the editorial position, is only fair and does not impair the dignity or influence of the paper. A Republican paper, for example, should, as a matter of common decency and justice to its readers, publish the platform of the Democratic party and a fair abstract of the arguments supporting it. If it does not do this voluntarily, it certainly has no right to refuse such matter as an advertisement.

Altruistic Selfishness

IT is a bad thing to have but one baby in a house—bad for the baby. He does not learn altruism. He does not understand, as a little child, that he must make way for another child, and he gets his best lesson when his "nose is put out of joint" by the coming of another baby for which he must make way. A family of children is a school of unselfishness, if the mother is a fit teacher. The parents, meanwhile, learn to sacrifice, and to care second for themselves. The family is a little altruistic colony, altruistic within itself, but it may be altruistic only within its own doors—"for us four and no more"; selfish outside. The French call the English family a selfish unit.

But the children go to school and soon learn a wider social altruism. They are loyal to their school and "root" for it, and they shout and cheer when the rival school is beaten. Perhaps there follows the college yell, and with it the narrowed altruism of task and sacrifice for a fra-

ternity, and bitter rivalry or injury directed toward the student outside of its membership.

All along there has been the development of a degree of altruism, a widening of affection and self-denial; and it is well, even if there has begun to grow up with it something more than a lack of good will, something of a selfish and hostile attitude toward those that are without. But this correlative attitude is itself not lovely, and yet is praised as a part of virtue. Very hard is it to see the wrong that stands close to the right. A fellowship, or union, is often created of those engaged in a certain line of paid labor. Its members are pledged to help each other. They care for their sick and bury their dead. They pension their decrepit comrades. They work together to defend their rights and increase their privileges and benefits. That is all most commendable. It is a beautiful practice and example of loving and sacrificing for one's neighbors. Of course, it is the neighbors within the circle, but that is much; it is a good school in which many a narrowly selfish man has been broadened out into an altruism which is thus far Christian. The danger is, of course, that toward those that are not of the membership there may grow up something worse than indifference—a real hatred, or even actual injury and violence. Such cases have often occurred. The history of strikes have been full of them, directed rancorously against the free lances of labor. The simple fact is that we have in these cases only limited altruism, and beyond the limit it may be that we have even hate instead of love; as if indifference or hate were the natural attitude of human nature, and altruism had slow growth, and only within the bounds of mutual advantage, only where the selfishness of a brotherhood or fellowship had somehow involved a degree of defensive altruism of each toward his brother.

We see the same thing in nations. In its beautiful aspect of love of country we call it patriotism. It is characteristic of a large mind, one that has learned to look beyond family and clan, and care for the whole fatherland. It is a real virtue, closely allied to Christianity. The man who works or even dies for his country has learned self-sacrifice to the limit of its diameter if not to its broadest circumference. But there are others outside of country, and they should be loved, in a less degree, perhaps, than one's own fellow citizens; certainly not hated. Here is the conflict of altruistic patriotism and selfish patriotism, when, in love of country, one indulges suspicion, prejudice, or hate against a neighboring people, insults them in voice or in the press, calls them by opprobrious names, goes proudly to war with them, and kills them with all the ingenuity of modern science. That is not Christian; it is hateful. It is the result of narrowing one's altruism.

Patriotism is not a vice, as certain French and German Socialists declare; it is a virtue, but a virtue that may very easily degenerate into a most pernicious vice. M. Jaurés and his associates have not wholly reached their international altruism thru a larger breadth of vision, for it has come not by way of patriotism, but by the inferior way of class sympathy. Nevertheless they have crossed national borders, and they say it is detestable that brother should fight brother, and that no citizen should become a soldier in war.

And how about protective tariffs and the exclusion laws? Protection is good, but wrong and injury toward one's neighbor nation is not good. It is fine and most admirable in every way for a nation to benefit its own citizens; but it must always give us pause when a law injures the citizens of other nations. A tariff is good and necessary; but when the purpose of the tariff is exclusive, and when it helps us by injuring other people, it is time to ask the question, "Is this Christian?" Can we not have a patriotism which shall love our neighbor, which shall leap over boundaries, and which can adapt, even in its commercial policy, the language of the first treaty of the United States with Japan, to create "a perfect and universal peace, and a sincere and cordial amity"?

Then there is the race altruism, which favors "Anglo-Saxons," or Caucasians, as against brown, yellow and black, which loves one's own race and despises or hates some or all others. There are in this country sections where "dagoes" are

shut out of public schools, others where Asiatics are set off by themselves, and a third of the country where black people are excluded by law from the privileges of the whites. We are beginning to find out that the greatest danger of the century comes from this race hatred or contempt. It may drive the English out of India—we begin to fear it. It makes what we call the great yellow peril in the East; but what is really the white peril of provoking resentment and war by arrogance and brutality, and of all the varieties of this narrow territorial or racial altruism, with this extra-territorial or extra-racial selfishness, there is no country that supplies, at home and in its colonies, so many and virulent illustrations as our own.

May we add that in religion sectarianism gives another illustration of warm altruism within the circle of its denominational fellowships, and of icy selfishness and bigotry outside of them. For religion fully sanctifies very few people. It does not necessarily give a broad love. It allows us to talk of *our* mission, or our culture, or our temperament, or of whatever has made our denomination a religious club instead of a Church of Christ. So we take in some and love and help them, and we crowd out or keep out others whom we do not love enough to take them in as brothers, with all their little differences that separate them from us. The very existence of a sect narrower than the Church Universal is a confession of extra-ecclesiastical ill-will and selfishness; for Christians are, as yet, most of them, only "*called* to be saints." When and how shall we learn the breadth and the charity of "love for Being in General"?

The Peace Conference

It is now expected that the Hague Conference will end next week. Tho it would be premature to pass final judgment on its work until the full report of its actions is available, enough has been cabled to this country to justify the following conclusions:

It is needless to say that the pacifists are anything but satisfied with the results. Probably their disappointment at the fruits of the Conference, judged by what *ought* to have been done, is not unreasonable. Still, the progress in what *was* done is by no means insignificant, and we have no doubt, as time goes on, this will be generally realized. Whatever blame history may allow to the work done and undone at The Hague in 1907, it will be found, we think, that the governments behind the delegates should bear most of the blame rather than the delegates themselves.

What, then, are the net results of the Conference? They are of several kinds: First, actual conventions that will be presented by the Conference to the governments for their approval, so that the ideas contained in these conventions may become at once a part of the law of nations. Second, those results show a growing sentiment in the official mind, both at the Conference and at the various capitals, in favor of progressive ideas, which must await the third or some succeeding Conference for general adoption.

There are other, but less important, results, of which may be mentioned the acceptance of the Porter proposition, which removes from the war area disputed money claims, by necessitating arbitration of these claims before the use of armed forces for their collection; and the acceptance of the proposal for the convening of the Third Conference within eight years from the termination of the Second, coupled with the proposition for the assembling of a committee of arrangements two years before the probable date of the Third Conference, for the preparation of a plan for its organization and procedure, and also a program for its discussion.

If it were not for the proposals of periodic "self-governing" conferences and a Supreme Court of Justice for the world, similar to the Supreme Court of the United States, these accomplishments would have seemed of immense importance. For the strength of sentiment developed at the Conference for these other far-reaching propositions (a large number of important States having unqualifiedly endorsed periodic self-governing Conferences), proves conclusively that the proposals which won general approval are considerably below the existing sentiment of the representatives of the leading Powers.

Some question arises in regard to the exact meaning of the Porter proposition. The technical words used are "Contractural debts," but popularly speaking, it would be proper to call them "disputed money claims." Claims of this kind apparently constitute the chief danger of war between any European and any American State. Therefore, the acceptance of this proposition has reduced this danger to a minimum if it has not entirely destroyed it. At the outset of the Conference, there seemed to be very little hope of carrying this proposition. But it finally passed and has been expressly assented to by all the creditor and debtor nations represented at the Conference. This alone would amply have justified the holding of the Conference, as it removed the greatest danger of war between three of the five continents of the world.

Despite the manifest importance of this proposition, the arrangement for the Third Conference is of even greater value. The Americans proposed that hereafter all Conferences shall meet periodically and that they shall be self-governing. In presenting this motion informally to various delegates, the Americans perhaps over-emphasized the necessity of having the future Conferences "self-governing." This implied considerable dissatisfaction with the manner in which the present Conference was conducted. From this the Europeans realized that if they approved the American proposal as made, Europe would hereafter be compelled periodically to assemble in a Conference whose discussions would take such wide latitude as goes with "freedom of speech" in public assemblies, this being well understood in Europe as America's idea of self-government. Such an assembly would give anxious hours to all official Europe, during its whole sitting. Indeed, under present conditions in Europe there is danger to the peace of the European States in every free discussion at such Conferences. Because our peculiar system is diametrically opposed to that of Europe, our security seems to lie in a way which is dangerous to European States. The strength of any American proposal depends upon opportunity for free speech and wide circulation of the reports among the people. On the contrary, the maintaining of Europe's internal peace lies chiefly in keeping public discussion within narrow limits.

So acute is this feeling that there was great relief thruout Europe when it was learned that Roosevelt had consented that the Emperor of Russia might issue the invitations to the Conference which the European Powers had already agreed to attend. This made them sure that the Conference would be run by a Russian president, on such lines as to keep it within the limits necessary for European security, and which any fairly informed Russian would thoroly understand. Despite this delicate situation growing out of the different political policies of the two continents, the pressure of sentiment for future conferences was so strong that the Europeans were compelled to jockey a little for position. The Americans, tho many members of the Conference were in favor of their proposition as originally presented, were induced to modify it with the view to insuring its unanimous acceptance.

To the provision for the Third Conference, unanimous consent was thus secured without any apparent effort. This was the most important event of the Conference. As the Second Conference was able so easily to make definite and satisfactory arrangements for a third, can any one doubt that the increased power acquired by this idea during the next decade will enable the Third Conference to arrange for its successor, if not for its successors?

When voting in favor of the motion for the Third Conference, the delegates of some of the Powers whose fears were awakened at the thought of a "self-governing" Conference, declared in open session that the Emperor of Russia, in their opinion, had acquired the right to call the Third Conference, because of his having called the first and second. In this way the Europeans insured that the next Conference would be conducted according to European methods which will take due account of European conditions and dangers. On the other hand, the Americans secured definite arrangements for the Third Conference, and developed such strength for periodic conferences that the advocates of this idea need have no

anxiety in regard to its full acceptance at no distant time.

Less than three-quarters of a century ago, the chief European governments represented at this Conference entered into a conspiracy to destroy the idea which they themselves have now united with the Americans to strengthen by providing for the Third Conference. As a result of this conspiracy the combined military power of Europe was used to restore hereditary government wherever popular government was getting a foothold in Europe, and when this work was apparently finished the conspirators contemplated the continuance of this work in America. The instigator of this conspiracy was the Emperor of Russia, a man with whom Nelidoff, the president of this Second Conference, was personally acquainted.

The contrast between these two facts is sufficient to indicate the progress which has already been attained and to give a slight idea of the possibilities which the interval between the adjournment of the Second and the convening of the Third Conference may bring forth.

Tri-Church Union

The question of approval of the Act of Union agreed upon at a Council of the Congregationalists, United Brethren and Methodist Protestants some months ago has been the chief subject before the Congregational National Council held in Cleveland, O., last week and this. The decision will not be reached before this issue reaches our readers. The report presented in favor of it was referred to a committee of twenty-eight, which held eight sessions public to the Council, and which were attended by hundreds of the members, and the warmest interest was shown. While the strongly predominant feeling was for union, there were not a few voices of hesitation, criticism or even opposition. It is amazing that such an objection as temperament should be raised, as if any denomination ought not to be ashamed of itself that was willing to withhold fellowship with any who call themselves Christians. If Congregationalists, or any other denomination, has what is called "a mission," it is not particularly for culture, or intellectual outlook, but for the Christian outlook, equally for city and country, for all conditions of society and all styles of thinking and feeling and religious expression. Some people seem to think that the great mission of Congregationalism is to demonstrate what they call autonomy, as that of the United Brethren and Methodist Protestants is to demonstrate connectionalism, both important enough, but quite in harmony if we call one liberty and the other fellowship. The present opportunity presents a crisis for the Congregationalists more important than any other since over a hundred years ago they gave over their churches out of New England to the Presbyterians, and thus eventually created the New School Presbyterian Church. To turn down this union is to turn down the denomination itself.

Professionalism

Dartmouth's Athletic Committee has disbarred twelve of her students from taking part in intercollegiate contests during the rest of their college course, mainly, it seems, because they were found guilty of playing baseball for money during vacation. Why would it not be a better plan for Dartmouth — having first abolished any snap courses she may have— to arrange the curriculum so that every student will be compelled to spend at least eight hours a day in study and recitations, and then let anybody, without regard to prèvious condition of professionalism, represent the college in athletic contests? If an occasional wicked professional is willing to take such studious punishment every day in order to play on the team, he is just the type of man that our colleges are most in need of at the present moment. The spectacle of an athletic committee drawing the line against a man who has been admitted by the faculty to the privileges of the college is enough to make the irreverent smile.

A Tariff to Aid Labor

Look to New Zealand and Australia if you want to keep abreast of social and economic progress. These great states of the Antipodes are today doing things while the rest of the world is talking; and, more to the point, their citizens are

prosperous and happy, despite the campaign of misrepresentation carried on against them by the London *Times* and lesser English and American papers, who have done everything possible to create an opposite impression. Australia, after having surrounded herself with a Chinese tariff wall, now proposes that some of the benefits of this high protective policy go to the workers instead of being monopolized by the manufacturers. Accordingly an excise duty equal to half the import duty will be imposed on all colonial manufactured goods if the conditions under which these goods are produced are unfair to the workers; and a board of excise will be created with full powers to separate the sheep from the goat manufacturers. The result will be to crush out employers who do not pay trade union wages and recognize trade union conditions, or to bring them up to that standard. We call this plan to the attention of the National Civic Federation's great trust conference to be held in Chicago shortly.

Senator Borah's Views

We are glad Senator Borah was able to convince a jury that he was not implicated in the violations of law on account of which several persons were indicted with him in Idaho. Abundant evidence that the offenses were committed by others was produced at the trial. We cannot commend, however, all that he said to the public after his acquittal. The prosecutors were M. C. Burch, of Detroit, and S. R. Rush, of Omaha, special assistants of Attorney-General Bonaparte. What evidence has the Senator that they were, as he says, "actuated by corrupt motives"? Such a charge should not be made unless there is proof available to support it, and we venture to say the Senator hasn't any. He also asserts that all the officers of the Interior Department, and "presumably" all of those in the Department of Justice, know that 99 men or women out of 100 who take up land claims under the Timber law intend to sell them at once, and that the Government connives at violations of the law by continuing to issue receipts to these holders of claims. But does not the Government properly assume that the entryman has respect for his own oath? If a speculator or a land company hires the men and women of a score of families to take such claims, paying them beforehand to break their oaths, we hope the Senator does not mean to defend the persons engaged in such practices, or to assail the Government for prosecuting them. The law should be repealed or amended. Unless we are misinformed, either repeal or amendment has been effectively opposed by the speculators and corporations which have profited by such violations of it as are now under consideration in Idaho.

The anonymous writer of the article entitled "Success in the Ministry," which appeared in THE INDEPENDENT September 12th, will be pleased to learn of one instance in which it has borne fruit. A subscriber writes us of a young friend, a college senior, who expected to enter the ministry, but who, while engaged during the summer in religious work in Oregon and Washington, met so many young, aggressive business men who set before him so strongly the attractions of business life, and spoke so depreciatingly of the ministry, that he almost gave up his previous plan of study. But, says our correspondent, "some one gave him the article, 'Success in the Ministry,' and it brought him back with a rush; he now hopes to go out West and show those business men that a minister has a career worth while."

Ex-Sheriff H. K. Brown, of Baker City, Ore., who arrested Steve Adams, the man wanted as a witness in the trials for the murder of Governor Steunenberg, and who testified in that case, was killed last week by a bomb attached to his gate, much as Governor Steunenberg was killed by Orchard. No one knows who did it, but no one doubts what was the organization that is responsible for it. Sheriff Brown had received threatening letters, and before his death declared that he had no doubt it was persons connected with the Western Federation of Miners who affixed that bomb to his gate. It is horrible that such murders should be committed, and no one yet punished. A band of murderers are joined against society and law.

We call the especial attention of our country readers to Mr. Huntington's second article on game preserving published elsewhere in this issue. His remedies to prevent the extinction of our quails and partridges are so simple that we should think any intelligent farmer or country landlord would find it profitable to follow his advice. Since his article was written we learn that the bob-white is practically extinct in New Jersey, and one of the officials says it behooves the State to get a substitute, as it is almost impossible to get birds for restocking purposes. As a result of our well-meaning but unscientific game laws fishermen and hunters have worse luck every year, and fish and birds in the market are luxuries only for the millionaire.

We find in a Philadelphia paper the statement that companies or firms controlled by Senator McNichol have "received practically all the municipal contracts of the last four months" in that city. They amount to $2,500,000 and include filter beds for the water supply. One of the firms is that in which not long ago Boss Durham was a kind of silent partner. We assume that all these contracts have been properly awarded and will be carried out to the letter; but how many interesting events in those days of the revolt against Philadelphia's ring are recalled by the brief announcement!

The movement on foot to reform the present method of recording real estate titles is deserving of every encouragement. All persons who have had to do with the ownership of land know how unsatisfactory the searches now in vogue must ever be. The best searcher may overlook something like dower rights or the claims of undisclosed heirs in his search and then a fatal cloud descends upon the title. The general adoption of some form of registration and State guarantee of title, such as the Torrens system of Illinois, would be of great benefit to the public.

An explanation of the Fairbanks cocktail incident is given by the *Interior*. The fatal drinks were ordered by an officious neighbor, anxious to see that the dinner was fashionably accoutered, and the Vice-President suffered in silence rather than to throw the blame on a lady. Thus Eve is as bad as ever, always getting man into trouble, but Adam has become a gentleman; he does not tell on her any more.

It is a good thing to insist that the patent medicine men shall publish their formulas and not make extravagant claims to cure. Of course, tho, we must be consistent about it and at the same time require the doctors to write their prescriptions in English instead of Latin and to tell the truth, the whole truth and nothing but the truth to their patients.

That meat eating still persists, in spite of the vegetarian cult, is evident from a census bulletin issued at Washington last week, which sets forth the fact that wholesale butchers killed 31,000,000 hogs, 11,000,000 sheep and 7,000,000 beeves, of a total value of $663,000,000, during the past twelve months.

It is always a puzzle to an editor why the subscription list keeps on growing when he sees only letters stopping the paper on account of some article, and never one subscribing for it on account of some article.

Much of our sociological speculation is like talking of what man could do if he had four hands, interesting, sometimes, but not instructive. "If the water boiled the fish would be caught, ready cooked," say the fishermen of Poitou.

The Hague Conference is more and more coming to be what its advocates said it would be, a practical substitute for war.

This has been a quiet week in the scientific world. Only one new element of the radium group and two new cures for cancer have been reported.

There are still some colleges where any alliance between learning and practical purposes is regarded as miscegenation.

We are daily expecting the appearance of a book entitled "The History of Mastication From Chaucer to Fletcher."

Insurance

The Control of the Provident Life Passes

THE controlling interest in the Provident Savings has been sold to those now controlling the Pennsylvania Mutual Life, of Philadelphia. It has been known for some considerable time in insurance circles that this interest in the Provident Life was in the market, and reports of negotiations for its sale have appeared from time to time. F. Augustus Heinze, O. H. and E. R. Thomas and their associates have now given way to a syndicate composed of former State Senator John J. Coyle, president of Pennsylvania Mutual Life Insurance Company; Henry Brooks, vice-president of the Hamilton Trust Company and president of the George Brooks & Sons Company, also president of the Standard Fire Insurance Company; Charles M. Brumm, representative from the Twelfth Congressional District, and a well-known attorney-at-law; Col. George J. Elliott, of the Bell Telephone Company; John J. Moore, former County Treasurer of Luzerne County, and now vice-president of the Plymouth National Bank; John W. Phillips, cashier of the First National Bank of Mahanoy City, and John C. Grady, Director of Docks, Wharves, etc., of Philadelphia.

The new interests came into control in the early part of last week, and Colonel Elliott was elected president of the Provident Life, vice Timothy L. Woodruff, resigned.

Prior to the election of the new president, the following directors were named:

John J. Coyle, president of the Pennsylvania Mutual Life (not the Penn Mutual) and an ex-State Senator of Pennsylvania; Henry Brooks, Hon. C. M. Brumm, Col. George J. Elliott, John J. Moore, John W. Phillips and J. G. Grady.

It is understood that Col. Elliott will devote his entire time to the affairs of the institution of which he is now the head, removing from Philadelphia to this city for that purpose. John J. Moore will also become a resident of New York, devoting himself largely to the company's financial interests here. The policy of the new management has not yet been announced, but it is likely to be exceedingly conservative. John J. Coyle, an experienced insurance man, will be the underwriting manager of the society.

A NEW Massachusetts law that has recently become operative provides that a medical and surgical chest must be installed in all manufacturing plants where machinery is used. The purpose of the law is to benefit workmen who are injured while at work in factories or shops.

THE regular quadrennial examination of the Connecticut General Life Insurance Company, of Hartford, Conn., of which Robert W. Huntington, Jr., is president, was duly approved by Theron Upson, Insurance Commissioner. This examination covers the company's statement of its business for the year 1906, and its financial condition at the close of business on December 31st of that year. The company's books were thoroly audited for the year 1906 and the items of ledger assets and of income and disbursements verified from the trial balance. Ledger entries were traced thru the journals and cash books to the agents' reports, vouchers or other original sources and no disbursements were found for any illegal or improper purpose or for any purpose other than as stated. The examining actuary sets forth in his report that the company is in an exceedingly healthy financial condition, and that it is apparently managed with as great economy as is practicable. The annual statement of the Connecticut General shows gross assets on January 1st, 1907, of $6,601,283.95, with liabilities of $5,978,052.78, or a total surplus as regards policy-holders of $623,231.17.

Financial

Railways and the Public

PRESIDENT RIPLEY'S extremely pessimistic remarks on the 6th inst. might well have led the public to expect an annual report much less favorable than that of his road (the Atchison, Topeka & Santa Fé), which was made known a few days later. It was a great year for the Atchison. Gross earnings ($93,683,407) were increased by $12,882,397, or 15 per cent., and net earnings by nearly $3,000,000. Out of the $21,168,723 earned on stock, $11,363,722 was paid in dividends, and $9,600,000 devoted to improvements. Two other annual reports published last week may be noted. Union Pacific's showed considerable increases of gross and net, with earnings of more than 16 per cent. on the common stock. In Rock Island's were seen a gross increase of $9,000,562 and a net increase of $3,023,478.

On the 6th, the Atchison's president was in a very gloomy mood. He could not advise any one "to invest a dollar in any of the Western States" traversed by his road. He complained of a prevailing "hysteria over railroads and corporations." This had "affected high places and resulted in grand-stand plays where we might reasonably expect to find calm and deliberate judgment." Hard times were approaching. In his annual report he says that railroad companies' ability to obtain needed additional capital has been impaired by a loss of confidence on the part of investors, due largely to the unfriendly attitude of the public and to the arbitrary action of legislatures and commissions.

There has been hasty and unwise rate legislation in the States, but the roads will not suffer great loss on account of it. A world-wide monetary stringency has made it difficult to borrow, except at high rates, but the new issues authorized by our railways this year amount to $1,344,677,600, or about $400,000,000 more than those authorized in the corresponding months of last year. Loss of confidence on the part of investors is due largely to the exposure of sharp practice or violation of law by railway companies. Five days after the interview of the 6th inst., the Atchison was convicted at Los Angeles of rebating offenses, for which the possible fine is $1,100,000. Confidence has been shaken by a long list of scandals, including the life insurance disclosures, the Union Pacific's financial operations, and the recent revelations concerning the street railway companies of New York. The opinion of Robert Mather, president of the Rock Island Company, is entitled to respect in railroad circles. He said in a public address on the 12th: "I count as first among the causes that have made the securities of the railroads unsalable the misdeeds of the railroads themselves."

* *

....During a recent trial of one of the Union Pacific gasolene motor cars, a run of 570 miles (from Omaha to Denver) was made in 40 minutes less than the fastest regular schedule for steam trains on the same route. The company is building eighteen cars of this type, to be used for branch line traffic.

....September's output of pig iron was 2,183,487 tons. August's was 2,250,410, a quantity exceeded only in July and May of the present year. On the 2d inst. the steel mills of the United States Steel Corporation broke all records for a day's product.

....James K. Corbiere has resigned as vice-president of the Morton Trust Company, a position which he has filled since the company was organized as the successor to the old banking house of Morton, Bliss & Company. Mr. Corbiere has formed, with his two sons, the banking and brokerage firm of J. K. Corbiere & Sons.

....On October 1st there were 6,620 national banks. There were only 3,617 when the law of March 14th, 1900, was past. That law permitted the establishment of a national bank capitalized at only $25,000. Nearly two-thirds of the banks organized since March 14th, 1900, are thus capitalized, the average capital of 2,363 being a little more than $26,000,

VOL. LXIII NEW YORK, THURSDAY, OCTOBER 24, 1907 No. 3073

Entered at the New York Post Office as second-class mail matter.

Survey of the World

National Topics

Mr. Roosevelt's two weeks of hunting in the Louisiana canebrake ended on the 19th, and on the 21st he left Stamboul, La., for Vicksburg. On the 17th he killed a black bear weighing about 400 pounds, at the end of a four hours' chase. This was done by one good shot at a distance of about sixty yards.——It was reported by the Associated Press that Mr. Bryan, in an address delivered at Richmond on the 11th, said:

"All the great metropolitan newspapers are controlled by the Trusts, and their columns are open to the highest bidder."

He was promptly asked by the New York *World* to prove this. Replying briefly by telegraph, he asserted that he had said "many," not "all," of the metropolitan papers. In a later telegram, on the 18th, he remarked that he had been misquoted, and added the following statement:

"A great many of the big daily papers are owned or controlled by Trusts and corporations. Their editors are but tools in the hands of schemers. They chloroform the people, telling them things are all right, while the Trusts come along and pick their pockets. These editors are but the mouthpieces of the great Trusts, and they write what they are told to write by those who would fleece the people. I will explain in my New York speech."

He is about to make a series of speeches in the State of New York. Some think his aim is to gain popular support for his candidacy. Mr. Conners, chairman of the New York Democratic committee, says that the delegates from the State in next year's national convention will be instructed to vote for Lieutenant-Governor Chanler, who was elected on the Hearst ticket to the office he now holds, altho Mr. Hughes, the Republican nominee, defeated Mr. Hearst in the contest for the office of Governor. In that campaign there was a fusion of the Democrats with the Hearst party (the Independence League), but now (for the approaching election), there is a fusion, in the greater part of the City of New York, of the Republicans with the Hearst party. This alliance, made by Mr. Parsons, chairman of the Republican County Committee, and a intimate friend of President Roosevelt, affects several candidates for the bench, about half of the candidates nominated for the Legislature and the nominee for the office of Sheriff. By a considerable number of Republicans it is not approved.——In his recent public addresses Mr. Bryan has opposed the President's recommendations as to the regulation of corporations by national authority, and in the South he has commended such action as was taken by the Governor of North Carolina in the case of the Southern Railroad Company. Speaking in the Young Men's Christian Association's building at St. Louis, and referring to some of the gifts made by wealthy men to educational and religious institutions, he said: "I hope the time is near when people will refuse to sell their respectability to great criminals in return for blood money."——Secretary Taft, at a banquet in Manila on the 19th, said: "I hope in another two years to visit Manila again, but then I shall probably come as a private citizen."——There are many indications that the eligibility of Governor Hughes for the Republican presidential nomination is under consideration outside of his own State. He has stead-

fastly refused to assist or countenance any movement in behalf of his possible candidacy. At a dinner of the Republican Club in New York City, on the 18th, after defining his views as to the control and regulation of corporations and pointing out the aims of his administration, he said:

"To avoid any possibility of misapprehension regarding my own course I may say this further word: I do not seek any public office. The majority of people doubtless think that the distinction and power of office are an irresistible attraction. To me public office means a burden of responsibility—a burden of incessant toil at times almost intolerable—which under honorable conditions and at the command of the people it may be a duty and even a pleasure to assume, but is far from being an object of ambition. I have not sought, nor shall I seek, directly or indirectly, to influence the selection or the vote of any delegate to any convention, and with reference to the action of any delegate to any convention there will be no suggestion or thought of influence, protest or reprisal in the Executive Chamber."

He did not aim, he also remarked, to be a party boss, but wanted simply to be Governor during his term.

Rebating Under the New Law

It is asserted by Interstate Commerce Commissioner Franklin K. Lane that the Southern Pacific Railroad Company, of which E. H. Harriman is president, has repeatedly violated the Hepburn Rate law by giving rebates, and that the record of these violations comes down to the 24th day of last month. All the indictments heretofore found against railroad companies and shippers have been for violations of the Elkins law, an older statute, in which no prison penalty is provided. But the new law provides for punishment by imprisonment as well as by fine. Mr. Lane has been making an investigation for the Commission at San Francisco, where testimony was taken at public hearings, which do not appear to have been noticed in news dispatches from that city. On the 14th inst. he returned to Washington, and there the substance of his discoveries was given to the press. "We found in the Southern Pacific office," he said, "a list of preferred shippers, who paid but a proportion of the published rate upon State shipments. This list included many of the largest and most important manufacturing firms. We also found twenty books, which had accumulated since the fire of last year, and which showed special rebates. There were several thousand entries. These refunds in all amounted to about $500,000 during the last year." A large majority of them relate to traffic within the State, as to which the existence of a secret rebate system was admitted by officers of the company; but there was also evidence of rebating on shipments between California and other States. Press dispatches say that Auditor C. B. Seger testified that the rebate accounts were kept in a separate set of books by two confidential clerks. They also assert that among the concerns receiving rebates were the Colorado Fuel and Iron Company, the Union Ice Company, California Sugar Company, California Pine Box Company and Associated Oil Company. The amounts paid are published as taken from the books. Demand for these books was resisted, but, under the provisions of the new law, they could not be withheld. They relate only to transactions since the time of the earthquake and fire, when the company's books for previous years were destroyed. It is shown in them that rebates were paid up to September 24, the date of the investigation. It is stated that G. W. Luce, an officer, offered himself as a witness, apparently with the purpose of acquiring immunity, and that Mr. Lane would not accept him. Shippers who had received rebates made similar offers, some of which were accepted. The evidence will be submitted to the Department of Justice. Mr. Harriman asserted recently that rebating had ceased on all the roads with which he was connected. He now says that Commissioner Lane's statements are false and absurd, declaring again that there has been no wilful payment of rebates on the Southern Pacific, and remarking that "some members of the Commission are seeking notoriety." Whereupon Mr. Lane says that if Mr. Harriman is willing to assume responsibility by admitting that he has knowledge of all that has been done on the Southern Pacific, the admission may prove troublesome when the records in the case reach him and he reads the evi-

dence.——On the 11th, in San Francisco, three additional indictments for rebating (under the old law) were found against the Southern Pacific and two against the Pacific Mail Steamship Company. These supplement the indictments found on September 27. In all, there are between 300 and 400 counts. ——In the case of the Atchison, Topeka & Santa Fé Railroad Company, convicted at Los Angeles on the 11th of rebating, the fine may be anywhere from $66,000 to $1,320,000. The District Attorney gave notice that he should ask the grand jury to indict the company's counsel, Thomas J. Norton, because the latter had given the free use of a car on the road to an agent employed to procure witnesses for the defense.

Secretary Taft in the Philippines

Secretary Taft arrived at Manila on the 15th, and was received with many expressions of respect and affectionate regard. In the harbor there was a parade of water craft in his honor, led by Governor Smith and General Wood. On the 16th he formally opened the new Philippine Assembly, making a long address. At a caucus held on the 13th, the members had decided, by a majority of one vote, that there should be no prayer at the opening exercises, but this decision appears to have been reconsidered, for prayer was offered by Bishop Barlin, the only native Catholic bishop in the islands. At the beginning of his address, the Secretary said:

"President Roosevelt has sent me to convey to all Filipinos congratulations upon another step in the enlargement of self-government. His message is intended for every Assemblyman, irrespective of their views in the electoral campaign. It assumes loyalty and does not assume that he may not have the wish to bring about peaceably a transfer of sovereignty, but assumes that while the present Government endures he will uphold its authority.

"I am expected to say something about the policy of the United States toward the islands, but I cannot speak authoritatively, because the power to direct the Government is vested in the Congress. The National Administration's avowed policy under President McKinley and President Roosevelt has been and is to govern the islands, safeguarding the interests and welfare of the Filipinos, and by the spread of general primary and industrial education and the practice of partial political control, to fit the people to maintain a stable government.

"As this policy of extending control continues it must logically result finally in ending the sovereignty of the United States unless both people agree to retain the bond, owing to mutually beneficial trade relations. None can anticipate the period or process of political preparation.

"During my last visit I was of the opinion that it would take considerably longer than a generation. My views remain unchanged. We are engaged in a great experiment that no other nation has attempted. Hence it would be unwise to fix a period when the experiment must succeed. Our Philippines policy has been widely criticised by some as too hasty and as too foolishly confident in the capacity of the Filipinos, resulting in the so-called disastrous result of the elections. Others demand the immediate granting of self-government."

In the States, he continued, there had been a strong minority party "denouncing our policy, expressing sympathy with armed enemies and aspiring to make the islands independent." This opposition had prolonged the war and afterward had retarded the development of government in the islands. He expressed a hope that Congress at its coming session would enact a compromise measure admitting Philippine sugar and tobacco free of duty, but limiting the quantity in order that the fears of those opposing free admission might be allayed. He advised the Assembly to provide for permanent tenure and retirement on pension in the civil service. The report that our Government contemplated a sale of the islands was, he declared, utterly without foundation.

"Those crediting this report misunderstand the motives of the American people. A majority of our people still favor our altruistic policy concerning the islands. Our obligations present only two alternatives, either the permanent maintenance of popular government under American control or giving control to the Filipinos when they are fitted for it. I believe the Assembly is a logical step in President McKinley's policy, and that it is not radical. Critics say that the results of the election indicate excessive haste. I differ with them. The small vote indicates indifference or timidity, but it does not support the assumption that as the Assembly proves its usefulness the electorate will not increase."

It was true that a majority of the members elected stood for immediate independence, but this was a result which he had regarded as possible when he was urging the creation of the Assembly. If it indicated that the majority were irreconcilables, obstructing the Government,

this would be discouraging, but he was confident that the majority desired the Government to exist for the benefit of the Filipinos and in this were really conservative:

"I have been reported as coming to express bitter and threatening words on account of the election. Nothing could be more false. I am filled with a spirit of friendliness and encouragement. You will properly study public economy in the numerous bureaus, but I hope that utility functions will be thoroly investigated. It would be wise to prepare a recommendation to Congress concerning the customs. As you conduct your proceedings and shape legislation on patriotic, conservative, intelligent and useful lines you will show capacity to participate in the Government. Finally, upon you falls the responsibility for achieving success and bringing a greater extension of political power, or, thru neglect and obstruction, of requiring the confiscation of your existing powers because they were prematurely granted."

Sergio Osmena, Nationalist, formerly Governor of Cebu, was elected Speaker, or President, the nomination having been made by Manuel Quezon, Governor of Tayabas, and seconded by Dominador Gomez, the radical from Manila. On the following day, Governor Smith's message was read before the Commission and the Assembly in joint session, and a committee representing both bodies adopted a resolution thanking the people of the United States for the creation of the Assembly. The Commission has provided for a permanent Public Utilities Commission of three persons, empowered to adjust, increase or reduce the rates of any of the public utility companies doing business in the islands. Addresses made by Dr. Brent, the Episcopal Bishop of the Philippines, now in this country, show that he thinks the Assembly was created before the people were ready for it.

The Brownsville Affray

Curious evidence concerning the Brownsville affray has been submitted to the War Department in a report from Brigadier-General Crozier, Chief of Ordnance. Having ascertained by experiment that a discharged cartridge could be connected with the rifle from which it had been fired by a microscopical examination of the characteristic markings on the surface of the cartridge shell, he caused further experiments to be made with the shells of the cartridges fired at Brownsville and with the rifles of the negro battalion. It was found that, of the 39 cartridge shells, or cases, in evidence, 11 had been fired from one and the same rifle, 11 more from another rifle, 8 from a third and 3 from a fourth; also, that the shells in the first three of these groups had been fired from "three rifles belonging to Company B, Twenty-fifth Infantry [the negro company], and that those of the fourth group had probably been fired from another of the rifles in the same company." Examination of the bullets recovered and placed in evidence showed that they were "United States model of 1898 or 1903," and that they had been "fired from either the United States model of 1898 rifle, or from United States model of 1903 rifle, and from no other." Brigadier-General Crozier remarks that "the bearing of these facts upon the identity of persons doing the firing is not a concern" of his bureau. The experiments and examinations were made at the Springfield Armory.

The Oil Trust Case

Among the witnesses testifying last week in the Oil Trust suit was William G. Rockefeller, the son of William Rockefeller, and the treasurer of the Standard Oil Company of New York, who explained the loaning of $32,761,000 to outside interests in 1906 by saying that the company was accustomed to loan about $20,000,000 a year to Wall Street houses, and additional sums to individuals. He was questioned concerning a loan of $7,630,044 to Theodore N. Barnsdall, of Pittsburg, and he said the money had been advanced to Barnsdall on collateral consisting of the stock of oil companies in West Virginia, Pennsylvania and other States. At the borrower's request, the company had collected the income of these concerns and applied it to the debt. Barnsdall was involved in a controversy, last year, with the Interior Department concerning oil lands in Indian Territory. It appears that he has desired to be regarded as an independent producer, not in alliance with the Standard. Since this testimony was given he has said to the press that he is an independent and always has been one. He borrowed the

money from the Standard, he says, for the development of oil lands in Kansas and Texas, and for the formation of a corporation which has acquired several oil companies elsewhere. No progress was made in tracing the loans charged against P. S. Trainor and James McDonald. Trainor has testified that he did not receive the $20,000,000 entered against his name and that he knows nothing about the matter. Mr. Rockefeller failed to throw any light on the subject. As director in the Southern Pipe Line Company he could not explain that company's loans of $4,509,000 and $2,602,000 to Trainor. It was admitted by officers of subsidiary companies that it had been the custom of the Standard to buy independent companies and operate them ostensibly as independents, and that movable companies not openly connected with the Standard had been used by it for killing competition.

Transatlantic Wireless Telegraphy

On October 17th the Marconi Company opened commercial communication across the Atlantic from Glacé Bay, Nova Scotia, to Clifden, Ireland. The first message was transmitted from Sir Wilfrid Laurier, Premier of Canada, and afterward messages were exchanged between King Edward VII and Lord Grey, and congratulations were received from Privy Councillor Baron Avebury, formerly Sir John Lubbock; M. Clemenceau, Premier of France; the Duke of Argyll; Field - Marshal Viscount Wolseley; Alfred Austin, Poet Laureate; Sir Norman Lockyer; Lord Kelvin, and many other distinguished persons. Altogether during the first day thirteen thousand words were transmitted thru the ether to Europe, and over two thousand words received from the other side. The apparatus worked satisfactorily, and there was no difficulty in receiving the signals. The Continental Morse code was used, and the electric waves sent out from bronze wires strung between four wooden towers, 215 feet in hight. The messages are received at the station across the Atlantic practically at the same time they are sent, for the electric wave travels with the speed of light, 186,400 miles per second. The first unmistakable signals, the transmission of the letter "S," three dots, across the Atlantic from the Poldhu station in Cornwall, England, to St. John, N. F., was effected on December 12th, 1901, and a year later the Marconi station at Glacé Bay, Cape Breton, was able to send across its first messages, thus demonstrating the fact that the rotundity of the earth does not interfere with the passage of the waves thru the ether. Lord Kelvin secured the distinction of sending the first commercial telegram when in July, 1898, he insisted upon paying a shilling for the transmission of his message by wireless from Alum Bay to Bournemouth, about fourteen miles. There are now over fifteen hundred and fifty stations engaged in regular transmission of wireless messages. A classification of these stations may be made approximately as follows: Commercial land stations, 195; merchant vessels, 170; lighthouses and other Government stations, 150; naval installations, 670; military portable stations, 55; experimental stations, 310. The United States Signal Corps has maintained for four years wireless communication across Norton Sound in Alaska. During this time there has never been a day when the service was interrupted, and the speed is as high as that ordinarily obtained in telegraphy by wire. More than a million words a year are sent, and at times a rate of thirty-three words a minute has been maintained for an hour.

End of the Peace Conference

After sitting continuously for eighteen weeks The Hague Conference ended last week, Friday. On Wednesday, the ninth Plenary Session was held, during which, first, thirty-eight votes were recorded in favor of the project for the establishment of the International High Court of Justice, while Belgium, Denmark, Greece, Rumania, Switzerland and Uruguay abstained from voting. Thus the Court is accepted unanimously in principle, but it will not go into effect until the nations thru the channels of diplomacy determine upon some way of selecting the judges. Second, the following report of obligatory arbitration was adopted:

The Conference unanimously favors:
(1) The principle of obligatory arbitration.

(2) That certain differences, especially those regarding the interpretation and application of conventional clauses, are susceptible to being submitted to obligatory arbitration without restriction.

The Conference unanimously proclaims that while a convention on the subject was not concluded, the differences of opinion had more of a juridical character, as all the states of the world, in working together for four months, not only learned to know each other better by getting closer together, but developed during this long collaboration high ideals for the common welfare.

Third, the Porter proposition that no nation shall collect debts from another nation until after arbitration received the approval of thirty-nine nations, with only five abstentions. Baron D'Estournelles de Constant then proposed that all the countries represented at the Conference contribute appropriate works of art to be used in Mr. Carnegie's Palace of Peace, and this was adopted by acclamation. On Friday the Conference practically came to an end, and by the adoption of the following resolutions:

"The Second International Peace Conference, first proposed by the President of the United States, having been, through the invitation of his Majesty the Emperor of all the Russias, convoked by her Majesty the Queen of the Netherlands, met June 15, 1907, at The Hague, in the Hall of Knights, with the mission to further develop the humanitarian principles which were the basis of the work of the first Conference.

"In a series of sittings from June 15 to October 18, in which the delegates were constantly animated by a desire to meet the intentions of the initiator of the Conference as well as those of the governments participating, the following conventions were agreed upon for the signature of the plenipotentiaries:

"1. The peaceful regulation of international conflicts.

"2. Providing for an international prize court.

"3. Regulating the rights and duties of neutrals on land.

"4. Regulating the rights and duties of neutrals at sea.

"5. Covering the laying of submarine mines.

"6. The bombardment of towns from the sea.

"7. The matter of the collection of contractual debts.

"8. The transformation of merchantmen into warships.

"9. The treatment of captured crews.

"10. The inviolability of fishing boats.

"11. The inviolability of the postal service.

"12. The application of the Geneva Convention and the Red Cross to sea warfare; and

"13. The laws and customs regulating land warfare.

"The right to sign these conventions will be open until June 30, 1908."

M. Nelidorff, the president of the Conference, made a long speech in which he reviewed what had been done and the results obtained:

"While superior considerations," he said, "such as the good of humanity in general, must undoubtedly guide delegates at such a Conference, they must also keep in view the objects of those who direct the governments, the interests of which are often opposed to the interests of other countries. The efforts of the Conference have tended to harmonize these interests."

Then, after detailing what had been done, and thanking all those who collaborated with him, he ended by saying:

At one of our recent sittings thanks were expressed to the august initiator of the two conferences, his Majesty the Emperor of Russia. The conference, I hope, will to-day render homage to the President of the United States, who first proposed the meeting of the second conference, by authorizing me to send him the following telegram:

"The delegates to the second peace conference having finished their work, and remembering with gratitude the initial proposition made for its convocation by the President of the United States, present to him their respectful homage."

Many among us will meet again here some years from now. I, among others, shall not be present, but I hope that in working on the continuation of our task you will remember with sympathy our collaboration, and sometimes kindly remember him who has had the honor of presiding over your deliberations, and is animated by the most sincere wishes for the success of future conferences and the growing development of solidarity in international relations, based on justice and the law.

[It is to be noted that from this speech President Nelidoff evidently expects there is to be more than a Third Conference.] When he had finished, the representatives of the Dutch Government, and Sir Edward Fry, of Great Britain, the dean of the delegates, made addresses, as well as many of the other delegates. The European press generally takes the view that the Peace Conference as a whole has been a fiasco, and as one correspondent writes, "faint applause from the stalls and persistent poohing from the galleries have followed the fall of the curtain upon the Hague Conference." It is said that nearly $3,000,000 has been expended by delegates at The Hague, of which over $500,000 was spent for 317 official dinners, of which those given by Señor Barboza, of Brazil, were the most

expensive, the flowers alone representing an item of $2,000. The telegraph tolls amounted to $225,000, and more than 1,000,000 words of press matter concerning the Conference were sent out. The Dutch Government spent $112,580 as host of the Conference, and the longest speech made in plenary session was by Joseph H. Choate on the inviolability of private property at sea, which contained 11,736 words. It was delivered in English. Señor Barboza, however, holds the first place as to the number of speeches delivered.

The Campaign Against the House of Lords

The Prime Minister, Sir Henry Campbell - Bannerman, opened the campaign by a speech in Edinburgh on October 5th at a large meeting held under the auspices of the Scottish Liberal Association. He began by outlining the good work that had been done by the Government in foreign and colonial affairs, in practically giving plenary self-government to the Transvaal, in introducing the people of India into councils concerning their own affairs, and in arranging frontier questions in Asia with Russia, then he contrasted the failure of the legislation which had been impeded by the House of Lords. "We see a session of legislative wreck, months of inquiry and labor thrown away." The Conservative party might as well have been in power, and, indeed, "so long as the House of Lords stands where it does the Conservative party is never out of power." He discussed at length the two measures for the improvement of conditions in Scotland which were past by the Commons and rejected by the Lords. The Scottish Landholders Bill was intended to check the depopulation of the rural districts, and the giving over of large areas to sport for the benefit of those nomad tribes who, in the month of August, appear at the Perth Station with their guns and their fishing rods and kilts with white knees to go up and possess the land. The other bill, "which did no more than throw upon the local authorities the simple duty of valuing the land apart from the buildings and improvements on its surface, was incontinently rejected, and I say that this rejection was a piece of arrogance and high-mindedness which went to the extreme point of the pretensions of the House of Lords."

"Never was the House of Commons treated with greater contempt by the other House than in this instance, never did the claims of property find a more willing and obsequious agent than in the House of Lords as we know it to-day. In rejecting this bill the House of Lords, who represent, and it is their express claim that they do represent, landed property, as before and against all other, were rallying to the immunities and privileges of their class, and that is why I do not feel sanguine about their abandoning their opposition easily. Well, it is a melancholy and discouraging fact that within so short a space of the general election we should see that great demonstration of opinion, that great constitutional verdict of public judgment, reversed and set aside by these irresponsible gentlemen who call themselves a revising chamber.

The Prime Minister described the plan which the Government wished to have adopted, which was to have a small, private conference between an equal number of members appointed by the two Houses to consider a bill about which there was marked disagreement. If this conference proved unproductive the bill might, after a suitable interval, say six months, be again past and sent up to the House of Lords, and if then rejected and another conference fail to produce a compromise, it might be past over their heads. The resolution past by the House of Commons holds that "it is necessary that the power of the other House to alter or reject bills past by this House should be so restricted by law as to secure that, within the limits of a single Parliament, the final decision of the Commons should prevail." The London *Times,* in criticising the speech, says it is absurd to think of upsetting the constitution because two bills, which were past by a heterogeneous majority without adequate discussion, and may or may not be desired by the people of Scotland, were rejected by the House of Lords.

"Conferences are a farce when one side knows that it need not yield anything because it can get everything in six months, while the other side knows that it has absolutely nothing to negotiate with."

Problems of the French Government

The Ministerial Council meeting at Rambouillet, under the presidency of M. Fallières, has decided upon its political program to be submitted to Parliament on its reassembling, probably October 22d. A bill will

be introduced for the appropriation of $1,200,000 for the relief of the sufferers from the floods which have recently devastated France thru the overflow of the Rhone, the Loire and the Saône. The three measures of most importance are: First, the facilitation of the devolution of Church property to the communes; second, the reform of military courts-martial; third, the establishment of an income tax. It has come out that during the conflict over the separation law that a large number of valuable objects of art have been taken from the French churches either by downright burglary or the substitutions of imitations. Antoine Thomas, a wealthy barrel manufacturer of Clermont-Ferrand, was arrested for the theft of the famous Cope of Orth, which disappeared from the Church of Ambazac, near Limoges. Thomas made a full confession; in fact, he is suspected of having exaggerated his exploits. He claims to have stolen sacred relics and utensils to the value of $400,000. The cope alone is estimated to be worth $120,000, and this he says he sent to an antiquary in London for $10,000. He declares that when the inventories for the transfer of the Church property to the communes were being made, the priests removed the most valuable articles, replacing them when necessary by others, and either selling the originals or hiding them to prevent their confiscation by the civil authorities. M. Briand, Minister of Public Instruction, will introduce into Parliament a bill declaring all objects of art in the churches and other ecclesiastical buildings to be the property of the State and under national protection. Such works of art cannot be given away, exchanged, sold or removed without the consent of Parliament. It may also be made a penal offense to export any religious work at one time the property of the Church and now belonging to the State. A similar law has for some time been in operation in Italy, to prevent exportation of its historical and artistic treasures. The French Government is continuing to prosecute the anti-militarists, who are endeavoring to corrupt the conscripts by distributing to them manifestos denouncing the army, and calling upon them to turn their arms against their own officers in case of war. The Minister of War instituted prosecution against Professor Hervé, a leader of the anti-military propaganda. The convention of French Radicals and Radical Socialists which met at Nancy repudiated such attacks upon the army and the encouragement of desertion, and will support the Government in its attempt to suppresse this movement.——In Germany, Dr. Karl Liebknecht, son of Dr. Wilhelm Liebknecht, the veteran Socialist leader, was convicted of high treason for publishing a pamphlet against militarism. One of the witnesses was Herr Bebel, who testified that Dr. Liebknecht's extreme ideas were not endorsed by the Social Democratic party. He was sentenced to eighteen months' detention in a fortress, a light form of imprisonment, altho the crown prosecutor demanded a sentence of two years' penal servitude and five years' loss of civil rights.

Strikes in Italy

Italy is afflicted with a series of strikes, which seems likely to cause a serious interruption of business and communication. The trouble began with a strike of the gas workers in Milan. Strikebreakers were brought in to prevent the city being left in darkness. The company and its employees had come to an agreement, and the strikebreakers were being conveyed to the railroad station when they were attacked by the strikers with stones. Carabineers, in dispersing the mob, were obliged to fire, and seven men were wounded. In consequence of this the strike extended. All the street cars were stopped, the factories closed, and newspapers did not appear. Bands of strikers of a thousand each paraded the dark streets singing revolutionary songs. In Turin, Bologna and Leghorn sympathetic strikes were ordered, and the railroad men stopped work. They endeavored to persuade the Central Committee of the Socialists at Rome to declare a general strike of all the workingmen in Italy, but the commiteee refused, believing that under the circumstances public opinion would not support them. In spite of this the railroad employees continue their strikes and are trying to tie up all lines.

Graphics of the Voice

BY E. W. SCRIPTURE, Ph.D., M.D.

[Professor Scripture is one of the pioneers in the field of experimental psychology in this country and was for twelve years Director of the Psychological Laboratory at Yale. He has of late devoted himself to the difficult problem of the analysis of vocal sounds. His recent researches are published in his "Experimental Phonetics," by the Carnegie Institution of Washington, reviewed in our issue of July 28th. In the following article he explains in a popular way how the records of "visible speech" are obtained and studied, illustrated by gramophone tracings, some of which have never before been published.—EDITOR.]

THE investigations in phonetics for the Carnegie Institution—concerning which the editor of THE INDEPENDENT has asked for some account—were begun in the attempt to solve the problem of the nature of English verse. Of what does English verse consist? Is it a system of long and short syllables, or of strong and weak ones? Are there variations in pitch, as in Greek? After all, does the scheme of syllables have any application at all? Is it not possible that modern English verse is built on principles that are derived from the Anglo-Saxon, and that our present way of treating it is an invention of college pedantry?

These problems led to a new field of investigation. Consider for a moment: How shall we best study verse? Of course, by catching it as it flows from the mouth of the poet, freezing it and then examining it in detail with the microscope. This is practically what was done, not only for poetry, but also for prose and song and for various musical instruments. The method was as follows:

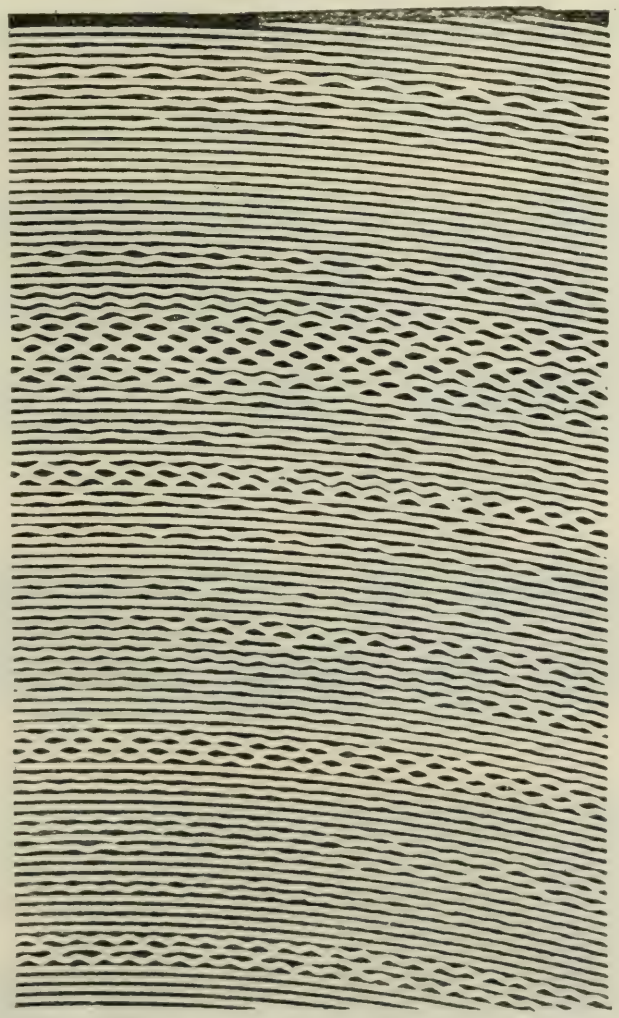

FIG. 1.—PIECE OF A GRAMOPHONE PLATE CONSIDERABLY MAGNIFIED.

The person whose voice was to be studied was required to speak into a gramophone (disk machine) or a phonograph (cylinder machine). For a study of the typical American vowels I had a trained elocutionist pronounce them with special distinctness. For a specimen of American verse Dr. S. Weir Mitchell was kind enough to make several records. Mr. Joseph Jefferson furnished records of Rip Van Winkle's toast and Dr. Chauncey Depew gave a specimen of oratory. For French pronunciation and French verse I had a large number of records made, but have not had time to study them. As a typical specimen of German, the German Emperor made two records for me.

In the gramophone method the recording apparatus makes a groove on the disk and the speech vibrations make sidewise deviations in this groove; some of the strongest can be seen by looking at a record thru a magnifying glass (Fig. 1).

To enlarge and record these vibrations on paper it was necessary to devise a spe-

cial machine; this was accomplished with great labor and expense. The machine was first used at Yale University. Attracting the attention of the Carnegie Institution, its work has been liberally supported for four years; for six months it was loaned to the University of Berlin. Fig. 2 gives a scheme of the machine.

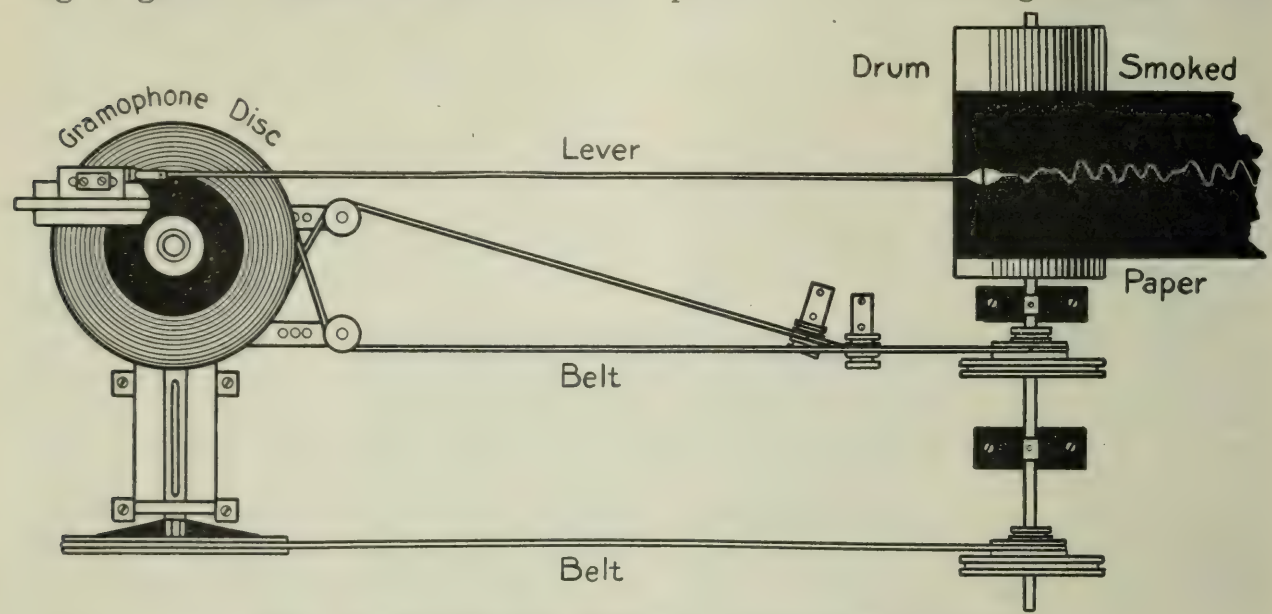

FIG. 2.—MACHINE FOR TRACING GRAMOPHONE RECORDS.

The gramophone disk is made to turn very slowly, once in six to ten hours. A steel point in a long light lever rests in the speech groove just as the steel point of the reproducer does; the vibrations in the groove make the lever move back and forth. A fine point at the end of the lever records the vibrations, magnified 300 times, on a long band of smoked paper.

The apparatus has to be constructed with great accuracy and delicacy.*

This machine was used to trace records of prose and verse, of musical instruments, etc. Fig. 3 shows a small piece out of a note from a cornet. Each wave in the line represents one vibration of the air in the cornet tone. The pitch of the tone can be calculated from the record. The recording and tracing apparatus were so arranged that 1 millimeter on the band of paper represented 0.0004 seconds. One wave of the cornet record measures nearly 3 millimeters; the period or time occupied by the vibration was therefore 0.0012 seconds. The frequency or number of vibrations per second was therefore $1 \div 0.0012 = 833$, being approximately $g^{2\sharp}$.

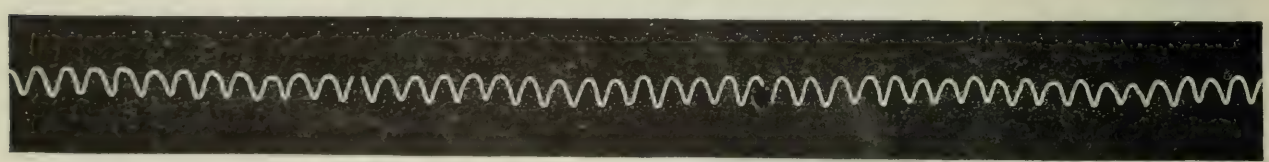

FIG. 3.—TONE FROM CORNET.

Let us notice the peculiar form of the waves in Fig. 3; they are sharper on one side than on the other; this is a characteristic of the cornet tones.

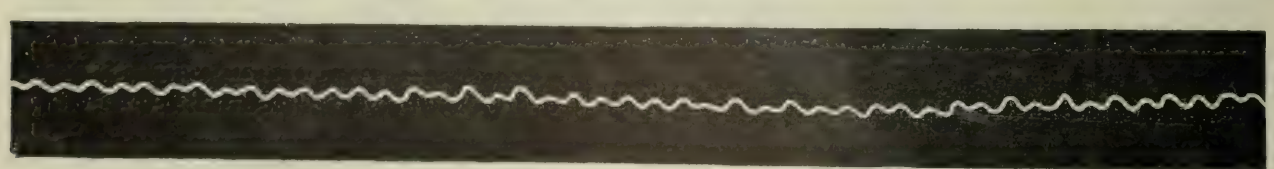

FIG. 4.—TONE FROM A CLARINET.

A portion of a clarinet record is shown in Fig. 4. Here the waves fall into

*Those who wish the details will find them in my "Researches in Experimental Phonetics," Publication No. 44 of the Carnegie Institution.

groups of two. The length of the group indicates the pitch of the tone in which the instrument is played; this we can calculate just as in the case of the cor-

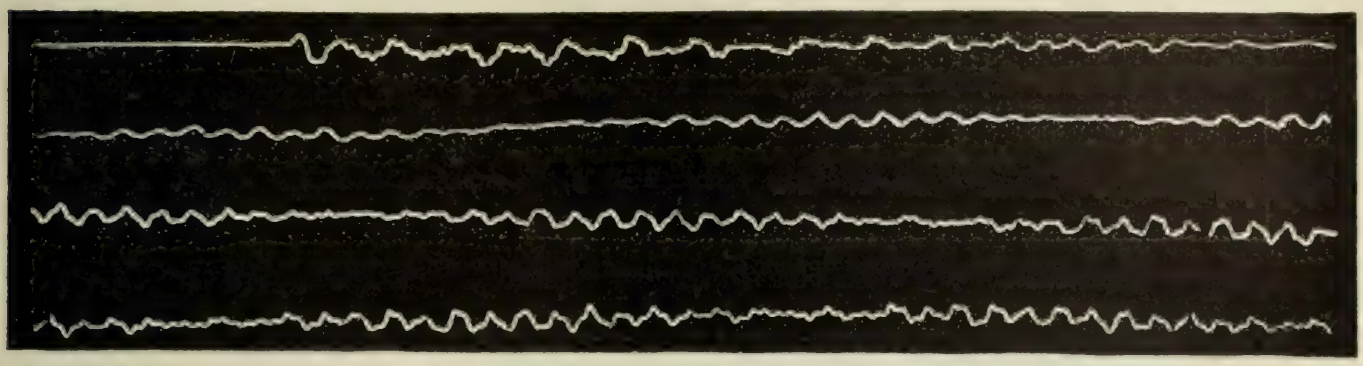

FIG. 5.—VIBRATION FROM A GONG.

net. The division of the group into two indicates that the octave overtone is also present.

The curve of a gong, Fig. 5, shows by its small waves that a high tone was present; but the longer waves indicate also a lower tone. Curiously enough, the longer waves gradually become shorter; this agrees with our usual experience that the tone of a bell starts lower at first and runs up in pitch. We notice also the periods of nearly straight line where the lower tone fades away; this represents the beats present in bell tones.

A still more complex curve is shown in Fig. 6. It is part of a note in a piece played by Sousa's Band. An attempt to unravel it would be hopeless; yet our ear picks out of the sound the parts due to various instruments.

Turning to speech we must first consider how much we want the vibrations magnified. If we decide on having as before 1 millimeter=0.004 second, then a speech lasting five minutes will—as any one can readily compute — require 750 meters of paper—that is, about one mile. Since the machine must trace the curve very slowly, it can accomplish this mile of curve in about a month by running night and day. In fact, it has traced off several such records, one, a speech by Dr. Depew, requiring a month and a half of incessant work. Recorded on this scale

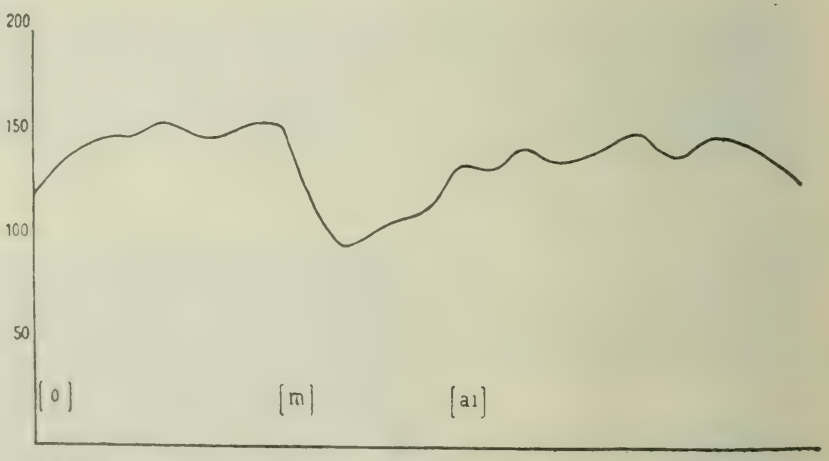

FIG. 11.—MELODY PLOT FOR "OH MY," SORROWFULLY.

a spoken vowel is often a yard long. The record of a joke is in this way rather long drawn out, but we have the advantage of having every detail mathematically accurate. As one frivolous visitor to the laboratory remarked, this is a good way to get onto a man's curves.

In Fig. 7 we have a piece out of a record of "oh" spoken by Dr. S. Weir Mitchell. The piece has been cut into four

parts to get it into the column of print. We notice first that the waves fall into groups of three; each group represents one vibration from the larynx. By measuring the length of a group we can get the pitch of the tone from the larynx at each instant. Let us do so; we find that the length of the groups steadily changes. If we indicate the pitch for each group by a dot a certain distance above a horizontal line and connect the dots, we get a "melody plot." The melody plot for the entire "oh" of which Fig. 7 is a part is given in Fig. 8. It shows that the voice begins low, rises quite high, quavers a while, and then falls. Compare with this the melody plots of the "ohs" spoken in different emotions (Figs. 9 to 13). We see at once that in the melody plot we have a record of the emotion. This opens up an entirely new field, that of melody in prose and verse; the melodies of whole speeches, poems and songs have been obtained. The problem is a fascinating one and the results are often unexpected, but we cannot stop for them here.

The groups in Fig. 7 comprise three subordinate waves; these indicate the tones of the vocal cavities. In the first line of the figure the three strong waves indicate that there is a powerful cavity tone an octave and a half above the larynx tone. But we notice that, altho adjacent groups are similar in form, the form always changes slowly and steadily from beginning to end. This is true of nearly all American vowels; the sound of each one changes steadily while being spoken.

The vibrations that compose a wave group are the effects of the laryngeal vibrations on the cavities of the mouth and nose. They differ for each different vowel sound. What sort of waves correspond to the different vowels? Let us cut short pieces out of a number of vowels spoken by Joseph Jefferson (Fig. 14). Let us notice the vowel *a* in "glass." We find a similar but weaker curve for the same vowel in "that," an almost identical curve in "schnapps," a distantly similar one in "and," and a rather similar one in "family's." The vowel *a* is shown in weak vibrations at the beginning of "ah." In this way we can go over the plate of curves and pick out similar or dissimilar ones with the unaided eye.

If we inquire what tones of the voice are represented by these curves, we have to face the problem of curve analysis. This is a difficult and complicated process, the analysis of a single wave often requiring whole days of computation. The results of thousands of such analyses show that the prevailing views of speech and the action of the vocal organs are largely erroneous. Brought into connection with the facts of anatomy and physiology, they give us an insight into the human voice such as we never had before.

In the first place, it is generally supposed that the larynx contains two cords or two membranes which swing in the breath current and set the air in vibration. This is not true. The larynx contains the two "vocal lips," which open and shut by compression; the larynx thus emits a series of puffs of air, just as a locomotive or a puff siren does, only so fast that the puffs make a tone.

Again, it is supposed that the vocal cavities—chest, throat, mouth, nose—act like brass resonators to reinforce certain overtones of the laryngeal vibrations. This is also not true. The vocal cavities have soft walls and cannot act like brass resonators; their tones do not coincide with overtones of the laryngeal tone and therefore cannot reinforce them. The cavities are adjusted to certain tones for each vowel; the puffs from the larynx strike them and bring forth these tones.

Altho the new view of vocal action has been definitely established, it has not yet become known to any extent, and it is safe to say that no American book that discusses the voice has gotten beyond the old Helmholtz resonator theory, and that every vocal teacher bases his or her instruction on an absolutely false supposition.

Thus, altho these investigations started with the problem of verse, they had first to solve the problem of the nature of the human voice. This being accomplished, the next problem is that of the nature of the vowels in speech. Large amounts of material have been collected, but have not yet been published. Some of the results are as follows: Every American vowel changes from beginning to end. This change is less than in Eng-

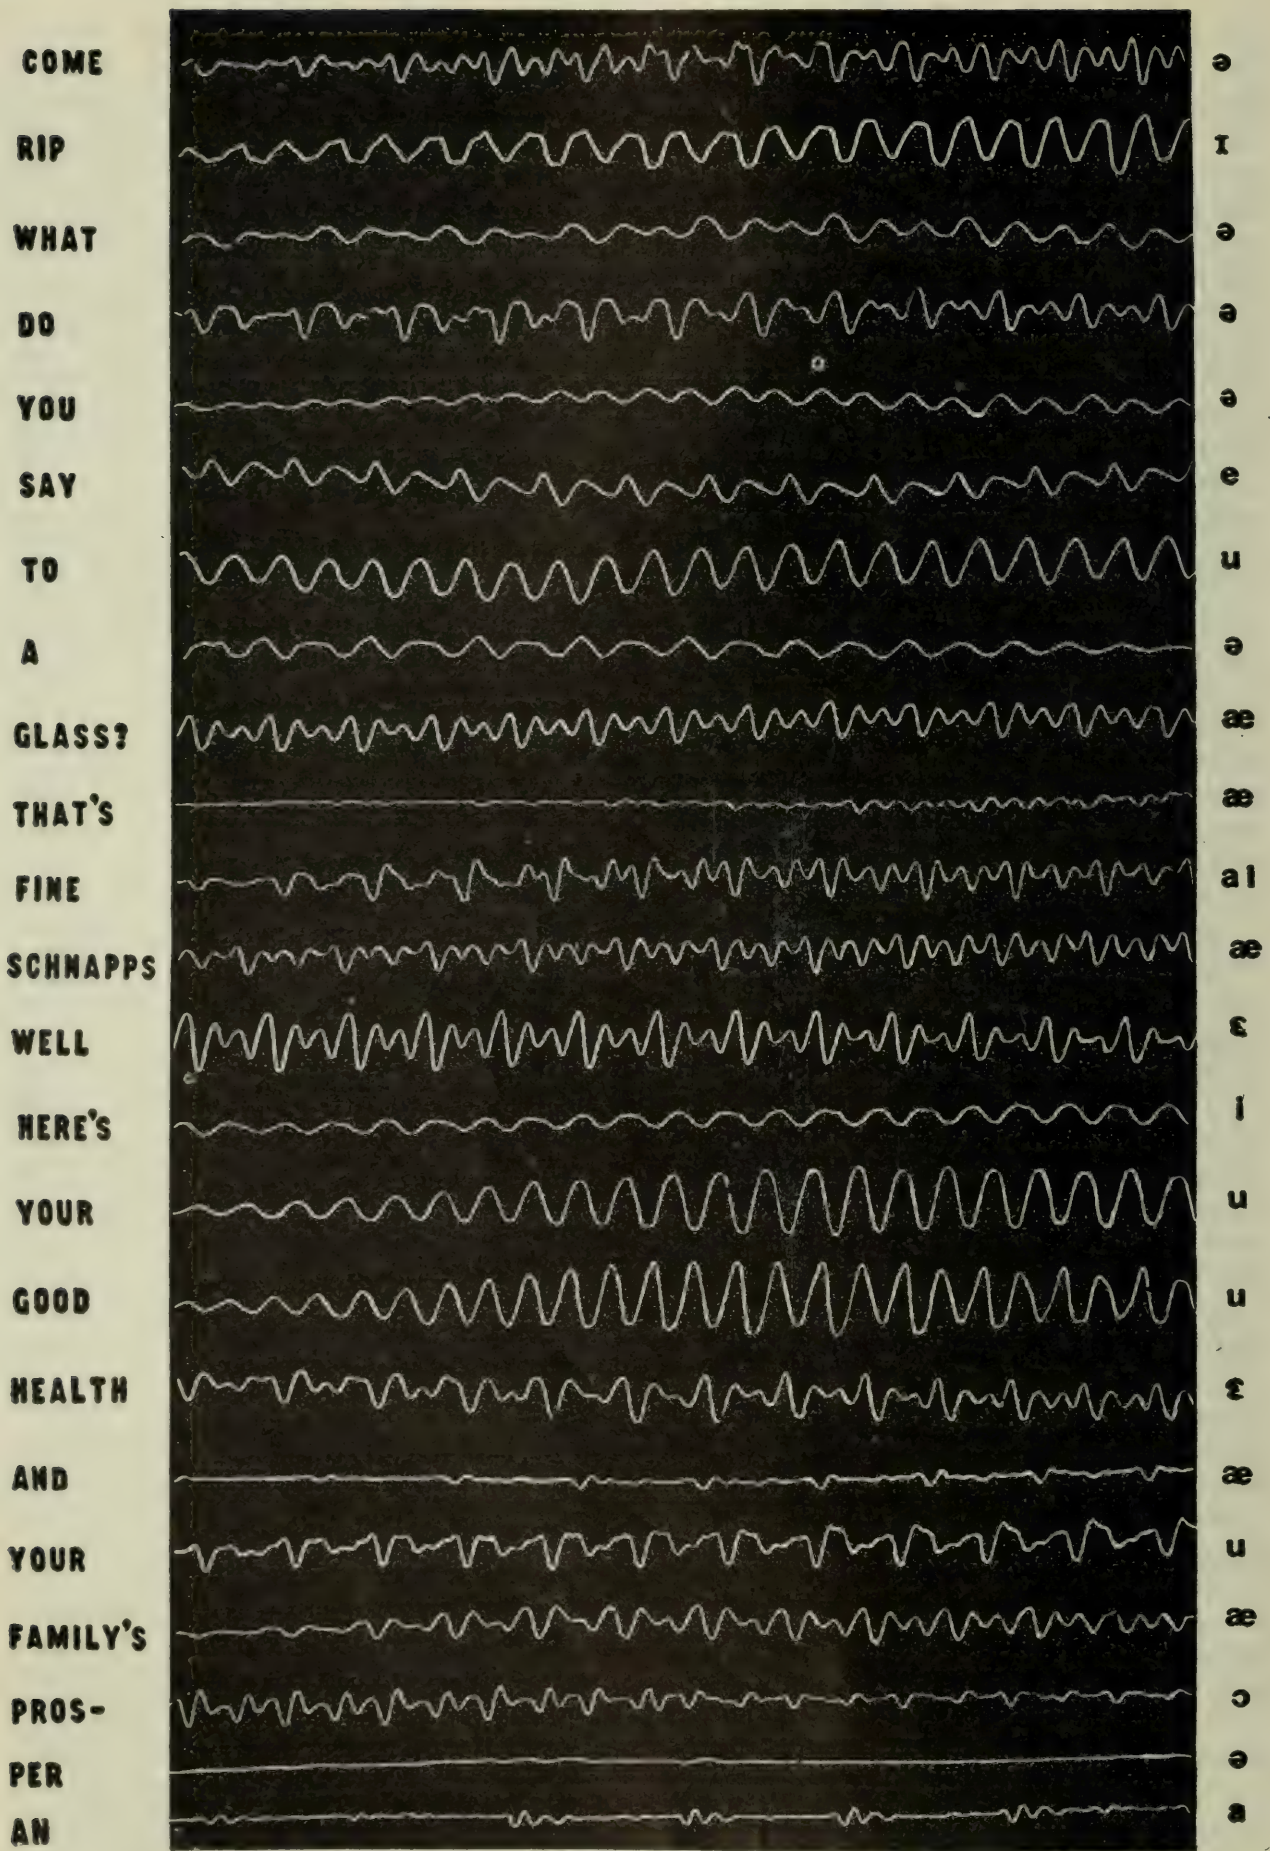

FIG. 14.—GRAMOPHONE TRACING OF THE VOWELS OF RIP VAN WINKLE'S TOAST, SPOKEN BY JOE JEFFERSON.

lish vowels. Many so-called simple vowels change more than the diphthongs. Many short vowels go thru very great changes. There are more vowels, especially short vowels, than are at present recognized. The short vowels are generally and the long vowels occasionally incorrectly given in our dictionaries.

It is evident that in these gramophone records we have the data for solving our original problem concerning verse. The melody plot gives us the pitch at every instant. The length of the vowel gives us the duration. Some idea of the intensity can be gained from the hight of the vibrations. An examination of verse curves shows that in English verse there are "strong" syllables, which are made so by being louder, longer or different in pitch, and "weak" syllables, which are softer, shorter or more monotonous. Thus all the theories are correct as far as they go. But they are applicable only to certain forms of sing-song or specially musical verse. Applied to truly characteristic English verse, the schemes of the prosodists are shown to be mere scholastic jugglery with the letters of printed verse, which have nothing to do with the living verse spoken by the poet. The Merker in the opera of Hans Sachs found nothing but errors in the song of Walter von der Vogelweide, because it would not fit his schemes. True verse will not fit the schemes of grammarians. Living verse has no regard to syllables, feet, etc.; it is a flow of emotional expression which follows psychological laws. One of these laws brings the ideas into larger groups; these fall into smaller groups indicated by the stanza, the line and the phrase. Within each of these there is a specific number of rhythmical expressive impulses. For example, the stanza:

> The cities are full of pride,
> Challenging each to each,
> This from the mountain side,
> That from her burthened beach.
> —*Kipling.*

expresses one larger idea; each of the four constituents is expressed by a line and is marked off by pauses. Within each line there are three impulses that center around the sounds in "Cit—," "full," "pride," etc. The centers of impulse occur at approximately equal intervals. These are the vital factors of the verse. There is no division into syllables by speaker or hearer, and there is no regard paid to dactyl or trocha. "The proclitic syllable," to explain the first word in the first line, is a device of the grammarian to conceal ignorance.

Altho these investigations were begun in America, they were carried on mainly in Germany. One reason was that the measurements and computations required many paid assistants. These could not be obtained at any practicable figure in America, but in Munich any number of doctors of philosophy could be hired at fifteen cents an hour and university (graduate) students at ten cents. Retired military officers proved to be good assistants. For several years the superintendent of the laboratory was the Baron von Hagen, a retired Prussian major, who is now carrying on one branch of the work independently.

Another reason was the favorable scientific environment. In the land of the dollar the man who spends his life doing something that has no monetary value is looked upon as somewhat soft in his upper story. Perhaps he is; what sensible and righteous man would sacrifice the comfort and health of his family to a selfish craze to find out something new? In the American college, too, the scientific investigator is disliked as a man who is trying to upset things, or who is selfishly working for glory instead of correcting examination papers. This, too, is quite proper and just; the successful conduct of an institution requires that every man in it shall sacrifice his personal inclinations to the routine necessary for the object to be attained—which, in America, consists in the teaching of dead knowledge to students.

In Germany the case is different. To get his degree every student *must* do some original work. To obtain permission to teach he *must* do more scientific work. To attract and hold students he *must* keep on doing scientific work. To become an assistant professor and then a full professor he *must* always keep on doing more scientific work. Finally, to hold his place and not be shelved he must never cease in original work. Competition provides that the work must be of merit; a slouchy investi-

gation is liable to cost the author his entire career. It is the characteristic German "must" that places German science supreme. In enthusiasm, self-sacrifice and natural ability the American student is ahead of the German; but in America he turns to business, law or medicine if he has any common sense, whereas a German naturally has to become a scientific man even when he follows a profession. These factors produce in Germany a scientific environment that leads to quick recognition of results, to inspiration for further work and to the supremacy of German science. Not one of the great modern scientific discoveries has been made west of the Atlantic; America has not produced a single scientific man of the first class. The Nobel prizes for science all go to Europeans. What has America done to compare with the discovery of the X rays (German), argon (English) and radium (French)? What has our chemistry furnished of importance like the benzole-ring of Mendeljéef (Russian), the sugar theory of Fischer (German) and the physical chemistry of Van t'Hoff (Dutch)? In physiology we can only learn at a distance from the researches of Pawlow (Russian), in nerve anatomy from Ramon y Cajal (Spanish) and Golgi (Italian), in bacteriology from Koch (German), Roux (French) and Kitasato (Japanese). Having few scientific men, we have no able teachers. In college the students are crammed with dead facts instead of having their natural gifts for enterprise and discovery developed. It does not dawn on our universities that their first duty is the advancement of knowledge, and that their second is to make every student to some degree a scientific investigator.

In conclusion, I must answer the question every American asks: "What is the practical value of such researches on the voice?" In the first place, our dictionaries are shown to give incorrect pronunciations for many words. Again, the army of vocal teachers are shown to be basing their methods on wrong principles. Still newer investigations show that the case is worse than we had supposed; and an entirely new system of instruction is now being worked out by the new methods. Other branches of the work have led to important medical applications. A peculiar epileptic voice has been found which enables us to rescue a class of hysterical persons from the epileptic treatment. A new cure for stammering and stuttering has also been found.

VANDERBILT CLINIC, COLUMBIA UNIVERSITY,

The Closed Door

BY GRACE DENIO LITCHFIELD

KNOCK! Knock! Bide not there baffled with spent hand.
Lo, here the threshold of thy dreamed-of goal—
Here, here, fulfilment for thy seeking soul.
Oh knock! Oh knock! Take not thy craven stand,
Stilly consenting, with Fate's beggared band,
Mulcted forever of thy rightful dole.
Grasp for thy drop from Life's abundant bowl—
Thy meted morsel of the Promised Land!
The touch withheld, how shall the latch unlock?
What hostel proffers to unchallenging guest
Friendship's full feast—Wisdom's consummate wine?
Fool! For a lifted finger all were thine—
All, all thy soul could compass at its best.
Knock, that the door may open! Knock, oh knock!

WASHINGTON, D. C.

October on the Hills

BY E. P. POWELL

Author of "The Country Home," "Our Heredity from God," etc.

AUTUMN comes with its lap full of fruits, yet not quite welcome. For who likes to have the long days go, while the sun slowly closes down on the bright hours. The bird chords held on till the daybreak dropped below five o'clock, and now only one solitary robin whistles in the dawn near my window. Who that knows the four o'clock morning can willingly spare its rich quiet; the sweep of scythe in morning dew, the far-off call of the mourning dove and the drowsy call of the waking cocks thru the whole valley. Every week, however, we discover that the night is gaining on us and the glory of the daybreak is more and more disturbed by the hurrying of the farmer—as he goes down hill toward winter.

I do not quite like a butternut tree, because it gets tired so quickly. It drops leaves by the middle of August, and early in September its limbs are bare. It must have got this tradition from a colder climate and shorter summers. The white ash is something of the same sort. It leaves out late in the spring, does its work quickly, and clothes itself in rich purple, while the maple and other neighbors are still adding to their growth. The butternut is unconventional and heedless of custom, but its nuts are compensative—to all of us who remain childlike.

Bees have now a very narrow range of flowers, and my boy no longer takes from them their storages. The vast fields of goldenrod along the creek still give them harvest — but they color and flavor the honey. It is, I think, for these hymenopterous friends that the goldenrod is so abundant. It requires a very nice adjustment of vegetable and animal life to make either prosperous. Only a few years ago I discovered that sweet clover was a superior honey plant. I had thought it only a weed. So now after its early summer blooming I cut it down, and it sends up a big bunch of branches to blossom in October. Here my bees are industriously happy. It is astonishing how far these honey makers go for their stores and how much better they know the country than we do. If away back in their evolution they had moved off on the line of articulation, their field notes would be finer and fuller than those of Burroughs or Thoreau. But if they told all that they saw, and all that they discovered, some one would be likely to call them nature fakirs.

Where do these ugly hours come from? The winds jerk off the leaves and have a spiteful pleasure in throwing them into the mud. Color is especially disliked. Everything is brown and dingy. Nothing on the ground looks cheerful, except late violets or mushrooms. In the sky the clouds go by, for hours, at a fearful pace. Suddenly the whole program changes. The blue looks thru, and the sun looks down laughing; and we are ashamed that we were sad. A wet day, however, has its uses. It sends us to the shop, and relieves the strain of work, by setting us at another class of tools. My father's shoeshop was a big bit of my education. It was worth all of Murray and Peter Parley and a half-dozen other such tutors and mentors. My own shop is another sort of thing, but it is just as useful. There we collect the dropped fruit and turn it into delicious cider. We sharpen the tools and we repair what has been broken. Books multiplied until they grew impertinent. They assumed a sort of autocratic and commandatory position. We are learning that a big part of education comes from things.

After a wet night is the time to look for mushrooms. The "inkys" are abundant around old stumps, and they are very good, but it takes a panful to make a dinner. Out of the grassy clumps and the rich hollows, where the cows have spent the nights, lift bunches of Agaricus —pink-lipped and delicious. But best

of all are the "puffballs"—smoky fellows when two or three days old, but they are the mutton of the vegetable world—sweet and juicy and satisfying. With them should always go a rich, cream gravy, and plenty of it, with toast. I am surprised to find how the small children of my neighborhood are learning to distinguish these fruits of the night. The danger of being poisoned is very slight, and vanishes altogether when one has made them a study.

Autumn revels in the beautiful. The colors are superb. Nature seems for once to forsake the law of temperance. No heavy frost has blackened the foliage or torn it from the trees. There has been a quiet ripening of the year. The yellow birds sit on the thistle tops and chuckle their satisfaction. I do not know any bird that seems happier than this little seed-eater. The sumach stands in great clumps of scarlet on the higher slopes, and the Virginia creeper has not dropped all of its crimson leaves from the charred stumps, that it loves to drape in glory. At this season of the year everything is reversed. The meanest becomes the most noble and the humblest most exalted. I picked some exquisite beadlike seeds, and found they came from a nettle. One may make a compost pile very charming all summer by growing over it squash vines, but now the morning glories open their beautiful eyes and cover the coarser vine. One must never forget the beautiful, while working for the useful; Nature never does.

Your mean little city lot of twenty by fifty will glorify itself at this season if you give it half a chance. It will paint your weeds with touches like Rembrandt. Chickweed and shepherds' purse come up everywhere, and ask for a chance to make the world a little more beautiful. The new creed reads, Go back to Nature! Surround yourself with brooks, gardens, orchards, flowers and fruits. Set your heart on things intrinsically beautiful as well as good. But then intoxication is always an evil, whether with drinks or with food, with poems or with flowers—or even with religions. Work must always go with worship. If you find happiness it will not stay with you unless you put your hands on it as well as your heart.

The corn fields are lively with huskers. You can see them here and there between the orchards. What a glorious thing it is to sit on the rustling stalks and toss the golden ears into piles. It makes a poet of a lout. Boys transfer the piles into great wagons, and the loads rattle down the fields to the barns and the cribs. Co-operation is nothing new; it only changes forms. Our fathers knew very well how to pull together. The husking bee, the paring bee, the raising bee and the rag-carpet bee and quilting bee were simple ways of making social life charming. Machinery crowded out the most delightful amenities of the farm home, until nothing was left but disagreeable tasks. Now, with all the sciences hitched to the plow, new forms of co-operation are born. We have learned how to walk alone; therefore we walk together.

I waked this morning with a consciousness that the world was very happy, and that I was in full key with the world's spirit. The cocks called out all thru the valley yards Good Morning! The birds were not singing, for their home building was finished in August; but my pet catbirds were calling me thru the open windows, and I called back to them most gladly. The July crickets did not get waked up this year until late in August, and even then we had so little of them that we are glad to hear them in the autumn months. My friend lit his pipe last night, and then he put it away again, saying: "I don't need it. Instead of soothing me, it disturbs my complete submission to the love song of the innumerable crickets." One should know how to put himself into the most perfect harmony with Nature's moods. A gentle night, fairly full of the cradle song of the cricket, is the very incarnation of peace and content. The sounds seems at first to be a bit inharmonious, but the blending becomes perfect, and after a while is somniferous.

Nature is a perfect farmer if not meddled with. She understands soil making, and her piles of humus are always increasing in the little hollows. There is no spot on earth she would not make

habitable and fertile if let alone. The drifting leaves were not woven all over the trees for a single purpose. They shade the tree trunks in summer, and they exhale ozone to purify the air, and they are also indescribably beautiful. But when they have served their purpose for tree and for man, Nature drops them down to fatten the soil. Fools burn them, but other fools burn banknotes; it is all the same—it is the destruction of wealth. In Florida, where deciduous leaves are not plentiful, I found that Nature had created a superabundance of vines; legumes that take nitrogen from the air and add it to the sand. But there also the fools were at work, and with fire, once a year, they sent millions up in smoke.

The wise man is needed everywhere. One-half the forces of nature go to waste, without brains to direct them. The fool is always out of place, especially in his own garden and orchard. He has planted what he was told to plant, but never really knows the spirit of the tree. The weeds laugh at him and grow under his feet, but the marigolds wonder and die out. So I prefer my walks on the wild pasture knolls, or in the edges of the woods. There the struggle for existence manages to turn out a compensative value. Wild bushes become hedges and windbreaks. The superfluity of weeds rots down into humus. But an orchard, grafted and set for a purpose, should overcome all side issues and be kept to the point. This needs a man who is himself also trained to an end. That is the trouble with much farming; it lacks culture—not plow-culture, but brain-culture. Our schools do not see this, and they care only to make store accounts come out even. I have a near neighbor with Puritan blood in him, which makes him devoutly ethical. I do not see that it goes far to the growing of corn. He has infinite crosses of Welsh, Dutch, English and Scotch; not very well worked over or bred into unity. His school training is superabundant, but it all applies to literature. He can make a good after-dinner speech, but his pears are knobby and his apples are scabby. Suckers come up all about his trees, and they grow also all around his life. Somehow he does not fit in. Nature has made no preparation for this sort of farmer. She calls for brains everywhere and for sympathy. She will not let up on this demand. She prefers cattle and sheep to an untrained human being.

Some say that autumn is sad. To my mind it is unutterably glad—a gladness, however, all its own. It is the gladness of mature life, infinitely richer than that of boyhood or youth—not noisy, and yet full and deep and satisfying. I am happier and younger at seventy-five than I was at twenty-five. Somewhere along back there I crossed a bridge over into sunnier meadows and more brainful orchards. Then I have, along the way, a storage everywhere. I own my past life. There are ideals lived out and joys experienced. What a richness there is in owning a life; in the consciousness that you have not only dreamed fine dreams, but lived many of them into your life of days; not only planned, but worked. I think that heaven is always in the building; but it is also in having been built. I have seen joy in the eyes of the young man, but never so grand as in the eyes of the octogenarian; a man who had gone with God for eighty years. I knew Emerson when he was seventy; I therefore do not care for his youth. But the springs are needed as well as the autumns; youth as well as ripeness; night as well as morning:

"Beautiful life! Strong youth!
I come to you as the sunset; you come to me as the sunrise.
Alone we do not circle the earth; do not know it;
Between us we make the day—clear and full of meaning.
We search out the earth, find its buds, and compel them to open.
We are ever looking forward toward each other.
All night I whisper, thru the trees, of you, for you.
I call the dawn, till, breaking the east, it comes.
O, how it comes! Dressed in light and love!
Bright purpose rays red over the heavens!
Strong youth! Great hope! Beautiful dawn!
I wait you as you come; I, the evening,
I have the table laid—waiting; life sits at the feast."

Only yesterday the world was a flush of blossoms; apples, pears, plums, cherries and lilacs all flung out their banners and filled the world with sweetness. It did not seem as if the year could get on

without that glory of florescence and that sea of ozone in which we bathed every morning. Then we past into the swift July and the calmer August, with great fields of ripening grain and the green corn on our tables. It was clear then that we had started for a goal; that goal was never to be touched. The bees buzzed like swift shuttles, knowing in the hot summer that winter was somewhere ahead. I saw a ripe strawberry one morning, and the dew made silver all over the scarlet. It was so beautiful that I came away and did not pick it. That was foolish in me, for all beauty depends upon the power of change. The strawberry went down to the soil to nourish future strawberries. Now the world is ripe; the harvests are near an end; the bins are filling. The larger part of progress lies in the capacity for dying well. Every ounce of my soil proves this. To handle death well is the highest science. To turn a compost pile over into melons, what a glory is that! Out of the dung hill to bring forth corn. In the soil of the passing year lies buried an eternity of years.

CLINTON, N. Y.

The Need of Good Men in the Philippines

BY A. L. PITCHER

[The following article is most timely at this moment owing to the opening of the Filipino Assembly by Secretary Taft last week. America has accomplished wonders in the Philippines, but there is yet much to be done if we are to achieve a lasting success there and keep the good will and loyalty of the natives.—EDITOR.]

THAT the indifference of the American public toward the Philippines is greater than their present interest, is pardonable for several reasons: generally speaking, we know very little of the country and the race of people recently brought under our form of government; our impressions are formed largely from personal letters, newspapers and reports from the Insular Government. Letters from our friends dwell chiefly on the hardships of living in the Philippines, so that our first concern is for these friends or relatives and their welfare in a land we regret they went to. The newspaper reporter and cartoonist in their gibes at Philippines and Filipinos are succeeding in coloring public opinion to an extent prejudicial to country, people and our government there. Government reports themselves are hardly of an encouraging nature:—there is a deadening sameness to repeated accounts of ladronism and the wrongdoings of petty officials. But the strongest reason for indifference, I think, is attributable to the fact that the Philippines are proving of so little value commercially, and since this commercial value is also the national value, the islands are out of politics. This is, without doubt, the principal reason why interest in the real worth of the Filipino people has cooled.

I pardon much to American indifference, and am most patient in answering questions which amuse me by their puerility; which chagrin me because of the ignorance prompting them. One dear old lady who saw my photographs of Filipino friends asked if I had taught them to wear clothes. This was a perfectly natural query, since she knew that it is hot in the Philippines, and she had thought the Filipinos savages. Others have expressed surprise because I tell them that the natives are intelligent, and really worth while; but when I have declared strong feeling of friendship for people in the town where for two years I lived familiarly with them, my declaration has been taken as a good joke.

A sweeping condemnation of the whole Philippine matter is rather hasty since a moral obligation binds America to the

future of that land. Our present indifference, but temporary I hope, is lamentable because the Filipinos are a people demanding a better recognition of their natural qualities; and because under present conditions brought about by the personnel and deeds of petty government officials, these qualities are being dwarfed and the natives' conception of America perverted. In what follows I wish to show that the Filipinos are in many ways naturally superior to the officials allowed to govern them; and that these officials, necessarily a poor lot, are working inestimable harm, and should at once be superseded by a better class of American men.

I went to the Philippines to help show the natives something about American schools, and to teach them English. I was assigned to an inland town of Pampanga, a province of Luzon. The people of this town were friendly and hospitable when a perfect stranger I came among them. I saw that they were not savages, that they wore clothes, scant, to be sure, but modest; that they had profited to a high degree from the civilizing influence of Spain. I was surprised to find in a peasant community so high an intellectuality; this simplified my attempts to educate them. By clearly defining my purpose among them, and by asking their co-operation and patience until I learned their ways and language, I met them half way, and my honesty brought them the other half. It brought more; it brought me the confidence, friendship and an equal standing among them; and no higher consideration can be given a foreigner by the Filipinos than that he is worthy to be considered just as good as themselves. I know that this sounds queer, but I have proved it; and have found that this relation does not necessarily mean the lessening of one's own dignity, nor the admittance of the native to a troublesome degree of familiarity, which is the undoing of any foreigner among them.

I was admitted to their family life, an intimacy that proved to me their respect for old age; their love for their children; their reverence for the family, accountable for monogamy, legitimate children and a wholesome observance of marriage. I visited their ceremonies, religious and secular; I attended their feasts; I went with them into the country, hunted, ate, slept just as they did. I found in their relations, one with the other, their conduct was marked by a dignified courtesy and a constant good nature.

In return for their trust, confidence and good will I did my best to further our relations. My house was always open to them, my ear ever ready to listen to a grievance—too often caused by American injustice — and my advice at their service. Possibly coming and living alone in their town brought out to me all the charm of Filipino hospitality, and led to our understanding. Certainly by appealing to their better instincts, and by respecting their customs, my life with them was shorn of its loneliness and became one of pleasure.

An American who will meet the advances of these people and will return them, finds himself the guardian and sponsor of the community; by his influence the laws are better understood and observed; the town is kept cleaner; the district is better policed, and gaming is less practiced. For disarming native suspicion and for overcoming deep-rooted conservatism the American must show himself friendly, as thus only will he acquire a standing among the Filipinos enabling him to work incalculable good. The American must be an all-round model of his country, and a worthy one for natives whose innate good breeding requires the best Americanism for their daily contemplation. He must be patient, too, for the Filipino learns slowly; he is cautious in accepting a new thing like the American system, so different from the Spanish in either the schools or the government. But he is inquisitive and impressionable, and a past master of imitation he easily and quickly grasps what he wishes. Like his Tagalog brother, the Pampangan is a "cheerful, good-natured, sensitive child, quickly responsive to kind treatment, but when abused attempts retaliation, and, if unable to obtain this, sulks, apparently loses all interest, and assumes a stupidity as exasperating as it is contrary to his normal state."

These are some of the characteristics encountered and not sufficiently considered by the American officials sent to the

provinces to demonstrate our ways of living and our government. Generally it is a lack of patience, less frequently a lack of honesty in dealing with the people that is the source of estrangement, and once this wedge enters, pushing them farther apart, official and people are in no mood for mutual relations of confidence or of friendship.

* * * * * *

That government rascality of various kinds is prevalent in the Philippines cannot be denied; it is due to the circumstances under which a government is formed in a new land. The Insular Government of the Philippines in selecting its minor officials had to meet the conditions peculiar to the country. Obviously the number of eligibles for office is limited; obviously it has been the policy to select, so far as possible, honorably discharged soldiers, for such positions as provincial treasurers, governors, collectors of ports, postmasters and teachers; while the constabulary has been filled entirely with these ex-soldiers. It is among the officials of the above classes that we find a large number of peculators. The reasons are not far to seek. Given a set of subalterns, and often men from the ranks, who are inured to the domineering methods peculiar to the volunteer military service; raise these men to positions whose very dignity implies power and command, and in these cases over a people obsequious in the highest degree of officialdom, and unless the incumbent is well adjusted in the matter of personal equation, the result is a foregone conclusion. The very remoteness of officials from heads of departments in Manila, and the at times insurmountable means of communication, leave the reins of control wholly in the hands of provincial officials, who draw them tight or loose, and administer wisely or unwisely, as ability and natural disposition suggest.

In view of the material at hand, and the unattractiveness of the life, securing men well qualified and adapted for provincial office is no easy matter, and there creep into the service unqualified persons whose equipment cannot sustain the peculiar demands of the office. This is hardly chargeable to the department when we consider the possible material; but the need and importance of more substantial material to choose from are the vital defects crying for immediate attention.

Owing to the unique class of people to be governed, it is more than axiomatic that the future of the Philippines is dependent on the personnel of government officials. These, removed from the cities and from an intercourse with their kind, are sprinkled thinly over the provinces. There may be possibly four Americans in a capital town—a treasurer, supervisor, constabulary officer and school teacher; in most cases the last two, or even the last, will be stationed alone. For any official to approach success in the work planned an understanding of the people is so essential that it is just here failure is most liable and traceable largely to the stand taken by the official. To show how this works: To a town where the Filipinos had given every consideration to Americans there came an officer, on important civil duty. Holding all Filipinos in mean estimation, he began by trying to bully the people into letting him a house at his own low figure, about half what was asked. This not succeeding, the people were called ladrones and declared unworthy of American protection—a tactless remark, which engendered bad feeling and led to strained relations. The crisis came one day when the officer, exasperated at the president's failure to come promptly to the former's headquarters merely to give some information, rushed to the town house and attempted to drag the native headman thru the streets. This idiocy aroused the Filipinos to a retaliation which landed the official in the town calaboose, hustled there by the mob.

I detail but one of many instances I have witnessed wherein a ruffian American has tried to bully a people whose inborn courtesy, dignity and natural good breeding are as foreign to the understanding of our Government representative, as his bearing and deeds were foreign to the understanding of the natives. The low, worthless Americans let loose in the archipelago are far from being the equals of those they bully. The brutal coarseness with which this class of officials administers American justice to a people still in medievalism is completely

estranging the Filipinos, and perverting their ideas of Americans. Our nation is judged by these things and these persons; the natives receive impressions which work for no good to the Government at large, and which frequently drive them to the hills to avenge themselves on a government so represented. It is thus largely a question of winning or antagonizing the Filipinos thru provincial officials.

Before condemning the Government for the frequency of mal-administration and of wrongdoing, and before indifference becomes more deeply rooted, take into consideration the circumstances, and look to the remedy. If men from the ranks of military life and training are to be raised to offices of responsibility and dignity; if these men, as Government representatives in stations too remote to allow of personal investigation, are set in authority over a subservient race whom they cannot or will not understand; and if these men, because of enervating climate, poor food, tippling and the ill-adjusted natural or mental faculties, lose their heads when in a position to domineer a conquered people—if men of this stamp are to carry Americanism to the Filipinos, clearly it won't be carried far. In view of the Government's dependence on its minor appointees, and in view of the large number of worthless Americans encumbering today these appointments, it behooves America to shake off this indifference, to give the Filipinos the benefit of a more intimate acquaintance, and to demand for them a set of governors commensurable with their own racial and instinctive breeding.

This can be brought about by making service in the Philippines attractive to good men; by weighing the candidate's personality and adaptability for close relations with the Filipinos; by appointing no one not declaring an interest in and for them, and no one not standing for, and setting the example of pure justice, erring neither in generosity nor abuse. I hope the influences of petty domineering and rascality are yet radicable; I know that these must immediately cease if the Filipinos are to be saved for us.

MYSTIC, CONN.

The Dragon City

BY IVAN SWIFT

In this unchanging shaft-light hour by hour,
Pent in and comfortless, the city's power
Goes grinding on around me; and the sky,
A somber square the empty winds go by,
Scarce marks the transit of the night or day.
A million unfixt spirits take their way
Beneath my keep, nor seem to reckon why
They tempt a dragon, follow far, and die!

I marvel I could quit the peace of fields
For this, where all our fervent sowing yields
But mortal thorns to weave us penal crowns!
I have not learned the tenets of the towns:
I seem disarmed where every man contends,
Denying virtue and rejecting friends!

Where I have wandered, on the northern hills
A Presence full of power and promise fills
Our hearts with common joy; and there we learn
How comradeship and simple trust will turn
The fear of beasts and enmity of men.
But what avails the code I gathered then?—
The God of farther places *here* they scorn,
And flout the solemn faiths that *I* have sworn!

Were men but rude, like some unlettered breed,—
Then might I stand, as one who knew the creed;
But here are sinuous ways and sultan smiles,
Soft insolence, diplomacies and wiles.
These subtler crafts plain men can never know;
And fall as falls the unresisting snow;

From this most pitiless of human mills
I wonder I am not among the hills,
Whose faithful benediction followed me!
And I am pained of infidelity
At parting from the pines and golden sands
And old-time friends—the warm and rugged hands
Of long-true friends! I wonder I should roam
This way! My heart is *there*—and there is *home!*

CHICAGO, ILL.

Two Weeks in China

BY J. H. DE FOREST, D.D.

Shanghai

FOR forty years I had heard of Shanghai, and in a vague way knew that it was the abode of foreigners somewhere on the low flats of the Yangtse delta; that it was governed on exterritorial lines much as Yokohama used to be; that it was often a storm center of international passions, famous at such times for its lying cablegrams; and that it figured large in the commerce and diplomacy of the world..

But one hour's ride across this enduringly built city, the sight of its fine architecture in stone and brick, its banks, hotels, club houses, business places, residences, churches and missions, set me to wondering. Here is a city holding more Westerners than any other city of the Far East—more than all Japan has, a city of glorious commercial importance and prosperity, the gateway to the whole empire of China, a city rapidly expanding and "destined in the near future to be the largest city of all Asia." Shanghai is certainly a world city, not only on account of its universal mercantile interests, but rather because it is the center of high diplomatic problems, on the right solution of which depends so much of the peace and progress of the world.

The first impression one gets of Shanghai is of its magnificent commercial power. China is cut in two by the enormous river Yangtse, whose branches are other enormous rivers and canals that flow north and south over fruitful prairies and penetrate far up mountain valleys. And Shanghai is the gateway into this thickly populated continental valley. It is, therefore, the commanding city of the empire, and as such the connecting center between the East and the West. Being a world city it forces one to think in world terms.

Residentially it astonished me. The men who build up these open ports of the East love solidity in architecture. They come to stay. The common thought about them is that they come to make money and then return to the home land to live in ease. One look at their substantial and delightful homes in the midst of lawns and gardens flanking country avenues for miles and miles knocks from the mind all thought of the transitory nature of the Westerner's stay in the East. To be sure, he loves to go home for a visit, but once in the East he forever hears the call to stay and make an abiding city.

Now Shanghai has a hundred miles of roads, and scores of miles of these roads are wholly residential, but do not make the mistake of thinking that all these beautifully built, broad piazzaed houses belong to foreigners. Wealthy Chinese have caught on the idea of Western architecture, and all along these avenues where but a few years ago were paddy fields and vegetable gardens are now spacious and expensive abodes of *taotai* commissioners, retired officials and merchants. Besides these wealthy ones, there are 400,000 other Chinese in the settlement, and it is this mixture on a large scale of Westerners and Chinese that interests one—a pointer toward the larger coming together of the East and West.

This commingling of the peoples of two civilizations widely differing in language, religion, government and morals, gives rise to problems of world interest, the chief of which is exterritoriality. Just as Japan a few years ago felt humiliated over treaties that denied her judicial authority over foreigners on her soil, so China is awakening to find herself—the great historic Middle Kingdom of the earth—classed politically among inferior nations—with Siam and Turkey. "China for the Chinese" is a cry already heard in many ways. Boycott of American goods is one form of it. The Boxer movement was another violent expression of it. Murder of missionaries is one more. No wonder that those 15,000 students in Tokyo are uneasy over the discovery that Western powers have hu-

miliated their empire many times and in many ways in the name of exterritoriality. Indeed, every mission college, so far as it teaches international justice and human worth, is a silently revolutionizing force. Yale and Harvard, Oxford and Cambridge, have taught scores of gifted Chinese youths the world system of laws from which their empire is measurably excluded.

And Shanghai now is probably the greatest world center of this difficult problem of exterritoriality. Yokohama figured large in this question a dozen years ago, but now that Japan has political equality with nations of the West there is no longer this irritating problem of "foreign settlements" and "concessions" within that empire. Hongkong, too, is not in it, for that splendid "City of Victoria" is a "Crown Colony of Great Britain." But Shanghai, with its 13,000 foreigners, is deeply in it. And for this reason it is intensely interesting to see what forces are at work toward a peaceful solution of this international problem.

Among these forces it should be said that powerful commercial interests will probably resist to the last the abolition of exterritorial rights and the transfer of vast properties to the protection of the Chinese Government and laws. That was what Yokohama did, and Shanghai will naturally do the same. From the Shanghai standpoint this is perfectly right. Save for the protection of their own foreign governments and the constant presence of gunboats, these foreigners never could have built up that vast system of commerce that is bringing new life and hope to the millions of China. Exterritoriality is one of the blessed methods by which nations of different degrees of civilizations and different moral and religious standards can temporarily come together in peace. Without it war would be ceaseless and semi-barbarism would perpetually obstruct the incoming of new methods and international intercourse. At the same time it must never be forgotten that the nations on whom it is imposed hate it, and so it is also a cause of friction and war. It is, therefore, a temporary expedient to be abolished as soon as possible. Commercialism wants it as a permanency, but the moral forces of the world look forward to its abolition, foreseeing that it is better for humanity that a great backward nation whose face is turned toward the light should be trusted rather than that its awakening people should be more and more embittered and poisoned against the rest of the world.

Now Japan is one of the great forces that is encouraging China to take necessary steps for the recovery of political autonomy, by building up an army and navy that the world will be forced to respect, by reformation of government and laws, and by universal education in world knowledge which will remove the dead hand of conservatism. The United States is another potent agency, and has frankly expressed its sympathy with China's desire in the last treaty signed at Shanghai, October 8th, 1903:

"The Government of China having expressed a strong desire to reform its judicial system and to bring it into accord with that of Western nations, the United States agrees to give every assistance to such reform, and will also be prepared to relinquish extra-territorial rights when satisfied that the state of the Chinese laws, the arrangements for their administration, and other considerations warrant it in so doing."

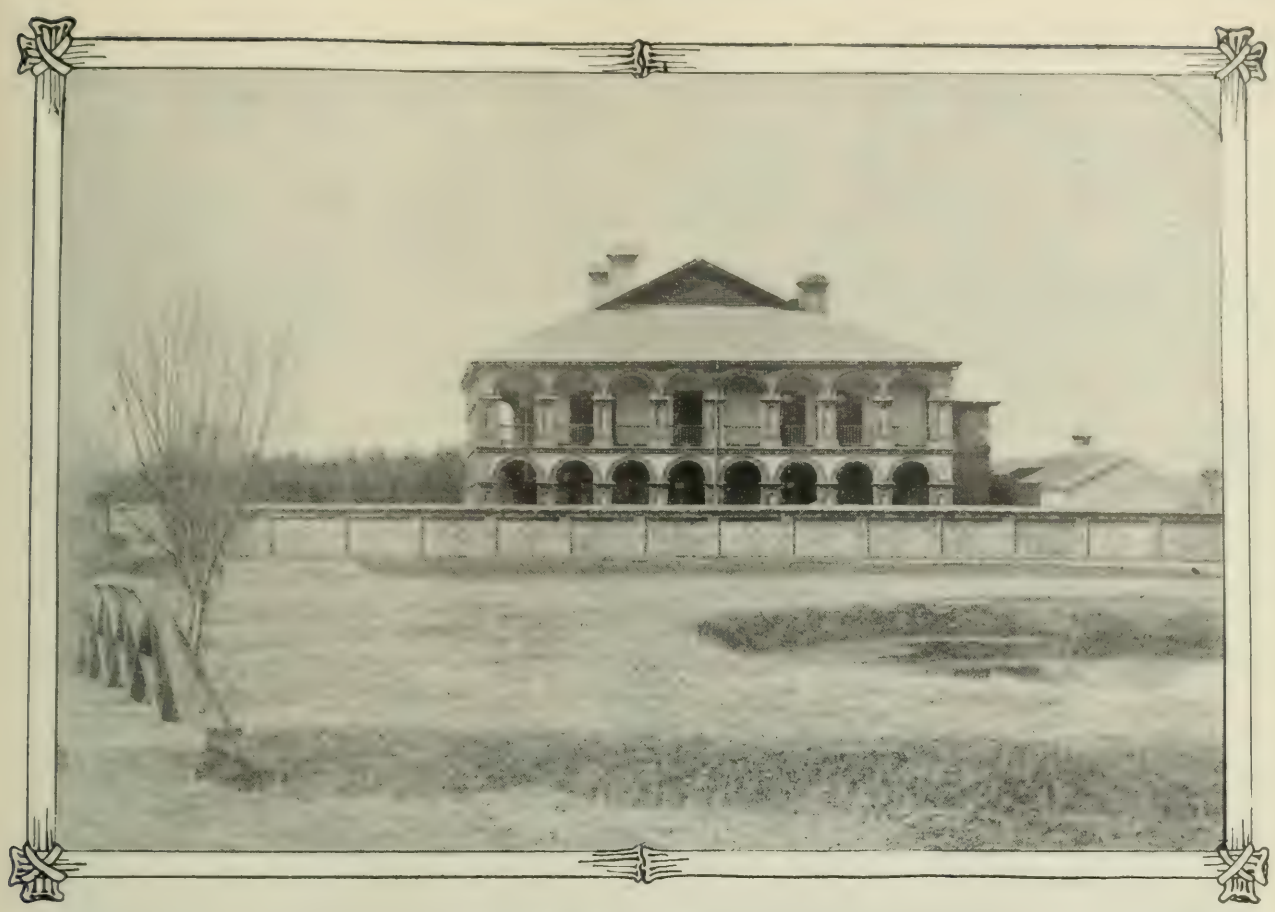
Other nations are taking the same sympathetic attitude. And it is coming to be believed that international justice and peace will be far better conserved with new China as a political equal than with old China handled by exterritorial methods that at best humiliate and exasperate a great historic people.

These are the diplomatic forces that are pressing China toward freedom. But to me there is one great moral force of untold power that centers in Shanghai for befriending China. It is the largest missionary body in the world, made up of 4,000 chosen men and women. These are the people who love China for China's sake, who learn that difficult language, know its ethical literature, and by their writings are the best interpreters of China to the peoples of the West. We may as well say it frankly, these people in their new environment have made mistakes as sectarian propagandists under Western protection, but on the whole their work is one of love and self-sacrifice, and their one deep desire is to help in the regeneration of this great nation. A new life and larger hope are coming

over this vast missionary movement. The Protestant forces are uniting in many ways, so that a broader, more sympathetic work of national dimensions is coming to be their ideal. Such men as Richards, Reid and Smith are working thru literature and education to set up the kingdom of God rather than to propagate Western forms of Christianity. And the great Missionary Centennial Convention recently held in Shanghai, by recommending Chinese Christians to make a Chinese Church rather than to imitate all kinds of foreign forms of Christianity, adopted one of the most far-reaching resolutions a missionary body ever past. This opens the door wide for a truly sympathetic Christianity that will be a mighty moral force in the coming national life, and that ought to be a factor in hastening the recognition of China as a political equal with the nations of the West.

Nanking

A night's ride up the Yangtse River brings one to this city of 300,000 people, enclosed in an imposing wall that winds over hills and across valleys for more than twenty miles; the city of a Viceroy who rules over more people than half the population of North America; the city where hundreds of thousands live in some sections frightfully congested, while in other portions hundreds of acres of the dead cover the hills and valleys; whose temple to Confucius, "The Most Holy Teacher," is the second in size in the empire; whose Examination Hall, with its long rows of cells, capable of holding over 20,000 students, is the largest in China; whose Ming Mausoleum tells of the departed glory of a former dynasty; whose missionaries have conspicuous schools and hospitals; whose swarms of beggars beggar description.



I was dazed to be dropped down into such a city and such an environment. That massive turreted wall of from 30 to 100 feet high, wide enough on top to pasture goats and hogs, will in the future possibly become a magnificent automobile road, affording passengers extensive views of the city, of endless graveyards, of the Golden Purple Mountain Range, and the yellow Yangtze River winding thru the valley. Nothing but ages of despotism mingled with civilization could produce such walls. But the New China that has begun will have no more need of these walls for protection than New Japan has of her Tokugawa castles.

Confucius's Temple, with its broad, yellow-tiled roof, stands on a low hill, a fitting monument to one of the very greatest men that ever lived. God gave Confucius to China and to Japan, I fully

NANKING.

A section of a part of the city that was made desolate by the Taiping Rebellion about fifty years ago. It is now the drill ground of the new order of soldiers, whose extensive military college looms up in the center, while beyond the city walls are the treeless Golden Purple Mountains.

A TYPICAL FOREIGN DWELLING HOUSE IN NANKING

With wide porticoes to protect from the summer heat, for the Yangtze Valley lies in about the same latitude as Mobile. The United States Consul lives in this house. Mission school buildings are of the same massive construction save the porticoes.

believe. Were I a Chinese I would worship that man. And when China comes to worship the Son of God, as she surely will, her Christianity will be of a Confucian type rather than a copy of the sectarian Christianity of the West. As I looked at the imposing temple gates that have never been opened, but that are waiting for a greater than Confucius to come, and then, entering by a side gate, saw within, over the altar, the golden-framed tablet inscribed *"Most Holy Sage Confucius,"* I lifted my hat and felt in harmony with the words on the right, *"Among the Living None Like Him."* It was a surprise to find that the common people do not worship at Confucian temples; none but officials have that privilege; and it was an added surprise to hear that the Throne has recently conferred the highest possible posthumous honor on the Sage by ranking him equal with Heaven and Earth. The significance of this political act seems to be two-fold. It is regarded by many as one sign of the present reaction against the Western religion and progress. And when we recall the growing hatred on the part of the Chinese of the Manchu Dynasty, this unique deification of their great Sage by a Manchu Empress may be an attempt to conciliate the people and thus bind into one solid nation both Manchu and Chinese.

What a remarkable system of competitive examination is manifest in what is called Examination Hall! There is no hall, but acres of brick compartments, 3x4 feet, in narrow rows of about one hundred cells each. We went up into the central tower that overlooks these rows of solitary cells in which so many millions of China's best young men had toiled and won, or fainted with bitter disappointment, and in not a few cases had died in their cells. We went to the judges stand where the sentence of success or failure was pronounced. And suddenly we saw a sight that foretells New China. In rode a high military-looking officer, and out from the buildings adjoining the empty cells came troops of new soldiers or policemen and lined up to salute their superior, dressed

in Western military uniform. It meant that Old China is passing away and New China is in evidence. Instead of Examination Hall there are now schools of every grade. Heretofore missionary compounds with their roomy school buildings of three stories built with solid brick, have stood conspicuous within the walls of Nanking as the only evidence of Western knowledge and life. But now there are Government schools and colleges on a scale that makes the mission buildings look small. There are the Military and Naval Colleges, the Normal school and middle schools, built in Western style, equipped with modern laboratories of chemistry, biology, mineralogy, geology, physics; there are also maps and charts of all kinds, as well as botanical, entomological and zoölogical specimens.

Such educational changes are pointers. The carriage roads thru a large section of the city, Chinese soldiers drilling in Western uniform, and the new police system also are pointers. There is a new atmosphere of progress everywhere apparent. China is really awakening.

Soochow

This is one of the oldest cities in the world, with a population of about half a million, and famed for its silk, its learning and its architecture. It is eighty miles west of one of the newest and most influential cities of the world, Shanghai, and is joined to it by a new railroad. All along those eighty miles every look from the car windows presented a number of unburied coffins and a countless number of grassy mounds just a little larger than the coffins below. It was not so much graveyards that we saw, rather we rode eighty miles thru a section of a graveyard whose name is China.

SOOCHOW UNIVERSITY.

Until a few years ago these grounds were filled with the dead of centuries. They have made way for the University. Back of this building, containing recitation rooms, laboratories, library, and chapel with 400 seatings, are spacious dormitories, and in front are the homes of the President and Professors.

It is worth while to study the dead for a moment since they form a living problem. Many of them had to get out of the way for that railroad. This is one of the significant facts of New China that are in evidence. The *Fungshesi* (wind and water) superstition is losing its

power. The dead at last can be raised without hurting them or anybody else, and very much to the public good. The splendid university of the South Methodist Mission, in Soochow, stands in an old graveyard from which over a thousand of ancient and medieval dead were removed with the friendly aid of the city authorities and with no sign of displeasure on the part of the people. If the dead can only be altruistic enough to get out of the way for railroads and universities, it will mean the gradual liberation of China from the costly superstition with which the gods of Wind and Water have for ages tyrannized over her millions.

The city roads compel attention, for they are as different from Western roads as a sewer is from a subway. Going thru the Broadway of Soochow is like going thru a narrow tunnel twenty feet deep with a crack in the top of its entire length. For the projecting roofs almost meet, and the light that might penetrate below is interrupted by signboards of every size and shape hanging on both sides. As we walked thru an alley three feet wide between solid brick walls twenty feet high, my companion fittingly said: "This is the Wall Street of Soochow."

Foreign missions have become one of the world movements, and every great city of the East is a center of wide missionary activity. In this conservative city live about forty missionaries, men and women, whose educational, medical and evangelistic work is certainly telling on the social and civic life of the people. The most conspicuous sight as you approach Soochow is the nine-story pagoda—the largest in the world—and next are the twin pagodas. These have rightly given Soochow the name, Pagoda City. But also a massive roof and tower can be seen high above the city walls—the University of the Southern Methodists. Here world knowledge is imparted by skilled teachers to over a hundred of the choicest young men of Soochow. And that Soochow prizes such knowledge is shown by these three facts, that even graduates of the preparatory course can easily get positions at $50 a month, while those of the higher courses can get double that amount; that Chinese sub-

THE ANIMAL AVENUE LEADING ACROSS THE PLAINS OUTSIDE OF THE CITY TO THE MING MAUSOLEUM.

The Mukden Mausoleum of the founder of the present dynasty also has a similar avenue in a beautiful pine grove. The utter absence of trees in and around Nanking makes one feel lonesome.

scriptions amounted to $15,000 for the building, and that parents of these young men pay $70 a year for tuition alone, while board for the same period costs only $40. When Chinese are willing to pay for intellectual food imparted under Christian teachers nearly twice as much as board costs, it means not only high praise for Protestant missions, but also a new attitude toward the West.

Yet there is no government recognition of mission schools, and their graduates cannot be candidates for official positions. Now and then a fine scholar from a mission school rises into favor and holds an excellent position, but one can hardly expect a great government that chafes under exterritoriality to recognize the graduates of schools carried on under that hated system, however worthy the schools may be. And it is not strange that one of these missionary teachers should lose his political perspective so as to publish in *The Recorder* these stinging words, "Without government aid we must again take up earnestly our work of battering at the ignorance, blindness and folly of this vast nation!" Exterritoriality is one of the blessings and also one of the curses of the East. I doubt whether any responsible missionary could make a public statement like the above anywhere except under political exterritoriality and as an agent of exterritorial Christianity.

This reminds me of the unfortunate tendency that this necessary political system fosters among missionaries. Not all by any means come under its withering influence, but there are a few who have the habit of forever telling all the bad points about the Chinese unrelieved by one good generous expression of sympathy or the mention of one solid trait of character. For example, I talked for two hours with two missionaries, perfect strangers, and their sweeping characterizations of the Chinese were repeatedly expressed in the words "rotten," "lying." This I am glad to say was outside of Soochow. Inside the city resides a missionary of wide plans, a true sympathizer with the Chinese, a man respected and beloved, who said to me: "I personally would have no objections to coming under Chinese jurisdiction. I should have no difficulty with them." It was significant of the future to hear such a statement, for when this spirit permeates, as it surely will, the whole missionary body of 4,000 men and women, whose profoundest purpose is to manifest the mind that is in Christ Jesus, and who long for the redemption of the nation, then they will be one of the greatest forces in swinging the people out from exterritoriality into equal treaties. I believe the missionaries of Japan were, by their sympathetic appeals, a valuable help in securing political equality for Japan, and when it comes in China I believe the great sympathetic movement will be not from the open ports but from the missionary body, whose work thru all the land ought to be a potent factor in the liberation of China from political inequality.

SENDAI, JAPAN.

The Open Shop From the Viewpoint of a Union Man

BY A. J. PORTENAR

MEMBER OF TYPOGRAPHICAL UNION NO 6, NEW YORK CITY.

THE open shop is a subject of daily discussion in publications of every character. But altho the volume of literature and oratory offered the public on the subject is enormous, I submit the proposition that it is one-sided. Apart from some trade journals printed for and circulated among union men, argument on the matter is invariably based on the *a priori* assumption that the open shop is the correct and desirable condition. The consequence is that the great section of the public not directly connected with trades unions has been

led to form an imperfect judgment because it has not been enabled to hear the advocates of both sides.

At the outset, it must be admitted that the whole question hinges upon the justification which can be offered for the existence of trades unions. The general introduction of the open shop is equivalent to the destruction of trades unions, and the open shop is or is not the most beneficial industrial condition in precise measure as the trades union is or is not a desirable institution. Thus it is my twofold object to show (*a*) that unions and open shop cannot exist at the same time; (*b*) that of the two conditions the continued existence of unions tends to the greatest good of the greatest number.

Designedly, those who advocate the open shop have striven to make it appear as the fair shop; where opportunity for employment is equal to all, and where merit alone is the determining factor for advancement; where the walking delegate does not intrude his unwelcome presence and sow the seeds of discord between the just employer and his contented employees; where the workman keeps all he earns instead of supporting the parasites who foment strife that there may be an excuse for their being; and, above all, where the workman is free to exercise his sacred constitutional right to contract with his employer without the unwarranted interference of third parties.

Let us suppose a given industry to be upon an open-shop basis. Just at this point I contend that discrimination is certain to enter. Some of the applicants for employment are non-union. The employer knows that these will accept a lower wage than the union has fixed; they will make nothing more effective than muttered protests against lengthening of hours; they have no mistaken notions as to the employer's right to regulate every incident connected with their employment, altho their interest in the matter is as vital to them as is his interest to him. Can there be any doubt as to which will obtain the preference?

Let us suppose that this procedure has continued for several years. Is it conceivable that the disintegrating effect of such a condition has escaped the notice of employers? And when the inevitable result has been attained; when men have abandoned their union memberships by hundreds, because it was a handicap in the effort to obtain and retain employment; when there is no union, and no scale of wages, and no schedule of hours, has the experience of the past taught us that employers will none the less pay the former wage; will just as cheerfully continue the shorter workday; will magnanimously refrain from making oppressive shop regulations?

We have concrete illustrations which furnish the answers to these abstract questions. We have seen the open shop established in some places, with the precise results indicated by the above queries. Instead of a generous disregard of a man's union affiliations, to be suspected of membership in one was sufficient cause for a curt dismissal. Spies have circulated among the men for the express purpose of discovering who might be members or inclined to become such, and the slightest expression in the interest of organization was followed by discharge.

Union men know the open shop is a closed shop—closed to them as union men—which they enter only by depriving themselves of that which they have won with such pain and sacrifice; of that which the bitter experiences of centuries has taught them is their most potent weapon—the right of combination with their fellows.

Per contra, the union shop is closed to no man. The union welcomes the adherence of every worker in a trade, and gladly extends its benefits to every one who will avail himself of them.

I believe I have demonstrated my first proposition, i. e., that the open shop is incompatible with the existence of trades unions. It remains to be shown which of the two industrial conditions is the most desirable.

The first argument that presents itself as a justification of trades unionism is one which concerns the manufacturer and merchant almost as directly as the union man. The union obtains for its members a larger portion of the wealth they create in the shape of wages. When they spend their earnings the essentials of food and shelter must first be provided; clothing will come next in such quality as the mechanic can afford. If there

then remains a surplus, the thousand and one other things that add to the comfort and refinement of life may be purchased according to the financial ability of the purchaser. But it is evident that if the essentials take the whole income of the workman, the other desirable but non-essential articles must remain on the shelves of the retail merchant; this again reacts upon the manufacturer, who finds the market which absorbs his wares greatly curtailed. What, then, would it avail employers as a class to reduce wages to the point which would permit nothing more than a bare subsistence? How would a merchant benefit by cheaper good that he could not sell? In so much as the unions cause wide diffusion of wealth in the shape of good wages liberally spent, they are one of the greatest factors in the upbuilding of true prosperity, as opposed to the false prosperity which reckons a nation's wealth, but takes no account of the number who hold it.

Now we will take up the phase of the matter presented in the picture of the walking delegate driving men from congenial employment, regardless of the existence or non-existence of sufficient grievances. If it is assumed that union men are hardly as well able to care for their own interests as a flock of sheep; that they strike without knowing why, and endure the hardships and sufferings entailed as a consequence for no better reason than that somebody ordered them to do so; that they persist in loyalty to their union, altho deprived of their situations and robbed of their earnings to support unworthy leaders, only because they lack intelligence to perceive how much better their condition would be outside of it, then indeed it were a worthy work to rescue them from their union slavery and give them open shop freedom. But if it is conceded that union men are at least on a par with others in knowing which side of their bread is buttered; that they are just as keen to get a good job and as reluctant to leave it as any other sort of men; that they can realize when they are being robbed as quickly as most people; and that the hardships of strikes are no more palatable to them than to other persons with a proper appreciation of well-filled stomachs and well-clad backs, then it must seem tolerably clear that there is intelligent reasoning behind their loyalty to the union idea. "You cannot fool all the people all the time" is as applicable to them as to others.

The trump card of the open shop advocate is always insistence upon the sacred right of the individual to work where he likes, for and with whom he likes, and for what he likes. Fiery eloquence on that topic, with an impassioned reference to the Constitution and the flag, and something concerning our revered forefathers, mixt and served hot, makes an apparently effective argument until examined in the light of cold reason. Freedom of contract presupposes the equality of the contracting parties. What sort of equality exists between the owner of land, machinery and capital on the one side, and the owner of nothing but a pair of hands on the other? It has been forcibly said that most workmen have not a month's wages between themselves and the almshouse. Thus the "freedom" of one of the parties is fatally circumscribed by the imperative character of his necessities. Now, if the position of the workman is still further prejudiced by the fact that three men are seeking one job, will it be contended that any other "freedom" remains but that of taking what he can get—with the alternative of starving?

The union confers with the employer as a representative of the individuals who compose it. All the questions surrounding employment in an industry are discussed, with the result that written contracts for a definite period of time are agreed upon, at living wages and for reasonable hours. Will any amount of glowing rhetoric enable the individual to do as much for himself?

Observe, the union fixes a *minimum* of wages. There still remains to the individual unrestricted freedom to contract for a wage above that sum. And merit above the average finds remuneration in compensation above the minimum. It is very common, in my experience, to find men receiving more than the scale. Obviously, then, the only freedom the union man has surrendered is the freedom to enter into deadly competition with his fellows for the opportunity to labor until

wages have been reduced to the level on which the cheapest of them can exist.

It is thus shown that unions keep up the wages of their members. They do more. The non-union man, in receipt of wages always less than the union scale, and working longer hours, is nevertheless enabled to get more than he otherwise would if the scale did not exist as a standard. Thus his wages have been raised, his hours decreased, his standard of living bettered, and even his vaunted freedom of contract in some degree preserved, thru the struggles and sacrifices of other men.

My chain of argument is now completed. In diagrammatic form it would appear thus:

Open shop—destruction of trades unions—unchecked competition for the opportunity to work—consequent loss of wages—increase of working hours—decreased purchasing powers of the masses—less employment in store and factory, making still more difficult the struggle for existence.

Union shop—more employment for more men, under better conditions, for higher wages—more money to be spent for the things that add refinement to life—more work for the men that make and handle these things—a more general diffusion of the products of industry—a distinctly higher standard of living, with the mitigation of the most terrible feature of our industrial system—competition between the have-nots for the opportunity to work.

And if further justification of trades unionism is required, it can be found in the altruism which prompts it to care for its sick and aged; to bury its dead and protect its widows and orphans. Yes, and it can be found in the fights it has made and will make for everything that tends to the uplifting and betterment of the race; for the children it has saved from the devouring maw of Moloch in mine and factory; for the efforts it has made to destroy the reeking sweatshop and the filthy tenement; for the advanced political stand it has always taken.

We know the conditions which gave birth to trades unionism. Open shop means a reversion to those conditions. Union men understand this clearly enough; and, however they may mask it behind high-sounding phrases, employers are equally cognizant of that truth.

The fight against the open shop is a fight for life. The bundle of sticks shall not become a heap of breakable twigs!

BROOKLYN, NEW YORK.

Dress Reform in Germany

BY MINNA CAUER

[Frau Cauer is the daughter of a Lutheran clergyman. After her first husband's death she took a teacher's examination with the object of making her profession that of a teacher. She went to Paris to perfect herself in the French language and filled for a considerable time a position in a girl's school. She married, in Paris, a well-known historian, who died later in Berlin. After his death she devoted herself to the study of history, and finally became interested in sociology, and questions of reform, and women's rights, in general. She is editor of a paper called *The Women's Movement* (*Die Frauenbewegung*), the best paper in Germany for the education of women in the fields of politics, business and the home. She is also a leader of the so-called left wing, or "Party of the Left," in the woman's suffrage movement of Germany, the party whose aim is the practical advancement of the cause of women in all its various forms.—EDITOR.]

ONE of the most fascinating topics of modern investigation is the history of national costumes and the development of fashion. It is most intimately connected with the history of the people, their commercial activities and the flowering of their art.

The idea that fashion was less slavishly followed in the earlier centuries than now is utterly false. The laws and regulations of the Middle Ages tell us only too plainly that the costumes of that period were so exaggerated that they had to be restricted by law.

As late as the beginning of the eighteenth century we find thruout the Continent laws restraining not only the luxurious habits of the women, but also the unprecedented mania for fashion among the men. In the sixteenth century, for instance, the legal width of a man's trousers was reduced to twelve or thirteen ells, as the wealthier and the more distinguished citizens had occasionally been using one hundred and thirty ells for these necessary garments!

They say that in Berlin one of the old Grand Dukes, who was very rigid on the question of the sumptuary laws, had given orders that if a man were seen upon the street wearing these tremendous baggy breeches, they were immediately to be ripped off him!

The men wore most brilliant colors, got themselves up like guys, and adopted many of the foolish fashions of the women. They padded their chests, bedecked themselves with jewels and lace —and even went so far as to wear low-necked doublets!—instances of this fashion being known in the fifteenth century.

Finally, when they became such caricatures of the women, the English took it up, and, in the eighteenth century, they became the champions of simplicity in dress and the arbiters of men's fashions from that time forth. Trimness, elegance of cut, and an irreproachable texture are the hall marks of taste as they have established it.

The subject of women's dress, however, is far more difficult and intricate. Here, so many things must be considered other than in the question of men's clothing. Women claim the proud title of "Standard-bearers of Beauty!" but, according to my motion, they can only justify this claim by freeing fashion from the tyranny of fad and luxury.

A serious phase in this question is the average feminine education. Women are brought up from their earliest childhood to study the art of pleasing—that is, pleasing by their personal appearance. Their one aim is to correct and overcome all natural deficiencies. This matter of assisting nature has been carried so far that the human body has been tortured out of all shape, and a naturally beautiful figure is a most unheard of thing in modern times. The old Greeks and Romans never fell into this error, for their innate sense of beauty preserved them from it. Loose flowing garments were the rule in those countries.

We shall never quite know whether women themselves are altogether responsible for the idiotic vagaries and foolish exaggerations of fashion, or whether they are evolved in the ateliers of the tailors and designers to further their own interests and those of the manufacturers. One thing is certain, however, that the welfare of our industries hangs closely together with the trend of our fashion and the more or less artistic development of our ideas. And we are convinced that for the last hundred years the tailors have set the fashions, and the women have simply allowed themselves to be dressed—a deplorable sign of women's subjection to man's authority.

The tailors and manufacturers, together concoct the most unutterable absurdities, and the women hasten to obey their dictates, and fall in line at the first notes of the familiar tune—"It is the very latest thing out!"

Recently the reform movement, however, has begun to assert itself, and here in Germany, at least, the women have risen and proclaimed a crusade against the tyranny of the tailors, declaring their rulings to be both unsanitary and absurd.

"Health is Beauty," is their battle cry. But stronger than this is the argument that only a healthy woman can perfectly fulfil the highest purposes of her life. So it is easy to see why the best of our women have united to denounce the old-fashioned "straight-jacket"—which may have given us a *fashionable* figure, but never yet a *beautiful* one.

The human frame is tortured out of all semblance of beauty, and not only that, it is absolutely deformed. And as many thousands of women are now called upon to earn their own living, standing in the ranks of the wage workers, as the men have heretofore, it behooves them to fit themselves for the struggle with the proper accoutrements —sensible and healthful clothes. The matter of beauty must be the second consideration!

Of course, the frivolous element—the women whose only aim is to serve as a

decoration and who are incapable of anything else, can get themselves up in their coats of mail, may lace as much as they like, and can revel in the luxury of their "great moment of relief" as some woman said with unconscious satire in addressing a club meeting in Berlin. "I couldn't think of going without my corsets," she declared. "No amount of freedom in the world could compensate me for that one

MINNA CAUER.

brief moment of ineffable bliss when I first take them off at night."

This instrument of torture not only cramps the body, but it stunts the heart, the mind and the sensibilities of womankind. The young Emperor of China, in establishing the first girl's school in that kingdom, ordered that none of the scholars should be allowed to bind their feet—a wise regulation that. Perhaps now the more civilized women will at last come to the realization of the fact also that the natural development of their thoughts and ideals is hampered by the torture they subject themselves to.

The women's movement in Germany is in deadly earnest on the subject of dress reform, and fights steadily on, in spite of the sneering attacks of the "Mondaines," as they call themselves in their fine French. A small handful of women, however, are fighting alone, for all the interests of German industry are arrayed against them. Yet they are accustomed to a hard, unequal struggle.

To be sure, this question of dress reform will never be settled until women assert their independence and strike out for themselves on commercial and professional lines, at the same time asserting their right to dress as they please, and not conform to the dictates of tailors and manufacturers whose profit depends upon the distortion of the natural lines of beauty.

Many things indicate that this great change is now about to take place. The corset has been put upon the "blacklist." To be sure, it still exists, but it has had to make all sorts of concessions to assure its continued existence. There are thousands of new and improved models, and the manufacturers complain bitterly that their profits are falling off. Even in Paris, that El Dorado of corset worshipers, the designers are inventing all sorts of draperies to do away with the old rigid lines of the conventional figure.

In Germany, however, the movement has not yet been supported as it should be by the medical fraternity. Of course, in the better health resorts the patients are made to dress sensibly during their stay, but as soon as they recover they revert to their ancient ideas, finding the "wasp waist"—the violent compression of the thorax—a thing of beauty. That the most important functions of the body are hampered by it, the hips made vulgarly pronounced, and a woman's walk and carriage rendered hideous, are minor considerations with them—all they want is style.

Difficult as the introduction of the corset reform has been, the matter of hygienic underclothing, on the other hand, has had a tremendous following. Women no longer weigh themselves

down with countless unnecessary petticoats, and many prefer the lighter weight tights or bloomers. Shopkeepers have tried to resurrect the voluminous whaleboned petticoat, with its yards of fluffy ruffles and its elaborate trimmings, but only the fashion plates of society—whose one great mission in life is the latest shape of a hat or the *dernier cri* in the hang of a skirt—patronize these remarkable inventions.

The women of the reform movement have as great a desire to appear to advantage as their sisters; they admire individuality and beauty quite as much, but they have not devoted their whole lives to these matters. To tell the truth, they are somewhat bored at the eternal and unending discussion of this question of clothes. They have better things to think of—the progress of the world and the work of the individual. Consequently the early development of woman's dress reform was practical and utilitarian rather than beautiful, and more attention was paid to the mandates of health than to the dictates of form.

So the Mother Hubbard effect was invented, which we must admit transforms the average woman (and we concede that most Germans have exceedingly clumsy figures) into a human caricature of a marsupial. Yet this style was only transitory, and has long since been superseded. Even among those who, from motives of economy, or lack of taste, still wear them, they are modified and improved. If the material is soft and hangs well, and the figure well proportioned and slender, this style of gown may be made most attractive.

We must remember that well-cut reform gowns are tremendously expensive, and that the ordinary "Empire" is not; so the latter is very much more worn by our representative women who are engaged in practical professions.

There are very few good shops that make a specialty of reform clothing, and these few keep the prices up—in fact, they find it necessary, for it is so much less work to make a gown fit snugly over a well-cut corset than to follow the soft and flowing outline of the natural figure. Consequently, really beautiful effects can only be made by the use of expensive materials.

It is well known that Eleanora Duse never wears a corset, and dresses always in the most exquisite of reform clothes, with long lines and simple draperies. Yet, as we all know, this takes money, and a tremendous amount of money, too; and, more than all that, a slender and willowy figure—and last, but not least, distinction.

The wearing of the clothes. That's the secret of success in all dress reform. As the materials must necessarily be soft and clinging and reveal so much of the figure, it takes no end of "distinction" in the matter of carriage to wear a reform gown successfully. The owner's individuality must be carried out in her gown, and the frock and its wearer must be one harmonious whole. Then the impression is perfect, and beauty is the result.

Many artists have given their attention to this subject, and have evolved wonderful creations, invariably striking, sometimes attractive, but always elaborate, so that they would only be suitable for the "Mondaine." Then it became the fashion among the "Upper Ten" to wear elaborate tea gowns and Empire dinner gowns. It was considered "smart." That was the whole secret of its popularity.

But that was not the idea of the reform movement. We needed a radical change in women's views on questions of health, beauty and fitness. The special object of our crusade is, of course, the corset; but all the exaggerations of fashion—dyeing the hair, painting the face and the wearing of stuffed birds and animals, and especially the extremes of décolleté—come under the ban.

The antiquated specimen of femininity is divided from her more advanced sister by a deep and impassable gulf. A woman with modern ideas of sense and good taste will never allow herself to be dictated to in the matter of fashion, but will develop her own ideas of beauty along her own lines.

It must be admitted, however, that reform dress is more suited to the house than to the street. I think I have never yet seen a successful walking gown on the reform plan. As a general rule the most suitable are simply the straight-cut English tailor suits worn without a corset.

As we all know, the love of out-door sports has done more than any other one thing to bring about a more sensible system of dressing. The more women interest themselves in swimming, rowing, skating and wheeling, the better it will be for the cause. At no time in the past has woman's life been so free and untrammeled, and, naturally, her clothing adapts itself to her life.

The next proposition is to make the women *set* the fashions and not blindly conform to them—to inspire them to plan a suitable costume. All we need now is a simple tasteful walking model on practical, yet artistic, lines. If some one could evolve this, and invent a soft and pliable material in which to carry it out cheaply, our cause would soon be won.

Paris and Vienna now set the fashions for all the world, yet even they are beginning to feel the influence of the German health reform in dress, and are themselves making concessions. In matters of good taste the Parisienne is the standard; the Viennese is well known also for her "chic," and no one can compete with the English on the lines of practical simplicity, yet in questions of hygiene in dress the German women are coming to the front. They must learn a lesson from the Parisienne and the Viennese, however, and take a leaf out of the practical book of the English woman; and then, combining utility and beauty, they may yet dictate to the world in matters of fashion. At present, unfortunately, they are very far from that goal.

Foreigners still look with withering scorn upon our antiquated German styles. They are unjust, however, for we have made greater strides in the last ten years than any other nation in Europe. The women of Germany have just been thru such a strenuous period of development, and have made such radical changes in their inner life and their relations to society, that they have had neither the time nor the strength to think of anything but the breaking up of their traditional forms and conventions.

Not that the highest period of their possible development has yet been reached, and our women stand on the same plane as the men; but so much has already been done, and the worst is over; so now she looks about to see what she can do for the betterment of her outward conditions. She begins to think of herself—her home and her personal adornment—to bring these both into harmony with her new individuality. She wants to be self-sufficient and independent of the whims of a passing moment.

The old style of dress is neither normal nor beautiful, nor has it the distinction of elegant simplicity. The fundamental principles of our dress reform must be the beauty of fitness and the beauty of form. And these ideals can only be realized by women who have the courage of their own convictions, and are willing to stand out against the mighty current of conventionality.

Climb Down

BY WILL ATKINSON

THE peril in China is yellow,
At home, here, they say it is black!
There will ever be peril to some one
Till man shall climb down from man's back!

They have sung of our burdens out yonder,
They have told us their morals are slack!
But the white man's sore burden will vanish
When we get off the darker man's back!

We may drive in the Bible with bayonets,
We may set war's grim hounds on his track,
But we'll never do much for the brown man
Till we take all our weight from his back!

Do you wonder Christ's words merely mock him,
That he thinks Christian virtues we lack,
When we take each week six days to plunder,
And fasten our load on his back!

Some at home take pleasure in slumming,
To see how men live in a shack;
But if from suff'ring you'd free him,
Just get off the poorer man's back!

God's skies will grow golden with promise,
God's harvest will meet every lack,
And brothers will all the wide world be
When we get off the other man's back!

CHICAGO, ILL.

Literature

American Legislatures

THE volume on *American Legislatures and Legislative Methods,** in the American States Series, edited by Professor Willoughby, is contributed by Professor Reinsch, who has already won for himself no slight reputation as a student of practical politics and colonial affairs. For the benefit of the person deficient in elementary knowledge on the structure, functions and powers of the Federal Congress and the State legislatures, the author has dealt with these topics as succinctly and readably as the critic could desire. But the volume contains more than handbook information; it takes up many interesting and vital topics which escape the bespectacled gentlemen who pore over written constitutions with calf-bound volumes of the Supreme Court reports in hand. The function of the committee in American legislation, the practical influence of parties bearing in on government at every point, the position of the legislator as party man and leader, and innumerable other concrete factors in American political life are duly emphasized and wisely discussed. Professor Reinsch even goes farther into more intangible but no less real questions such as the perversion of legislative action, public forces influencing legislatures and the legislative product itself. That it is no mere perfunctory piece of work drawn from formal documents with slight effort is evidenced by a single passage:

"The dominating influence of the Senate in party organization was never more clearly shown than in the Republican convention of 1900. Both the temporary and permanent chairmen were Senators; the four nomination speeches were made by Senators; and there were seven Senators on the most important committee, that on Resolutions which drafted the national platform. The National Committee appointed by the convention contained five Senators, among them Hanna (as chairman) and Quay. The advisory council appointed by the National Committee had three Senatorial members, among them Platt and Depew; while Hanna, Quay and Scott were members of the Executive Committee. So well organized was the Senatorial group at this time that the selection of the Presidential candidate was largely determined by their discretion, both in 1896 and in 1900."

The gentle wielder of the rake will find much material for contemplation in the chapter on the perversion of legislative action, and those who want to make people "good" by law will do well to read the same pages. How comforting it is to find that an investigation of a railway scandal in Wisconsin away back before the war revealed the fact that nearly a million in bonds had been judiciously distributed among the legislators and eminent politicians. Mr. Belmont's slight contribution to the Civic Federation at the expense of New York City may be regarded therefore as evidence of improvement, and we may sit with him on the platform of the Federation meetings without feeling any discomfort—apology being made to Jevon's logic.

Professor Reinsch, however, does not believe in indiscriminate criticism of State legislatures. On the contrary, he rightly emphasizes the importance of the powers enjoyed by them—touching every point of our social and economic life—and pleads for an intelligent study of the operations of these institutions, a sane and impartial criticism, a sustained effort to support honest men who are working for just and effective legislation, and an elevation of the legislature to that plane of public importance which it deserves. Without a doubt there is room in the citizen's library for such a useful and suggestive study of national and State politics.

*AMERICAN LEGISLATURES AND LEGISLATIVE METHODS. *By P. S. Reinsch.* New York: The Century Company. $1.25.

The Greatness and Decline of Rome

THIS recent book,* by an Italian author, is well translated. The frontis-

*THE GREATNESS AND DECLINE OF ROME. *By Guglielmo Ferrero.* Translated by Alfred E. Zimmern, M.A., Fellow and Tutor of New College, Oxford. Vol. I, The Empire Builders, 328 pp. Vol. II, Julius Cæsar, 389 pp. New York: G. P. Putnam's Sons. $5.25.

piece gives a bust of Cæsar, whose face is lean, spare and highly intellectual, with the forehead extraordinarily high, the towering brow equaling the hight of the rest of the face. The book is equipped with a long list of authorities, a good index, a table of contents and four appendixes. The first four chapters of about a hundred pages are introductory. The rest of the two volumes, a continuance of which is intended, are devoted mainly to Cæsar, his friends and his enemies.

What manner of man was Cæsar? The picture which the best historians, with Mommsen at their head, have drawn, is this: Cæsar up to over the fortieth year of his life had been a citizen of considerable importance. Hampered by debts and comparative poverty he became in 60 B. C. consul, and at the end of his year went to Gaul as pro-consul, choosing hard knocks rather than dangling around the capital. Far from Rome he wrought out success after success in battling with the Gauls, successes which at Rome were at first belittled and then feared. Pompey, the fortunate, was resting in the pride of his laurels easily won in fighting Mithradates and the pirates. Cæsar was giving and taking hard knocks, in far-off Gaul, and developing a genius for strategy. His aristocratic enemies at Rome called him braggart and charlatan, and declared his great successes too easily won to be real. All Rome, blinded by Pompey's former glory, talked lightly of poor Cæsar, with his sham victories and sensational reports. These victories were really won by the hardest of fighting, in which he never flinched. With an almost reckless daring he drew his lines around the great Gallic city, Alesia, and was in turn encircled by many times his numbers. But he "greatly stood at bay" until he had won the city. His annexation of Gaul and Britain to the empire was complete. All this was done by a strategy, the main part of which was reckless daring. But as he always succeeded in the end, he became the idol of his army, which was always ready to die for him. To them where Cæsar's camp was *there* was Rome.

When Pompey had long basked in sunshine at Rome, Cæsar, now sure of himself, choosing rather "to be the first man in a little village than the second man in Rome," came down from his province, appeared at Ravenna, on the road to Rome, and crossed the Rubicon. Pompey, the Great, felt his power departing from him. He hoped to breathe a more congenial air in the East, to which he fled. But when Cæsar had attended to unfinished business in Rome and in Spain he was close upon Pompey's heels.

At Dyrrhachion Cæsar offered battle with forces less than half those of Pompey, and was beaten. Again he was beaten. But neither he nor his soldiers flinched. Then came the day at Pharsalos. The armies were both Roman, both eager to fight; but at the first serious clash Pompey's army went to pieces. The field was not even seriously disputed. Cæsar lost only 200 men, while 15,000 of Pompey's soldiers lay dead upon the field, and 20,000 surrendered on the next day. And this was Roman against Roman.

The chief defect of the book is the inclination to disparage the deeds of Cæsar. In the case of Pharsalos this was, of course, impossible. But "The losses sustained by the Helvetii during the war," says the author, "were very slight." But 276,000 Helvetii are reported by Cæsar as slain. While we are just reading that things are going very badly with Cæsar we suddenly hear "The annexation of Gaul produced a powerful impression." But there is no recantation of the statement that "the conquest of Britain had been a complete fiasco." Then we read "Cæsar's prestige was on the wane." "The old confidence in Cæsar was badly shaken. Just now Cæsar was making a serious mistake in lavishly showering upon Italy and the empire the plunder that he had collected in Gaul." "One of the greatest mistakes made by all historians of Cæsar is the assertion that after Pharsalia and Thapsos he was practically omnipotent, sole master of the republic and of the Roman world. In truth, he was nothing of the kind." "Sulla had saved the whole empire from imminent destruction and rescued an entire class of citizens from political extinction. Cæsar had not emerged triumphant from a revolution; he had

merely happened to win in a civil war brought about in a peaceful and peace-loving country, thru the rivalry of two political cliques. He had neither the prestige to inspire one-tenth of the terror or admiration of Sulla, nor an army on whose fidelity he could rely, nor a body of supporters united in their aims and ideals." "Under twentieth-century conditions he might have become a captain of industry in the United States or a great pioneer or mine owner or empire builder in South Africa."

Thus, in spite of occasional praise, a belittling tone constantly comes up. Let us rather say with Mommsen of Cæsar:

"He worked and created as never any mortal did before or after him, and as a worker and creator he still lives, after millenniums in the memory of the nations, the first and also the only Emperor, Cæsar."

Southern Life and Leaders

It has frequently been remarked that one of the reasons for the obvious sympathy of Europe, and especially England, with the Confederate cause, was due to the existence in the old South of a type of civilization more easily intelligible to European minds than that of the North. An aristocracy founded on agriculture and birth distinction understood and was understood by European society, while the industrial organization of the North was relatively foreign to European comprehension. The truth of this generalization is today constantly emphasized, whether in the technical works of the masters of the Southern field—Brown, Phillips, Fleming or Rhodes—or in the writings of the better class of popular historians.

Philip Alexander Bruce, already well known as the author of the best treatise on the economic history of a colonial commonwealth, now appears in the attempt to reconstruct the social life of Virginia during the seventeenth century.[1] To the origin of the higher planting class, and the causes of social distinctions, he devotes more than half of his small volume; the amusements and pastimes of his people occupy the remainder. Probably no antiquarian in Virginia could draw upon a larger body of source-material for this purpose than our author has done. The limitations in result are those naturally belonging to the antiquarian as distinguished from the historian. His picture of colonial life is clearly drawn, and his thesis of the essential similarity between English and Virginia conditions well maintained. But the view of the antiquarian is as manifest upon the thought of the volume as the hand of the local printer is obvious upon its letter-press. At times Mr. Bruce's local pride gets the better of his logic, as when he follows up a statement (p. 178) of the superiority of Virginia sobriety over that of England, with a series of quotations and incidents (pp. 179, 180, 244) which seem to us to point to the reverse of his conclusion. In more serious matters his judgment is excellent.

In the ante-bellum diplomatic service the Southern gentleman, with his social ideals so closely similar to those of Europe, had more than his share of influence; and it is interesting, if not important, that a British subject became the diplomatic head of the Confederate government. The career of Judah P. Benjamin[2] winning his way in Louisiana law, business and politics, administering the Confederate State Department thruout most of the war, and then, after middle life, returning to his mother country to sit out the beginner's terms at Lincoln's Inn and gain a commanding place at the British bar, goes to show that the aristocratic, caste organization of the South did not close the way to either ability or race. Mr. Butler has not had access to any considerable body of new material in preparing this biography of the Jewish lawyer. Thanks to Mr. Benjamin's deliberate attempt to foil the historian and biographer, only a few dozen of his letters escaped the fireplace. But these, reinforced by personal recollections and a careful study of contemporary newspapers, have been used to excellent advantage. The only great contribution of the volume is in its orderly assembling of materials which are familiar, in detail, to the average historian.

[1] Social Life of Virginia in the Seventeenth Century. *By Philip Alexander Bruce.* (Privately printed, 1907. For sale by the Bell Book Company, Richmond, Virginia, $1.60, postpaid.)

[2] Judah P. Benjamin. *By Pierce Butler.* Philadelphia: George W. Jacobs & Co., 1907. In the American Crisis Biographies, $1.25 net.

The life of Robert E. Lee[3] follows that of Benjamin in Dr. Oberholtzer's series of American Crisis Biographies. Mr. Bruce has converted his biography into a eulogy; but the present trend of historical opinion makes us willing to listen with considerable approval to even a Southern panegyric upon the most honorable product of secession. We agree with extreme judgments in favor of General Lee, at the start, and our chief comment upon the author's effort in praise is that it is unnecessary. The work, however, has certain distinct virtues. We know of no better or fairer statement of the Virginia theory of constitutional law and secession than that which here prepares the reader's mind (p. 64-85) for Colonel Lee's resignation of his command in the United States army, and his refusal of the proffered command of the Northern army of invasion. We are today less certain than our fathers were that the reply to Hayne contains the whole of the Law and the Gospel. And we are willing to admit the existence of reasonable doubts and their resulting changes in some of our accepted historical views.

The three books of Southern history before us are all written in the honorable desire to accept the results of the war without admitting dishonor in the losing cause. They illuminate, in the aggregate, many points of Southern history, yet they reveal some of the striking weaknesses in present Southern history writing. We are far from believing that the Northern writer, academic or otherwise, possesses a monopoly of historical skill, but we wish that more Southern writers, including these authors, had a broader acquaintance with the general facts of history and a smaller degree of devotion to the "lost cause." Devotion to any "cause" goes far to incapacitate the historian.

[3]Robert E. Lee. *By Philip Alexander Bruce.* Philadelphia: George W. Jacobs & Co., 1907. In the American Crisis Biographies, $1.25 net.

The Human Side of Animals

Somehow the most popular of the vast flood of nature books are those dealing with animal life. Perhaps this is because we are more interested in animals as the guide-posts marking the way which man has past in his long evolutionary journey to the summit of nature. Perhaps it is simply because we see in animals so many life activities resembling our own so closely that sympathetic interest is aroused. Perhaps there are still better explanations, but certainly for some very deep reason we are more and more becoming enchanted by books which present the facts and especially the fictions of the "human side" of animal life. The well-known books by Kipling, Long, Seton-Thompson, Roberts and others are so familiar that, like the novels of yesterday, they no longer satisfy; and so a hearty welcome is sure to be extended to new animal books such as the three which call for the following review:

Wild Animal Celebrities[1] relates the actual life stories of celebrated animals, many of which are still living in the menageries and zoölogical gardens of Europe and America. Children—small ones and those of larger growth who are still young in spirit—will certainly read with delight the sketches of famous lions, bears, elephants, monkeys, dogs and other animals. Here we find the life sketches of our old friends, "Wallace," the untamable lion; "Jumbo," the king of elephants; "Sally," the bright chimpanzee; "Bridge," Lieutenant Peary's magnificent Eskimo dog; and many others, especially those we have seen in the great New York Zoölogical Park. Such a book ought to be read by every one who visits collections of wild animals.

The Haunters of the Silences[2] is like its companion volumes, "The Kindred of the Wild" and "Watchers of the Trails," except in the selections of animals as subjects of sketches. The stories are said to be in line with accurate natural history. However, it is not concerning questions of observed facts so much as the interpretations that scientific men will have a quarrel with the author of this and with those of similar books. The fundamental question is whether wild animals think and reason and have emotions and in still other ways closely resemble the psychologic

[1]Wild Animal Celebrities. *By Ellen Velvin.* New York: Moffat, Yard & Co. $1.00.

[2]The Haunters of the Silences. *By Charles G. D. Roberts.* Boston: L. C. Page & Co. $2.00.

life of the human species. The author emphatically reaffirms his belief that "the actions of animals are governed not only by instinct, but also, in varying degree, by processes essentially akin to those of human reason." But something akin to human reason would hardly be sufficient for many of the situations in this book, for the author's animals do things which only the human mind does. To take one of numerous examples: "As soon as she [the old bear] realized that her strength was failing, she was seized with fear. What would become of the cub if she were killed?" Here the interpretation involves not only human reason in a complicated form, but also knowledge of death and its consequences. We may be ready to admit the general proposition that some animals show some similarity to human mental processes, but before we can accept such a reading as the above we must be ready to admit that animals completely equal the human mind in some complicated process. We must also have some proof of how the old bear learned the symptoms of approaching death and on what basis of previous experience she instantly reasoned out the probable consequences to her helpless offspring. When an author plunges so far into the realm of imagination in reading human life into animal life, can we wonder that reputable psychologists who have critically studied animals insist that such writings are essentially fiction? Obviously they are not contributions to science. True, the book contains plenty of well-known facts; but it is primarily a book of interpretations, and in making these the free play of a good imagination has woven the facts into the fictions of the "human side" of animal life.

The third book, *Wayeeses, the White Wolf,*[3] is an extract from "Northern Trails." The accuracy of certain statements has been called in question; but accepting the statements as they stand, we must recognize that the author in his characteristic style has read human life into his animal heroes. The remarks above apply here also.

In conclusion, the criticisms above must not be taken as meaning condemnation of such books. Tho we have reviewed them from the standpoint of a critical man of science, yet we believe that such animal fiction has an important place, not in science, but in literature. Their moral value is great, but they should be read with the spirit and the understanding which even children soon learn to apply to ordinary fiction.

[3] WAYEESES, THE WHITE WOLF. *By W. J. Long.* Boston: Ginn & Co. $1.00.

Some Higher Ministries of Recent English Poetry. By F. W. Gunsaulus. New York: Fleming H. Revell Co. $1.25.

Time runs so fast nowadays that for an instant the word "recent" suggests only a discourse upon Watson, Kipling or Henley, and it is with a pleasant sense of assurance that one opens Dr. Gunsaulus's pages to a larger theme. The four lectures deal with the distinctively Christian element in the writings of Arnold, Tennyson and Browning, the introductory essay treating of the preparatory influence of Shelley, Wordsworth and Coleridge. Of these he writes:

"Now when thus the religious man of eighty years ago in England came to do his own thinking, the men who most of all had represented those forces which were both to make his spiritual problem and solve it, were Shelley, Wordsworth and Coleridge."

Of the subjects of the further essays he adds:

"Unquestionably this perfect understanding which Arnold, Tennyson and Browning have of the new relations which science has made to exist among old truths, and that perception which they give us of the significance of the newly-found truths to religious thought and to the spiritual life, have made them supremely helpful to our feverish and startled age."

The classic stoicism of Matthew Arnold Dr. Gunsaulus finds always noble, always self-reliant, yet always unsatisfied, always unfinished, as if waiting for some revelation fulfilling the human desires it voices. The paper on Tennyson emphasizes his portrayal of conscience and the inevitable results of sin as brought out in the Idyls of the King. In Browning the religious element is constantly present, in the pictures of outward nature, in the struggles between right and wrong of the characters in the dramas, in the metaphysical questionings of the monologs. Arnold, by his very lack; Tennyson, by

his delineation of life; Browning, by his direct themes, all return continually to the need for the human element in answer to the religious yearning of mankind. Dr. Gunsaulus's essays are scholarly and seriously suggestive, and give a broad view of the thought and of the influence of these three masters of the last century.

Memoirs and Artistic Studies of Adelaide Ristori. New York: Doubleday, Page & Co. $2.50.

However barely written, the incidents of such a life as Madame Ristori's cannot fail of interest. Her autobiography has not literary quality, and it is marred in the translation by a faulty English that editing might, it would seem, easily have been bettered. But it presents an eager and indomitable character and fascinating career of deserved success. Its very absence of detail and of finish shows it the work of one absorbed in other tasks. What the memoir lacks in fulness is somewhat made up by the introductory note of the translator and a paper by Mr. L. D. Ventura. This includes several delightful letters from Madame Ristori making the reader regret that the memoirs could not have been penned in that easy and intimate manner. That would surely have preserved a host of entertaining incidents from the constant journeyings over Europe and North and South America; spirited pictures of the actress contemporaries, Legouve, Rachel, Salvini, Rossi, Booth, and wise comment on affairs. The studies of her principal characters, Mary Queen of Scots, Queen Elizabeth, Lady Macbeth, Phædre, Myrrha, Medea, are of interest even to those who never saw Ristori, showing the close analysis and severe study she gave her parts, and her own lofty ideal of character.

The Dog's Medical Dictionary. An Encyclopedia of the Diseases, Their Diagnosis and Treatment, and the Physical Development of the Dog. By A. J. Sewell, M.R.C.V.S. New York: E. P. Dutton & Co. $2.00.

This book gives an abundance of detailed information with regard to the many ailments of the dog and their treatment. The many who are interested in this domestic pet will find very nearly everything that they can possibly want to know with regard to these animals and what to do for them, not only when they are ill, but also when they are well. The information, however, especially with regard to remedies, is given with such minute detail that we anticipate some abuses from the overconfidence of those who know nothing of the nature of the remedies employed. The real crux in the illness of animals, even more than in men, is the diagnosis. It is very easy to be mistaken in this matter. If a certain diagnosis is made with confidence on insufficient grounds, a remedy may be administered which is not only not beneficial, but may even be seriously harmful. The instructions, however, for the feeding of dogs, for their care in times of illness, the details of bandaging and of manipulations that will benefit the animal after accidents are all of them calculated to save much suffering and will be humanely useful.

Lexicon to the English Poetical Works of John Milton. By Laura E. Lockwood, Ph.D., Associate Professor of English Language in Wellesley College. 12mo, pp. xii, 671. New York: The MacMillan Co. $3.00.

Bradshaw's "Concordance" to Milton's Poems is here supplemented by a very valuable *Lexicon,* in which all but the smaller words are interpreted and all passages noted. The volume will be almost indispensable to the student of the English poet most worth the studying. That it is perfect the author does not and cannot claim, but what faithful and intelligent diligence could supply is here given. It allows the student to compare the uses of a word by referring to its occurrences elsewhere; and this is especially important in an author so rich in meaning and vocabulary as is Milton. We have attempted to test the work by a single short poem, the "Lycidas," and we have only the following points of criticism on that difficult poem: "Gray-fly," l. 28, cannot mean the "trumpet-fly," for that is a bot-fly, or gad-fly, which does not "wind her sultry horn." The "star," l. 30, cannot be Hesperus, for we are told that it "*rose* at evening bright." "Taint-worm," l. 46, is omitted in its place, altho we are referred to it under "Worm." "*Clear,*" l. 70, does not

mean "free from sin, innocent, pure," but has the sense of the Latin *clarus*. "*Touch* my trembling ears," p. 77, needs to be explained by "*tetigit aures*." That "*Plea*," l. 90, means "defense" is not easy to see; but "Neptune's plea" has long been a puzzle. "Eyes," l. 139:

"Cast hither all your quaint enameled *eyes*
That on the green turf suck the honeyed showers
And purple all the ground with vernal flowers."

is not properly defined as "blossom of a plant," but as the *daisy, day's-eye*, for it is accurately described. And "*purple*" l. 141, does not mean "a mixture of blue and red," nor even "a brilliant color," but the crimson of this "crimson-tippit flower," like "Tyrian purple," or Milton's use in "Paradise Lost," iii, 364, "impurpled with celestial *roses*." Nevertheless, this is a very valuable work.

Socialism Before the French Revolution. A History. By William B. Guthrie. New York: The Macmillan Co. $1.50.

Dr. Guthrie has given us a valuable book. Holding that "close generic relationship exists between earlier and later Socialistic doctrines," he reviews for us the main social writings of the pre-revolutionary era beginning with the time of Sir Thomas More, and points out doctrinal resemblances between the earlier and the later times. On the whole, he has not pressed his discovery of resemblances too warmly. Declaring that social theory is the outgrowth of social conditions, he has been conscious enough of the great difference between social conditions of the nineteenth and the sixteenth centuries not to lose sight of the equally great differences in resultant social theories. The resemblances relate more to general attitudes than to specific claims and assertions. All Socialisms, early and late, protest against the existing order and propose to supplant it by an entirely different one; and they all have a like, tho not an identical, attitude toward the institution of private property. But the earlier Socialisms were communistic rather than Socialistic, in their theories of distribution; they did not distinguish between capital, as we now understand the term, and wealth. They were despotic, too, instead of democratic, requiring a "good prince" to secure their success. Tho generally they made political administration include industrial administration, they did not include any comprehension of the economic basis of institutions; and tho they were based largely upon the wrongs and privations of the masses, they did not include a comprehension of the modern theory of the class struggle. It is a strange fact that the peasants' rebellion in England in the latter part of the fifteenth century and in Germany in the early part of the sixteenth did not bring forth this last-named theory, and that it had to wait more than 300 years to be formulated by Karl Marx. Dr. Guthrie has made a painstaking study of More and Campanella and of Morelly and the social radicals of the French Revolution, and his summary of their teachings is on the whole excellent. His references to modern Socialism are not always so happy. There are frequent statements that need the saving grace of qualification; while the tone of some of them is jaunty rather than judicial.

The Silver King; The Dancing Girl; Joseph Entangled. By Henry Arthur Jones. New York: Samuel French. 50 cents each.

Henry Arthur Jones had to progress toward writing his dramas of ideas by first producing a successful melodrama. And before doing this he had to write a long three-volume novel from which to extract the plot. Financially, therefore, Mr. Jones arrived with *The Silver King;* since then most of his plays have seen their way into print. The majority of acting editions heretofore published by Samuel French have been in fine type, with many inaccuracies. But three of Mr. Jones's plays are now issued by this publisher in a *format* which is a welcome departure. The type is of generous size, the page margins ample. Into these margins have been placed many of the original stage directions, with sufficient blank space left for manager or reader to add notes. Besides stage diagrams of scene setting, an appendix, consisting of "calls," "gas plot," "property plot" and "scene plot," forms a valuable feature. Altogether each volume affords a key to stage production. The plays here noted

are not representative of Mr. Jones's best style, but it is to be hoped that the publishers will soon prepare those better entitled to be known, such as "Mrs. Dane's Defense" or "The Hypocrites."

The Standard Family Physician. A practical International Encyclopedia of Medicine and Hygiene Especially Prepared for the household. By Prof. Carl Reissig, M.D., of Hamburg, Germany, and Smith Ely Jelliffe, A.M., M.D., Ph.D., with the assistance of many American and German specialists in the treatment of diseases and experts in medicine and surgery. 2 vols. New York: Funk & Wagnalls Co. $13.00.

The hardest thing in the world for the man in the street is to obtain medical information which shall not be couched in terms too scientific or technical, and yet shall represent absolutely the present state of knowledge on medical questions. It is easy for every one to obtain supposed popular scientific medical knowledge on most subjects, and indeed such information is almost thrust upon all. With experience, however, readers learn that writers are only exploiting their ignorance for their own purposes. This present work promises to fill a distinct place in English literature by supplying in simple, yet scientific, language all the ordinary information that may be desired with regard to medical subjects. It is true that very little incentive to the use of drugs will be found in the work, and, as a matter of course, the subject of treatment, the most difficult department in medicine, is left to a great extent to the personal advice of a physician. Even with his knowledge it is hard enough to decide very often what line of treatment is likely to be of service. All other matters of information, however, are thoroly representative. The arrangement in alphabetical order makes it easy of consultation, and the illustrations are so well done as to add greatly to the value of the work. Instead of replacing the physician in any way, this work rather prepares the minds of its readers to appreciate the difficulties which the physician has to meet in the handling of disease, and will render people more sympathetic to his efforts for the cure of patients. While ordinarily such works are likely to do at least as much harm as good, there seems to be no reason why this one should not prove a source of benefit in every way to its readers. We cordially recommend it to those who are interested in medicine and who think they have learned much from various sources of popular instruction as to medicine, yet will find, after reading this, how far their opinions were from those which are accepted by serious physicians.

La Conférence d'Algésiras. Histoire diplomatique de la crise marocaine par André Tardieu, premier secrétaire d'Ambassade honoraire. 1 vol. in-8 de la Bibliothéque d'histoire contemporaine. Paris: Félix Alcan. 10 fr.

The Algeciras Conference on the Moroccan question held last year appeared at the time to be a long and tedious period of profitless wrangling over the insignificant details of an impracticable plan. Little more than a year has past since then, yet the world has seen some stupendous events grow out of that diplomatic battle. It was a great game that was played at Algeciras, with stakes of the highest. The primary question was whether Germany should be allowed to check France in her effort to extend her influence in North Africa as a sort of compensation for the loss of Alsace-Lorraine. The primary result was that France was given practically a free hand in Morocco, with the approval of all the Powers, and that Germany found herself practically isolated. The secondary results of the Conference are too far-reaching and complicated to be traced, but we already realize that every important nation has felt the effects of it, our own not the least. This volume has an especial interest to Americans, for in it we see for the first time what an important part the United States played in the Conference. M. Tardieu is generous in his praise of President Roosevelt for standing up for France in this, "the gravest crisis in her history since 1875":

> "In spite of all temptations
> To belong to other nations,"

the chief temptations being three urgent telegrams from the Kaiser asking the support of the United States for the German plan. M. Tardieu is eminently fitted to write the history of the Algeciras Conference, for he knows more about its workings, from the French

standpoint at least, than any other person who is at liberty to write on the subject. His leaders in *Le Temps* are regarded as almost as authoritative as the Governmental "Yellow Book." Sharp German criticism of this volume by inspired journals has failed to invalidate it on any important point. As for style, he has done as much as any one could to make the history of the intrigues and discussions an interesting, even dramatic, narrative.

Empire Builders. By Francis Lynde. Indianapolis: The Bobbs-Merrill Co. $1.50.

This story is not so powerful as the title intimates. It is the usual railroad romance in which the obscure young superintendent of an unimportant mountain division suddenly conceives an idea which, if realized, will insure the future prosperity of the road. He manages by guile to obtain the $5,000,000 necessary for the construction of his "empire," which modestly consists of a line running thru several mining towns. He is badgered by irritable presidents, hostile managers, treacherous stenographers and ferocious road gangs, but in the marvelous way which no longer thrills us, the author rescues his budding magnate and empire builder from dynamite and failure, and gives him the president's niece to marry—which is as much as any hero would expect.

Wireless Telegraphy: An Elementary Treatise. By A. E. Kennelly. With 66 illustrations. New York: Moffat, Yard & Co. $1.00.

Now that Marconi has succeeded in establishing regular commercial communication between Europe and America the general public is becoming interested in wireless telegraphy and wants to know how it works. This little book contains as good an answer as can be given to the question. The author, who is Professor of Electrical Engineering in Harvard University, explains in language comprehensible to any one who has studied elementary physics as much about the principles and the apparatus as any but an expert needs to know. He does not fall into the ordinary fault of the popularizers of science of using sensational language or attempting a deceptive simplification, but gives clear and concise descriptions with pertinent illustration, verbal and graphic. Such a sentence as this, comparing the electric waves sent out by the masts of the wireless telegraph to light, is very helpful to the lay mind:

"A distant eye, assumed capable of seeing this long-wave light, would see the antennæ shine out, in a certain unknown color, for six millionths of a second in every 5,000, like a flashing lighthouse which sent a beam over the sea for six seconds every eighty-three minutes. It may be readily imagined that when an electro-magnetic wave strikes a steel bridge, or a steel sky-scraper office building, it casts a long shadow, and a relatively large quantity of energy is torn out of the wave. Trees also have been found to be feebly conducting, and it is believed that they absorb energy from waves passing them. This fact, taken in connection with the imperfect conductivity of dry soil in comparison with sea water, accounts for the considerable greater distance at which electro-magnetic waves can be transmitted over the ocean than over land."

The House of the Vampire. By George Sylvester Viereck. New York: Moffat, Yard & Co. $1.25.

The story has a fantastic and grewsome theme, intellectual vampirism, the stealing of a man's thoughts before he has spoken them, the sapping of the vigor and originality of a succession of bright and ambitious young men by one masterful mind which grows as they are sucked dry and cast aside. In the hands of a Poe or Stevenson such a motif would serve to thrill or frighten a generation of readers; here it is inadequately handled. Only in a few pages does Mr. Viereck succeed in producing the effects he strives for; the rest of it is crude and commonplace. It is a convincing book. It bears internal evidence of the truth of its theory, for evidently somebody has been sucking the juice out of Mr. Viereck's brain during the last few months, as the hero of the book, who quotes Mr. Viereck's poetry, was preyed upon by the vampire superman. In "Nineveh," and still more in some of the "Other Poems," he showed symptoms of that strange malady called genius; in this novel he is obviously convalescent. As our esteemed contemporary of literary criticism, *The Bang*, says:

"It is a novel with a purpose. That purpose is to reveal what George Sylvester Viereck thinks of George Sylvester Viereck."

Literary Notes.

....Forest Morgan, of Hartford, has recently bought out the H. A. Camp interest in the publishing house of S. S. Scranton Company, and is now the manager of the company.

....The tabloid literature of the illustrated weeklies has no gayer maker of verses and sketches in prose than Tom Masson. In his new volume, *A Bachelor's Baby and Some Grown-Ups,* Moffat, Yard & Co. have collected over fifty of his diverting tales of the Dimpleton family and others. (60 cents.)

....On the fortieth anniversary of the publication of Lea's *History of Sacerdotal Celibacy in the Christian Church,* a third and revised edition appears. (Macmillan, 2 vols., $5.00.) This was the first of those systematic studies of ecclesiastical history which have brought renown upon American scholarship.

....The Library of Congress, in cataloging and printing its letters and documents, is doing a great service to students of early American history. Recent volumes are: *Calendar of the Correspondence of Washington with the Continental Congress, Naval Records of the Revolution,* and Vol. VIII of the *Journals of the Continental Congress.*

....Good parents all with one accord will bless the woman who will tell them how to entertain lively youngsters on rainy days. This benefaction is attempted by Carolyn Wells in her latest book, *Rainy Day Diversions,* and since it seems to be Miss Wells's special mission in life to keep people amused, she does not fail of her purpose. (Moffat, Yard & Co., $1.00.)

....The early history of that evil monster begotten of American politics, the gerrymander, has been written by Dr. Elmer C. Griffith and is published by Scott, Foresman & Co., Chicago, $1.25. He finds traces of this form of partisan trickery a hundred years before 1812, when it received its name from the redistricting of Massachusetts under Governor Gerry.

..A new translation of the letter of Dr. Diego Alvarez Chanca, dated 1494, the first written account of the people and products of the New World, has been made by Dr. Fernandez de Ybarra, whose nationality and scholarship enable him to interpret and annotate it with unusual accuracy and spirit. It is published by the Smithsonian Institution, Washington.

....The third volume in the new series of translations and reprints from the original sources now being published by the Department of History of the University of Pennsylvania contains *The History of the Langobards by Paul the Deacon,* translated and thoroly annotated by William Dudley Foulke (Longmans, Green & Co., $1.50). This account of his own people by one of the most learned of medieval historians will be a pleasant surprise to the English reader who has hitherto had no opportunity to put this vivacious chronicle of the seventh century on the shelf with his Herodotus and Froissart.

....Among the recent publications by the John Lane Company are *Nature's Aid to Design,* a collection of photographic studies for designers and craftsmen, by E. S. D. Owen and Louise W. Bruce. *Dalmatia, the Country, its People, and its Arts,* by Maude M. Holbach; *The Book of Fruit Bottling,* by Edith Bradley and May Crooke, which is particularly opportune; *Two Dianas and Their Shooting in Somaliland,* a copiously illustrated account of big game shooting by two feminine Nimrods in desert and jungle; *Golden Thoughts from the Gospels,* and *Golden Thoughts from Sir Thomas Browne,* being the first two volumes in the *Golden Thoughts Library; The Baby's Day Book, Songs of the Day, the Dusky and the Dark,* by W. Graham Robertson.

Pebbles.

MARY had a little lamb,
For which she did not care;
So took it back to be exchanged,
And got a "Teddy Bear."
—*The Punch Bowl, Pennsylvania.*

"DEAR Lord," prayed five-year-old Annette one evening before retiring, "please make a good little girl out of me, and if at first you don't succeed, try, try again."—*Chicago Daily News.*

JASPER: You don't seem so fond of Roosevelt as you were.

Jumpuppe: Well, we are somewhat confused. We approved of his anti-race suicide theories and now, when we go to look for a flat, we find that we are undesirable citizens.—*The Editor.*

ON THE BRINY.

FARMER TRELLIS — Tur'ble crime in New York. Man found dead an' no one knows who killed him.

Mrs. Trellis—Goodness, Joel, where was the police?

Farmer Trellis—Paper says the police are all at sea. Whether they're helping the navy out or gone on a picnic it don't state. P'lice never ought to go to sea all to once that way. —*Puck.*

THE LONG WAIT.

BILL NYE when a young man once made an engagement with a lady friend of his to take her driving of a Sunday afternoon. The appointed day came, but at the livery stable all the horses were taken out save one old, shaky, exceedingly bony horse.

Mr. Nye hired the nag and drove to his friend's house. The lady let him wait nearly an hour before she was ready, and then on viewing the disreputable outfit flatly refused to accompany Mr. Nye.

"Why," she exclaimed sneeringly "that horse may die of age any moment."

"Madam," Mr. Nye replied, "when I arrived, that horse was a prancing young steed."—*Harper's Weekly.*

The United States in World Politics

In January, 1906, the sleepy, old Spanish town of Algeciras, near Gibraltar, was invaded by a hundred and fifty plenipotentiaries, secretaries and newspaper correspondents ostensibly to settle the affairs of Morocco. To be sure life and property were not perceptibly more unsafe in that turbulent country than they had always been in the memory of man. The matters to be arranged, chiefly the organization of a bank and police force, were not in themselves so difficult as to require the united labor of the picked representatives of the thirteen Powers for three months. Algeciras was not where they would have preferred to spend their winter. They were crowded together in a noisy public hotel, in cooking and comfort not up to the standard their profession had accustomed them to; there were no amusements, no society but their own; the town had no special interest except, perhaps, there might be considered a peculiar appropriateness in choosing the place where the Moors landed twelve hundred years before to begin their invasion of Europe as the place to plan the European invasion of Morocco. But the diplomats were unable to keep their eyes fixed for so long a time on the land just across the Mediterranean. Their thoughts naturally strayed to other lands similarly dependent on the will of greater Powers.

As we now realize the Algeciras Conference had as much to do with the fate of Persia, Tibet and Afghanistan, if not of Korea and the Philippines as it had with that of Morocco. Algeciras readjusted the balance of power in world politics; it effected or at least demonstrated the isolation of Germany; it laid the foundation of the Anglo-Russian understanding; it predetermined to a great extent the action or lack of action of The Hague Conference.

In the Conference of Algeciras the United States took an active, perhaps even a decisive, part. Not for a generation had France been in such a dangerous position as when the Emperor of Germany threatened to upset the Anglo-French convention by which France was given a free hand in Morocco because he had not been consulted in its making, and if President Roosevelt, when the Conference was deadlocked, had supported Germany instead of urging upon the Kaiser the acceptance of the French proposals, the Conference might have been fruitless and a European war imminent. The Czar responded in the same sense to the Kaiser's appeal for assistance and with the combined force of personal intervention from Washington and St. Petersburg against him he gave way.

Since President Roosevelt had in 1905 been instrumental in getting Germany and Frence to submit their quarrel to such a conference, he naturally was solicitous for its success in peacemaking. He had previously recognized the special influence of France in Morocco when by the aid of the French he had obtained the release of Perdicaris, kidnapped by Raisuli. The French plan of having the ports of Morocco, policed by French and Spanish officers, substantially that finally adopted, was first submitted to our delegate, Henry White, Ambassador to Italy. He agreed to bring it forward at the proper time as an American proposition, and offered to have the President recommend it to Emperor William. Mr. Roosevelt accordingly sent two or more telegrams to the Emperor urging his acceptance, to which the Emperor returned emphatic refusals, and in his turn, in his telegrams of March 14th, 15th and 17th, which, according to M. Tardieu, historian of the conference, he sent thru the German Ambassador at Washington, Baron Speck von Sternburg, but without the approval of the Imperial Chancellor, he

asked President Roosevelt to support the Austrian project, which he said only the United States and France opposed. To these the President replied that the Austrian proposal was "inacceptable" and that if the Monroe Doctrine had not prevented him from taking part, he would have actively fought it.

The chief point of disagreement at the time was whether the police of the port of Casablanca should be under a Swiss or Dutch officer, as Germany thru Austria proposed, or under a French or Spanish officer, as France insisted. From the standpoint of American interests it would be hard to distinguish between them. We were called to Algeciras because we had taken part in the similar Conference of Madrid in 1880. Mr. White's instructions were simply to maintain the principle of the open door, and, in accordance with the petition of the Jewish societies in America, to protect the Moroccan Jews. It was a debatable question whether the country would be kept open to commerce better by its ports being in the hands of two Powers or of three.

The question has no interest now at any rate. The Jews of Casablanca have since then been massacred or driven out by the Arabs and their houses demolished in the bombardment by the French, who are "policing" the place with a good-sized army. They hold also the town of Udja, on the opposite border, and by supporting either of the two Sultans they will have practical possession of the country. And Germany has nothing to say.

Germany made a determined effort to regain at The Hague the prestige she lost at Algeciras, and to a great extent succeeded, because her delegation was a strong one, and their policies more thoroly studied and planned than those of any other. In her opposition to the reforms proposed she always managed to join with one or another of the Powers, so as not to be caught alone, as at Algeciras.

The defeat of Germany at Algeciras left Great Britain and Russia free to divide up Persia into spheres of influence as they chose, with no protest from Germany, altho her interests and prospects in that country were greater than in Morocco. The protection of India by the Anglo-Russian agreement in regard to Afghanistan and Tibet makes the alliance between Japan and Great Britain of less value to the latter Power. This convention will expire in 1915, and if Russia and Great Britain are then still in harmony it may not be renewed. This would leave Japan out in the cold so far as military support is concerned.

At the same time that the Algeciras Conference was at its crisis President Roosevelt was called upon to make another momentous decision. On February 19th, 1906, he adopted and earnestly advocated the plan for a lock instead of a sea-level canal at Panama, altho this plan had been condemned as impracticable and unsafe by eight out of the thirteen consulting engineers, including all five of the foreign experts. The plan as adopted did not answer the requirements of Congress in providing for any vessels afloat or likely to be constructed. Its locks were too small to handle the "Lusitania," to say nothing of the "Europa." Since then they have been enlarged and our naval men urge that they are still too small.

But the President laid down as one of his two "prime considerations" "the utmost practicable speed of construction," and in approving of the lock plan gave as one of his reasons that it could be completed in half the time. According to the estimates of the engineers and present rate of progress we will have a passage thru the Isthmus of Panama at the same time that the defensive alliance between Japan and Great Britain terminates. In the meantime it is apparently thought that our fleet will be more useful in the Pacific than in the Atlantic. The example of Japan fired Persia, India and China to an outburst of national aspiration. Now Persia is securely controlled by Russia and England, and the latter, freed from defending the frontier of India, can give her whole attention to the internal unrest. China is curtailing the number of her students at Tokyo and is rejecting Japanese assistance in commercial and military matters. The United States and Canada are being affected by a growing anti-Japanese feeling, which, if it does not lead to a conflict, will probably prevent any close alliance between either branch of the Anglo-Saxon race and the

Japanese. Altogether it looks as tho there was some truth in the old saying that Japan loses in diplomacy what she gains in war.

The People, Not the Rabble

Of all the dishonest arguments by which the privileged class in all ages has tried to give color of reason for its existence, the most discreditable is that which rests upon the intentional confounding of "the people" with "the rabble."

The history of political philosophy gives us no record of any philosopher possessed of sense enough to write a tract or a treatise who has advocated government by the rabble.

But the self-defense of a privileged class in all ages and in all places, including the United States of America, A. D. 1907, has consisted chiefly in the falsehood that those who believe in government by and for the people are advocating government by and for the rabble.

Every civilized population that has appeared in history thus far has comprised three elements—the arrogant, the considerate and the rude. The arrogant become a privileged class. The considerate are the people. The rude and low-lived are the rabble.

Between the arrogant privileged class and the low-lived rabble the people have had to struggle mightily for existence. But on the whole they have held their own, and their work is not ended. They will stay on the job until they have humbled the arrogant and disciplined the rude. The considerate will inherit the earth, in due time.

This constitution of society is by no means the same thing as the familiar stratification of "upper," "middle" and "lower" classes. The low-lived are by no means all in the "lower class." The "middle class" is not composed exclusively of the considerate.

The considerate element is composed of those who have ideas and manners. This is why the considerate are the people. The identification is obvious. The people is that part of a population which can lay some claim to mental and moral unity; which can do things collectively; which has, in a word, common purposes and social instincts and habits. These presuppose ideas and manners, and human beings that have ideas and manners by that token are component units of "the people."

The rude and the low-lived have no ideas and they object to manners. They are deficient in social instincts, and are therefore unable to act together except in hoodlum fashion. They cannot even howl in unison. This is one chief reason why they are disagreeable.

Of course, the low-lived rabble is unfit to enjoy or to exercise the functions of an electorate. This admission may be construed as undemocratic. It may be taken as equivalent to an admission that universal suffrage is inexpedient, or at least undesirable. But such construction would be erroneous.

Under universal suffrage the votes of the rabble, if left to itself, would count for nothing. They would be thrown at random, and the ballot of one fool would cancel the ballot of another fool. The votes of the rabble carry weight only as they are influenced. Influenced by the people, the considerate, they count on the side of social order and well-being. Influenced by the arrogant, they count on the side of social injustice and rascality.
